failed to respond to the appeals that have been made to them by their own countrymen? If belief is to be worth anything, there must precede it independence of spirit, self-reliance, selfrespect, and a love of freedom of choice and action. In the Buddhist forecast of what is going to happen none of these qualities are recognised as actually existing among our people. If Christianity is accepted in the future more than in the past, it will be accepted voluntarily and not under the pressure of any such overwhelming circumstances us those contemplated by certain Buddhist writers.

Among Shinto organs the Kyorin and the Yui-itsu, so often noticed in these columns, pursue quite opposite courses. The first of these is a conservative organ and a strong advocate of pressing for Government patronage and support. It still persists in urging the necessity of Shiutô being elevated to a position in the state distinct from all other creeds. It maintains that its connection with the worship of national ancestors and the Divine origin of the Imperial line entitles it to be ranked higher than imported creeds like Buddhism and Christianity. This view is not adopted by the Yui-itsu, Mr. Shibata's organ. 'The leading principle emphasized by this enlightened writer is the necessity of more practical morality among Shintoists. The Shinto sect to which he belongs is called the 實行數派 子ikkōkyō ha (The Practical Religion Party) and the Yui-iisu discusses subjects bearing on everyday life and practice. Mr. Shibata is a man of wide sympathy and takes a keen interest in the labours of members of other sects.

In the last Summary we epitomised from the Fukuin Shimpo the first part of a review of the history of religion in Japan during the past thirty years. We now give an abstract of the concluding articles on the subject. The writer, whose nom de plume is Chikuhō, has divided the thirty years into various periods according to characteristic tendencies. The first period he designates "An era of progress and reform;" the second "An era of Reaction." We now come to the third, which is called an era of "Moral instruction preparatory to the adoption of Occidentalism." In the years 1881 and 1882 there was a strong conservative feeling all over the country. The Rikugo Zasshi dates from that period; and it was started to act as a defender of the Christian faith against the attacks of learned men. preparation for subsequent changes which had been going on steadily for many years were of two kinds; one educational and the other literary. The Male and Female Schools started by the missionaries throughout the country did much to pave the way for sweeping reforms. Among the learned classes the circulation of classically written treatises on Christianity brought over from China, like the 天道劉源, Tendö-sögen, the 性理路論. Seiri-ryakuron, and the Fasukyō Tai-i (大意) exercised great influence. Among Christian journals there were the Tokyo Shimpo, which was started in 1877 and discontinued two years later, and the Köbe Shichi-ichi Zappo, the pioneer among Christian periodicals. The cause of Christianity was greatly helped by the Christian professors connected with the Kaisei Gakkö; Messrs. Griffis, Parsons, Verbeck, Veeder, and others; by the starting of the Meiji Gaka-in by the Itchi Kyöksi and the Doshisha by the Kumiai Church. The zeal of Christians was stimulated by the opposition it met with. Chiefly through the instrumentality of Mr. Fukuzawa, the lecture meetings known an Yennetsu-kai became all the rage, and numerous were the speakers who openly opposed Christianity on the platform, Conspi-cuous among these were Professor Morse and the Bible were organised. Mr. Shibusawa Yei-Mr. Yalabe Ryōkichi. Magazines with antiChristian articles in them were constantly appearing, among which the Tōyō Gakugei Zasshi is specially worthy of mention. The opponents of Christianity used every available weapon against it, even emphasising the absurd notion that Father Nicolai was a political agent who intended

Mr. Minister of Communications)
was to be seen studying the Four Gospels. Not long after, the former President of the Supreme Court, Mr. Miyoshi Taizō, joined the Christian Court, Mr. Miyoshi Taizō, joined the Christian Church, and he and Mr. Wadagaki Kenzō were the means of pushing forward evangelistic work for the Empiror and Veneration

UNIVERSITY OF ILLINOIS AT Mr. Yalabe Ryökichi. Magazines with anti-

to betray Japan into the hands of Russia. The Buddhists put forth their whole strength against the new faith, and in 1883 the Lecture Hall known as the Meiji Kaido was erected, which acted as a centre of anti-Christian influence and sentiment. Professor Toyama and Dr. Inouye Tetsujitō joined the chorus of the opposition.

In the meantime Christians went ahead apace, In 1880 there was held in Tokyo a conference of representatives from all churches. During the next year the Young Meu's Christian As-sociation was started. About the time of the opening of the Diet the treatises of Beutham. Mill, and Spencer were earnestly read, and their anti-Christian arguments eagerly seized and utilised here. The part played by the Rikugo Zasshi in publishing from month to month learned articles in defence of the Christian citadel ought never to be forgotten. The chief writers for this journal at that time were Messra. Ibuka, Kosaki, Uemura, Takahashi, and Ukita. In later days Messrs. Onishi, Yokoi, and others become constant contributors. The defence of Christianity carried on by the Rieugo Zasshi was based on the writings of Christian scholars in Europe and America. The writers all took keen interest in Christian philosophy and adopted the views of some of the most advanced of Christian thinkers in the West. The influence of the magazine on the minds of educated Japanese cannot be over-estimated. In 1883 the Second All Japan Christian Conference was held in Tankiji, Tökyö. One of the results of this huge meeting was the raising of a fund for the establishment of a Christian publishing company. By this mesns the Keiscisla was started and a weekly Christian journal, the Tökyö Masshū Shimpö, now named Kirtsutokyö Shimoun, was called into existence.

Among the thirty years under review the last

ten or twelve are the most remarkable on account. of the rapid pace at which the Occidentalising process has been going on. The impetus given to Christianity by the introduction of foreign literature and by the universal desire to effect Treaty Revision was doubtless considerable. This is beginning to be felt. Christianity was favoured in many quarters as a means to an end, and not for its own sake. That end being realised, pro-Christian zeal has declined in resure consecutive to the consecutive to the consecutive terms of the consecutive terms. declined in many cases. Christianity was not viewed messential to the reform of Japan, but as the religion of the nations whose feelings towards Japan it was necessary to change. Christianity for a long time was in many minds only regarded as a means of effecting political or social reform, and no attempt was made to examine its claims to acceptance as the one guide of life. To give a few instances of this attitude of mind, Mr. Fakuzawa contended that a change of belief would be involved in mixed residence, and even Mr. Toyama, who had been so loud in his opposition to Christianity, in his Kirtsutokyo to Shakar Kairyo no Kwankei turns around and advocates its introduction for the sake of the secondary benefits, such as music, &c., that it confers. How rapid was the progress of the Europeanisation that commenced some 12 or 13 years ago! Mr. Mori Arinori went so far as to propose that the English language be substituted for Japanese. The Romajikai and the Kana-no-kai both aimed at the abolition, except for special purposes, of Chinese characters. The equality of the sexes was openly proclaimed. Foreign dress was said to be the correct thing, and even a foreign Fancy Ball was given by no less a personage than the present Premier. Christianity undoubtedly reaped many benefits from this pro-European wave of sentiment. It was held up to admiration by the Minister of Foreign Affairs (Count Inouye). Ministers of State consulted ministers of the Gospel as to its teaching, and even in the houses of leading business men like ichi promised support to evangelists; Mr. No-

in various quarters. Count Itagaki after his visit to Europe declared that the success of Constitutional Government in Europe was largely owing to the Christian morality of the people so governed. Leading members of two great political parties received Christian bap-tism, namely Messrs. Kataoka Kenkichi and Nakajima Nobuyuki of the Jiyu-to and Mr. Shimada Saburo and others of the Kaishinto, Messra, Verbeck, Knox, Thompson, Uemura, and others undertook an evangelistic tour in Shikoku, which yielded great results. number of baptisms as given in the Kirisutokyō Shimbun were 4,332 in 1889, 4,730 in 1888, 3.096 in 1889, and 1,940 in 1890. In 1889, Mr. Niijima and other Christians drew up a memorial to the Government asking that Christianity be publicly recognised as one of the creeds of the country. This step was condemned by certain Christians on account of the opposition that it evoked. Though it did not ucceed, the Constitution shortly after granted

the desired liberty of conscience.
With Christianity thus in favour in all quarters, it is not to be wondered at that various attempts were made to utilise her influence for political purposes. It was some time in 1888 when the Minister of Foreign Affairs proposed to confer with representatives from all the Chris-tian churches of Japan. The Conference was not held, however. The late Count Goto in founding his well-known party the 大同團結, Daido-dunketsu, hoped to gain the support of a large number of Christians, whose discontent with the indifference with which they had been treated by the Government he aimed at utilising to serve political ends Failing to obtain Christian support, the members of this party subsequently won over certain Buddhists, assumed the name of Sonkō-hōbutau (章皇孝佛) Daido-danketsu.\*

The return of Mr. Tani Kanjo from a visit to Europe, strongly prejudiced against the course which events were taking in Japan, was the signal for the commencement of a reaction. The draft or a revised treaty prepared by Count Inouye was declared to have conceded far too much to foreigners. The tide had turned, much to foreigners. The tide had turned, and anti-foreign agitators were to be heard throughout the country. What is known as the Kokusui Shugi (Principle of Nationalism) was emphasised by the press and the platform. Christianity felt the change keenly, and is feeling it still. Mr. Chikuhô's history does not extend hereand the ware 1802. He promises to tend beyond the year 1893. He promises to review the events of the last six years on a future occasion.

The Fifth of the course of lectures on "Foreign Literature" delivered by Mr. Uchimura Kanzo at the Kanda Seinenkai Hall deals with the literary aspects of the Bible. After observing that Mr. Gladstone's statement that there were 20,000 volumes on his shelves which he had read is one which few persons could make, and, after urging the need of a judicious selection of books, Mr. Uchimura says that as far as he himself is concerned, there is no one book that he can name which affords him so much pleasure to read m the Bible. Regarded from a strictly literary point of view and read critically, defects will no doubt be found in it, but, taken as a volume whose object it is to explain the relation between God and man, there is nothing equal to it. And even as a literary treasury it has furnished m writers of auccessive generations some of the choicest gems. The English translation made in the reign of James I., though as a translation it is doubtless incorrect in many places, as a piece of literary work has never been surpassed. The language is terse and lacid, frequently rising to the sublime. The English Bible affects the mind of the intelligent reader as no other book can.

verts throughout Inpan according to investigations made last November. Musashi stands first among the provinces as regards the number of Christiaus; the number given being 10,317. Next comes Settsu, with 2,982, followed by Hokkaido with 2,032, Rikuzen with 1,183, and Kötsuke with 1,070. If the number of converts be compared with the population, Setten leads with 32 Christians to every 10,000 persons, followed by Musashi with 30, Bizen with 18, Yamashiro with 17, and Suruga and Rikuzen with 15. The following table shows the number of converts belonging to Protestant sects, the Presbyterians excepted, from whom no returns had been received when the table was compiled:

Kumiai-Kyökai Methodists 4,727 Nihon Methodists 2,293 Baptists (泛動数金) 1,725 Fukuin-Kyōkai
Kirisuto-Kyōkai Southern Methodists ...... Salvation Army Bifn (美智) Kyōkai Universalists Friends (友會) 115 Unitarians Fakyū-Fukuin-Kyōkai 普及福書 歌會 .......... 62

The total reacted is 38,710, or 9 persons in every 10,000 of the population. The following are the provinces which the respective hodies make their centres :- The Kumini Kyōkai; Setteu, Kõisuke, Musashi, Iyo, and Yamashiro. The Nihon-Kirisuto-Kyökai: Musashi, Tosa, Setten, and Rikuzen. The Seikökai : Musashi, Setten, and Hokkaidō. The Methodists : Musashi, Hokkaido, Hizen, and Mutsu, Nihon Methodists: Musashi, Suruga, and Kai, The Baptists: Musashi, Setton, Rikuzen, and Nagato.

The Kiricutokyo Shimbun says that though these statistics may be defective in some respects, on the whole they give a fair idea of the progress made.

Mr. Fukuzawa, writing on the effects of Confuciation in China and Japan, says:—China's present troubles are largely owing to her bigoted adherence to the teaching of her sages, the easence of whose doctrine is submission to the powers that be irrespective of the right of such powers to claim homage. The history of China goes to prove that the men who have succeeded have done so in spite of Confucianism and by the adoption of the very courses which it condemns. And yet, in the face of this and of China's steady decline, there are people here in Japan who do nothing but preach loyalty to superiors and filial piety. These virtues are all very well in their place, but in this advanced age, to suppose that a country can maintain its prestige in the world by its inhabitants simply bowing to the wills of their superiors is utterly absurd. Our position at this moment depends chiefly, not on the Confucianism we borrowed from China, but on the ideas that we received from Europe and America. There is no such lever to lift Eastern nations out of the slonghs into which they have fallen Western learning, and the Japanese who, failing to see this, preach Confucianism afresh at the end of the nineteenth century, as was done some 8 or 9 years ago, are retarding the progress of the nation. Confucian ideas must be eradicated from our minds, and we must become Occidentalised to the very core.

Mr. Izawa Shûji has contributed to the Taiyo an interesting and sensible article on the status and control of Christian Sects in Japan and of the action that should be taken by the Government vis à vis Christian schools, The number of Christian converts of itself demands that there should be some public recognition. The Reman Cathor of the Summary.]

We do not credit this statement as far as the far below the mark. The statistics in other particulars differ from those given above.—[Writer Digitized by

lic converts are put down at 52,177, the Pro- agitating for the privilege it has now obtained testants at 38,361, and the Greek Church at for years, but hitherto the religious restrictions 23,153, making an aggregate of 113,691. Mr. 122wa next discusses the leading characteristics of the different bodies. The following is the gist of his remarks:—The Protestants are divided nto 34 sects. Of these the Nihon Kirisutokyō-Kai stands first as regards the number of adherents, their adherents being over 10,000. Next comes the Kumiai Kyōkai with over 5,000 and the Seiko-Kat (Episcopalian). Each sect has numerous schools connected with it, and each has a special form of government. of the Roman Catholics may be said to be an absolute monarchy, that of the Greek Church to be a limited monarchy, while the Protestants all favour representative government in one form or other. The experience gained in the art of government by the leading members of the various sects is considerable, and should be regarded as conducive to the highest interests of the State. The following are statistics hear-The Roman Catholics have 4 elementary schools, with 2,982 scholars; 3 girl's schools, with 180 pupils; 29 industrial schools, with 622 students; and 2 higher schools, with 206 students. The Protestants have 105 elemen-tary schools, with 6,831 scholars; 15 more ad-vanced boys' schools (Middle Schools), with 1.520 pupils; 47 girls' schools, with 2.527 pupils, and 837 Sunday schools with 30,627 pupils. The Greek Church has 2 elementary schools, with 69 pupils; r advanced boys' school, with 53 students, r girls' school, with 77 students. The Catholics have r school of divinity with 42 students, the Protestants 17 with 223 suidents each and the Greek Church 1, with 11 students. There are in all 777 ordained foreign missionaries, 680 Protestants, 96 Roman Catholics, and I Greek Church missionary.\*
In September, 1885, an envoy from the Papal

Court was granted an audience with our Em-peror. On that occasion a letter from the Pope was read to His Majesty, in which the hope was expressed that now that Japan had entered the comity of civilised sations the relations between her and the Papal Court would be of an intimate kind. In November, 1888, an answer to this letter was sent to Rome by the Emperor, Marquis Saionji, then on his way to Berlin, being the bearer. This communication promised that Roman Catholic converts should be in every way protected, and that, as far as the law of the las freedom of belief would be granted. land allowed.

It is thus plain that Christians in this country have a right to claim equal privileges with Shintoists and Buddhists, and whatever the law sanctions in the case of one sect it ought to do in reference to others.

Since writing the account of the Doshisha affair, magazines of more recent date have reached us. We summarise briefly the opinions they express. Great surprise has been felt that Marquis Saionji, whose proclivities are all pro-toreign, should have objected to allow the schools attached to the Doshisha liberty in the matter of religion, while granting them the pri-vilege which as educational esablishments they might justly claim. The Minister professes to be a man of liberal sentiments, but there is no liberality in the policy adopted in reference to the Doshisha. It is said that the action taken by the Doshisha is nothing but a subterfuge; that the trustees will carry on the schools in the same way as they have been hitherto conducted ; that a change of name is after all a trivial matter. What has been done, say some, is to bring the schools in outward form into agreement with other establishments controlled by the Department for the sake of the exemption from military service to be obtained thereby. The change has only been one of form. It is stated that the Döshisha has been

contained in their Articles of Association have rendered their efforts fruitless. The view of some is that the action of the trustees is to be regarded in the light of a mere formal subjec-tion to the existing rules of the Department, and is of a piece with the procuring of passports by foreigners when their real purpose in travelling is quite different from any of the grounds on which a permit may be granted as stated by the

Obituary notices of the Rev. Dr. Verbeck have been published in various magazines, in which his work as a preacher, as a school-ieacher, and a translator is highly praised. As the facts given are well known to most of our readers, we do not think it necessary to re-state them here. Dr. Verbeck's influence on the Government in the early days of the Meiji era in said to have been considerable. His quiet, unassuming manner, his extensive knowledge of Japanese, and his scholarly acquaintance with the latest developments of Western thought the latest developments of Western thought rendered him an invaluable adviser to many a statesman who was groping his way to a new world. As to his translations, that of the Psalms is said to be the best. The task was extremely difficult, but is alleged to have been performed with great skill. Without earthly citizenship, it is said, that Dr. Verbeck proved the content of the provents of the pro his Heavenly citizenship beyond all manner of doubt.

Dr. Inouye Yenryo has just published a useful little work called 破地協論 Ha ibutsuron (The Destruction of Materialism). Dr. Inouye has discussed the views of leading materialistic writers like Dr. Kato and Mr. Fukuzawa. The style of the book is semi-colloquial. The Chinese characters are supplied with kana, and the language used is such as can be easily understood by persons of very ordinary education.
The work is for sale at the Tetsugaku-shoin m 30 sen per copy.

There is a project on foot for amalgamating the Rikugo Zasshi and the Unitarian organ, the Shukyo, As regards advanced thought and Christian philosophy these two magazines have no equals in Japan. If they succeed in uniting their forces, the sympathisers with liberal and advanced Christianity will have cause for rejoicing. It is said that in the event of the union, Mr. Kishimoto Nobuta will be the editor of the new magazine.

Two articles on religion appear in the Shakqi Zasshi—one entitled "The Future of Buddhism"; and the other "The Future of Christianity." We can only find space for a short digest of the views expressed. During the past few years Buddhism has shown distinct signs of conforming herself to the spirit, and of supplying the wants, of the times. This programme is forced on her by the approach of mixed residence. There are, however, certain things which are essential to her future auccess. (1) There is need of increased consolidation. She would do better with fewer temples and fewer priests. A small number of strong fortresses is better than a large number of poorly equipped and poorly manned outposts. She needs to adopt a process of selection. (2) Her young pricate, though well versed in modern learning, the masters of good literary styles and smart in debate, lack religious fervour and do not realise their responsibilities m teachers of men, (3) The sects must unite and must together organise practical works of benevolence and take steps to enlighten the ignorant. What is wanted in Buddhism is real life and apirit and deep religious feeling. Buddhism is old and decrepit, and unless some new blood can be put into her she will go the way of all the earth. It is the soul that needs revivifying. All this outward polishing up of her exterior parts, this patching of holes in her garments, will not hide from men the fact that her life is slowly cbbing away,

Theightelefion Christianity expresses great

dissatisfaction with the general state of things in the Christian world. The main contention of the writer is that religion consists everywhere in the observance of forms without corresponding life. There is, in the opinion of the writer, an unmistakable hollowness about the majority of Christian services that are held. The preaching is formal. The praying is formal. The confession of belief is formal. The preachers occupy their time in explaining elaborate doctrines in which few but theologians are at all interested and about which Japanese care nothing, or they denounce things in general and utter a series of lamentations on the wickedness of the age and of society as a whole. The audience has no sympathy with this kind of thing. Their experience of life is by no means so gloomy as the preachers represent. There are pastors who mourn that so little interest is taken in prayer meetings. To say nothing of the fact that Protestants are not a worshipping people, that the Church is regarded by them as a mere lecturing hall rather than a temple where they approach God, the idea that a number of people who are perfect strangers to each other can in reality unite in prayer as do the members of some families, is chimerical. The success or failure of Christianity is often said to be indicated by the size of the audiences in Christian Churches. This is a most unreliable mode of calculation. The forms of the Church are learnt by heart and repeated like so many short lessons in the case of a very large number of pro-The writer concludes by recommending the adoption by Japanese Christians of the time-honoured relationship between parishioners and the temple to which they belong, and that between the Buddhist priest and his flock. In the methods of teaching Christianity and of instructing believers adopted by Christian minia ters, the Shakai Zasski contends, there is much that ill accords with Japanese feelings and tastes, and there is no reason whatever why such methods should not be abandoned.

### YAPANENE FACTS AND COMMENTS

Referring to the excess of imports-17 million yen-during January and February, the Kokumin remarks that the phenomenon still continues, the figures for the first half of March already reaching 5 million yes. An outflow of specie abroad in the inevitable result. The average amount of specie reserve at the end of February, compared with the figures at the end of March, was as follows :-

Gold coins. Silver coins. Totals, Average. Yen. Yen. 75.777.121 1,680,030 84.066,024 1,721.867 len. 77,457,151 85,787 891 8,330,740 February ... Decrease ... 8,286,903 41,837

According to the Shogyo the Government has at last sanctioned the Hoksyetan Railway Company's issue of bonds. The nominal amount is 1,800,000 yen, payable in two periods. The first period comprises ten days from the rat to the 10th May, when 900,000 yen will be issued; the second is between the 1st and the 10th August, for an equal amount. Each bond is of 500 pen face value, issued at a rate of at less! 97 ven per 100 ven. Interest is to be paid half-yearly at the rate of ten per cent, per annum. Redemption of the principal is to be effected within ten years, commencing in January of the 33rd year of *Meifi*, by lottery. The security depusit for application is five yen for every 100 ves face value.

At the graduation examinations held on the 28th ultimo in the Normal School at Katsumata, Niigata, the Governor is reported by the Zokyo Asaki to have remarked, in the course of his speech, that although there should be no objection to instructors embracing a religious faith as private individuals, it would be unpardonable if they attempted to guide others in the light of their own prejudices. After censuring the teachers and atudents in vehement terms. the Governor exclaimed: "I do not hesitate to say that the brains of the instructors and their

ciples did not exist side by side with tutors equally unprincipled." This created a sensation, and m soon as the ceremony was over the principal of the school, teachers, and officers presented to the Governor a statement suggesting the advisability of their resigning.

The Tokyo Asashi states that the Governor of Kanagawa, acting upon instructions from the Minister for Foreign Affairs, line recently prohibited a proposed tour in America for the investigation of agricultual matters. The Colonial Board of America has instituted a rigorous examination of Japanese immigrants. passengers conveyed by the steamer China, which left Yokohama on the 24th February, and by the *Peking* and the *Doric*, which sailed on the 5th and the 25th March respectively, fifty-seven were refused permission to been carried on since October last under the land on the plea that their arrival was in violation of the Emigration Regulations. A strong protest was made, but in vain.

The difficulty of preventing the secret import of pium in Formosa, according to the Mainichi, seems resily insurmountable. Junks from Foodhow and Amoy generally serve as means of smuggling and the drug is landed in stormy weather and on dark nights. Each passenger carries with him 50 or 100 cattles, and the amount so conveyed is said to exceed 30 per cent. of the total import each year. That is, however, the simplest form of smuggling. More complicated artifices are resorted to by artistic knaves. Opium is sometimes packed like cotton, salt, liquor, or paper, or is mixed with the contents of other packages. Sometimes it is concealed in the bottom of a ship with painted boards spread over it, and upon these boards other cargo is placed. At other times a hole is made in a mast to stow the drug, or a strong chest of sheet lead filled with opium is chained to the bottom of a ship. The policemen are constant in their vigilance and yet the smugglers manage to evade them; the question needs thorough examination.

In the beginning of the 22nd year of Meiji (1889) Government paper above one yen denomination was put into circulation, the Nippon states to the amount of over 27 million ren, in spite of the legal limit, a little over 20 million The limit of issue was subsequently extended from 20 millions to 85 millions, while steps were taken for the gradual redemption of paper until the figures were reduced to 5,400 000 yen for Government and 4,600,000 yen for bank notes. The issuing power of the Bank of Japan has increased, the Government having deposited 22 million yen without interest to The decrease of notes affords a corresponding profit to the Bank. The untaxed notes of the Nippon Ginko in the 22nd year of Meifr aggregated 20 million yen only, but the amount has now swelled to 58 millions. The Bank, it is said, is enabled in reap a considerable profit from the present appreciation of interest.

Sales of tea since the opening of the season have smounted, according to the Nichi Nichi, to 21,819,350 catties, the average price being per picul. The figures for 26.76 yen the previous year aggregated 20,147,100 cattles, the average quotation being 20,98 year. Such a marked progress is almost beyond precedent. In the corresponding period of last year the stock in the market did not exceed 104,100 catties, 21,800 catties less than this year. The tea season opens in ordinary years on the 24th or 25th April, from which day arrivals from the various producing districts become constant. This year, however, the tes crop is yet in a state of immaturity; and it will be two or three weeks before plucking commences, the severity of the winter having brought about the delay. The work of plucking is not likely to be commenced before the beginning of May. Should the leaf escape in

facture, but does not seem to have equally influenced sale prices. Many tea plantations having been converted into rice or vegetable fields, a reduction in the crop for this year is inevitable, and quotations will continue to rise.

The Mitaul family have under consideration the construction of large warehouses and a pier in Kobe on the site where the Onohama Shipbuilding Yard fermerly stood. The project has made rapid progress. Of an area of 12,000 Isube 10,000 have been appropriated for the construction of a row of godowns, together with a pier of 900 hen in length, by the side of which four steamers of 6,000 tons each can lie at anchor. Between the pier and the warehouses are to be laid rails for the transport of goods. The naceseary investigations for the project have supervision of an experienced engineer of the Nippon Yusen Kaisha, the geological ex-amination alone being uncompleted. A large supply of iron will be secured from America when work commences in the beginning of May. There are two or three warehonsing companies in Kobe, but the recent development of trade has led to the necessity of increasing these institutions. The Mitsui's project, rethese institutions. The Mitsui's project, remarks the Nichi Nichi, has met with universal approbation.

The marine products of Hokkaido do not, according to the Tokyo Shimbun, fall short of 15 million yes annually in value, the number of fishermen employed being 150,000. The herring fishery alone is reported to require over 100,000 men. It is the season just now, and thousands of fishermen from the interior are proceeding to the North every day. Aomori occupies the most prominent position in respect of their supply, while Iwate, Akita, Yamagata, and Niigata are scarcely less conspicuous. The wages paid to the fishermen from these prefectures vary from 20 to 60 yes for the season, the average being 33 yen. The period of their service is from two to four mouths. The steady appreciation of labour during the past lew years, however, has led to the increase of their wages by 40 per cent. Under these circumstances it is estimated that one-third of the marine produce has to be appropriated for payment of wages. The fishing industry, the Tokyo Shimbun adds, will cease to be an largely profitable as is was before unless improvements are introduced into the system now in operation.

On the night of the 31st ultime Count Incuye, Minister of Finance, says the Hochi, de-livered an address at the Miteri Club on the subject of financial reform. He said: capital requires still my fullest consideration. It must be determined whether foreign capital should be appropriated for such unproductive enterprises as military ments or for productive enterprises in industry and commerce. If unproductive under-takings alone are aimed at, it is doubtful whether foreigners can be induced to invest. Retrenchment is the best expedient I can propose at this conjuncture; and with this in view I have reduced the budget proposals by about forty million ven. The taxes hitherto were so onerous that they could hardly be borne. Increased taxation, in the circumstances, is sure to end in failure, and I could not adopt it with out great regret. In short, the question of finance is still under investigation; but I may be prepared with its solution by the time of the Diet's ordinary session in December." The Hochi adds that all seemed to be dissatisfied with the Minister's explanation.

The Rokumin publishes statistics of the number of Buddhist temples in the capital. It represents the gross total to be 1,287. Classified according to Urban Divisious, Asakusa stands first with 307; Shiba next with 196, while 151 are allowed to Shitaya. The number hen gradually decreases. Koishikawa is resay that the brains of the instructors and their pupils are completely corrupted; it would be a wonder if students of such degraded printing of May. Should the leaf escape in presented as having 95; Ushigome, 62; Honjo, jury from frost, it promises to be excellent in quality. The appreciation of commodities has 4; Kejimschi, 3. Kanda district contains none. Digitized by Digitized by UNIVERSITY OF ILLINOIS AT presented as liaving 95; Ushigome, 62; Honjo,

sects, our contemporary remarks that the Jodo sect occupies the most conspicuous position, having 377 temples. Next comes the Shinshu with 252 temples, followed by the Nichiren sect with 204 places of worship. To the Zen sect belong 159 temples, and to the Tendai 127. The Shingon, which has adopted the doctrines of the famous Kobo Daishi, is possessed of 83 chapels, while the new sect, Riusai, founded in opposition to the Soto, has 73 institutions. Two other minor sects, the Obaku and Fishu. own 10 and 3 temples respectively.

The export of tobacco during the 30th year amounted, according to the Shogyo, to 351,740 yen in value, showing an increase of 97,357 yen over the previous year. Below is a comparative table showing the classification as well m the amount of tobacco exported during the past five years :---

Classification.	1893.	1894.	1995.

A serious dimunition is noticeable in the item of cigars for last year, while there is a corresponding increase in the case of cigarettes.

A well-known broker of the Tokyo Stock Exchange, named Kanijo, has since antumn made a corner in Hokkaido Coal Mining shates. People were surprised at his bold attempt, and various rumours sprang up through ignorance of the real wire-puller be-hind. On the 31st ultimo, the number of shares Kanijo had arranged to buy reached 16,000. At 4 p.m. a party of dealers on the sellers' side brought the shares to the Exchange, intimating that 2,000 shares only were deficient. The broker representing the buyers was immediately called and directed by the Exchange officers to take delivery of the same, but he refused m do so on the plea of the shares being still deficient. By # p.m. the sellers succeeded in collecting the remaining amount, and presented it at the office. The buyers were again pressed to take delivery, but showed no signs of complying. Pressure was brought upon them till late at night, but in vain. There was no alternative for the Exchange but to regard them as contract-breakers and punish them as such. Their failure, indeed, affects the stability of the Exchange, the loss involved in the transaction being extremely A meeting of the Directors, Inspectors, and other principal officials of the Exchange was called to discuss the method of dealing with the insolvent brokers, while a conference was likewise held by the brokers to determine what course to take. The brokers who are to be charged with breach of faith according to the Exchange Regulations are seven in all. The Exchange, unable III carry on its business, put up a notice of suspension on the plea that its account books had to be adjusted. precedent can be found for the present incident, which not only entails serious losses upon the Exchange, but also affects the whole economic community. A compromise between buyers and sellers is suggested as one means of settling the matter.

The Osaka Mainichi, the Kobe Chronick says, reports that the cruiser Takao had hee starboard how damaged by collision with a sailing vessel on the 1st inst., about 4 p.m., off Chinana-point, Inno Island, Insland Sea (off Bingo). The cruiser put in at Matsuhama, where temporary repairs were effected, and she left there on Sunday morning. Digitized by GOOSIC

### CHINESE NOTES.

With regard to the anti-foreign disturbance in Changking, of which very brief intelligence was recently received, the N.-C. Daily News publishes the following :---

We are in receipt of a special telegram from on correspondent at Coungking supplementing the facts published a short time ago with regard to the recent anti-foreign demonstration there, whereby a student was strangled and property belonging to the Methodist Mission at Kiangpeli destroyed. It states that the Tues or country militia are now there in large force and refuse to allow the execution of the death-watrant of the murderers of the student. The Consuls have demanded of the Taotal that he disperse the murderers, arrest the leaders of the gentry who institute the tue to W. The 500 for connecting the rate and The 500 for connecting destroyed. cited the riot, pay Tis. 500 for property destroyed, and allow the Mission to re-occupy the premises in question and also to protect them there,

The foreign residents of Chungking presented an address of congrututation to Mr. Archibald I. Little on the occasion of his arrival at that place in the first steamer that ever navigated the Upper Yangtaze.

These notes from Waku are interesting :---

The new German engineer, who was specially engaged at home for steel call making at the Nanengaged at home tor strett all making at the Nam-yang Ironworks, has arrived. He thros out to be an Englishman, trained in the Sheffield steel works, but who has been employed in Germany for some years, and was the best man they could find for the work. Rather a peculiar fact!

THE NEW MINT AT NGANKING.

Mr. Gervase Cook has been twice to inspect he new mint which is being elected at Nganking, The machinery is made by the firm of Hein Knappe, of Magdeburg. They have sent out Knappe, of Magdeburg. They have sent out no foreign engineer to superintend its election, all the work being done by native artificers. There is one single engine, to which steam is supplied by a Cornish boiler, 4ft. Gin. in diameter, and 20it long. There is also a small electric lighting plant, and coining machinery for dollars and cents. The boiler came out in the shape of plates, and is being put together by native workmen without any foreign supervision at all. These devices enabled the German tender to be below the English offers. This mint is about the same size as the old one in Wuchang, but outling like as large as those in Canton on Nausking. Mr. Cook says that these last two are the best appointed mints he has visited in China. All best appointed mints he has visited in China hen machinery was supplied by the Birmingham Mint Co., England.

### THE TONGLIU COLLINGIES

Mr. Cook has also been visiting the Tonglin baring works, in company with H.E. Sheng, Mr. Wang, Director of the Hanauching coalmines, and Mr. Lo, the Chinese engineer. This boring has Mr. Lo, the Chinese engineer. This boths has been going on for the last six months, and has only reached a depth of 226 feet. The works are under the direction of Messis. Feining and Phillipp, and when operations were commenced the officials were told by the former that coal would be reached at a depth of about 150 feet from the suctace: he cannot now say at what depth it will be found, if at all. Mr. Phillippis of animous that it will not be found. Mr. Cook depth it will be found, it stall. Mr. Phillipp is of opinion that it will not be found. Mr. Cook believes that coal will be met with and that two seams exist at a depth of about 300 or 400 feet, and that moraseams may be found deeper. He went down the trial shaft and found a seam two feet thick, at an angle of 50 to 90 degrees, but from the strata be thinks this seam will prove thinks and better dense down will prove thicker and better deeper down, and will be work able. The cause of the delay in the boring is that the machine in use in only able to run at 74 revolutious per minute. Mr. Cook advised them to
change it for one at the Tayê works, which would
enable the boring to proceed at the rate of from five to ten feet per day instead of only from six to twelve inches.

12th March.

### LOSS OF A STEAMER AND SEVERAL LIVES.

The steamer Frashi Maru, belonging to Mr. Suzuki Sawayo of Hakodate, struck a submerged rock early on the 26th ult, while on her way to Otaru, and is said to be breaking up. Fourteen of the passengers are reported to have been safely landed, while the remainder, whose number is not stated, are reported to have been the disease has appeared, thought it does not

### THE DRAGON FLAG AT PORT ARTHUR.

A very apposite story is told in the columns of the Hachi Shimbum. When Port Arthur was handed back to the Chinese in May 1895, Vice-Admiral Tauboi commanded the Japanese squadron on the station, and he with Captain Miura were present at the ceremony of re-hoisting the Chinese colours. It was a comparatively calm day, and the dragon flag barely floated out when it was run up. To the surprise of every one, however, no somer did the dragon unfold than the halyards snapped and the flag came down. Vice-Admiral Tsuboi examined the halyards but could not discover the cause of the break. He predicted that the incident might be regarded an an omen of the fate that awaited China's possession of the port.

### THE BRITISH SQUADRON.

It may interest our readers in know that the Fleet which the British Government have just ordered to assemble in the North China Sen comprises 3 First Class Battleships, 3 Armoured First Class Cruisers, 2 First Class Cruisers. 3 Second Class Cruisers, 1 Third Class Cruiser, 4 First Class Gungoats, 3 Second Class Gun-boats, 1 Third Class Gunboat, 3 Sloops, 4 boats, I laird Class Gauden, 3 Stoops, 4 Torpedo boat destroyers (Handy type), 6 First Class Torpedo boats and 3 Second Class Tor-pedo boats, which, with the Despatch boat Alacrity, will be off the neighbourhood of Port Arthur on or about the 6th inst. The aggregate tonnage of the above is over 94,000 tons, the number of guns carried by them being 228irrespective of torpedo tubes in each vessel and torpedo boats,

### CHOLERA.

Some apprehensions are entertained on the ambject of cholera in Tokyo and Yokohama. There have been aix cases of unquestionable Asiatic cholers in the latter place, though only one of them has proved fatal. In Tokyo there have been nine cases and one death, but medi-cal experts have not yet given a decisive opinion as to the character of the disease in the capital. The Home Department is adopting vigorous measures of prevention, the appearance of the disease at this time of year being, of course, somewhat ominous.

The cases of choleraic seizure, eight in number, of which we spoke in our issue of the 5th instant as having occurred in Tokyo, have happily been found to be sporadic. In Yokohama, however, as already stated, the Asiatic form of

yes show any signs of spreading.

### " FRIENDS."

We give litteratim, as an example of the excellent education in English afforded by the Joshi Gakuin, the essay on "Friends" by Misa Tesu Moteki :--

" The man that bath no music in himself, Nor is not moved with concord of sweet: Is fit for treasons, stratagems and spoils.

Is fit for treasons, stratagems and spoils.

And indeed there is something in music that every one admires. To the highly cultured and to the barbarian alike it conveys a pleasure that mu not be put into words. Wherein does its mysterious attraction he? Is it not rather Shakespeare's "caucord of sweet sounds," blending into harmony notes that could not charm us of themselves? Harmony is beloved of our Creator, for music itself is but m chord in what the Ancients called the music of the spheres and what we think of as the reign of universal law. The Grand Maker of all has constructed this universe on a grand scale of harmony in which there is no discord: not so much as the stopping of the sun on the eastern or wes-tern horizon. One star keeps time with another tern horizon. One sta

"All nature is but art, unknown to thee,
All chance direction which thou canst not see, All discord harmony, not understood, All partial evil universal good."

And there are spiritual harmonies no less than material. The word "friend" suggests not one, but more than one, and it too includes the idea of harmony. We meet one person after another who is indifferent to us, but when we find one who shares our tastes and sympathies, who enters into our most sagred input and sorrows whose bears most sagred input and sorrows whose bears beats as one with ours, we have found a friend. A friend is a fountain of pure love and strong sympathy, one who understands us and calls out latent gifts in us that we ourselves have not suspected. Some persons make no distinction between friends and acquaintances, calling both friends, ranking both slike. But they thereby degrade one of the noblest of words and show that they have not tested one of life's richest experiences. The companionship of one real friend is more satisfying than association with a host of acquaintances :-

> "The soul selects her own Them shuts the door:
> On her divine majority
> Obtrude no more. I've known her from an ample nation

Chaose one;
Then close the valves of her attention
Like stone."

Friendships are formed in various ways. Very commonly they arise gradually between people who have known each other a long time, as the result of mutual admiration and confidence. Some result of mutual agonization and such together by a strange attracting power, knowing each other in-stantly as friends and cherishing ever after a close and unwavering regard. Such friendships are per-haps most perfect, as the unsought and spontageous is often hightest with ideal bloom. Emerson says "my friends have come to me unsought. The great God gave them to me." Yet succe a friend's influence is one of the strongest that enters into human life it behoves as a best we may to be wise in the choice of friends. Many hopes have been weekled. haps to be wise in the choice of rivelius. Arany hopes have been wiecked, many ambitions destroyed, by the blighting effect of a corrupting friendship. On the other hand how many have been led to higher aspirations and timer lives by ciation with a faithful soul mate.

association with a faithful soul mate.

What so calls out the highest that is in us as the desire to be worthy of the friendship of one whom we love and admire? and what sacrifice will we not make in order to render some mete return to those who give freely to us of their test. Since friendship is so precious a possession it ought to be guarded with vigitant care. There is an insibe guarded with vigitant case. There is an insi-dious danger which sometimes menaces it; especially it would seem among young people. Intimacy often tacks politeness and thus the bloom of friendship is tarmished. If we set a right value on friendship courtesy naturally springs up from the fountain of our reverential beaus, not by obli gation at all.

Politeness in mutual intercourse is as the perfume to the flower, as delicate, as evanescent, as priceless. The greatest disappointment which can

God is the best, for it is founded on a rock. man friendships are precious but there is a higher height. "Henceforth I call you not servants, but I call you friends." This great promise and blessed word is to every one who is in the same family with Christ. Since we have known the divine friendship by the love of God our love must be like His, and in every human friendship we be like His, aull in every human friendship we ought to have in mind that great word, " Love one another as I have loved you.

### THE INSURRECTION IN THE PHILIPPINES.

A correspondent of the China Mail, writing from Singapore on the 14th instant, says, with regard to the fresh outbreak of hostilities in the Philippines:—The passengers by the Isla de Luzon, the Spanish mail steamer, which passed through here yesterday, are one and all of opinion that the state of the country forebodes very grave consequences. The Friars are again raising their heads, and asserting themselves more than ever, persecuting the natives who have returned to their homes under the amnesty, trumping up false charges of an irrelevant nature against those whom they anspect of being antagonistic to them, and openly defying the Government. General Prime de Rivers is so disgusted with the Government not carrying out his recommendations for reforms that he has insisted upon being relieved. Moret, the Colonial Minister, is evidently in earnest about reforms, and from the paper now to hand from Spain, is bent on secularizing the Monastic Orders; but he is meeting with great opposition, probably by pressure from the Queen Regent, which Sagasta has not the moral courage to insist upon removing.

The Correo Espanol, the principal Carlist organ, and consequently the advocate of the Friers, in trying to persuade its readers that the secularization of these Orders in the Philippines would bring about the emancipation of the Islands and their total loss to Spain.

El Pais, on the other hand, warmly applauds the reforms, remarking if they are much longer delayed there will assuredly be a reproduction of the civil war in the Archipelago of Magellan, This moment appears to have arrived ! Spanish officers tell me that the rebels have so far only delivered up old and worthless rifles and guns. All the Mausers captured from the Spaniards are still in their hands.

The same correspondent, writing from Manila on the 16th, said :- The telegraph wires connecting Manila with Bolingo via San Fernando are now out, and the working of the railway has been rendered impossible owing to the rebels having torn up the tails and damaged the per-I am told, but do not know if it manent way. is correct, that miles of telegraph wire have been carried off by the rebela to make lantaccas (small cannon made of boiler tubes and bound with wire). It is generally believed that the rebellion will spread, and that it is assuming fresh vigour in the Provinces.

### FIRE IN YOKOHAMA.

About half-past twelve this morning fire was tound to have broken out in a godown on No. 183 Settlement, occupied by Messrs J. R. Very shortly after the alarm was Simon & Co. given, Superintendent Morgin, of the Yokohama Fire Brigade, with a party of men and a hose-reel and stand-pipe, proceeded to the scene, and, working from a hydrant, succeeded in limiting the fire to the one building and extinguishing it is less than an hour. The fire started on the ground floor of the godown, which was used for froning and preparing linen goods. Some linen and empty boxes on the priceless. The greatest disappointment which can goods. Some linen and empty boxes on the come to us is a booken friendship. Some high thinkers tell us that there can be no such thing, part of upper floor burned, and some bales yet surely there have been broken hearts because friends have failed those who trusted them, failed in the hour of need. Friendship, like all lofty edifices, must be reared upon a solid foundation. Alere liking is not enough, nor sympathy in transient tastes. There must be a foundation of principle. But the friendship which is sealed by the lave of sodown.

### THE DIET.

The Diet is to meet on the 14th May and sit for twenty one days. It will be a short session, but as there is no Budget to be discussed, the Houses can probably get through the limited quantity of business that will come up for consideration. We have no details as yet about the exact nature of that business, but it may be presumed that the revised drafts of the remaining portions of the Civil Code will be the principal Bill. Unless the Codes are passed in time to go into operation by July, the operation of the Revised Treaties will have to be postponed, a very improbable contingency.

### NEWS OF THE WEEK.

The third cruiser, lately built for the Chinese Government, was successfully launched from the Vulcan Dockyard at Stettin on 12th Febru-Mr. Lu Hai-hwan, the Chinese Minister, performed the ceremony of naming the vessel Hai-Shen.

A Notification has been issued by the Department of Communications with reference to the time for which tickets on the State Railways will be valid henceforth. The table stands thus:—Tickets for distances of over fifty miles and less than a hundred, 2 days. Tickets for distances of 100 miles and over, a day additional for every hundred miles or fractions of a hundred.

The scheme of Mr. John Milne for scattering earth-tremor observatories over the globe is being carried out, says a home paper. Recording apparatus is to be established at Toronto, Harvard, Philadelphia, Victoria, B.C., iwo stations in New Zealand, Batavia, Madras, Calcutta, Bombay, Mauritius, Cape Colony, Argentina, San Fernando, Kew, and probably other places.

The will of the late Mrs. Frances E. Willard has been offered for probate. Most of the estate is left to Miss Anna Gordon, but Miss Willard's home in Evanston is left to Miss Gordon and Mary Bannister Willard during their lives and will revert eventually to the benefit of the National Women's Christian Temperance Union. The estate is estimated at \$17,000, of which \$16,000 is in real property.

The Hon. I. H. Stewart Lockhart, Colonial Secretary of Hongkong, left on the 19th ult. for England, on leave. The following appointfor England, on leave. The following appointments, consequent on Mr. Lockhart's departure, are notified in the Gasette:—Hon. T. Sercombe Smith to be Acting Colonial Secretary, Mr. A. M. Thomson to be Acting Colonial Treasurer and Acting Collector of Stamp Revenue in addition to his duties III Postmaster-General, and Mr. A; W. Brewin to be Acting Registrar-General in addition to his duties an Inspector of Schools.

About noon on the 25th ult., two women, one the daughter, Sayo, 23 years of age, of Mr. Kamiyama Yasugoro, of Kohira village, Tokyo-fu, and the other, Inc, 61 years old, the wife of Mr. Kamiyama Tomoyemon of the same village, went out on some errand and failed to return home. The villagers, alarmed, made a soarch for them, in company with the police, and on the morning of the 30th ult, the bodies of the two women were found in the forest of Hugi-yama, in the same district, the girl terribly ent about the body, while the elder woman appeared to have been strangled to death. No trace has yet been found of the perpetrator, or perpetrators, of the fool crime.

The appeal in the case of Tsuda Yaheyi and twenty-two other Japanese immigrants who arrived at San Francisco by the steamship City of Peking on February 22nd, bas been dismissed and they are to be deported in accordance with law. The ground is that, according to their own statements, they had not sufficient means of support and were liable to become a public charge. Thus they were within the re-Original from

Digitized by Google

strictive clauses of the Immigration Act. There in, states a San Francisco paper, no doubt that the men are farm labourers, though they pro-fessed to be " students of agriculture," and declared they did not want work. It is probable, also, that they came on a contract for work. Other cases of a similar kind are pending.

The proceedings of the Japan Women's Temperance Union were continued on Monday at the Union Church, Yokohama, the morning being occupied by devotions and a business Beasion; while a meeting was held in the after-noon at which addresses were given by Mrs. Ushiodo on "The Rescue Home"; Miss Flor-ence Denton on "The Foreign W.C.T.U.," Mr. Tomeoka on "Reforming Forces of Christignity;" Mr. Harn on "Prison Reform;" and Judge Miyoshi on "Education for Criminals." Music was given by the Yokoliama Choir, a Mesdames Topping and Garst, and Misses Allen and Spencer, Misses McNair, Miller, Coates, and Fisher. In the evening Miss Clara Parrish gave an ad ress on "Our Leaders" illustrated by stereoscopic views; and Mr. McNair and the Hon Mr. Kiyoura, Minister of Law, also spoke. The speech of the latter was guarded, though appreciative to a certain extent—in contrast to the address of Judge Miyoshi, who spoke in warm terms of praise of the manner in which women were held in respect in Christian countries.

Details are to hand of the alarming accident to Lord Brassey, the Governor of Victoria, in Sydney harbour. He was climbing the temporary stairway from a steam launch to his yacht with Jessop, his boatswain, when a heavy wave thre the staircase away from the yacht, and Lord Brassey and the boatswain were thrown into the sea. Both disappeared in the water between the vessels, smid indescribable excitement. By good fortune the boats parted long enough to allow Jessop to make his reappearance first and the Governor some auxious seconds later. Jessop was promptly harled into the launch, but the rescu- of the Governor was a matter of difficulty. The coxswain of the launch reached for his coat collar, but missed him. Lord Brassey, however, swam back, and the coxswain caught him under the arm, and with assistance quickly got him into the launch, but not a moment too soon, for Lord Brassey was scarcely on deck when the vessels came together with a crash.

According to the American papers Sir Julian Pauncefoje, the British ambassador, has informed the Canadian Ministry that he has arranged a convention with the United States whereby the Alaskan boundary dispute has been settled. Undertheterms of the convention the British Government has conceded the claim of the United States that ten marine leagues should be measured from the shore of the mainland and should proceed along the shore of the inlet, which are thus recognized as arms of the ocean. The contention of the British and of the Cana dian Governments was that the ten-league limit should begin on the ocean side of the island and that the delimiting line should be run across the inlets and not follow their shores. These inlets are numerous and extend into the mainland a great distance, and the decision, there-fore, is of much importance to the United States. The United States has agreed to the British retaining the boundary on the summit of the Chilkoot Pass and the White Pass, because in the Russian agreement of 1825 the line of demarkation was fixed as one running along the tops of the mountains.

The names of the passengers from the Far East who transhipped at Colombo to the P. & Japan. O. steamer China, which went sahore at Perim, O. steamer Cana, which went and the Array are given as follow:—From Japan—Mr. V. Osborne, Captain N. P. Pollock, Mr. H. W. Commons, Mrs. H. Collbran, Miss Colbran, and Mrs. More. From Shanghai—Mrs. Wade

Mr. G. Rowe, Commander E. F. Domville, Mr. and Mrs. Gompertz, Sergt. Foord and family, Inspector Hennessy and family, Serget. Hail and family, Inspector Mann and family, Inspector Butlin and wife, and Mr. Call.

The machinery of the new mint which is being crected at Nganking is made by the firm of Hein Knappe, of Magdeburg. They have sent out no foreign engineer to superimend its sent out no foreign engineer to superment its erection, all the work being done by native artificers. There is one single engine, to which steam is supplied by a Cornish boiler, 4ft. 6in district, and 20ft, long. There is also a small electric lighting plant, and coining machinery for dollars and cents. The boiler came out in the shape of plates, and is being put together by natives without foreign supervi sion. The mint is about the same size as the old one in Wuchang, but nothing like as large as those in Canton or Nanking. These last two are the best appointed mints in China. All their machinery was supplied by the Birmingbam Mint Co.

The Hongkong Telegraph speaks plainly about the sanitation of the Colony. One port after another, it remarks, is declaring quaran-tine against Hongkong, and the trade of the colony suffers in proportion. This quarantine boycott is the pensity for insanitation. Hongkong has the finest system of drainage in the East—on paper. Here is a difference between what ought to be and what is. What is, is a putrid atmosphere pervading the Queen's Road level every evening. It is "no worse than other eastern towns," it is "wonderfully clean, all things considered," but small-box and plague are tile enough to cause all other ports unanimously to declare quarantine. The colony m so near to China that epidemics cannot be avoided without an immense amount of careful thought and hard work-perhaps not even then. The town is still for from clean, even if the drains were perfect.

### GERMAN TRADE EXPANSION.

British trade in the Baltic, as elsewhere, appears to be suffering from German competi-According to a Consular report from Stockholm, British exports to Sweden are not increasing, or even holding their own, as they should, against German competition. The increase of the German trade is due to the energy and push of the German commercial traveller, who over runs the country in all directions, and gives long credits. The principals do not reside in Sweden, but operate from Germany, Berlin being only 24 hours from Stockh lin, and. therefore none of the profits of the trade are spent in the country. It cannot be said that the Swedes are particularly enamoured of system, which has absorbed, so much of their The British Consul at Gothenburg suggests in his report that printed patterns and illustrations should be used more sparingly in circulars, &c., as he has known Continental competition avail itself of this source for obtaining new and improved ideas at the expense of the British inventor or constructor. Circulars should be printed in the language of the country. and with the weights and values current in the country where the goods are intended for eale, and not in the English equivalents alone, as it is far too complicated a matter to make the necessary calculations to arrive at the conclusion of which is best value, British or foreign goods. It ends by people generally taking the goods about which they most easily understand the price, general terms as to credit, &c. Such advice has often been applied to merchants resident in

The tendency in Sweden now is, instead of exporting the raw material, to manufacture it, and export the products. To have spoken of Sweden a lew years ago as a competitor with England in skilled labour, would have been ac Gardner, 2 children and nurse, and Mr. C.
Smith. From Hongkong—Mr. and Mrs. W.

are famous throughout the world; but the couditions of life and wages of the workinen who turn out such good work are not generally known. The average hours of labour are 60 a week (i.e., 6 days of 10 hours), and the wages vary from 25 to 40 ore (3\frac{1}{2}\)d. to 5d.) an hour, or, in some exceptional cases, 50 ore (6\frac{1}{2}\)d.). Owing to the depressed state of the United States labour market, the Swedish workman now seems to think he can do as well at home, if one may judge by the numbers who return home, and by the emigration records.

As regards Sweden, Great Britain, Germany, and Denmark have between them about 70 per cent, of the foreign trade of the country, and although Great Britain does the largest trade of any nation, it must be noted that Great Britain imports from Sweden £8,000,000 worth of goods, and sends her out only £5,500,000 worth. Germany, however, imports £6,500,000 worth from Sweden, but sends bei ont £6,500,000 worth. If from the British exports be deducted the value of the raw material exported (vix.: coal, metal, cotton, wool, skins, &c.) there remains but £2,653,000 the value of manufactured goods exported, whereas Germany exported \$3,430,000 worth of manufactured goods. Again taking the joint trade of Norway and Sweden, Great Biliain experts £8,635,900 worth of goods of all descriptions, but imports £11.133.300 of their produce. Balance against Great Britain of £2.197,400 worth. Germany, on the other hand, exports £10,081,800 worth of goods to these two countries, but takes only £3 425,600 worth. Balance in favour of Germany of £6,656,200 worth. The returns of British trade are therefore not an brilliant m they at first seem to be, when it is considered that, roughly speaking, half of the goods imported from Great Britain to Sweden were brought over in Swedish or Norwegian vessels, and of the exports from Sweden, likewise about half were carried by the same means. In regard to German imports and exports, about two-thirds of the former and halt of the latter were carried by Swedish vessels. Her Majesty's Consul at Copenhagen in his report to the Foreign Office of May last, states "that Hamburg bas, without doubt, taken away the colonial trade to the Baltic which Englandoriginally had."

### AMERICAN JOURNALISTIC ITEMS OF FAR EASTERN INTEREST.

"The distinguished Chinese Minister at Washington," says the Chicago Record, "has been discussing American customs as compared with those of his own entpire, and he is brave enough to blat in his own gentle way that possibly even an Occidental people may learn some-thing from those of the Orient. When somebody called attention to the barbarous Chinese custom of binding the feet of women, he admitted its folly freely and fully, but mildly remarked that the women of China, if they did have deformed feet, did not injure their constitutions by compressing themselves into sheaths of steel and whalebone. This is an old and much-discussed point, and Mr. Wu's comments have been anticipated by most of the Occidental physicians. But he did not stop with this criticism. He has noted with shocked surprise that the American woman's hat is often not only tricked out elaborately with feathers but bears the stuff-ed corpses of birds. This custom among a civilized and humane people be cannot understand, and he modestly suggests that his own country-women would regard with exceeding sorrow any practice which wrought the destruc-tion of the "sougsters and the loveliest birds" simply to cater in the desires of human vanity.

Minister Wu's kindly criticism is respectfully referred to the milliners and their clients. The next time. Mr. Wa tackles this subject it is to be hoped he will enlarge upon the lack of artistic taste shown in the custom of wearing the dead budies of birds perched in hopelessly unnatural poses upon the hats of women. Let

article than a hat which looks like a specimen of taxidermy.

Professor J. N. Wigmore recently lectured on "The Law of Boycotts and Strikes" at the Lake View High School in Chicago. "He talked of the laws governing strikes and boycotts under four aspects. He considered the civil wrong of the boycott; the criminal aspect of both strikes and boycotts as found in federal and Illinois law; injunction as a method of prevention of boycetts and commitment for contempt as a means of enforcing an injunction. The Debs and Northern Pacific cases came up in the course of the lecture, as did many other cases of recent date."

An American exchange says :--- ' Dr. Van der Heyden of Yokohama has just built an antiseptic dwelling house supposed to be microbe-The walls of this building are plates of glass set in metal fastenings and made air-tight. Near the roof there is a small opening for the outflow of air from the living rooms, so arranged that no air can enter that way. Air from outside can get in only through a tube, whose opening is at some distance from the house. The air that enters is filtered first through cotton batting and then is sterilized by passing through glycerine,"

Here is an item from a Chicago paper:—
"Arrangements have just been completed by which the baggage of Asiatic passengers landing m Pacific coast points en toute for Europe may be sealed and sent in bond to the Atlantic or gulf port of embarkation, so that it is now necessary to have but one inspection by customhouse officers. Heretofore two inspections were necessary-one at the port of entry and the other at the port of departure. The change was made to give the American roads a better footing for competition with the Canadian Pacific. It entails a great deal of additional responsibility and work on the railroads, we each road must examine the seals on receiving the baggage, and each baggage car becomes in effect a bunded warehouse."

### TAPANESE NILK INSPECTION REGULATIONS.

We give the following translation of Ordinance No. 3 of the Department of Agriculture and Commerce:-

It is hereby notisfied that by-laws for the en forcement of Regulations promulgated by Law No. 48 in the 30th year of Meiji with regard to the encouragement of the direct export of silk have been established as follows:

March 30 of the 31st year of Meiji.

(Signed) BARON ITO MIYOJI, Minister of Agriculture and Commerce,

By-laws for the enforcement of Regulations with regard to the encouragement of the direct export of raw silk.

Att. I.—Any person desiring to receive the bounty specially provided for the encouragement of the direct export of raw silk, shall present at the Silk Inspection. Office an application prepared in

accordance with Firm No. 1.
If the applicant does not reside in a district in which a Silk Inspection Office exists, he may demand inspection through an agent whom he may appoint in a district where such office is established.

Ait, II .- The inspection of silk shall be conducted according to the following processes :

(t).—Exclusive weight. The whole weight of a bale of silk is first ascertained, and what remains

bate of sith is first ascertained, and what remains after subtracting tare and accessories is to be recognised as the exclusive weight of silk.

(2).—Limite. This is to be determined by inspection with the taken eye.

(3).—Re-recling.—Five pieces of silk in a bale will be set upon a recling apparatus, and submitted to the process of recling two hours with a velocity of forty turns an hour according to the degree of fineness.

(4).—Degree of fineness. Five pirces are selected from a bale, and from each of them lour lines, each 500 metes long, are taken and weighted separately to grammes. The weight so obtained

ascertained, the average will be taken to deter-

mine the number in the bale.

Att. III.—Any silk which has undergone inspection as prescribed above is not eligible for

examination.
Art, IV.—The Silk Inspecting Office shall deliver to the applicants a certificate of inspection with a duplicate for each base of silk which has

with a duplicate for each base of silk which has passed examination.

Art. V.—The Silk Inspecting Office shall, with regard to the silk mentioned in the preceding article, cause the applicants to pack each hale of silk in the presence of the members of the Office, enclosing therewith a copy of the certificate of examination. The package shall then be inscribed with the name of the inspecting office, the number for examination, and the classification as to the qualification of silk, and it shall be duly sealed. The cost of packing, however, must be borne by the applicants.

borne by the applicants.

Art. VI.—Any silk which has undergone the process indicated in Article V. shall lose its qualification if the seat formally affixed to it is

destroyed prior to its direct export.

Art. VII.—Any person destrous of undertaking the direct export of silk for which a certificate of examination has been obtained, shall endorse the same with his name and address, and affixing a seat thereto, forward together with the bill of lading to the Imperial Custom House of the

district from which the silk is to be expected.

Act. VIII.—The Imperial Custom House shall, after examining the goods with reference to the certificate of inspection daily endoused as prescribsertificate of inspection duly endoused as prescrib-ed in the preceding article, mention therein the date in which all the specific forms of procedure were completed, and, affixing its seal thereon, deliver it to the applicants, provided the goods in question which are to be shipped at once shall

question which are to be shipped at once shall amount to over 500 catties.

Act. IX.—Any person derivous of obtaining the bomity shall present to the Minister of Agriculture and Commerce an application prepared in contentity with form No. 3, and also certificate of examination together with another certificate for presentation in the foreign port of discharge,

Act. X.—The date of the foregoing application shall be within 180 days immediately following

shall be within 180 days immediately following the direct export of silk.

Art. XI — If any direct exporter desires to en-

Art. At —I any meet exporter desires to she trust another person with the sale of his goods, he must select as the agent a person registered as a Japanese subject, or a commercial company composed of members or shareholders of Japanese nationaldy

Art. XII.—With respect to these Regula-tions Acticles IV (Note excepted), VII., VIII., XIII., XIV., and XII of the Bylaws for the en-forcement of the Silk Inspection Law promulgated by Ordinance No. 3 of the Department of Agricul-ture and Commerce in the 29th year of Mesii shall be applied.

### ENGLISH CYCLING NOTES.

Landon, February 18th.

Mamitius is the latest place to be visited with
the bicycle craze. Cycling is taking a firm hold
in the island, not only gentlemen but ladies indulging in the exercise.

A writer points out the folly of having the spukes of a bicycle nickel plated, and refers to the trouble that already exists in keeping the ordinary plated parts of the bicycle from rusting. In the opinion of many cyclists there is already too much bright work about a bicycle, though the present plated parts do admirtedly give a bicycle a very smalt appearance. When wet or damp weather comes we know how difficult it is to keep these bright parts from rusting, and unless they be liberally coated with vaseline they are pretty sure to tust. One suggestion is that only the handlebar and brake workshould be plated. The other parts being near the ground and consequently more liable to catch the mind, should be enamelled black, or in a colour harmonising with that used on the other parts of the machine.

Apparently in New York the qualification of a good rider is to have a long list of century rides to his credit. Edward S. Edwards, of the Century Wheelmen of New York, certainly intends mounting to the top of the tree, for during 1898 he intends riding a ceutury every day. So far he has not failed to cover his hundred miles any day,

CORRESPONDENCE.

### THE GOVERNMENT AND THE DOSHISHA.

TO THE EDITOR OF THE " JAPAN MAIL!"

Sira,—The great question of the late Dashisha from its very beginning appeared to the writer in a two-fold aspect, viz. in its relation to the Trustees first; then to the Japanese Government as representing the politico-moral conscience of the nation in similar transactions. As stated in the previous letter, I have looked upon the whole affair from a high moral ground, rather than from purely technical legality. Indeed it would be the vertext nonsense to make the contention that a Government is not bound to take any notice of the judiciomoral nature of its citizens' actions, especially of those actions which have such far-reaching and avenual relations as the present one. Sir,-The great question of the late Dushisha extensive relations as the present one.

That the action of the Doshisha Trustees was That the action of the Doshisha Trustees was illegal morally, and judged by an universal tilbutial of justice, also forensically, I think is the unanimous verdict of every fair-minded and impartial and fair-minded spectator. But concerning the duty of the Government in regard to the matter the Editor remarks.—"It is very difficult to see live the Government of the control of the to see how the Government can notice the question directly or indirectly."

For the sake of illuminating the point allow me to give the following illustration: Suppose a rob-ber comes with his ill-gotten spoils and offers them to me to purchase; and I by that personal moral law which regulates every individual action—leaving the judicial lawaside for the present—bound to take notice, both "directly and indirectly" of the question of the origin and means through which he has procured his commodities or not? I think there is only one answer to the question and a question of the origin and means through which he has produced his commodities or not? I think there is only one answer to the question and no more. The Doshisha question has very close resemblance to this. The analogy, I think, is not a forced one, although it is a little expanded. Here is a body of American Christians putting their absolute trust in the integrity and human honesty of their Japanese fellow-Christians to organize and carry on a Christian Institution in their native land; but as soon as the Institution is organized and continued the Language turn round and within and equipped, the Japanese turn round and vinlate their most solemn and sacred coverant notwithstanding the vehement profests of the donors. Now I call this an act of piracy and highway robbery; the only difference being in the one physical force is used, while in the other the "force" of deception and blackmailing. The Government on her part instead of discouraging the act of dishonesty and deception on the part of her citizens, has all along abetted and encouraged it by promising to recognize the Chu-Gakko department if the Chu-istian clause was struck out of the Couristian. the Constitution.

Of course the Government has absolute right to decline recognizing any educational Christian institution, but civilized humanity will hold her morally responsible if directly or indirectly she stimulated her citizens to violate their most sacred engagements.

In conclusion I must say, that this entire unfortunate transaction strongly reminds me of a missionary story of the South-Sea Islands. The story is that more a polygamous chief went to a mission-ary and requested to be baptized and initiated inta the Christian Church. The missionary knowing the chief well, replied that he would be very glad to administer the sacred rite; but as the chief had two administer the sacred life; but as the chief had two wives he could not perform it for the present. The chief left the missionary in a very pensive mood. After the lapse of two or three weeks he cappeared with shining countenance and asked to be baptized at once as all the hinderances had been stability counters. totally removed.

"But what became of your second wife," asked the missionary in a subdued and polite tune, "Drd you send her to her father?"

"O no!" answered the chief triumphantly, we simply killed and ate her up!"

Whether the Trustees did kill the Doshisha and Government did countenance and participate in this moral cannihalism or not, are two questions for the civilized world and the Japan Mail in decide,

PHILO. JAPAN.

(We have already said that we appreciate the point of view taken by this correspondent and by some others also with repart to the Government, but we have shown that, speaking speakfeally, it would have been quite beyond the Government's declared function to assume the role of judge in such a matter. Has any complaint been addressed to the Government by the foreign donors? It not, what ground for official interference exists? Hearway is not correspondent would think quietly about the practical side of the question, he wild, we think, appreciate the impossibility of any arbitrary interference on the Government's part such as he recome Ortgina / Wom

### THE FRENCH REVISED TREATY.

### (CONCLUDED FROM TESTERDAY.)

Article 18 .- Les Hautes Parties Contractantes conviennent que dans tontes les matiéres relatives au connerce, à la mavigation, et à l'exercice de l'industrie, tout privilège, faveur ou immunité quelconque que l'une d'elles a déjà accordés on accorderait à l'avenir au Gouvernement ou aux ressortissants de tout autre pays, seront étendus immédiatement et sans condition au Gonveuuement et anx ressortissants de l'autre Partie, leur ment et any ressortissants de l'autre Partie, leur intention étant que, pour ce qui concerne le comerce, la navigation et l'industrie, les Japonais en France et les Français an Japon jouissent, sons tous les rapports, du traitement de la nation la

plus favorisée. Article 19.—Chacune des Hautes Parties Contractantes pourra nommer des Cousuls généralis, Cousuls, Vice-Cousuls III Agents consulaires dans tous les ports, villes il places de l'autre Partie. Ces Agents et les Consuls suppléants, Chanceliers et Secrétaires attachés à leur poste exerceront, en toute liberté, leurs fonctions et attributions et joniron, à charge de réciprocité, de tous les privilèges, exemptions et immunites, ainsi que des pouvoirs temptions et immunites, ainsi que des pouvoirs ni sont ou seront accordés aux officiers consulaires de la nation la plus favorisée.

Ils n'entrecont en fonctions et ne jouiront des dioits, privilèges et immunites consulaires qu'aprés en avoir obtenu l'autorisation du Gouvernament

En ce qui concerne le lieu de leur residence, les deux Gouvernements ne s'opposeront respectivement aucune restriction qui ne soit commune dans

leur pays à toutes les nations.
Article 20 - Les ressortissants de chacune des Hautes Parties Contractantes jouiront, dans les États et Possessions de l'autre Partie, de la même protection que les nationaux pour tout ce qui con-cerne les brevets d'invention, les marques de fabrique ou de commerce, ainsi que les dessins ou modèles industriels et de fahrique de toute estèce, en remplissant les formalités prescrites par la loi.

Article 21.-Le Gouvernement de la République Française donne, en ce qui le concerne, son adi é

sion à l'Arrangement survant;

Les divers quartiers é rangers qui existent au Japon seront incorporés aux communes respectives du Japon et lecont dès lors partie du système

municipal du Japon.

Les Autorités japonaises compétentes assumeront en conséquence toutes les obligations et lous les devoirs municipaux qui résultent de ce nouvel État de choses ■ les fonds et biens municipaux qui puntralent appartenir à ces quartiers seron, de plein droit, transfé & auxdites Antorités japo-

naises. Larsque les changements ci-dessus indiqué aurant été effectué . les baux à perpérur é en vertu desquels les é rangers possèdent actuellement des proprié é dans les quartiers seront confirmés et les proprié és de cette nature ne donneront lieu à aucuns impôts, taxes, charges, contributions ou conditions quelconques antres que ceux expressé-ment stipulés dans les baux en question. Il est entendu toutefois qu'aux Antorités consulaires dont il y est fait mention secont substituées les Autori-

tés japonaises. Les terrains que le Gouvernement japonais aurait comédés exempts de rentes, vu l'usage public auquel ils éraient affectés, resteront, sons la éserve des droits de la souveraineré tereitoriale affranchis d'une manière permanente de tous im-pôts, taxes et charges; et ils ne secont point détournés de l'usage auquel ils étaient primitivement

destinés

destinés.

Article 22 — Les dispositions du présent traité sont applicables à l'Algérie. Il est entendu qu'elles deviendraient en outre applicables aux colonies françaises pour lesquelles le Gouvernement Français en réclamerait le bé-éfice. Le Représentant de la République Française à Tokyo aurait à ces effect le notifier au Gouvernment [a-ponais dans un délai de deux aus, à dater du jour

ponais dans de la company de l'echange des ratifications du présent traité, Article 23.—A dater de la mise en vigueur du présent traité, seront abrogés le Traité du 9 nccobre, 1838, la Convention du 23 juin 1866, et en général tous les arrangements conclusente les Hautes Parties Contractantes existant antérieurement à cette date. En conséquence, la juridiction française au Japon et les priviléges, exemptions on immunités dont les Français jouissaient en matière juriodictionnelle seront supprimés de plein droit et sans qu'il soit besoin de notification, du droit et sans qu'il soit besoin de notification, du jour de la mise en vigneur du présent trailé; et les Français secont dès lors sommis à la judiction des tribuoaux japonais.

Article 24—Le présent Trailé ne produira ses effets que trois ans au moios après la signature.

ll entrera en vigneur une aunée après que le Gouvernement de S.M. l'Empareur du Japonieur. que le

Gouvernement Française son intention de le voir mis à execution Cette notification pourra être faite à un momen quelconque après l'expiration des deux années

qui suiviont la date de sa signature. Le présent Traité restera obligatoire pendant une période de douze aus, á partir du jour où il

aura été mis à exécution.

Chacune des Hantes Parties Contractantes aura le droit, a un moment quelconque après que ouze années se seront écoulées depuis l'entrée en vigueur du présent Trairé, de notifier à l'autre partie son intention d'y mettre fin et à l'expiration du dou-z'ème mois qui suivra cette notification, le Traité cessera et expirera entjèrement.
Tomefois l'article 7 du Traité pourra être dé-

nonce à toute époque par le Gouvernement Français et, dans ce cas, cet article cessera d'être en vigneur un an après sa dénonciation.

Article 25.-Le présent Traité sera ratifié et le ratifications en seront échangées à Tokyo aussitô: que faire se pourra.

En foi de quoi, les plénipotentiaires des deux pays ont signé le présent Traité et y ont apposé leurs sceux.

Fait à Paris, en double exemplaire, le 4 août 1896.

[L.S.] Signé: Soné Arasuki [L.S.] Signé: G. Hanotaux. SONÉ ARASUKÉ. Раотосова.

Le Gouvernement de S. M. l'empereur du Japon et le Gouvernement de la République Française estiment qu'il est utile aux inté éts des deux pays de régler certains questions spéciales qui les intéressent multuellement et qui ne sont îpas préves an au Traité de commerce et de navigation signé cejourd'hui, leurs Pléniqutentiaires respectifs sont convenus des stipulations suivantes :

I.-It est convenu entre les Hantes Parties Con tractantes que, six mois après l'échange des ratifications du l'eaité de commerce et de navigation signé cejourd'hui, le tarif d'importation ci-annexé signé cejourd'hui, le tarti d'importation ct-annexé sera, sous té-erve des stipulations de l'article 19 du Traité de 9 octobre 1858, aussi longtemps que ledit Traité restera en vigueur, puis subséquemment des article 7 et 18 du Traité en date de ce jour, applicable aux produits du sol, des industries ou manufactures des Érais et Possessions de la Réquibleme Française à leur jungentation au on manufactures des grais et Possessions de la République Française à leur importation au Japon. Mais rien de ce qui est contenu dans le Traité, dans ce Protocole on dans le Tarif annexé ne pourra être tenu comme limitant on déterminant le droit du Gouvernement Japonais et du Gouvernement François de restreinde ou de prohiber l'importation des drogues, médeclues, aliments on brenvages dalsifiés, d'im-primés, peintures, livies, cartes, filhographies on printés, peintures, livies, cartes, fillographies ou gravures indécents on obscènes, ou d'autre objets pouvant offici quelque danger pour la sécurité on la morale publiques, d'articles fabriqués en violation des lois qui, au Japon et en France, réglementent les brevets d'invention, les marques de fabrique ou la propriéé littéraire. Ce droit réciproque s'étendra également aux prohibitions sanitaires ou autres provenant de la récessité de protéger la santé des personnes, ainsi que la conservation du bétail et des plantes utiles à l'acciontement. l'agriculture.

Les dioits ad valorem établis par ledit Tarif secont, autant que cela sera reconna possible, conen droits spécifiques par une Convention supplémentaire qui sera conclue entre les deux Gouvernements dans le délai de six mois à compter de la ratification du Traité en date de ce jour. Pour l'évaluation desdits droits spécifiques, il est convenu qu'un prendre pour base la moyenne des prix établic par les relevés des Donanes japonaises des six premiers mois de l'année 1894, en y ajout-ant les frais d'assurance et de transport du lien d'achet, de production on de fabrication jusqu'au port d'arrivée ainsi que les frais de commission, s'il en existe. Dans le cas où la convention supp'émentaire ne serait pas entrée en vigneur au moment où le tarif nouveau commencerait à être appliqué, ce seront les droits ad valorems qui, dans l'intervalle, seront perçus. Ces droits seront calculés sur le prix réel des marchandises au lien d'achat, de production on de fabrication, augmenté, des frais de transport et d'assurance dudit lien jusqu'au port de de chargement, ainsi que des frais de commission, s'il en existe.

An cas où Particle 7 du Traité cesserait d'être en vigueur par suite de la dénonciation qui en serait faite par le Gouvernement Français, le tarif ci-amexé ou le tarif spécifique qui lu sera ath-

situé cessera également d'être appliqué.

En ce qui concerne les articles non énumérés dans ledit Terif, le Tarifgé-érat du Japon s'appliquera, dès qu'il sera en viguent, sons réserve des stipulations de l'article 19 du Trailé du 9 octobre 1858 on des articles 7 et 18 du Trailé conclusional d'uni

effet, le Tarif d'importation actuellement es vignoer an Japon cessera d'être applique en ce qui concerne les objets et marchandises importés au Japon par des citoyens français.

In ce qui concerne tontes les antres stipulations des Traités et Conventions actuellement existants, elles seront maintennes sans conditions jusqu'à l'épuque ou le Traité de commerce et de naviga-tion en date de ce jour sera mis en vigueur,

11.—Le Gouvernment Japonais consent, en at-tendant l'ouverture complète du pays aux citoy-ens français, de tendre le sysième existant des passeports de façon à permettre aux Français, su-la production d'un certificat [avourable émanant de la Légation de France à Toliyo ou de l'un quelconque des Cousulats de France dans les posts enverts, d'obtenir sur leur demande, du Ministère Impèrial des Affaires Buangères à Tokyo on des autonités principales de la Piéfecture dans laquitte de la company de la préfecture dans laquitte de la préfecture dans laquitte de la préfecture dans laquitte de la préfecture dans laquitte de la préfecture dans laquitte de la préfecture dans laquitte de la préfecture dans la qui la préfecture de la préfe elle est situé un port ouveit, des passeports valua-ble pour toute l'étendue du paye et pour toute période n'exté lant pas douze mois.

ll est bien entendu que, sous cette r serve, les Lois et Règlements existants et régissant les citoyens français qui voyagent dans l'Empire du Japon sont maintenus.

III.-Le Gouvernment Japonais s'engage, avant la cessation de la juridiction consulaire française au Japon, à adhérer aux Conventions internationales concernant la protection de la propriété industrielle et de la propriété list raire.

IV.-Les Piénipotentiaires soussignés sont convenus que le présent Protocole sera soumis aux denx Hautes Parties Contractantes en même temps que le Traité de commerce et de navigation signé en ce jour et que, quand ledit Trailé sera ratifié, les arrangements contenus dans ce Protecole seront également considérés comme approuvés sans quil soit nécessaire d'une ratification formelle subséquente.

Il est convenu que ce Protocole prendra fin et cessera d'être obligatoire en même temps que le Traité auquel il est annexé.

En foi de quoi, jes Plénipotentiaires des deux Pays ont signé le présent. Protocole et y ont ap-posé leurs sceaux.

Fait à Paris, en double exemplaire, le 4 août tRon.

(L.S.) Signé: Soné Arasuké. (L.S.) Signé: G. Hanotaux.

DÉCLARATION. Le soussigné, Envoyé extraordinaire et Ministre Plénipotentiaire de Sa Majesté l'Empereur du Japon, a l'honneur de déclater, dûmeut autorité à cet effet par un mandat spécial de Son Gouvernes cet.effet par un mandat spécial de Son Gouverne-ment, que le Gouvernement Impérial Japonais s'engage à ne pas faire la notification prèvne par l'article 24 du Traité signé aujourd'hui tant que les Codes de l'Empire qui ont déjà été promulgués, nais dont l'application a été ajournée, n'auront pas été mis effectivement en vigueur.

### WINTON HOUSE SCHOOL.

The breaking up exercises previous to the Easter indidays, and presentation of prizes to the hops of Wiston House School, took place in the School-room, No. 59-a Bluff, on Wednesday afternoon. In spite of the inclement weather there was a very fair attendance of relatives of the scholars and friends of the school, ladies largely predominating.

Mr. Jas. TRoup, H.B.M. Consul-General, took the chair and opened the proceedings with a few remarks. He said he had been asked by Mr. Schurt to be present on this occasion, but he had at first feared he would be unable to do so, on account of presente of official business. He was glad, however, to find he was able to attend. He had not prepared any was able to attend. He had not prepared any speech, and he thought it most probable that the boys did not want one. He might, however, telf them of a saying which had been inculcated to him by his schoolmaster in his boy-hood, "Whatever you do, understand all you learn as you go along." Don't learn like a parrot, the first thing was to understand thoroughly what they than they taken. as you go along." Don't learn like a parrot, the first thing was to understand thoroughly what they tearnt. He was sine their teachers did all they could to carry out this line in their instruction, but a great deal depended upon the boys themselves. He was glad to see them tooking so well and hoped that they would enjoy this building. their holidays.

dans ledit Terif, le Tarifgé éral du Japon s'appliquera, dès qu'il sera en viguent, sons réserve des stipulations de l'article 19 du Traité du 9 octobre 1858 ou des articles 7 et 18 du Traité conclu cripurd'hui.

Pater du jour où le nouveau Ta.if aura son UNIVERSITY OF ILLINOIS AT

O. Bramball.

R. Box. 

14.—"Schwabenstreiche" (in German)...F. Herb. 15.—"Captain Miles Standish"......W. Graham, Mr. Schurr, the Principal, said he had no report to read on this occasion, but was much gratified at seeing Mr. Troup present at the breaking up of the school, the more so as he feared it would be the last time Mr. Troup would be able to preside. He had feared for some time they would not have been able to have the meeting, owing to the prevalence of colds and measles among the boys—his own two boys were laid up at Kamakura with Mrs. Schurr, who regretted being mable to be present, but she was, he thought rightly, a mother first and schoolmistress second. Last year they had had the services of Mr. Low in the school, but he did not think they would have another master—they found ladies better than masters. Mrs. Salabelle was still with them, he was glad to say, and Miss Wilkin had helped them till Miss Rae came. He thought the tone of the school was as good if not better than ever. There was no bullying of the younger boys by the elder; in fact the latter helped the former in their games. A great many boys had left the port during the past quarter, two of whom they expected back. He might mention for the information of parents that the holidays were until the 20th histant—a fortalish hence. holidays were until the 20th instant-a fortnight hence.

Mr. Troup then presented the prizes as follows Mr. Troup then presented the prizes as follows: FORM PRIZES.—Class I. A. Deutici major. Class I. B. Thomson. Class II. Ribeito (a Postuguese boy, imperfectly acquainted with English). Class III. Dubois. Class IV. Clark minor. MATHEMATICS.—Class I. A. Deutici major. Class I. B. Watson. Class II. Gomman major. FRENCH (Mrs. Salabetle's prizes).—Class III. Schurr (made 193 manks to 99 made by the next). Class IV. Clark minor. Examination.—Class IA. Graham minor. Class IB. Watson. Class II. Colton. German (and Scripture combined).—Herb Term's Work.—Class III. Schurt. Class I A. Graham minimums and Loomis. Class I B. Smith.

Mr. Jas. Walter made a few remarks to the boys and proposed a vote of thanks to the Chair-man, which was carried with accamation, and the proceedings terminated with three hearty cheers by the boys for Mr. and Mrs. Schurr, the teachers, and the ladies.

## THE SUICIDE IN YOKOHAMA

There were some signs of meningitis, possibly induced by alcoholism, on the surface of the brain, and this might have had something to do with the state of the deceased's mind at the time immediately preceding death. Otherwise the body was healthy. healthy.

healthy.

Mr. Henry Collins identified the body as that of his second son. Witness was going to tiffin at 206 Bluff when, at the top of the staircase, he was told that his son had shot himself at the Cemetery. When he arrived there he lound the body lying by the grave of deceased's mother, and witness accompanied it to the mortuary. Deceased came up from Robe on Monday or Tuesday, and was going back in a day or two. The previous evening he was in high spirits, and said he was going back in a couple of days. He was very talkative and jolly on Wednesday night, as he usually was. Witness had once or twice asked him how his business was going on. He used to say business was not so good as it used to be, but it would soon be all tight again. He had never spoken of being was held to gain. He had never spoken of being in any serious financial straits. He was always healthy and strong; at times he drank rather more than his allowance, and witness had spoken to him on the matter. He was 28 years of age.

Charles Voicent Schmidt, of 206 Bluff, said deceased came up from Kobe on Monday. He believed he came partly on a holiday visit, and partly on business. On Tuesday he did not do any work; but walked about during the day. On Wednesday evening he was with witness till about 8.30, when witness left the house. He did not stop the same of the came of th 8.30, when witness left the tionse. The bid not notice anything peculiar in his manner; he was quite lively and in good spirits. A few minutes before 9 on Thursday moraing deceased came in and said he had been for a bicycle ride. Witness left the house at five minutes past nine, and did not see him again alive. Deceased had several times spoken to witness with regard to his business affairs. He said he was in a little difficulty, but that he would tide it over in a short time, and start afresh. He had lost some money in his transactions, but that did not seem to trouble him much. Witness had known deceased since he was a boy. He had seen him on several occasions under the influence of liquor; but he was not addicted to habitual excess. When witness saw the body it was lying on the back by the side of a grave. Witness left the house at five minutes past nine back by the side of a grave.

Maria Francisca Schmidt, sister of the last wit-Maria Francisca Schmidt, sister of the last witness, said deceased arrived at Vokohama on Monday evening. He was at home all day on Tuesday and seemed in his usual spirits. On Wednesday he was away on business, and in the evening he appeared very jolly. He went to bed at the usual ham, and witness saw him the next morning just before nine o'clock, when be returned from his bicycle cide. Afterwards he work his wife down to the Stitchmant bases of the returned from the bicycle cide. Afterwards he sent his wife down to the Settlement to see after his letters, as he was feeling very fired. He then asked for a piece of paper and pen, saying he would write to his brother in Shanghai. He would write to his brother in Shanghai. He actually wrote two letters, one of which he left with witness for the post, and the other he put in his pocket. He then dressed to go out. Witness tried to stop him, but as he wouldn't stop she and her two little nieces went with him. He told witness he was going to buy some flowers, but when they got as far as the corner he said he had changed his mind, and he would go to see a friend instead. He told witness she was to return home alone, but she said she should see a biend instead. He told witness she was to return home alone, but she said she should not do so, as his wife would be very vexed. He then said she had better go an slowly to the graveyard, and be himself got into a jin wikisha and went on. When witness arrived at the graveyard he was not there, but she was him come in shortly afterwards. Witness asked him if he had seen his friend. He replied that he had not hear to see a friend but had been to have a THE SUICIDE IN POROHAMA CEMETERY.

INQUEST AND VERDICT.

The inquest on the body of Mr. R. J. Collins, who was found shot through the head in the Yokohama Genetal Cemetey on Thursday, was held on Friday morning at H.B. M.'s Consultate before the form of the more and his staff. The troops under Mr. R. G. E. Forster, pro-Consul, sitting as Coroner; and a Juny consisting of Messirs, Altan Owsion, Charles Ellis, and Vivian Rothwell Bowden.

Dr. Murroe stated that he had examined the body and found a large wound of entrance on the temple about 1½ inches above and about an inchin front of the right ear. There was a good deal of efficient of biot in the trissum tought the was formed and the was quite dead. By this time the morban and biot the region of the swould. There was a nother wound on the opposite side of the head also in the region of the skull he found the was quited eaded. By this time the morban and about an inchin front of the right ear. There was a good deal of efficient of blood into the trissum tought the was destined to report the news to Miss. Gollins. The swould the was quited eaded. By this time the hoody and found a large wound of the morban and a crowd of Japanese acrived, and of efficient of blood into the discusse to the swould the was quite dead. By this time the hoody and found a large wound of the proposite side of the head also in the region of the was quite dead. By this time the hoody and found a large wound of the proposite side of the head also in the region of the skull he found the was quited eaded. By this time the region of the was quited eaded. By this time the hoody and found a large wound of the proposite side of the head also in the region of the skull he found the was quited eaded. By this time the hoody and found a large wound of the trist of the region of the wound. There was another wound on the opposite side of the head also in the region of the skull he found the trists of the lead of the head of the head also in the region of the skull he found the trists of the lead of th

he returned he looked a little excited and very

red in the face.

By the Jury: The reason he gave for wishing to go to the Cemetery was that he wanted to pay the momban's wife for flowers for his mother's

Nagi, the gate keeper at the Cemetery, said about it o'clock on Thursday two children came to him to say that a foreigner had shot himself. Witness reported the matter to the police. Deceased occasionally came to the cemetery to see his mother's grave.

Garrier Kircher, constable when at H.R.M.'s

his mother's grave.
George Kircher, constable under at H.B.M.'s
Consulate, said that he went to the graveyard to
superintend the removal of the body. He recognised it as that of Frederick Collins. On the
centre of decessed's mother's grave witness found
a hat with the note produced in it.
The Coroner read the note as follows:
Vakoluma March 22, 1808

Yokohama, March 31, 1898.
To the Coroner. I kill myself on my business effairs.

Yours respectfully,

FRED. J. COLLINS.
Witness, continuing, said that by deceased's ight side he found the revolver with one barrel

discharged.

A Juror asked II the children who were present at the time of the occurrence could give evidence. In answer to a question from the Coroner Mr. Collins, senior, stated that the children were aged about five and three respectively. He had spoken to them about it, and one of them stated that she

to them about it, and one or them stated that she saw deceased place some flowers on the grave, caise his hands as if in prayer, and five.

The Jury's verdict was: "We find the deceased came by his death from the effects of a revolver builet fired by his own hand at Yokohama Cemetery on March 31st, while in a temporary state of unsound mind."

The Coroner: I thoroughly concur in the verdict.

### RUSSIAN GARRISON ON THE PACIFIC LITTORAL.

A writer in the China Gasetts, discussing the subject of Russia's garrison on the Pacific littorat, subject of Rissia's garrison on the Pacific mions, remarks:—Vladivostock is, of comme, more or less well-known as being an important military station, as well as the head-quartersof the Russian Pacific Squadron; but it is not, as many suppose, the beginning and end of Russia's armed strength located in the neighbourhood. If the Pacific binned. litteral.

This part of the Czac's Asiatic Empire is known as the Pri-Amer military district, and includes the provinces of Primorsk, Trans-Baikal, South Ussuris, and the island of Saghalien. It is bounded on the morth by the Arctic Ocean, on the west by the southern and eastern lines of the Likutsk province, on the south by the Russo Crinese fronter, and on the east by the Northern Pacific Ocean. Now, although Vladivaluck is its most important part, and has been stock is its most innortant port, and has been strongly enough fortified to bring it up to the classification of a third-class Russian fortiess, the town itself is not the head-quarters of the military town thell is not the head-quarters of the military district. The latter is located at Khabarovsk, the former capital of the province, a small town situated 456 feet above the level of the sea at the confluence of the Amur and Ussni rivers. By the former of these waterways Khabarovsk is placed in direct communication with the port of Nikolaovsk, 410 miles away, which, in turn, is 32 miles from the month of the Amur in the Pacific. During the summer months a regular service of steamers plies up and down the river between these two points, and continues up the U surito Khabarovsk.

the Line, a comparatively new force, consists of ten frontier battalions, each battalion being composed of 18 officers and 1,000 cank and file. Their uniform is of the usual shade of dark-green with red facings and light blue shoulder straps, while the head-dress is a large black sheepshin cap. These troops, like the others we are about to enumerate, are still armed with the old Berdan single-loader.

The Cossack Infantry includes only two and a The Cossack Infantry includes only two and a half battations, the whole battations each numbering 28 officers and 800 men, the half-battation 12 officers and 483 rank and file. The uniform wome by this force is dark green, with yellow piping and shoulder-straps, while the headdeess is a black sheepskin busby, 10 inches high, with a yellow top. The Ussurian, or Pacific Littoral, Cavairy is a kind of gendarmerie forming two squadrous of five officers and 150 men apiece, though there are only 131 horses to each squadron. The two regiments of Regular Cossack Cavairy are constituted as follows: first regiment, 6 squadrons, total strength, 41 officers, 081 privates; second regiment, 4 follows: hist regiment, 6 squardrons, total strength, 4 efficers, 981 privates; second regiment, 4 aquadrons, total strength, 34 officers 620 privates. Each Cossack Cavalry regiment carries a regimental guidon, and there are burgee-shaped squadron guidons as well of the following colours: Let squadron, scarlet; 2nd squadron, blue; 3rd squadron white; 4th squadron, darkgreen; 5th squadron, yellow; 6th squadron, cinnamon brown. The East Siberian Field Artillery-Brigade is composed of six four-gun batter. green; 5th squadron, yellow; 5th squadron, cinnamon brown. The East Siberian Rield Artillery-Brigade is composed of six four-gun batteries, armed with the 3 42-in-lingth steel field gun of the French de Bauge pattern, which since 1892 has laken the place of the discarded steel Kinpp. To each of the second and third field batteries in attached half a mountain battery. The detailed strength of the artillery buts will be found in the table given below. There are in addition two Cossack Horse Artillery butsteries of four guns arch, each battery consisting of six officers, 272 each, each battery consisting of six officers, 233 combatants, and 120 horses. The uniform of the artillery arm is a dark-green tunic, grey-blue breeches, and scarlet girdles and shoulder-straps.

The strength of the fortress artillery detach The strength of the fottess artillery detachments in Bastern Siberian is difficult to ascertain. Provision is made for three companies, two of 340 officers and men each stationed at Vladivostock, one of 104 at Nikolasusk. It is extremely probable, lowever, that with the completion of the new forts at Vladivostock this force has been largely augmented. The East Siberian Sapper Company consists of six officers, 238 men, including the heliographists and field telegraph detachment; but the Cossack Cavalry regiments. it ment; but the Cossack Cavalry regiments, it should in added, are also supplied with material for constructing field telegraphs and telegraphones. Therefore, without taking into consideration the departmental, medical, and transports corps, the Russian garrison on the Pacific litteral, before the recent reinforcements were made, were as

The strength of its reserve, that of good loads. The arrength of a lease year is, time-expired men who have settled in this part of the Carr's dominions, is problematical. It is said, however, that 8,000 infantry, 2,000 cavalry, and some 400 artillery old soldiers would be forth coming in case of emergency. The figures above given have been more than trebled of late by constant arrivels from Odessa.

According to the very latest information which has reached us, two West Siberian Line Batta-

military district has been reinforced by the expansion of the existing half mountain batteries into complete batteries on war strength. Of technical troops, a special Fortress Sapper Company, in-cluding a torpedo detachment, has been formed for Vladivostock.

### ENGLAND'S WAR PREPARATIONS.

" PRACE WITH HONOUR, OR WAR WITH VICTORY.

London, March 10.
The First Lord of the Admiralty, Mr. Goschen, in presenting the naval estimates to the House of Commons to-day, pointed out that, with the outlay in naval works, the expenditure amounted to the colossal sum of £25,550,000 (\$127,750,000), which, he explained, was even considered inad-equate in some quarters. Continuing, Mr. Gos-chen explaned that the navy was in a transitional state, to which many of the admitted deficiencies were due. Moreover, he added, the Government was introducing a series of improvements. The Jubiles display had been great, but the navy had not reached the ideal standard. He dilated upon the quiet and unostentations increase of the British fleet in Chinese waters by four vessels from other foreign stations as being an instance of the naval preparations and assured the House that in the distribution of cruisers, for instance, the Admiralty had considered carefulinstance, the Admiralty had considered carefully the protection of every trade and every
food-supply conte, and he trusted that "if times
darkened," the Admiralty would have the
confidence of the House and the Admiralty
would be found doing its duty. He denied that
the navy was undermanned, declaring that every
vessel which took part in the Jubilee review was
as fully manned as it would be in war time.

Mr. Goschen deplaced the recent industrial strug
gles, and appealed for an increase of pay for the
British seamen of the merchant marine, savine that

British seamen of the merchant marine, saying that British seamen of the merchant marine, saying that if, from false economy or impossible conditions on either side, British sailors and ships were ousted by foreigners, then "God belp us." He concluded: "If peace shall again reign in our centres of industry, and if the nation that calls herself mixtuess of the sea reassets herself by an inmisties of the sea reassets herself by an increase of merchant seamen, then the nation may look forward in confidence that if there be peace it will be peace with honor; but if war, which God forbid, it must be war crowned with victory." (Prolonged cheers.)

Mr. William Allen (Radical) advocated greater efforts, and moved an amendment that greater accordings be made for manning the fleet.

provisions be made for manning the fleet.

Rear-Admiral Lord Charles Beresford (Con-

servative), seconding the amendment, urged a larger reserve of men and suggested that Great Britain should buy all the vessels now building in England for other conotries.

The House rejected Mr. Allen's amendment. Many members urged an increase in the Naval

Sir Charles Dilke (Radical) said : "Every one must feel that the circumstances are such that we might find ourselves in war with an European Power, and that there is some risk that two other European Powers might be disposed to seize the opportunity to make demands we would seize the opportunity to make demands we would be indisposed to comply with. Nevertheless, the present estimates are the estimates of procrastination and delay. The condition of our navy, compared with those of other nations, is worse than it was two years ago."

Mr. Goschen, in a general defence of the estimater, said he thought it would be better in a time of crisis to complete and organize available estate and arounces than to decote their oversies.

to building vessels that would not be ready for three years. If there had been two or three first-class battle-ships for sale in England, he would probably have asked for money to purchase them, but there was none such for sale.

The discussion was then dropped,

### OUR INDIAN FRONTIER.

### ARE WE SAFE FROM RUSSIA?

Landon, March 7th. The House of Lords was unusually crowded to-day when Lord Roberts, commander of the forces in Ireland, made his expected speech in favour of a forward policy on the Indian frontier, putting forward the Russian perit and declaring According to the very rates has reached us, two West Siberian Line Battahas reached us, two West Siberian Line Battalions have been ususferred to Bustern Siberia and
putting forward the Russian peril and operation.
The previously existing 8th East
Siberian Frontier Battalion, augmented by 16
companies from European Russia, has been converted into the Vladivostock Fortress Infantry
Regiment, which now consists of 5 battions, each
of 4 companies.

The attillery in that is Appearance of India was only a matter of time.

UNIV that the policy of non-interference with the frontier that the policy of non-interference with the fronties tibes had been a complete failure. The speaker advocated the advance of British rule across the mountains, and traced the advance of Russia, anying that if she once crossed the Hindoo Koosh

The Earl of Onslow, Under Secretary for India, replied, pointing out the enormous cost of Lord Roberts' policy, which, he said, would impede the internal progress of India. He thought the dread Russian spectre hardly justified it. The ultimate destiny of the tribes was civilization, but the moment was inopportune to hasten it.

The Marquis of Lansdowne, Secretary of State for War, said the Government's policy was to keep the main pass open and to establish control over the tribes with a minimum interference in their domestic affairs.

After further discussion, the House of Lords adioumed.

### THE BOMBAY PLAGUE RIOTS.

Bombay, March 9th, Serious plague riots have occurred in the native quarter, and the outbreak is regarded as the most alarming that has occurred in India in many

The trouble arose through a plague party in-quiring into the cause of the sickness of a Mohammedan woman. An enermous crowd of Mohammedan woman. An enermous crowd of caste men gathered and stoned and mobbed the party, which retired for an escort of armed police and then returned and demanded the sucrender of the patient, which was refused. A Parsee magistrate, who exhorted the populace not to resist the police, was himself struck, whereupon he ordered the police to charge. They did so, and four Mohammedans were killed and several were wounded. wounded.

The disturbance spread with alarming rapidity. The Mohammedans, who were joined by the Hindoos, assaulted every European or Eurasian they met, and a hysterical mob attacked European dwellings in the suburb of Bycaulla. The residents barricaded themselves in their houses and food blank carticides from their houses and fired blank cartridges from their windows, which drove the cioters off Two members of

members of the Shropshire regiment I wo members of the Shropshire regiment were killed walking unarmed. The mob battered in their skulls. Many European officers and many policement were severely handled and seriously injured. In several instances Europeans who were traversing the native section of the town alone were beaten or stabbed.

The such attacked the lamestice Hospital

The snob attacked the Jamestjee Hospital and hadly wounded Mr. Gillespie, the house surgeon, but was repulsed by rifle volleys, and several of the rioters were killed.

The total deaths resulting from the riots are two soldiers of the Shropshire Regiment killed, a numicinal inspector, who accidentable shot himself.

a municipal inspector, who accidentally shot him-self, four European and four native policemen, with seventeen civilians in jured; nine ricters killed and twenty-two injured. One hundred and nine

arrests were made.

#### THE SOLAR ECLIPSE IN INDIA.

The St. Yames's Budget gives the following interesting account of the solar eclipse as it was observed in India :-

The party, consisting of Sir Norman Lockyer, K.C.B., F.R.S., Mr. Fowler, F.R.A.S., Dr. W. J. S. Lockyer, M.A., and the Macquess of Graham embarked on board H.M.S. Melponens at Colombia for Viziadioog. During the passage Sir Norman called for volunteers to assist in the furtheoming operations, with the result that all the officers and about 120 men put themselves at his disposal for various services. Lectures were given by the aid of the magic-lantern, the ship's com-pany evincing a keen interest in the subject.

The Melpomene arrived at her destination on January 7, and auctioned off the old fort of Vizia-droog. A suitable site was soon selected in the fort for the erection of the numerous justimments, and, all hands setting to with a will, everything was ready for rehearsal by the 13th, and from that was ready for rehearsal by the 13th, and from that day drills were carried out assiduously. The various instruments were enclosed in small huts constructed of matting, wond, and other material; these buts were given humorous natures, such as "Crystal Palace," "Central Hotel," "Empire Palace," &c., by the bluejackets. The legends, "H.M.S. Malpomene, 1898," and "Eclipse, 1898," were also painted in large letters on the walls of the loft in proximity to the eclipse camp. On account of the abundance of snakes at Viziadnog, every one fanding was obliged to wear gaiters. gailers.

gaiters.

The eventful day, the 22nd, was an extremely fine one. From daylight not a cloud appeared in the sky, and this state of things continued right up to and alter the end of the phenomena. At 11.15 a.m. the echpse began, the landscape, however, not altering appreciably till about five minutes after, when it began to darken gradually; and within five minutes of totality it appeared as on a very bright mountight night, and continued so up to the instant of the commencement of totality. Then, indeed, the scene was glurious. The moon appeared a black disc over the solar body, and in places flower suppeared to shoot out, and the brightness of the corona was most dazzand the brightness of the corona was most dazz-ling. Polar riffs appeared at an angle of about 23 degrees with the perpendicular, and flaming rad proluberances projected from the moon in various places. Four great streamers on either side ex-tended millions of miles from the sun's position. The heavens darkened to a very deep blue, and stars should out in many places. By the horizon and over the land the sky assumed light-pink and yellow tiots, and neutral in the north-westward. The sea changed from a bright greenish-blue to a rich dark-blue, except in some calm patches and close to the stays of these in calm patches and close to the shore, where it was a very light shade of blue. The land, with the exception of some distant hills which were of a

exception of some distant times which were or a neutral tint, assumed a dense black aspect.

The effect on the seaguils was indeworthy. These birds, which had been sitting quietly on the water, one at the commencement of totality, and flew off towards the southward, without uttering any sounds, returning, however, in a few seconds while totality was still on, and again settling on the water. There they equalited till Digitized by Google

about forty-five minutes after the end of torality, when they became very lively and commenced their fishing operations. Some livestock on board their fishing operations. Some livestock on board the Melpomene, consisting of a puppy, a monkey, a goar, and some portiry, did not take any apparent notice of the phenomenon. At the and of totality, darkness appeared to be suddenly semoved from the earth, and the landscape gradually assumed its proper column. It was interesting to watch the proceedings of the natives. It appears that they hold different ideas on the causes of columns, some imagining that evil spirits causes of eclipses, some imagining that evil spirits called "Raxas" wrestle with the sun and moon; others that a demon or diagon swallows the sun. To prevent these catastrophes, they fast for many hours before the phenomenon takes place, and during totality it was observed that many of them bathed in the sea and howled for about three minutes to frighten away the evil spirits, and thus save the sun from its fate. One important addition to the instruments brought out from England by Sir Norman Lockyer was Lord Graham's cinematograph, an instrument which has never before been used on similar occasions, and with which the owner obtained very interesting results, Lientenant Blackett, who volunteered to observe the stars, saw a heavenly body appear between Venus and Mais, which has not before been reposted.

by the Armstrong Company, made a most suc coasful trial trip on the 6th instant.

PRINCE Henry of Prussia left Hongkoug on the Gefion for Shanghai on the 13th inst.

Two men were run over and killed on the Tokyo-Yekohama railway on the 13th inst.

THE first number of the Yokohama Shimban, a new organ of the Liberal Party, is to appear on

ENGLAND will spend two million sterling in the construction of an arsenal and dockyard at Wei-hai-wei.

A FRENCH post-master is to be appointed for China, after the postal affairs shall have been separated from the Customs.

H.M. THE EMPEROR presented a sum of 5,000 yen towards the cost of the celabrations of the 10th instant in Tokyo.

The Oten-Baba railway line is to be opened on the 15th May, to run in connection with the Taiko Steamship Co.'s vessels.

A REPORT from Canton states that the authorities there have issued a notification strictly prohibiting the export of rice.

THE Educational Department has called Council of the Principals of the High Schools in the country to sit in Tokyo from the 20th inst.

Ir is stated that on the exchange of the treaty between Japan and Siam, which will shortly take place, a Siamese Legation will be opened in Tokyo.

THE steamer Mogal, which left Yokohama on Tuesday for America, look 935 emi-grants for Hawaii. Other 200 labourers also left Yokohama the same day for Hawaii by the Gaelic.

Tur Deutsche Dampfschiffs Rhederei Hamburg, or Kingsin Line, have sold their fleet and interests in the Far East to the Hamburg-America Company, which has just started running steamers to this part of the world.

On the 8th instant the holler of a locomotive on the Fukuoka-Koga section of the Kinshin Railway exploded, killing three and injuring several persons, also damaging some station buildings.

VISCOUNT Tanaka, Minister of the Imperial Household Department, will give a series of entertainments at his official residence at Kojimachi, Tokyo, on the 13th 14th, and 18th inst. at 7.30 p.m.

THE Dai-Nihon Teikoku Suinan Kyusai-kai (Japan Marine Rescue Association) of which H.I.H. Prince Arisugawa is President, rescued during last year 51 vessels, mostly fishing boats, and saved 234 lives.

FROM the 31st March to the 7th instant there FROM the 31st March to the 7/11 instant there were 3 new cases and 3 deaths from plague in Taipeh, 24 cases and 16 deaths in Tongchow prefecture, 16 cases and 12 deaths in Kagi prefecture, and one death in Tainan prefecture.

THE Nippon Yusen Kaisha have ordered from England three steamers of 20 knots speed, to be called the Nos. 1, 2 and 3 Aomori Maru, which are to be finished by about September next. The vessels are intended to run between Aomori and Hakodate.

THE Committees of the U.S. House of Representatives and Senate have both reported in

to use the forces of the United States to secure Cuban independence.

THE treaty concluded between Russia and China concerning Talienwan and Port Arthur expressly provides for the partial opening of the former for foreign trade, while only ships flying Russian or Chinese flags will be permitted to enter the latter port.

THE Isunch of the steamer Hitachi Mars (6,000 tons displacement) of the Nippon Yusen Kaisha took place at the Mitsubishi Shipbuilding Yard, Nagasaki, on the 16th inat. This is the first vessel of so large a size as 6,000 tons built in Japan.

AT a fire on the night of the 7th inst, in the Yoshiwara, Tokyo, 11 houses were totally and 7 partially destroyed. Owing, it is said, in the height of the buildings and the narrowness of the street where the fire occurred, no fewer than 15 firemen were more or less seriously injured.

THE Yokohama City Office is about to offer for subscription Water Works Bonds to the amount of 400,000 yen at a minimum ratio of 95 yen per 100 yes face value. The list will be open from the 15th inst. to the 14th May. The Bonds will be issued in denominations of yes 1000, 100, and 50, and will bear interest II 6 per cent.

On the 10th instant a grand fête was held in Tokyo in celebration of the 30th anniversary of its adoption as the capital of the country. The Emperor and Empress were present and received congratulatory addresses and there were namecongratuatory audresses and more were numerous picturesque processious and a variety of dances and other entertainments in Uyene Park and many of the principal thoroughfares. The festival generally proved a great success.

THE Import market in Yokohama 🖥 lifeless in the extreme, with little prospect of any im-mediate recovery. No transactions whatever have been reported during the week in cotton piece goods, yarns or woollens. Some cargoes of raw cotton have arrived at the southern port of raw collon nave arrived at the southern port from Bombay, for the cotton spinners, but nothing is doing locally. Of metals the same may be said an of cottons. Goods ordered months ago remain on the hands of importers, the buyers being unable in take delivery. Little business has been transfered in Karoana but halders are not discount for the same of delivery. Little business has been trans-acted in Kerosene, but holders are not disposed to lower their prices in view of the possible cessasion of supplies from America in the probable event of war. There is a large quantity of cheap Sumatra oil on the market. A fairly good business has been done in augar, both brown and white refined, at a slight increase in price. Arrivals of brown from Formoza have been large and the market is now well supplied. Heavy shipments of Salgon, Tongking and Rangoon rice continue to arrive, and it is anticipated that there will be a considerable fall in prices both of foreign and native grown grain, as soon as the first crop of Japan rice is put on the market. In Exports nothing has been done. No sales of silk have been effected even at considerably reduced prices and there is scarcely any tea of acceptable quality left on hand, sample of the new crop has arrived in Yokohama during the week. It was at first expected that the season this year would be later than usual but the change in the weather during the week has brought the plants forward and it is now anticipated that the cropping will begin about the usual time. Prices are expected to rule considerably higher than the average owing to the A REPORT has been received from London that favour of immediately requesting Spain to with the new Japanese cruiser Takasago Kan, built draw from Cubs, and instructing the President Very further base been done in secondary exports.

#### SPIRIT OF THE VERNACULAR PRESS.

In the course of the week we have spitomized the utterances of the week we have spitomized the utterances of various journals with regard to Japan's foreign policy. We now add later utterances, showing at the last a change of tone which can not fail to strike our readers.

The Nicht Nicht Shimbun refrains from engaging in, any discussion with the politicians who are now agitating for the adoption of a "strong foreign policy." It applauds their patriotic intentions, approves of their activity, and invites them to explain what they mean. At their meeting in the Kairaku-yen they adopted two resolutions: the first, that Japan must enter a protest against the actions of Germany and Russia in Shantung and Liaotung; the second, that, should her protest prove unsuccessful, she must take special steps with regard to Wei-hai-wei. But they failed altogether to set forth the grounds of the protest or to give any distinct idea of the procedure to be ultimately adopted with regard to Wei-hai-wei. Is it their purpose that Japan should stand forth as the champion of international law, and insist on the reversal of the steps already taken by Germany and Russia as evil precedents irreconcilable with any rules of inter-state morality? Or is it their purpose to recognise that what is done can not be undone, and that the only recource for Japan is to retain possession of Wei-hai-wei? Secrecy is often necessary in diplomacy. The officials charged with the conduct of a country's foreign affairs are frequently obliged to observe strict reticence. But the case is very different with party politicians. Their views derive force mainly as politicians. Their views derive force mainly as expressions of public opinion, and it is therefore necessary that they should formulate their ideas clearly so as to enable the nation to pronounce judgment on them. What is to be the fashion, then, of this protest advocated by the Progressist leaders? On what grounds is it to be based? And what is to be the nature of the procedure adopted in the case of Wei-hai wei? Japan's sole right to occupy the place is derived from the Shimonoseki Treaty, and lapses when the terms of that Treaty are fulfilled. Hence, when the whole of the Indemnity is paid off. her title to hold Wei-hai-wei disappears, and if she wants the place, she must obtain it by some new process. What is that process to be? The Progressiat leaders must see that until they distinetly formulate their programme, they can not expect to secure the cooperation of intelligent persons.

The Tokyo Shimbun (Liberal organ) takes the line that this agitation is entirely an affair of party politics and that the Progressists are or party pointes and that the Progressias are sacrificing the interests of the country on the altar of personal ambition. The men who figure as leaders of the movement and clamour for a strong foreign policy, are the same men that supported the last Cabinet when it tunnely allowed the Yamagata Lobanoff Convention to he trainpled under toot and suffered Japanese rights to be ignored even by Hawaii. sincerity is more than questionable. They carry party politics into the domain of foreign They affairs, and are willing to make the Empire's difficulties a means of climbing into office. It is true that Japan was treated most treacherously in the matter of Lisolung. She was turned out of it under the presence that her presence there of it under the presence that her presence there would endanger the peace of the East, the real reason being that the Power chiefly instrutental in turning her out wanted the territory for itself. That humiliation will never be forgotten by her people. Yet, even had they gauged the depths of the injustice practised accepted them. gainst them, they were powerless to resist. The country had a hundred and twenty thousand men beyond the sea. Its ships were scattered here and there guarding distant lines of commu-nications. Its armaments were more or less To have defied Russia, Germany, and France would have been to change victory beyond the movements in Formosa derive Chinese support, seas into peril at home. The situation is not The Hochi does not attempt to explain what

there is no material accession of strength. The armaments' expansion programme has not been carried far enough towards completion to add appreciably to the nation's fighting capacities. Apart from the fact that two line-of-battle ships have been added to the navy, things are much an they were three years ago. It would be merely idle bravado to take the field against a great foreign Power at present. The politicians who met in the Kairsku-yen a few days ago, and adopted magniloquent resolutions, knew that they were formulating an impossible programme.

The Hochi Shimbun seems in have made a distinct volte-face. It wrote recently in a strain that amounted to a distinct declaration of the necessity of fighting Russia. It now says that the time has passed when even a protest can be usefully lodged by Japan, and that, were she to raise her voice now, she would be like a mother talking to a dead child. Besides, what would be the result of a protest? There is not the remotest chance that Russia and Germany could be induced to give up the acquisitions they have made in China. They would fight to the death rather than do that. The politicians now agitating against the Government accuse the Cabinet of dilatoriness, but their own action is conspicuously belated. It is futile to talk of advancing protests against accomplished facts. The only courses now before the country are either to retain Wei-hai-wei or to give it up. That is the sole question. In order to retain it there must be some pretext. With the payment of the last yes of the Indemnity Japan's title to occupy the port dis-appears. Robbery with violence (kiridorigoto) has become the rule of international intercourse now-a-days. If Japan thinks of adapting her conduct to that rule she had better consider whether it is a rule that makes for the stability of a State. Her arbitrary retention of Wei-hai-wei after the conditions binding her to restore it had been fulfilled, would mean her accession to the ranks of the national burglars. other hand, it is not to be denied that the condition of affairs in the Far East has undergone an alarming change. Russia may be said to have come into possession of Manchuria; England, of the Yangiszs valley and all central China as well as a part of Shantung; France, of Southern China, and Germany of Kiao-chou. If, under these circumstances, Japan thinks it necessary to prefer some demands in the honest interests of her trade or for the sake of the maintenance of the peace of the Orient, let Let prefer them by all means.

The same journal in a later article writes very strongly in favour of Japan's seeking to redress the situation in her own interests redress the siluation in her own interests by obtaining from China some port as a set-off for the alienation of the Liaotung Peninsula. The places indicated as suitable are Ying-kow (Newchwang); Pitsu-wo (on the east of the Liaotung Peninsula, some 70 miles north of Talien); Taku shan (on the northero listoral of the Yellow Sea, a few miles westward of the month of the Yalu River); Wei-hat-wei; Foo-haw, and Amoy. Apparently our contemporachow, and Amoy. Apparently our contemporary would prefer one of the three places first mentioned, since they all figured prominently in the Manchurian campaign of 1894-5. It was from Taku-shan that Lieut.-General Viscount Katsura struck inland on his march to Haicheng. Pisu-wo may be regarded as the landing place of Marshal Oyama's army prior to the assault of Port Arthur. The capture of Yingassault of Port Arthur. The capture of Ying-kow virtually ended the Manchurian campaign. The Hochi thinks that, whatever may be the commercial advantages of Talien in the future, the place is at present inferior, as a mart of trade, to either Ying-kow, Pitsu-wo, or Takushan. With regard to Amoy and Fonchow, the idea is that their possession by Japan is neces-

and Ying-kow, are already opened to foreign But it does explain very fully the terms in which Japan's application to China should be couched. In fact, it gives a draft of the right kind of despatch, and we are bound to say that the language of the document belongs to an exalted rank of diplomatic speciousness. There is a long array of words, but the gist of the whole thesis is that Japan, commiscrating China's weakness, and appreciating the danger of disruption that threatens her, advises her to hand over some important points to be guarded by her neighbour, so that the two Powers may act in concert to stem the cantward set of the tide of Occidental aggression.

. . The Nippon has two articles on foreign policy. The first recapitulates the reasons that should have induced Japan to oppose the leasing of Port Arthur and Talien to Russia; the second is devoted to showing that, although England has sought and obtained Wei-hai-wei as a naval station, her policy towards China, unlike the policy of Russia and Germany, is not a policy of territorial aggression but a policy of pages and commencial aggression but a policy of peace and commercial expansion. She has made it quite plain that the preservation of China's integrity is her desire, and if, in view of the impossibility of preventing the realization of a part of Russia's ambitious designs in the Lisotung Peninsula, she has been obliged to lease Wei-hai-wei as a measure of self-protection, her real attitude towards China is not altered. Japan and England have a common policy in the East, and it is quite easy to see that the British Government tried to induce Japan to join in putting some back-bone into China vis-d-vis Russia. But the Ito Cabinet was not to be roused to action. Of course the Nippon's general conclusion in that things have been bungled, that the country has lost its opportunity, and that Japan has been guilty of suicidal self-effacoment.

The Chuo Shimbun also has three long articles on foreign affairs. They are devoted mainly to showing the difference between England's policy and the policy of Russia, Germany, and France. England employs her armaments to protect her trade; Russia, France and Germany employ theirs to extend their trade. The general tone of the Chuo's writing is highly enlogistic of England, but the conclusion arrived at is that might is right now a days, and that diplomacy not backed by force is fullle. From those propositions our contemporary goes on to prove that Japan is not in a position to raise valid objections to the doings of the great Western Powers. She protested with justice against her treatment by Hawaii,—a petty little State—nearly # year ago, and she carried her protest to America; but there has been no result : all talk of the Hawaiian affair has ceased to be heard. She would fare similarly now if she attempted to interfere with arrangements which are dictated by interests too large to be neglected or treated lightly. The Chuo thinks, in short, that people who counsel a self-assertive policy on Japan's part at this juncture take no adequate account of the forces at work in shaping present events.

The Kohumin Shimbun infers from Mr. Balfour's statement of England's Far-Eastern policy that some kind of understanding has arrived at between her and Germ iny, and expresses keen reg et that its often uttered hope of an Anglo-Japanese entente has not been realized. At first sight it may seem that England's proceduce with regard to Wei-hai-wei is more or less hostile to Japan, since the latter is still in occupation of the place. But no such idea can survive close scrutiny. Neither Power desires Wei-hai-wei for the sake of the place itself or as a territorial acquisition. Both have sary to the preservation of good order in For- a common object—the preservation of the mosa, since it is from these places that seditions balance of power, and therefore of peace, in the movements in Formosa derive Chinese support. Far East. If Japan insisted on keeping Weiwould have been to change victory beyond the seas into peril at home. The situation is not greatly altered now. The would be procedure would be likely to procure for Japan the war are healed, it is true, but, as yet, the lease of ports, which, like Amoy, Foothow,

Japan has valid reasons for evacuating it, the latter's obvious course is to seek some other suitable place. That is the gist of the Kokumin's writing.

The Mainichi Shimbun has a sensational article complaining that the blood shed Manchuria mid Shantung was spilled in vain, and that the spirits of the patriots who died for their country in the war with China must be vexed at the futile results of their bravery and devotion. There is a great deal of severe general criticism of the Cabinet, but even the Mainichi has arrived at the conclusion that it is too late for Japan to attempt to interfere with accomplished facts, and that her statesmen should direct their efforts to obtaining for the country some foothold on the Asiatic continent which shall restore the balance ot power.

#### THE JAPAN RAILWAY COMPANY.

The general meeting of the Japan Railway Company was held on the 6th instant at the Young men's Christian Association Hall at Kanda, Tokyo, when 330 shareholders, toge-ther with 660 agents representing 5.540 shares, were present. The Company has been divided into two parties-Conservatives and Reformers, the former headed by Mr. Shibusawa and the latter by Baron Asano; and a keen debate took place. Mr. Shibasawa was in the chair, and, in behalf of the principal officials, spoke apologetically of errors in the management of the Company's affairs.

Mr. Shibahara moved that, though the resig-nation of the principal officers was based on the failure to obtain Government sanction to the reformed bye-laws of the Company, this ought not to be a plea for so sweeping a step. He enquired if there was any private reason for the proposed resignation.

Mr. Shibnsawa replied that the sense of res-ponsibility alone impelled him and his colleagues to resign.

Viscount Soga then touched upon the un-natisfactory condition of the Company, urging the absolute necessity of reform.

After much discussion the election of officials was undertaken, the results obtained being as follow:—Directors—Mr. Mori Jinsuke, Marquis Asano Chokun, Messrs. Yamamoto Chokusei, Shibusawa Yeiichi, Futatsubashi Gencho, Kume Ryosaku, Marquis Saionji Kobo, Messis. Atachi Taro, Shirasugi Seiai, Kakuda Rinbei, Kikuchi Choshiro, and Fukagawa Ryozo. Mesais. Walanabe Fukusaburo, Hisano Shoichi, and Hayashi Kentoku were chosen as auditors.

According to the investigations of the Nippon the holders of over 10,000 shares of the Comthe holders of over 10,000 shares of the Company are as follow: —Marquis Asano, 212,423; Mr. Iwasaki Kiuya, 39,817; Mr. Iwamurs Michitoshi, 22,492; Marquis Mayeds, 17,978; Marquis Tokugawa, 15,424; the Mitsui Bank, 14,591; Marquis Shimazu, 13,947; Marquis Tokugawa Girei, 10,626; Marquis Nabeshima, 10,230. The greatest difficulty is experienced in selecting a President and Vice-President well qualified for the respective posts. Mr. Mori was nominated as President until August.

The agitation for reform seems to have been headed by Marquis Saionji, but another moving spirit, says the Nippos, is Mr. Adachi, of the 15th National Bank.

#### DEPARTURE OF COUNT AND COUNTESS DE PIMODAN.

Count de Pimodan, Military Attaché of the French Legation, and Countess de Pimodan, left Tokyo by the 4.10 p.m. train from Shim-bashi on the 12th instant. A large concourse of friends assembled at the station to say farewell, among them being nearly the whole of the Foreign Corps Diplomatique, several Japanese Admirals and Generals, the Vice Minister of the War Department, the Grand Master of Admirais and Generally, the Grand Master of the War Department, the Grand Master of Ceremonies, and a number of the foreign residence in the Roman Catholic Cathedral, ing imports. In regard to these no step taken by took place in the Roman Catholic Cathedral, ing imports. ents of Tokyo.

#### JAPANESE IMPORTS AND EXPORTS.

Commenting upon the growing inequality of the exports and imports, the Mainichi says that the approach of the period for enforcing the new Import Tariff tends to increase the tradal disadvantage against this country. Below are the figures for the past three months :-

GOODS. Excess of imports ...... 32.359.708 Export of bullion ...... 29,00x,385 Import.... Excess of export ....... 26,388,873

These figures refer to Yokohama and Kobe alone, In no previous year did the excess of imports reach such an enormous amount as 15,310,000 yes within a single month. Yet that was the case in March, the total excess for three months being no less than 32,360,000 ven. The direct consequence of this inequality was the exodus of gold to the amount of 26,400,000 yen ap proximately. The Mainichi adds that over 50 millions must be expected to flow out of the country by the end of the year.

#### DISASTROUS COLLISION OF STEAMERS.

ONE VESSEL SUNK AND ANOTHER BEACHED. Telegrams have been received from Moji and Kobe reporting that on Sunday last a collision occurred at Moji between the N.Y.K. steamer Toyothima Maru and the Taiko Maru, by which the former was sunk almost immediately and the latter received such considerable damand the latter received such considerable damage that she had to be beached to save her from foundering. Two boys belonging to the crew of the Toyoshima Maru were drowned, but the rest of the crew and two hundred passengers on the Taiko Maru were saved, mainly by the boats of the gaubout Othima Kan, which was at anchor in the port. Mr. Garry, the diver of the Nippon Yusen Kaisha, was despatched from Yokohama on Monday to see what can be done to raise the Toyoshima Maru.

A vernacular paper, translated by the Kobe Herald, gives the following particulars of the disaster to the steamers Toyoshima Maru and Taiko Maru: On Sunday evening at about 9 when the NY.K. Chemulpo liner Toyoshima Maru was about to enter Moji, the Tuiko S,S. Co,'s steamer No. 1 Taiko Maru struck her on her starboard side. The Taiko Maru was beached to prevent her from sinking. The Toyobeached to prevent her from sinking. The Topsshima received an ugly rent in the side, into
which water resued so freely that she went
down within 25 minutes of the accident.
Fortunately, H. I. J. M. S. Oshima Kan was
in port. The accident was observed by the
officer of the watch. The warship fired
three guns, as a warning to those able to
render assistance. Notwithstanding the fact
that the diseaser occurred at night time, no that the disaster occurred at night time, no lives were lost. The Toyoshima is a steamer of 1,109 tons gross and 687 tons register. had about 490 packages of goods from Osaka, representing a value of about 9,000 yen, heaides 29 packages from Kobe, valued at 2,666.50 yes. All the mail matter was saved. The place where she sunk is about 5 fathoms deep, so that the top of her funnel in about 7 feet above the water. The Taiko Maru is a steamer of the water. 12 tons gross and 311 tons register, and was built in 1891.

#### MARKIAGE OF M. DE GRUBISSICH AND MADEMOISELLE DE POURTALES.

Tsukiji, on the 12th instant at 10 a.m., in the presence of a brilliant assembly, including all the Foreign Chefs de Mission and the staffs of the Foreign Chels de Mission and the stats of the Legations in Tokyo, several of Her Majesty the Empress' Ladies in Weiting, Baron Samo-miya. Graud Master of Ceremonies, and Baroness Samomiya, Viscount Kagawa, Chief Chamberlain to the Empress, Marquis and Marchioness Nabeshima, Mr. Komura, Vice-Minister of State for Foreign Affairs, Viscount Aoki and many other distinguished personages. the ceremony the happy couple set out for Miyanoshita, whence it is their intention to proceed to Kyoto before returning to Tokyo.

#### YAPANESE FINANCE.

The Kyoto Chamber of Commerce recently presented a memorial to the Government with regard to the continued increase of interest by the Bank of Japan. Following it the gist of the document:

The Bank of Japan raised its interest by one rin in February this year, and another rin in March, so that it has now made an increase seven times

so that it has now made an increase seven times since the 28th year of Meiji, and it is moreover rumoused that the Bank again contemplates increasing its rate by two rin.

The Bank, by decreasing the rates by two rin July, 1895, helped to stimulate the mania for post belium undertakings, and to cause an expansion of the economic market. Its subsequent steps to raise rates have had the natural effect of tightening the money market and embatrassing the industrial community. What are the grounds for these lines of action?

The Bank of Lavan, in December last, resolved

The Bank of Japan, in December last, resolved upon raising its interest by way of giving warning to the economic community, but failed to obtain the assent of the Minister of Forance then in power. Of late, however, the financial world has begun to show a critical aspect with regard to the outflow of gold, which increases day by day, with a corresponding decrease in the speciereserve. If things are left to themselves, the foundation of the convertible system must inevitably be endangered. To relieve the country from misfacture of this nature, the Bank of Japan has resorted to the policy of augmenting its interest, hoping thus to prevent the growing excess of imports, and to check the mania for speculative undertakings. The example has been or will be followed by the various other banks throughout the empire, the result being a tighten-ing of the money market and the atter decline of industrial enterprises. But it is doubtful whee-ther the Nippon Gioko will be able to attain its

of industrial enterprises. But it is definite when they the Nippon Ginko will be able to attain its ends by these measures.

The foreign trade of the country for last year and the year before last shows that the excess of of imports over exports has been over 50 million yen, and the gold coming in from abroad was practically limited to payments on account of the Indemnity and the sale of War Bonds. No receipts from these sources are to be expected for this year, and the Government is under the necessity of disbursing allarge amount of specie in connexion with the expansion of armaments and the construction of railways.

Nor does the evil end here. The appreciation of commodities steadily encourages imposts to an enormous amount, the figures for January and February showing an excess of 16 million yen in value. An ourflow of gold and silver in excess of incomings will continue to be the feature, and not only is the relaxation of the money market not to be hoped for, in the present state of affairs, but the

only is the relaxation of the money market not to be hoped for, in the present state of affairs, but the very foundation of the gold system must be considered precarious.

No wonder that the Bank of Japan should have

been induced to adopt the resolute course it has taken. It is to be doubted, however, whether the Bank will be able to attein its ends without producing serious consequences for domestic enter-

The post-bellum appreciation of commodities and the consequent increase of imports are, however, but the natural course of things. Although the excess of imports is a phenomenon not at all layon able to the foreign commerce of this conne tavourable to the foreign commerce of this country, it can not be avaided. A glance at the trade returns shows at once that the imports comprise articles absolutely indispensable to the Japanese, consisting, as they do, of machinery, materials for industries, &c. The imports for last year totalled 219 million yen in value, of which ten percent, viz., 21,500,000 yea, was for the import of tice, and 20 million yen for sugar. Articles of luxury constitute but a small portion of the imports, the rest being included in the category of necessaries. In regard to these no step taken by the Bank of Inpage can have any effect in restrain-

#### ENGLAND AND RUSSIA.

After M. Muravieff's statement, addressed to the British Government in the middle of March, to the effect that Russia did not seek to interfere in any way with the sovereign rights of China, but simply wished to obtain an ice-free port as the terminus for her Trans-Asian Railway, assumed originally which port should be open to the trade of the circumstances. all countries—after that explicit statement it was virtually impossible for Great Britain to show hostility to Russia's programme, so far as its commercial features were concerned. England has no right whatever to forcibly check Russia's tradal expansion, or to oppose any legitimate have sought to obtain any footing on the measures adopted by Russia in the interests of commerce. the moment that Russia obtained Port neverbeen backward in urging-sometimes Arthur, a place not offering any tradal very peremptorily urging—upon China facilities, a naval station pure and simple, the opening of this port or that, and the England's hand was forced. She, too, had granting of tradal facilities here or there. All that Her Majesty's Ministers could fairly say to Russia was, we do not object to any steps taken by you to promote the development of trade in the Far East, but they must not be steps involving any interference with the privileges that British subjects enjoy under treaty in the Chinese realm." Russia, on her side, was careful that her procedure should not furnish any legitimate grounds of grievance to England, and, since each Power preserved mercasonable attitude towards the other, serious trouble was out of the question.

The fact appears to be that the British nation was thrown into a state of considerable excitement at first owing to the receipt of exaggerated, if not totally false, rumours. Telegrams sent from Peking represented Russia as having preferred demands of a sweeping nature in a most peremptory manner. It seemed to Englishmen the St. Petersburg Government had suddenly formulated a huge scheme of territorial aggression against China, treating the latter much as a victor treats a vanquished State, and deliberately trespassing on the rights possessed by British subjects in the regions affected. Such action on Russia's part, coming as the immediate sequel of the declarations elicited by the Kiao-chou incident from Her Majesty's Government, could be interpreted only in the light of a direct slap in the face to England, and, since it was impossible to imagine Russia standing out alone to challenge England in the Far East, the natural inference seemed to be that an anti-British combination had been formed by two or more of the Great European Powers. Asituation of that kind could not fail to cause much excitement in England, and it was in those moments of misapprehension that the war fury blazed out, and high language was held against Russia. Careful readers of the telegrams will remember, however, that Her Mainsters speaking from their will are the Mainsters speaking from their will are the Mainsters speaking from their will are the Mainsters speaking from their will are the Mainsters speaking from their will are the Mainsters speaking from their will are the Mainsters speaking from their will are the Mainsters speaking from their will are the Mainster will be the Mainster will Majesty's Ministers, speaking from their places in Parliament, denied any knowledge of the extraordinary proceedings attributed to Russia, and, when official inquiries were addressed to St Petersburg, the answer came from M. Muravieft that

to prevent Russia from getting any foothold in Manchuria, and to that erroneous notion we now owe the assertions that there has been some backing down on Great Britain's part. There has been no backing down. It would have been ridiculous for the British nation to maintain a position assumed originally under a false idea of

Mr. Ballour, in his declaration of policy, renders it plain that had Russia limited herself to leasing Talien, making an open port of it, and carrying her Trans-Asian railway thither, Great Britain would not have sought to obtain any footing on the facilities, a naval station pure and simple, to seek a naval station in China's northern waters, and Wei-hai-wei alone remained.

#### RUSSIA IN KOREA.

There have been a great many conjectures about the reason of Russia's withdrawal from Korea, one of them being that, in order to avert Japanese opposition to her Liaotung programme, Russia determined to placate the Tokyo Government by an apparently self-effacing policy in Korea. The Mainichs Shimbun laughs that notion to scorn, and assigns the fol-lowing as the true explanation:—" When Russia first stretched out her hand over the Korean peninsula, she imagined that Japan would devise all kinds of pretexts for opposing the growth of her influence. If, on the other hand, Japan raised objections, it would be difficult for Russia to achieve her programme of expansion to the south. The facts, however, belied Russian anticipations. Japan remained absolutely passive. The result was that she ceased to have any existence in the eyes of the St. Petersburg Government, and Russia concluded that she might comply with the wishes of the Koreans and abstain from all further interference. As for her influence, however, it has not been either impaired or increased by the step. sides, she has gained possession of Port Arthur and Talien, which command the Korean peninsula. She holds Korea in the hollow of her hand. Its existence depends upon her will. To superficial observers she may seem to have abandoned Korea, but if we look a little deeper, it appears that all her plans with regard to the peninsula have matured. Nothing could be sillier than to imagine that any mutually advantageous exchange has been

We have reproduced the Mainichi's explanation almost verbatim. Our readers will probably find it somewhat unintelligible. We found it so at first, mature reflection we conclude that our contemporary's meaning is this :-- Russia, recognising the necessity of making her influence paramount in the Korean penin-

England had openly pledged herself by measures designed to push Japan out of the arena. Accordingly, Russia decided to efface herself for the moment, especially since she knew that her new position at Port Arthur and Talien would enable her to re-assert her influence over the Korean peninsula at any moment. Such seems to be the Mainichi's theory. It is a fantastic theory, in our opinion, but it derives some interest from its source.

#### ENGLAND AND WEI-HAI-WEI.

Mr. Balfour's statement of Great Britain's policy, tallies at every point with the views advanced in these columns; views which could scarcely fail to present themselves to every thinking person. Great Britain can not afford to see a Power like Russia in undisputed command of the entrance to the Gulf of Petchili, and therefore of the chief tradal routes from southern to northern China. Some writers affect to be unable to understand why England should give special expression to her resolve to secure free access to the Gulf. So long as she is dominant at sea, they say, she can always be sure of making a path for herself anywhere. That is quite true so far as war-ships are concerned. But the question is of commercial routes. British fleets may be strong enough to go where they please, but if a foreign Power is seated at a point overlooking the track of merchant vessels, and can send out its men-of-war at any moment to interrupt their passage, a British squadron must be always within equally easy reach of the scene in order to guard against inconvenient contingencies. The key-note of Great Britain's policy is that she is deter-mined to secure the free navigation of the Gulf of Petchili by her merchantmen, and since Russia has insisted on placing herself at one side of the entrance to the Gulf, England has no choice but to place herself at the other.

#### ENGLAND AND CHINA.

It will be observed that in his statement of British policy, Mr. Balfour gives a very clear indication of the attitude of Her Majesty's Government towards China. He is represented as saying that "he hoped China would maintain not only nominal but real suzerainty over her do-minions," and that, Port Arthur being a purely naval port, its occupation by Russia "would have an undue influence on the counsels of the Peking Govern-ment." All this indicates as plainly as possible that although England, in order to insure freedom of commercial navigation in the seas of northern China, finds it necessary to obtain a naval station at the entrance to the Gulf of Petchili, her presence there is a protection rather than menace to the Chinese empire. She desires to assist the Middle Kingdom to preserve the substance, not the mere shadow, of its sovereignty, and she intithe answer came from M. Muravieff that his Government had not taken, and did not intend to take, any of the arbitrary and defiant steps attributed to it by Peking telegrams. Thereafter the excitement doubtless cooled at once in England. But the fact remained that there had been excitement, and that hot words had been spoken. In truth, as we observed some time ago, an impression remained that mates to the Government in Peking that

#### COUNT OKUMA ON THE SITUATION. lated into the present by the reporter.

The Yomiuri Shimbun attributes the following statement to Count Okuma with reference to England's application for Wei-hai-wei:--"Of course it is to be presumed that our country has lodged a protest. She can not possibly remain silent. To say nothing would be to throw away her right to a voice with regard Liaotung. If the retrocession could not to the Eastern Question. There is no be avoided, the three Powers ought to reason why she should fail to assert that have been informed that, while restoring important right. I presume that she has the peninsula at their instance, Japan that nothing has been said on the subject ject of another State's aggression. Her by either the vernacular press or the foreign press, I feel a little doubtful. The second was her silence when Germany silence of the nation, too, seems strange, seized Kiao-chou. The third, her silence at the pennisula at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at least of post in the pennisula at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at their instance, japan required that it should never be the obtained at the obtained at the obtained at the obtained at the obtained at the obtained at the obtained at the obtained at the obtained at the obtained at t A strong foreign policy needs a strong when Russia obtained a lease of Port people at the back of it. When the Arthur and Talien. It is too late to do anynation should be vehement in its endea- thing now about England. The grounds for vours to urge officialdom forward, this lodging a protest have disappeared. The popular quiescence is singular. As to time has passed. But there is still room what should be done in the event of our for the exercise of diplomacy. England is protest being disregarded, that is a secondary question. Whether recourse should, hostility to Japan. Besides, she would or should not, be had to practical measures would depend upon the conditions of the time, the strength of the country, and its interests. After due consideration of all to guard Woi-hai-wei, she would be opthose points, a decision should be taken. There is such a thing, too, as postponing further measures. It is not true that foreign politics can not be conducted without constantly warlike resolution. If diplomacy to find a way for Japan to rewar were the idea from the outset, diplo- cover some of her lost ground. Indeed, macy would be useless. going to war, what should be said ought easy. But I doubt whether those in office to be said; what should be maintained ought to be maintained. A protest is a protest, it is a means of asserting our rights. Assert your rights and the subsequent steps of procedure follow in due course. They depend, however, on the policy of the time, and on circumstances and expediencies concerning which nothing can be clearly predicated. There are folks in the world who make no effort on their own account, but trust that heaven tain desires to acquire. The Yomiuri will help them. That won't do. To sit Shimbun is the chief exponent of that twiddling one's thumbs and idly placing one's trust in another country is to forfeit that such a conjuncture should have arisen. one's opportunities. What lies within the range of a man's capacity, he must do. Above all, when there is question of as-serting one's rights and doing what is proper, why should there be any hesita-tion. The Cabinet will incur a heavy responsibility to the people if it keeps silence at this stage of the Far-Eastern Question. Undoubtedly our country ought to hold Wei-hai-wei. Russia having obtained a lease of Port Arthur, we ought similarly to obtain a lease of Wei-hai-wei. That is absolutely necessary, not only for the purpose of preserving the balance of power, but also for China's sake. The paying off of the Indemnity is not for the purpose of getting our forces out of Wei-hai wei. It is because a gain of 30 million yen (sic) of interest is made thereby, The leasing of the place may be regarded as an independent problem. At

The above appeared three days ago in endeavour to effect an understanding by the Yomiuri. It has the ring of Count which the interference of other Powers in Okuma's style, but the opinion expressed suspect that the Count spoke in the past the entrance to the Gulf of Petchili is tense, and that his utterances were transportant definanced by Russia and England.

That suspicion is confirmed by the following, which we translate from the Yorosu Choko of the 6th instant :- Yesterday, a member of our staff waited upon Count Okuma, and his Excellency spoke thus about foreign policy :-" The origin of the mistakes in Japan's foreign policy was at the time of the retrocession of not a country that entertains feelings of much rather have Japan in possession of Wei-hai-wei than Russia. would con sider that, if she could get Japan posing anobstacle to her own partition. Such being the state of affairs with regard to Russia, England, and China, it should not be difficult by a skilful exercise of Even without it should not only libe not difficult but even

One of the opinions expressed by Tokyo journals is that Great Britain's very power-ful waval demonstration in the Gulf of Petchili-or off Chefoo-is directed chiefly against Japan, since the latter is in pos-session of Wei-hai-wei, which Great Briview, and expresses considerable regret At the same time, our contemporary recognises that England's hand is more or less forced on account of the necessity of Kudo Kokan, Komuchi Tomotsune, and preserving the balance of power, and that Wei hai wei in British possession would deputies do not appear to have advanced be a more re-assuring result from Japan's point of view than its possession by a certain other Power. Further, there is some reason to hope that the arrangement may prelude an alliance between England and Japan. It is true that in the Far-Eastern field of commerce Great Britain and Japan are likely to be rivals, but for military and naval reasons England has cause to look with greater concern on Japan's future course in this part of the world than she has to regard the proceedings of Russia or Germany. With Russia at Port Arthur, England at Wei-hai-wei, and Germany at Liao-chou, China's gullet regarded as an independent problem. At is in the grasp of her enemies, and the all events, this is a time for stout, resolute adopt? The Yomiuri thinks that Korea alone remains, and that Japan should which the interference of other Powers in Korean waters will be averted. It will be at the close—that Japan should retain for China, as the Jiji Shampo justly obpossession of Wei-hai-wei—does not sound serves, to consider the expediency of
like the utterance of an eminently practical statesman as Count Okuma is. We
city will cease to be cliff of Petabili in

#### MR. MCLEAVY BROWN AND MR. ALEXCINFF.

Mr. Alexcieff, when giving up the direction of Korean finance, published a state-ment of the results achieved during his tenure of office. 'It was a proceeding of questionable taste and still more question able utility, for he had been only four months installed as financial adviser and his methods-assuming that he introduced some novelties-could scarcely have produced any tangible results in so brief a period. To the general public, there-Her fore, it seemed that, in stating a case The for himself through the columns of a newspaper, he was merely reaping where Mr. McLeavy Brown had sown for two years previously. That impression is now strongly confirmed by an answer which Mr. Alexcieff's letter has evoked from Mr. McLeavy Brown. The latter proves that the former's statement of accounts is very misleading. To describe in detail how Mr. Brown makes out his charge would weary our readers. It is sufficient to say that whereas Mr. Alexcieff gives China, too, \$594,698 as the balance in the Treasury when he assumed control, Mr. Brown shows that the real figure was over a million dollars; and whereas Mr. Alexcieff shows an increment of the balance after his coming into office, he fails to note that the customs collections (\$285,080) for the two months prior to his appointment were not entered in the books until a month afterwards. Finally, Mr. Alexcieff takes credit by implication for the growth of the balance during his exercise of control, but Mr. Brown explains that such growth is a normal feature of the winter months. Mr. Brown's letter does not coutribute to Mr. Alexcieff's reputation for fairness and accuracy.

#### THE PROGRESSINTS AND THE GOVERNMENT.

A brief paragraph in the Nichi Nichi Shimbun describes the result of the interview between the Prime Minister and a deputation of Progressists, consisting of Messrs. Oishi Masami, Kono Hironaka, Taguchi Ukichi, on the 7th instant. any policy of their own for the Govern-ment's acceptance. They confined themselves to recapitulating the salient events of the past few months-the seizure of Kiao-chou by Germany; acquisition of Port Arthur and Talien by Russia, and the promise of Wei-hai-wei to Englandand, in view of these important occurrences, asked for some information as to the course contemplated by the Government. Marquis Ito, in reply, entered into such particulars as admitted of open exposition, but said that it would be injurious to the interests of the nation to make any public statement of the policy which the Cabinet was in the act of pursuing. He expressed his conviction, however, that the empire's prestige and its interests would be fully preserved by the Cabinet's method of procedure. With Cabinet's method of procedure. that assurance the deputies had to be content. There will doubtless be an interesting debate on this subject when the Diet meets.

Original from 'ERSITY OF ILLINOIS AT **URBANA-CHAMPAIGN** 

#### THE STRONG FOREIGN POLICY AGITATION.

The leaders of the Opposition have not abandoned their agitation in the field of foreign affairs. Their deputation to the Prime Minister failed to elicit any information satisfactory from their point of view. Marquis Ito declined to enter into the details of the policy adopted by the Government. His reticence is obviously to be interpreted in the sense that some negotiations or pourparlers are now going on, or that the situation is not yet sufficiently settled to admit of public discus-sion. Under such circumstances the hands of party politicians ought to be tied by consciousness of their obligation not to hamper the Cabinet by independent suggestion. But it would seem that the leaders of the Opposition deem the crisis too vital to warrant any semblance of indifference. They have held another meeting, and appointed a committee of twenty well known members of the Houses of the Diet. The first function of the Committee is to discuss and report upon the resolutions adopted at the original meetingnamely, that a strong protest must be formulated against the actions of Russia and Germany in Liaotung and Shantung respectively, and that, in the event of the protest proving unfruitful, a resolute attitude must be adopted with regard to the evacuation of Wei-hai-wei. Pending the Committee's report no definite platform will be adopted by the agitators, but it would appear, from statements contained in their newspaper organs, that while they are generally agreed as to the menace that German, Russian, and French proceedings constitute to the peace of the Far East, they are undecided as to which of three lines of policy ought to be adopted. Briefly stated, the three views are these (t) When Japan took possession of the Liaotung Peninsula, Russia, France, and Germany obliged her to restore it, declaring that her retention of it would endanger the peace of the Far East. But almost before the echoes of their declaration had ceased to be audible, Russia and Germany took possession of important territories in Northern China, thereby acting in a manner directly contrary to their previous contention. Their action is undoubtedly inimical to the peace of the East, and the Japanese Government must endeavour to induce them to abandon the acquisitions they have made. (2) The cession of Kiao-chou to Germany hy China, and of Port Arthur and Talien to Russia, imperils the peace of the East. In order, therefore, to redress the balance of power, Japan must ask for continued oc-cupation of Wei-hai-wei, or for the lease of some other suitable port. (3) The records of the past show that the Ito Cabinet is quite incompetent to deal with foreign affairs of such gravity as those now presenting themselves. The Ministry must therefore be pulled down and and Japan would prefer to see England replaced by one representing public there. Hence, in asking for the reversion

common stand-point will be the last proposition, we imagine. Of course, there would be a delightful sense of poetic justice in turning the weapons of the Three Powers against their own breasts, and pushing them out of their newly hesitation, it must be admitted. A likely acquired territories just as they pushed tale in sooth. She would only invite a humiliating rebuff did she approach the Governments in Berlin and St. Petersburg with such a pro-test in her hand. The second programme, namely, to obtain from China the lease of some port in lieu of Wei-hai-wei, so as to preserve the balance of power for Japan, s certainly feasible; but there are evidently other and perhaps better ways of accomplishing the same end, and it remains to be seen whether the Ito Cabinet will not take, or is not now taking, one of those ways. The fact is, however, that the advocates of this "strong foreign policy " being members of the Opposition only, it is difficult to avoid the conviction that party feeling rather than national interest is the real motive, and that the overthrow of the Ito Cabinet will prove the only aim to which all sections can subscribe.

#### THE REGRETTABLE INCIDENT.

The regrettable incident in the chapter of Far-Eastern history now nearly closed is that Great Britain's original idea about the opening of Talien to trade was not carried into effect. It will always seem that she suffered a rebuff at that point. She did not advance any independent proposal on the subject, but merely included the opening of the place among the conditions which she would require if she complied with China's application for a Stateguaranteed loan. Hence, when China withdrew her application for financial aid, the concessions that she would have had to pay for it natually passed out of the field of discussion. Still the diplomatic victory certainly seems to have rested with Russia in that case. Russia succeeded in preventing China from pursuing her programme of a British national loan, and then immediately obtained for herself one of the chief concessions that England wanted for making the loan. It is true that Talien has been opened to trade. But it is also true that Port Arthur has become a Russian naval station, which would not have been the case had Talien been opened under English auspices. The Chinese Government must feel pretty had now about the whole thing.

#### WHOLE CLOTH.

The Mainichi Shimbun, which now leads the attack upon the Government's foreign policy, publishes a remarkable story. says that England originally urged the Japanese Cabinet to retain possession of Wei-hai-wei. The Cabinet, however, replied that, not only was Japan without any desire to keep the place, but she would be glad if England occupied it, for there was a strong probability that when the Japanese troops were with drawn, Germany would try to get possession, of the port, the British Government did not show any want of consideration for If the agitators can agree at all, their Japan. On the other hand, it was impossible for the Ito Cabinet to offer any subsequent remonstrance to England's procedure, or seek to keep the place for Japan. That is the story told by the Mainicht Shimbun, with some show of

#### THE "KUMIAI" CHURCHES AND THE DOSHINHA.

The annual meeting of the Kumiai Churches of Japan is now in session. One of the resolutions passed in the first session was to the effect that the recent session was to the effect that the recent action of the Trustees of the Doshisha is "immoral." Supplementing the numerous and strong expressions of condemnation formulated by the newspaper and magazine organs of religious bodies of all denominations throughout the country, this resolution ought to convince the Trustees of the necessity of either acknowledging their error and evoking their action, or coming forward with same explanation of their conduct. Among the names of the Trustees are those of several men who, pre-viously to this lamentable occurrence, possessed a large measure of public confidence and respect. It is difficult, if not impossible, to imagine that such persons would have adopted a course for which they did not discover full justification. What is that justification? The Japanese show singular calmness in the presence of injurious reports. As a rule they believe and trust the adage "rumour lives only seventy-five days." Apparently the Trustees of the Doshisha are acting upon that principle. They are mistaken. This act principle. They are mistaken. This act of theirs will never be forgotten. It will be handed down in the pages of history as a permanent disgrace to Japan unless they can offer some convincing explana-

Our readers will learn, from the Rev. Dr. Gordon's letter which we print elsewhere, that the representatives of the Kumiai churches have taken very decisive action with regard to the Doshisha incident. We referred to this matter cursorily in a previous issue, but Dr. Gordon gives the full particulars. It is to be hoped that the Kumiai churches will push the matter unflinchingly. It is to be hoped, also, that the Trustees will be prevailed upon to publish some explanation of their conduct. They must have some explanation. It is inconceivable that they should have adopted such a course without an excuse that satisfied their own consciences. The affair, as it stands, is inexplicable.

#### THE DEMONSTRATION.

It appears to us that there has been much ado about nothing. People have been talking about a big naval demonstration on Great Britain's part, and either ridiculing it or applauding it, but, after all, do we know that there has been a de-monstration? We know that a large part of Her Majesty's ships on this station were to assemble at Chefoo by the 5th instant, and we know that eight vessels were there on the 3rd, but we do not know that they "demonstrated" or made any extraordinary movements whatever. Their assembly in the immediate neighbourhood of the scene where the events of the epoch were occurring seems a natural precaution. That was the pro-per place for them. But, so far as we can see at present, the "great demonstration in the Gulf of Petchili" never went farther than the columns of The Times and a Reuter's telegram. It will be as well to suspend comments on the event until we kเดิพีร์ฟฟิลโท๊ฮิคโซ occurred.

#### FOREIGN PATENTS IN JAPAN.

Mr. W. Silver Hall, who addresses us on the subject of foreign patents in Japan, has devoted so much thought and trouble to the question that we are unwilling to leave his communication unanswered, though his failure to grasp the cardinal points of the discussion causes us much surprise and some despair. The kernel of the matter is extraterritorial jurisdiction, yet Mr. Hall now writes as though no such thing as extraterritorial jurisdiction need be considered at all, and grows quite caustic over the situation that results from the severity of his logic as he imagines, but in reality from his continued indifference to the central factor of the complication. We confess to having grown somewhat weary of the subject, our readers are probably in the same plight. However, since Mr. Hall's want of comprehension can not be singular, we shall endeavour to re-state the case in the easiest possible terms, and, by way of text, will take Mr. Hall's own words (using his italics) :-

First, as regards your Japan friend J., who re-gisters a patent in Great Britain. As you rightly say, that patent is protected against violation by say, that patent is protected against violation by British subjects (and for that matter by his own fellow-countrymen or persons of any other nationality) in the United Kingdom, but it is not protected from similar violation in Fapan. But who meanth ever expected that it would be so protected in Japan? Not the O.I.P. (ordinarily intelligent person) I should hope.

I take the converse case: Dues the solitary foreigner-an American, I believe-who has suc-In eigner—an American, I believe—who has succeeded in obtaining a Japanese patent, imagine for a nument that the patent will protect him in America against infringement of his invention either by Japanese or his own countrymen, unless the takes the proper steps to protect himself by a second—United States—patent? O. if a Canadian takes out a patent in Bolivia, or vice verse, does that patent protect him in his own country? These why should I consider myself aggrieved because Her Britannic Majesty's Courts in Japan "have no competence whatever in regard to patents registered in Great Britain," because they are compelled to answer "We take no cognisance of Japanese law which protects the patent (pre-

All the above is a mélange of very singular misapprehension and confusion of ideas. The first proposition to be noted is that reciprocity of protection must be guaranteed by the two parties to the contract. A Japanese patent registered in Great Britain must be secured against violation by British subjects within the jurisdiction of the United Kingdom. Is that condition satisfied? British subjects residing in Japan are within the jurisdiction of the United Kingdom, but there is no machinery to restrain them from violating Japanese patents registered in Great Britain. The British Courts in Japan have no competence to enforce the patent laws of England. If a British subject living in London-let us say violated a Japanese patent registered in England, he could be punished by the English law courts. But if the same British subject repaired to Yokohama, he might violate the same patent with impunity. Such is the result of extra-territorial jurisdiction with regard to Japanese inventions patented in Eng- and most essential. land. Consider, now, the other case, that

the Japanese Authorities alone. They ought to be able to guarantee it against violation by any person in the empire of Japan, whatever his nationality. Can they do so? They can not, for all British subjects-we confine ourselves to one nationality for the sake of explicitness-all British subjects residing in Japan are exempted from Japanese jurisdiction. The Japanese law courts, therefore, have no they too are incompetent for such a purpose. Hence the result of the extrapatent registered alike in Japan and in violation by British subjects. The Japanese Authorities can protect a British patent registered in Japan against violation by Japanese subjects, but the British Authorities, owing to their interpretation of extraterritorial jurisdiction, have no machinery for protecting Japanese patents whether registered in Japan, or in England, or in both, against violation by British sub-jects. We see no way of stating the facts more lucidly. If Mr. Silver Hall does not now apprehend them, the fault is not ours. If he does apprehend them he will perceive how amazingly irrelevant is his talk about a Canadian taking out . patent in Bolivia, where the extraterritorial problem has no existence. He will per-ceive, too, that his "closer examination" of our previous article has convinced him that we did not say precisely what we did say, and do now repeat, namely, that "if a Japanese subject holding a Japanese patent finds that a Britisher is infringing his patent (not in England, but) in Japan, and sues him in a British Consular Court his application will be dismissed." Silver Hall confesses that when he first read our article he received the impression that we had charged the British Consular Courts with incompetence of that kind. but closer examination convinced him of his error, and led nun to would in-"ordinarily intelligent person" would in-writing. The "ordinarily terpret our writing. The "ordinarily intelligent person" probably received the same first impression as Mr. Silver Hall received, and retained it, in which case he was perfectly right. As to this state of affairs "not having been brought about by the Japanese concession to grant patents to foreigners" and being, there-fore, beside the point, as our correspondent affirms, we would ask Mr. Hall, what is the point. Is it not that the patent law of Japan, in its present form, can not be administered so as to afford protection to foreign patents, and that Japanese legislators are consequently blamed for fraiming an unpractical and illiberal enactment? And is not the reply of the Japanese that their law was never intended to protect foreign patents, not because they are unwilling to protect them, but because the existence of extraterritorial jurisdiction constitutes a barrier to the reciprocal protection of Japanese patents by foreign Powers? If Mr. Silver Hall grasps these facts he will see that the part of our original statement which to him appears beside the mark, is in truth most relevant

of the Japanese realm would devolve on difference between the practice of the United States Consular Courts and that of other Consular Courts in Japan, it is because he took no note in past years of one of the burning questions of the time, a question discussed ad nauseam in the columns of the local foreign press. If he finds the Japanese law of patents quite unsuited for extension to foreign inventors, that is because it was not originally designed to be so extended. If he thinks competence to compel a treaty-port that the mere fact of prior registration in Englishman's observance of Japanese a foreign country should not be held to conpatent laws, and the British Consular stitute, "previous use" in the sense of the patent laws, and the British Consular stitute "previous use" in the sense of the Courts, if appealed to, would reply that Japanese law, he raises a question of interpretation already settled by legal experts. We have ourselves said that we consider territorial system is that a Japanese the present state of affairs most unsatisfactory. Our object in writing about Great Britain, is not guaranteed against it has been, not to endorse it, but to explain its origin, and to point out that it is altogether temporary since the operation of the Revised Treaties will at once bring a remedy. It is doubtless owing to the latter consideration and to their full understanding of the case that the Chambers of Commerce do not move, though Mr. Hall wonders at their inactivity.

#### THE SUGAMO PRISON.

A few days ago some residents of Yokohama paid a visit to Sugamo prison and inspected the cells and all the arrangements. With reference to this event, it is stated, we observe, by a Yokohama journal that the visit was in consequence of an invitation addressed by the Japanese Authorities to the Committee of the Yoko-hama Chamber of Commerce. That is a hama Chamber of Commerce. mistake. The Japanese Authorities did not take any action whatever in the matter. The visit was entirely of a private nature. It is always possible for foreigners, whether residents or tourists, to obtain access to Japanese jails and law courts, and they can count on meeting with courtesy and attention. Considering the questions now on the tapis, the gentlemen who visited Sugamo and informed themselves of the actual conditions existing at a Japanese his error, and led him to wonder how the prison seem to have taken a very wise step, and we venture to suggest that others might follow their example. The visitors were Mr. R. D. Robison, President of the Yokohama Chamber of Commerce, Mr. W. F. Mitchell, and Mr. E. Flint Kilby. Doubtless they will embody the results of their observation in a report for presentation to the Chamber.

#### A BIG STEAMSHIP DEAL,

We learn that the Deutsche Dampfachiffs Rhederei zu Hamburg, generally known as the Kingsin Line, whose ve sels have been tunning from Hamburg and ports to China a d Japan for several years, have sold their fleet and interests in the Far East to the Hamburg-America Company, which has just started running steamers in this part of the world. Particulars of the working of the new joint line have not yet been received, but so far as cargo carrying goes there can be no doubt that the Hamburg-America line will benceforth be in a very strong position,

#### WEI HAI WEI AND PORT ARTHUR.

Neither Port Arthor nor Wei-hai-wei in to be opened to trade: that is quite evident. Indeed there are no special reasons for opening them. To the Germans, however, it will be tand. Consider, now, the other case, that of a Japanese patent registered in Japan.

We really must be excused for declining. Under ordinary circumstances the duty of to follow our correspondent's arguments protecting such a patent within the limits are further. If he does not know the UNIVERSITY OF ILLINOIS AT

#### FAPANESE TOPICS.

It would appear that much inconvenience has been caused in Korea by the action of the Government in forbidding the use of Japanese silver yen-stamped coins-for tax-paying purposes. fact is that no other coins are available. Of course it was concluded, at the time when the prohibition was issued, that the Russian financial adviser of the Korean Government had recommended the step as part of the anti-Japanese policy attri-buted to his country in Korea. The inference may have been unjustifiablevery probably was. Nevertheless, now that the Russian shadow has been removed, there is a movement on foot for restoring the yen to its former rank as medium of exchange. The Soul branch of the First National Bank has telegraph-The Soul branch ed to the head office in that sense.

Has the Japanese nation's perception of foreign politics really become so much more acute during the Meiji era as some folks claim that it has? Such is the question to which a certain diplomat, speaking through the columns of the Fiji Shimpo, returns a negative answer. It is undoubtedly true that the number of persons disposed to meddle in the country's foreign affairs has increased. But it were an optimistic view to conclude that the public grasp of such matters is much more intelligent than it was a dozen years ago. There is altogether too much of the romantic in the minds of the Japanese. They do not recognise that the safety of the State is the very foundation of sound foreign policy, but are disposed to imagine that the country should undertake the task of succouring the weak and opposing the strong. Some would be content with more activity, whatever its objects, and are ready to insist that unless the Government is making itself heard all round, the national prestige suffers. The average Occidental's idea of foreign policy is very different. He does not deny that there may be occasions when to help another is the best method of helping oneself, but he does deny that a State should ever allow its own welfare to be subservient to impulses until all the objectionable facts are acof romantic altruism.

The present leader of the Liberals in the Diet is Mr. Hayashi Yazo. Much interest attaches, therefore, to a statement said to have been made by him with reference to the relations between his Party and the Cabinet. Speaking briefly, he does not lead the public to infer that any coalition has been established. There was some talk of such an arrangement at the time of the organization of the Cahinet, but, as m general election then inpended, nothing definite could be settled. Nor has anything been yet settled, though pourparlers are evidently taking place. Mr. Hayashi thinks that if the Ministry joins hands with the Liberals, the latter ought to receive at least as much official consideration as they had when a coalition exist-ed in 1885 6. In other words Count Itagaki ought to have the portfolio of Home Affairs. The Count is too ill at present to be put forward for the post, but his claim is none the less valid. Mr. Havashi further thinks that some discussion must be held with reference to the advisability of extending the construction. It definite views, but one can gather from who think that he is going to Soul partly appears; that the reduction was entirely his language that there is a disposition to be suggestion of Count Inouve, and connected with railway construction. cussion must be held with reference to the advisability of extending the opera-

of too restrictive a programme in economical affairs, and to advocate the introduction of foreign capital.

The Liberals seem to be taking a moderate and sensible attitude towards foreign affairs. They have been approached by the agitators who desire to contrive the adop-tion of a "strong foreign policy," but their reply has been that the circumstances are month, would have passed without any too grave to permit hasty treatment, and special collision between the Government that, as a general principle, they object and the Opposition, the only important to making foreign politics a plank in the questions brought up for discussion being platform of a political party unless the some supplementary Budgets and the interests of the country clearly demand remaining portions of the Civil Code. But such a course. A well-known Liberal—the Mainichi Shimbun predicts that the Mr. Suzuki Jubi-asks what are to be the practical stages of the Progressists' topics of paramount importance will be scheme of protest. To whom is the protest to be addressed? Not surely to China. That would be a little ridiculous. Is it to be addressed, then to Germany, France, and Russia? To all three simullatter, what is to be the order of proce-cial measures of Count Inodure? If the former, what will Japan do that they are to be attacked. in the very probable event of her protest's being cavalierly rejected? There is nothing in sight except failure and humiliation should such a line be adopted. Japan is not strong enough to place herself athwart the path of the great European Powers. She would merely be thrust ignominiously aside. She had thrust ignominiously aside. She had better make up her mind definitely in the first place whether she wishes to join hands with England or with Russia. That decision must have a vital bearing on her procedure at this juncture.

The "strong-policy" agitators have now abandoned the idea of attempting to retain Wei-hai-wei. They are persuaded that from a strategical as well as a financial point of view, Japan had better not attempt to keep the place. Thus their programme narrows itself to protesting against the action of Russia and Germany in encroaching upon Chinese territory.
The Nichi Nichi Shimbun, under such circumstances, naturally finds a very weak Never was there a spot in their armour. more belated protest, it says. Japan waits complished and then raises her voice against them. What seems particularly quaint in the eyes of the Nichi Nichi is that friends and supporters of the former Cabinet have allied themselves with this agitation. The seizure of Kiao-chon by Germany took place while the Matsukata Ministry was in Power, yet the Govern-ment maintained strict silence, and its political allies did not think of censuring ts reticence. Now, however, they blame the present Cabinet for not taking a step which, were it to be taken at all, should have been taken by the former Cabinet.

The Japanese continue to be much perplexed about the motives of Russia's action in suddenly abandoning the posiaction in studenty against the such pains to acquire in Korea. But there is an idea growing up that Japan will obtain in the Korean field some compensation for her effacement in Liaotung and Shantung.
Mr. Shibusawa Eiichi, President of the
First National Bank, is to visit Korea in a
few days. His journey is undertaken
ostensibly for the purpose of determining

among the Liberals to query the wisdom that his trip may prove the prelude of a new financial departure by Japan in the peninsula. It is a very vague kind of surmise, but we refer to it as illustrating the conviction that in turning her back upon China Japan is likely to assume a new attitude towards Korea.

It was supposed that the extraordinary session of the Diet, to be opened next the Mainichi Shimbun predicts that the facts will greatly belie that forecast, Two Throne impeaching the Cabinet's foreign policy. We are not told anything about taneously or to each separately? If the the nature of the objections to the financial measures of Count Inouye, but only

> Count Itagaki, although he is said to be too ill to think of undertaking official duties, is reported to have delivered an address at a meeting of the standing committee of the Liberal Party on the 11th instant. He took foreign politics as a subject and told his audience that the cardinal point to be observed in shaping a country's foreign policy was the national strength. In his opinion Japan has not grown stronger since the war, and that to set herself in opposition to Russia and Germany at the present juncture would be madness. For that view the Liberal leader can scarcely claim any novelty, but it is curious to note that he proceeded to combat the wisdom of an Anglo-Japanese alliance for the very same reasons that have recently swayed foreign conserva-tives, namely, differences of race, of religion, and of sentiment. He appeared to think that Japan could conclude such an alliance if she wished to do so, but he expressed doubts as to whether it would work satisfactorily, and he inclined to the opinion that more would be expected from Japan than accorded to her.

> It is thought that many of the contracts now made for the importation of foreign rice are purely speculative. They are classed, in short, with the operations in shares that took place last year. Most of the contracts provide that payment shall be made within two months from the time of the arrival of the rice, and the great object is to sell the contracts at a profit before the time for implementing them comes. The Nippon publishes some views said to be those of an expert in such matters. His opinion is that there will be something like a débacle in the rice market about June next, when great quantities of the imported cereal will have to be disposed of, and the price of foreign rice will fall appreciably, dragging down with it the price of Japanese rice also. On the other hand, the prospects of the barley crop are said to be inferior, andshould that prove to be the case, a further appreciation of rice may be looked for.

> The appropriation asked for by the Communications Department this year was fifteen million ven, but the Finance Mini-

The general work in that branch of public enterprise will not be interfered with, but the extension of the Toboku line will not be carried beyond Yonezawa, and on the Kiushu road nothing will be done, as work has not been commenced there, and the whole sum destined for the purpose, namely, 400,000 yes, has been disallowed. It must be confessed that the necessity of retrenchment in the field of productive public enterprise is unfortunate for Japan.

The results of the Tobacco Monopoly are very interesting to observe. It has frequently been pointed out in these columns that the system adopted by the Government does not seem calculated to attain the ends in view, and that far larger profits might be realized by a much simple and safer plan. However, the monopoly as originally organized is now in full working order, and we learn from vernacular newspapers that the results anticipated during the fiscal year just commenced-the 31st year-are these :-

7,320,000

Total Expenditures ...... 1,487,500

Net Proceeds of Monopoly ... 5,832,500 The income obtained from the Tobacco Tax in force in the fiscal year 1896-7 was 2,950,327 yen, so that the financial advantage of the monopoly system is 2,882,173 yen—a poor result compared with the possibilities in sight by other

The steady appreciation of prices and the consequent difficulty of making ends meet are beginning to be visible in the field of education. It is alleged that many students who have come from the provinces to attend schools and colleges in Tokyo find themselves obliged to abandon the hope of graduating, and are returning home daily. The diminution of provincial home daily. The diminution of provincial students in the capital owing to this cause is estimated at from twenty to thirty per cent. of the whole number, and it is alleged that the usual spring examinations for admission to the Tokyo schools show a reduction of nearly one half in the number of youths presenting themselves. It has been calculated that the cost of education at the Imperial University is from 10½ to 14½ yes per month—including, of course, board and lodging, books, and petty expenses, but excluding clothes;—that a lad can attend one of the Ordinary Middle School at an expense of from 9 to 13 yen, and that the outlay of a student at a common school is from to 10 yen. These figures are small enough, but it is plain that they represent a painful effort on the part of the middle classes.

A very shocking accident occurred on the 8th instant on the Kiushu Railway. The train which left Kotake on the Chikuho main line at 8.25 a.m. reached Kotai on the branch line safely, and was about to start for the coal mine when the engine blew up with a violent detonation,

latter's body was blown to a distance of seven or eight yards and was so terribly scalded that the flesh came off when an attempt was made to raise the unfortunate man. The engine-driver's plight was no better. He fell in the doorway of the station, and is reported to have risen to his feet and shouted towards the locomotive "You have killed me too, man-eating No. 23, have you?" The Nichi Nichi Shimbun says that this engine No. 23, had already caused the death of several people, and that the name of "maneater" had been given to it, but whether its destructive power were exercised in running over the victims or in scalding them to death our contemporary does not explain. The stoker, though quite unconscious of surrounding objects, exclaimed repeatedly before he died that there had been plenty of water in the boiler. A pointsman and five men at a crossing were also injured, the pointsman fatally, it is feared. There is talk, naturally, foul play—a charge of dynamite among the coal, and so on-but probably the simplest explanation is the true one, a boiler explosion.

If journalistic opinion has influence with the Japanese public the doings of the strong-foreign-policy" agitators have not much chance of gaining popularity. The fatally weak point in their position is perceived and attacked. If Japan has any valid grounds for protesting against the procedure of Russia and Germany in the Far East, she should have presented her protest five months ago when Germany seized Kiao-chou. That was the very fons et origo mali. Russia laid her hand upon Liaotung because Germany had grasped Kiao-chou, and England's occupation of Wei-hai-hei was an inevitable sequétur. It would be supremely ridiculous for Japan to spring up now, like a person suddenly awakened out of sleep, and raise her voice against events which she should have objected to at the outset if she intended to object at all. Her silence when the Kiao-chou incident came upon the tapis disqualified her for making protests at a later date.

The Mainichi Shunbun has become ominously mysterious about this question. It says that the course of events may be divided into three periods. Germany has the honour of appropriating the whole of the first period. Her seizure of Kiaochou is put in a class by itself and constitutes era No 1. Russia's acquisition of the Liaotung Peninsula and England's lease of Wei-hai-wei fill up the second period. In the first period, the Japanese Government and the Japanese people alike remained quiescent. In the second period, the Government still sat with folded arms, but the people rose and clamoured for action, denouncing the statesmen in power as "brainless and impotent." That is all explicit enough. But now comes the mystery. When is the third period to commence, asks our contemporary. At the time for withdrawing the Japanese garrison from Wei-hai-wei, or subsequently to that event? What the fragments flying to great distances the third period means we are not told, but cotton-spinning companies has been dark hints are thrown out that before it draws to a close the very existence of Japan may be threatened. There is something to brought on the tapis. It was started that the chimney of the locomotive may be threatened. There is something fair way to be realized when the circumstances that had suggested it underwent to be recognized.

driver and stoker were both killed. The too vague to invite reflection. But they are appealing very successfully to public curiosity. Everybody wants to know not what they are going to do, but what they really think. They have managed to en-velop their view in such clouds of mystery that no one can decipher it.

We were recently treated by the Yorosu Choho to an alleged interview with Marquis Ito, in which that statesman was represented as making some remarkable statements. Subsequent inquiry showed that Marquis Ito had not been interviewed at all, and had never made any statements of the kind attributed to him. The Yorosu Choho's versions of the views expressed by Japanese publicists must therefore be taken with extreme caution. They possess indeed the piquant feature of a lottery; they may be true and they may be false, and the reader has the privilege of balancing the probabilities. Consequently, it is not with the idea of endorsing or confirming the Yorosu's latest effort in this line that we allude to it, but merely to afford our readers an opportunity of guessing. The interviewed person is Viscount Aoki, and the topic, as will readily be conjectured, is foreign policy. The ex-Minister to Germany declined to make any particular statement, being precluded from doing so by his official connexions. But he did not mind asserting the general truth that in order to have a working policy, every country must possess a definite object. England, for example, makes commercial expansion her object; Russia aims at territorial aggrandisement, and Germany and France have their own specific purposes. Thus, whenever any one of those States finds itself required to deal with an incident, its Ministers can choose the right line at once, since they know the destination to be reached. But Japan has no basis of policy and therefore no superstructure. Having expended a sigh over this lamentable state of affairs, the Viscount was asked to give his own definition of what ought to be Japan's national policy, but he remained silent and sighing—a condition which naturally gives the Yorosu an opportunity of observing that a diplomat without a policy is not lit to be sent to China in charge of Japanese. The Yorozu Choho is at least ingenious. We have been disposed to think, lately, that scurrility was its sole accomplishment, but the inventive faculty seems to be there also.

It is, perhaps, worth noting that the utterances falsely attributed to Marquis Ito by the Yorozu Choho were reproduced by Yokohama local journals, but no contradiction of them has ever found its way into the columns of the latter. If it was worth while to tell the public what the Prime Minister was supposed to have said, it ought also to have been worth while to explain that he did not say what had been attributed to him. As a mere question of journalistic interest that view of the case might have suggested itself. We say nothing of accuracy: such a consideration is a little old-fashioned.

The project of a union of Japanese before falling. No casualties to life or limb were caused in the village, but it need scarcely be said that the engine-opinion, because the grounds of appeal are yearns abroad and at home, and such a Original from

decline of prices that the profits of the can only listen to what opinions they mills (ell away lamentably. A sudden have to offer. There is no objection to such as flower vases, censers in the tells of a combination of the companion of the tells of a combination of the companion of the tells of a combination of the companion of the tells of a combination of the companion of th the talk of a combination ceased to be heard. But the improvement did not hold. Prospects have again become gloomy, and several of the leading millowners, headed by the Mitsui, are reopening the question of a cooperative league. If the purpose of such a league were to prevent competition among Japanese manufacturers in domestic and foreign markets, its organization would be intelligible. Possibly that idea enters into the programme. But the main motive, as we gather from vernacular journals, is to obtain a subsidy from the Government. Such devices ought to be out of fashion by this time. Seldom indeed can it be justifiable to employ public money for the purpose of promoting private enterprise. In this case the contemplated effect of the bounty is to enable cotton-spinners to place their yarns in the Chinese market at prices lower than those demanded for Indian or Shanghai yarns. In other words, the lapanese people are put to their hands in Their pockets for the benefit ultimately of Chinese consumers. If a sufficient demand does not already exist in China for brought him to death's door. He rallied, this particular staple, it would be vain to attempt to create an artificial demand by the method proposed.

#### POLICY.

The Yorodau Choho prints what professes to be a verbatim report of certain remarks made by Marquis Ito on the 5th instant, after his Excellency's return from Oiso, to a statesman not now in the Government :-- " Truly the so-called 'strongforeign-policy advocates' are a great trouble. They appear to have no idea about anything except a country's draw. ing back. What is to be done with men who get up an empty agitation without any intelligent reference to the nation's real strength or its status vis-à-vis other nations? It is impossible to be more mistaken than they are when they imagine that diplomacy does not demand any resolution to fight if necessary and that the mere lodging of protest ends everything. What can be accomplished now-a-days in foreign politics without real strength? All the countries that have laid hands upon China were enabled to do so because they are veritably powerful. If a protest is made and disregarded, what are you to do? Unless you have considered your ultimate course you merely become an object of ridicule. England with all her strength and all her array of ships enters Port Arther, which is Russia's, and makes a demonstration, but Russia does not budge. She knows perfectly well that England has not the resolution to fight with her. Thus England's destock. Again, supposing that Japan obtained Wei-hai-wei, how could she keep it? Such a poor, unproductive place could never be retained. There is a much better never de retained. There is a much better plan. Keep your eyes open and you will see it. The so-called 'strong-foreign-policy' men are coming to-morrow to give me some advice, I hear. They may come, but it is not to be supposed that the secrets of diplomacy can be disclosed to them, especially in the case of a pro-ling. The masterpieces of men like gramme that it under negotiation. One Digitized by Google

Some of the statements attributed in the above to Marquis Ito are so obviously unlikely to have emanated from the Prime Minister, and are, at the same time, calculated to produce such a bad impres-sion, that we have thought it advisable to make direct application to his Excellency for contradiction or confirmation, and we are authorized to say that the whole account is a fabrication. Marquis Ito has not addressed any language of the kind to any one. The precis given by the Yorodau Choho may be dismissed as pure invention.

#### DEATH OF MR. E. CHIOSSONE.

It is with great regret that we announce 2 am, on the 11th inst. Mr. Chiossone's health had been somewhat broken for several years owing to attacks of asthma, but no cause for special anxiety presented itself until last autumn, when an ancemic condition and great weakness of the heart however, and, though his state continued precarious, there was nothing to presage the sudden end that overtook him. He was in his sixty-fifth year, and had lived a life of unceasing industry. Originally Pro-MARQUIS ITO ON JAPAN'S FOREIGN tessor of Engraving in the Royal Academy of Artsin Genoa, he subsequently proceeded to Germany, and, having been engaged at Frankfort in the manufacture of the first Japanese bank-notes, he finally came to this country in 1875 as Engraver to the Imperial Printing Bureau. There and in his private studio he accomplished much admirable work, and earned a high reputation for artistic and technical ability, his gentle and loyal disposition winning for him, at the same time, the hearty friendship of all with whom he came in contact. He was a Knight of St. Maurice and Lazarus, a Kt. of the Italian Crown, a Kt. of the Saxon Falcon, and he received from the Emperor of Japan the Third Class of the Sacred Treasure and the Fourth Class of the Rising Sun. Mr. Chiossone loved art and art objects passionately. During his residence of 27 years in Japan he acquired many beautiful specimens which now form a unique collection.

The will of the late Mr. Chiossone contains a clause bequeathing all his valuable collections of Japanese works of art to the museum of his native city, Genoa, Mr. Chiossone was an ardent lover of art products. Very soon after his arrival in Japan he began to collect bronzes. Naturally his training as an engraver equipped him specially for appreciating fine effects in moulded and chiselled metals, but of course his inexperience as a buyer of Japanese chefs monstration is converted into a laughing d'œuvre betrayed him at first into many mistakes, so that his very large collection of bronzes includes several pieces of inferior quality. On the other hand, it includes numerous specimens which

applies to the general run of productions, such as flower vases, censers, images and so on. Of course the very opposite is true of Japanese work in irou, and of the incomparably beautiful pictures on metal that are to be found in sword furniture. These also M. Chiossone acquired industriously, and he has left a rare and valuable collection put together when such things were still procurable in profusion. He also loved brocades and other woven stuffs, and he filled album after album with examples of the products of ancient and mediceval rooms. But perhaps his most interesting collection is that consisting of coloured prints. He set about buying these delightful efforts of Japanese artistic skill long before French collectors had discovered them -that is to say, when twenty or thirty sen was the market price of a the death of Mr. Edward Chiossone, which picture now saleable for twice as many took place at his residence in Tokyo at yen. Altogether Genoa will have m new attraction for tourists when Mr. Chiossone's collections are placed in its museum.

> The remains of Mr. Chiossone were interred on the 14th instant in the Aoyama cemetery, the funeral service being held in the Roman Catholic cathedral at Tsukiji. A very large concourse of people assembled to pay the last tribute of respect to one who had been loved by all that came in contact with him. Among those present were the Representatives of France, Italy, and Holland; Marquis Tokudaiji, Grand Chamberlain; Field-Marshal Marquis Oyama; Viscount Tanaka, Minister of the Imperial Household Department; Baron Sannomiya, Grand Master of Cermonies; Marquis Tokugawa; Mr. Watanabe Keki; and a great number of prominent Japanese and foreign residents of the capital. Innumerable wreaths and stands of flowers were sent, and a company of troops marched before the hearse to the cemetery.

#### THE OPERATION OF THE SILK BOUNTY LAW.

We have made inquiries with respect to the operation of the Law for encouraging the Direct Export of Silk, and we learn that, during the first eight days of the Law's enforcement-April 1st to April 8th- the total amount of raw silk offered for conditioning under the provisions of the Law was 135 bales of 100 catties each, and that only 13 bales were held to be qualified for bounty. Nothing can be predicted, of course, as to the quantity of silk that will hereafter be presented for examination, but it is considered probable that the experience of the first eight days will be typical. Moreover, in view of the fact that all the silk presented at the outset had been carefully selected beforehand by the applicants in anticipation of the Law's going into force on the 1st instant, it would seem fair to infer that the quantity qualifying for bounty hereafter will be very limited. We may add that among the 135 bales spoken of above, the 13 bales passed by the examiners were all placed in the third grade, none being judged fit for classification in the second

#### THE TORYO FETE.

to offer a hopeless prospect, cleared up completely before dawn, and the sun of Easter Sunday rose in a clear blue sky with almost summer heat. Tokyo, of course, turned out in gala costume to celebrate its own salvation, for it is certain that the event commemorated on the 10th instant was the turning point in the city's career. Neither from a geo-graphical point of view not yet from a commercial is Tokyo the natural capital of Japan. It owed its status in feudal times to political considerations, and had the Meiji Government decided in 1868 to make the administrative centre at Osaka or Kyoto, the metropolis of the Shogunate must have gradually lost its importance, and would probably have sunk by this time to the position of a very second-rate Thus the celebration on the 10th instant had a much sounder rasson d'étre than such affairs can usually claim, and, although many critics averred that instead of wasting their substance on idle show, the inhabitants would be better advised did they devote their enterprise and their resources to making the city worthy of its position as the capital of the empire, such sage reflections did not seem to interfere in any degree with the satisfaction of the great mass of the citizens. They threw, themselves into the fête with all the heartiness conceivable, and as holidaymaking is certainly one of the strong points of the Japanese, Tokyo wore an exceedingly joyous aspect throughout the hours of daylight on the toth instant. The celebration had its centre in the wide space between the first and second moats that surround the Palace park, immediately outside Niju Bridge. This large area, measuring about a hundred and fifty acres, is traversed in various directions by wide roads winding among esplanades, and, the fences that usually surround the latter having been removed for the occasion, accommodation was obtained for thousands of people without the slightest crowding. In Japan the Sovereign is the pivot of everything. In answer, therefore, to a petition from the citizens, the Emperor and Empress consented to open the fête by receiving addresses, and a special edifice was erected for their Majesties' accommodation on the esplanade lying immediately under the Castle's eastern One advantage of this choice of location was that a limit could dresses; a somewhat awkward arrangebe imposed on the size of the audience by ruling that only ticket-holders should be admitted within the second moat. " Ticketholders" signified all that had subscribed two yen or upwards to the expenses of the fête. No record of their number has yet been published, but arrival, there must have been from twenty to menced thirty thousand within the enclosure. At each of the three bridges over the second moat an arch of greenery had been erected, and on the esplanades stood large marquees. The broad white surfaces of the latter and the lines of gay bunting that festooned their roofs formed a brilliant spectacle in the bright sunshine. Incomparably the prettiest among the various edifices was that for the reception of the Imperial visitors. It had the steep slightly re-entrant roof-slopes and tiptilted ridge of Shinto architecture; the pillars, wall-plates, tie-beams, and ridge- 12. Horobiki.

softly with the milk white shingling of These various processions and dances the thatch; the hall was hung all round With genuine April capriciousness the with blinds of fine green bamboo, edged weather, which on Saturday night seemed and banded with rich brocade and corded and tasselled with purple silk; and the lacquered thrones for the Emperor and Empress were flanked with screens of undecorated gold-foil, making a heart of glowing mellowness in the otherwise severely simple interior. On the south side of the Imperial pavilion a spacious wing afforded accommodation for the guests of distinction, Japanese and foreign. In the case of foreigners the issue exceptions the members of the Corps Diplomatique and the Attachés of the Legations were alone present. The number of Japanese in the pavilion adjunct the Ministers of State except the Minister twenty minutes before eleven, a signal gun announced that their Majesties had left the Palace, and immediately a large concourse of students, male and female, who had been marshalled along the road outside Niju Bridge, sang the national anthem. As soon as the four carriages carrying their Majesties and the nobles and ladies in waiting had crossed the bridge, the City Band took up the strains of the Kimi ga yo, and the guests, descending from the pavilion-adjunct, stood beside the avenue along which the carriages passed. The Emperor and Empress rode in separate carriages, and entered the pavilion independently, but it was observed that, in returning, his Majesty's carriage waited until the Empress had entered hers so that the two vehicles could drive away together. the road in front of the pavilion, at a distance of some fifteen paces, the members of the Municipal Committee were drawn ceive; namely, an address from the Municount and Mr. Shihusawa mounted the steps of the pavilion and placed themselves before the dias in order to read the adment, since, after the reading, they had to turn their backs on the Sovereign when descending to their original posts. Their Majesties returned to the Palace after a very brief delay, the same ceremonies being observed as at the time of their The entertainments then commenced. They consisted of the following, according to the programme-which was printed in Japanese and English :-

1. Procession of a Daineyo

2. Procession of the Fachin (Court Ladies).

3. Dance; "The Conquest of the Demon's Island" (old lable).

4. Dance; "The Tonguest Spaceow" (old fable).

5. Facility Court Court Spaceow" (old fable).

fable).

5. Festival-Car—Battle-Ship and Cannon.

6. Festival-Car—Connes and Tortnise.

7. Pencessian of Tengu (Hobgobius).

8. Festival-Car—Pence Yamatedaks.

9. Festival-Car—Hamaguri issning from the Temple of the Sen.god.

10. Flower-Car with Shimadai.

11. Naga-Ula Dauce.

pole were of solid greenery, contrasting 13. Dakyu (Game of Polo). Digitized by Google

were not only picturesque and beautiful, but also derived much interest from the fact that they constituted a faithful reproduction of spectacles common in pre-Meifi days, though now seldom seen. Indeed, the general effect was admirable. The constant glow of rich, charmingly harmonized colours and the rythmic solemnity of the processions' advance in the foreground; the rapid movements of the gaily caparisoned polo-players in the middle distance; the broad expanse of restful white canvas relieved by the wavof special invitations appears to have been ing of many-hued flags in the back-very limited, for with three or four ground; the glitter of day-fireworks overhead, and the brilliant sunshine bathing the whole combined to produce a delightful picture. Shortly before one o'clock luncheon on a sumptuous scale was served was also small, and did not include any of to the pavilion guests in adjoining tents, and the general body of ticket-holders of Home Affairs, Viscount Yoshikawa. At betook themselves to restaurants in their respective quarters of the city, where arrangements had been made to supply them with refreshments. while the processions wended their way through the streets of the city to Uyeno Park, where tens of thousands of people had assembled to keep holiday among the cherry trees now bursting into bloom. Many spectacles had been organized independently of the Municipality's programme. Two troops of geisha, dressed in the piquant costume of the Tekomai, and a band of gennin, numbering about 150, were among the notable attractions. They represented the frivolous side of the city's daily life, and, on the other hand, several business firms took shrewd advantage of the occasion to advertise themselves. Thus the great tobacconist, Salsuma-ya, sent a troop of about a hundred demons, male and female, tricked out with bird-like masks, long elfin locks and taloned hands and feet up in line, headed by Viscount Okabe, of mountain imps (tengu); the Miyako Governor of Tokyo, and Mr. Shibusawa Shimbun propitiated the deities of pro-Eiichi, President of the Tokyo Chamber of Commerce. On these two gentlemen drawers admirably disguised as herons; devolved the duty of reading the addresses and the tailors of the metropolis sought which his Majesty had consented to re- to popularize foreign costume by dressing a regiment two or three hundred strong cipality, an address from the City Assem- in brilliant red tunics. It is, perhaps, bly, and an address from the Tokyo superfluous to say that the utmost good Chamber of Commerce, the two first of humour prevailed everywhere, for that is which were read by Viscount Okabe, and invariably the case with Japanese crowds, the third by Mr. Shibusawa. The Visbut we must in all justice pay a compliment to the admirable arrangements made by the Municipal Council, who discharged the duties connected with organizing the fête. Everything had been carefully thought out and skilfully provided for, so fête. that nothing like a hitch or contretemps occurred from first to last.

#### AN INFERENCE.

There have been many expressions of doubt as to whether the National Unionists might be counted supporters of the Government, or whether they ought to be classed with the Opposition, The question appears to be settled by the pre-sent strong-foreign policy agitation. Not a single member of the National Unionists is to be lound in the ranks of the agitators. Another question also is now answered; namely, whether the Cabinet's allies are the Liberals or the Progressists. It was supposed that the point could not be definitely decided before the meeting of the Diet. But the Progressiats are now emphatically in opposition and the Liberals are supporting the Government. Nothing was needed but the application of a test, and foreign

affairs have supplied it.

#### AMERICA AND SPAIN.

TE have said little in these columns about the war now most unhappily impending between the United States and Spain, because it really seemed that comment was useless, and that the only natural attitude for every thoughtful person must be one of earnest hope that such a calamity might be averted. A war in which America is engaged differs scarcely at all to the vast majority of Englishmen from a war in which their own country takes a part, and there can not be the threatened the United States, her kinsmen of Great Britain would rally to her There may be bickerings between the two nations in time of peace, but they are one could not endure to stand idle and indif- in a state of open rebellion. ferent. No severe trial is in store for the United States now, however. Some writers but, without the slightest desire to disparage the Spaniard, we venture to think we do conclude with absolute certainty is to indulge, she need only set her teeth a little and her difficulties would speedily disappear. On the other hand, no one can choose but admire the indomitable pluck and splendid grit of the Spaniards. Had they grown weary of the Cuban problem long ago and left the island to On-lookers see plainly enough that the So far as the latter question is concerned, Cuban insurgents in the eastern interior further explanations are probably useless. far as Spain's competence to reduce them matter have doubtless convinced themis concerned. It was calculated in 1876 Spanish trops sent to crush the rebellion of that era had aggregated 145,000 men, and the total despatched during the present outbreak can not fall far short of the same great number. Evidently the task of restoring, or at any rate of preserving, order is beyond Spain's strength, yet she continues the effort with unabating resolu- determine the duration of the lease. They tion. There is no exaggeration in saying may fix it at to years, or too years, or 1,000 that never since the "Black Eagle" con- years without infringing any provision of spiracy of 1829 has the island enjoyed law. That point, we say, is absolutely real tranquillity, neither can it be denied that the trouble had its origin in the monstration fifteen months hence. natives' deprivation of political, civil, and

public stations, and their severe taxation -causes of which Spain is justly condemned to suffer the consequences, confused problem to some minds, and can Meanwhile, the patience of the United not be left to elucidate itself, for it is a States has held out for half a century, matter which immediately and intimately Since President POLK proposed the purchase of Cuba for a million dollars in 1848, American sympathy has been uniformly with the Cubans, and there are innumerable reasons why the great continental republic should strenuously object to a condition of perpetual unrest and bloodshed on an island within six or seven hours' journey from its shores. Interleast doubt that if anything like a calamity ference is virtually forced upon America. The pity of the thing is that, if the insurgents could only be induced to lay down side with all the force they can command, their arms, Spain would probably consent to grant them independence. She intimated her willingness in that sense in heart as in blood, and at any moment twenty-nine years ago, but then, as now, of storm and stress for America England she declined to treat with subjects Her fine old Castilian pride forbids her to abate one jot of the punctilio have occupied themselves drawing up that a Sovereign State regards as its right, comparative tables of the ships that the two and now, in the sequel of a campaign that belligerents could send into the arena. has almost exhausted her strength, she Such a study may not be uninteresting, prefers to defy a fresh and colossal foe rather than forego anything of what she considers due to her dignity. Such a that the personnel of the fleets is the factor mood is very admirable, and we dare say of paramount importance. However, that that it receives as much appreciation in may be mere pride of race and is not, at any the United States as anywhere. None rate, a welcome topic of discussion. What the less peace must be restored in Cuba, and, since Spain can not restore it, there that, although some small hurt might be in- is no recourse but to ask her to stand flicted on America at the outset by way of aside. Every one regrets that fate should penalty for the condition of unprepared-have decreed these hard things for a ness in which it is her nonchalant custom country so stout in adversity, but of two evils the lesser has to be chosen.

#### THE NEW TARIFF.

HERE seems to be as much difficulty in understanding the arrangements with reference to the operation of the new its fate, they would simply have been Tariff as there is in comprehending the Japanese Treaty are:-"It is agreed by acting as nearly all other nations would question of land leases and superficies the contracting parties that one month have acted under the circumstances, after the Revised Treaties go into force, after the exchange of the Ratifications of of the island are practically invincible, so Those that have any real interest in the selves long ago that what has been set that; during the preceding eight years, the forth in these columns on the subject is absolutely correct, and that, after the abolition of the system of settlements, foreigners will be able to obtain land signed this day, be applicable to the under agreements securing length of tenure unlimited by law. In other words, it will be within the sole competence of the land-owner and the would-be tenant to certain, and can now await practical de-

religious liberty, their exclusion from all to be even less liable to misapprehension,

and though it has been explained with equal clearness and insistence, is still a concerns the import merchant. If the trader believes that a certain interval of so many months, counting from a date to be hereafter officially announced, will necessarily be allowed before enforcing the rates of the new Tariff, he may be betrayed into postponing measures of great importance to his business interests. We are therefore induced to refer to the following paragraph which appears in a recent issue of the Kobe Chronicle:

The Anglo-Japanese Treaty stipulates notice of the intention to bring the new Tariffs into force shall be given after the exchange of satisfications, and all the other Treaties contain clauses to a similar effect, but, while the Treaty with Creat British attended for our mouth may clauses to a similar effect, but, while the Treaty with Great Britain stipulates for one month, most of the others stipulate that six months' notice shall and under the most-favoured-nation be given. clause British merchants share in the benefits of this more equitable arrangement. But until the taufications of the new Treaty with Austria-Hungary are exchanged, it is clear that notice for the operation of the new Tariffs cannot properly be given. We understand that as soon as the intimation was conveyed to the Foreign Representatives that the Tariffs would be put into specation in November next, objection nuce raised on those grounds, and it is believed that the notice has been withdrawn. It is impossible not to sympathise to some extent with Japanese Government in the position in which it is placed, and it is only natural that every effort should be made to bring the Tariffs into operation at the earliest possible date in the hope that the additional revenue derived therefrom will be available in the current financial year. But at the same it would be impossible for the Foreign Representatives to allow any informality in matter where such important interests are at stake, and they had no alternative to the course taken of declining to receive notice. There does not seem much likelihood that the new Tariffs will come into operation earlier than January next, if then.

The above paragraph contains several errors, the most important of which could have been avoided by referring to the text of the Revised Treaties. Neither the Anglo-Japanese nor any other Treaty contains a stipulation that notice shall be given of the intention to bring the new Tariff into force. The words of the Anglothe Treaty of Commerce and Navigation signed this day, the Import Tariff bereunto annexed shall, subject to the provisions of Art. XXIII. of the Treaty of 1858, at present aubsisting between the Contracting Parties, as long as the said Treaty remains in force, and thereafter subject to the provisions of Arts. V. and XV. of the Treaty articles therein enumerated." There is here no question of notice. It is absolutely and definitively provided that the new Conventional Tariff may go into force one month after the date of the exchange of ratifications. The sole reservation is that there shall be no violation of the mostfavoured-nation clause: in other words, goods imported from Great Britain shall not have to pay higher duties than goods But the Tariff question, though it ought imported from any other country. All the other Revised Treaties are drafted in Original from

Digitized by GOOGLE

accordance with a similar principle-that is to say, the date when the Conventional Tariff may be applied is absolutely fixed without any stipulation whatever as to notice of intention. Some of the Treaties, however, extend the one month of the British Treaty to six months, and, of course, under the most-favoured-nation clause, the benefit of the extended period is enjoyed by importers of British goods also. The French Treaty is the latest of these documents. Ratifications were exchanged in Tokyo on March 19th, and the annexed Conventional Tariff may consequently go into operation from September 19th, without further notice of any kind. But there remains one Treaty in the case of which all the processes are not yet ended. It is the Austro-Hungarian. According to that Treaty, the operation of the Conventional Tariff must be separated by an interval of one month from the exchange of ratifications. The Treaty has been concluded, has received the ratification of the Emperor of Japan, and has been forwarded in ratified form to Vienna, where the ratifications will be exchanged. One month subsequently to the latter event the new Tariff may be Treaty Revision would not be consistent put into operation without further notice of any kind. Of course until the ratifications of the Austro-Hungarian Treaty are from the date of the exchange, the new rates of other countries that are entitled to most-favoured-nation treatment. But there is no question whatever of further notice. Any one imagining that so long as the Japanese Government does not speak, he has a certain interval of six months before him wherein to provide for the changes that the New Tariff will introduce, may find himself most inconveniently mistaken.

of their exchange.
Digitized by Google

them, our readers need scarcely be warned of the incorrectness of the Kobe Chromicle's statements that "as soon as the intimation was conveyed to the Foreign Representatives that the Tariffs would be put into operation in November next, objection was at once raised, &c.," and "the notice is believed to have been withdrawn." No such notice was given, uo such objection was raised, and no such withdrawal took place. It may be taken for granted, we presume, that the Japanese Government would gladly consult the convenience of foreign importers by giving formal notice and thus enabling merchants to make all desirable arrangements. But unfortunately the situation does not appear to warrant anything of the kind. The fault rests with Austria-Hungary. Had not that country's procedure been exceptionally slow, no uncertainty as to the date of the Tariff's enforcement need have existed. It is curious that a State whose tradal interests are comparatively so small should be the means of causing such confusion and inconvenience. But the history of did not its last chapter include some incident of that nature. We may add, in conclusion, that in speaking of the improexchanged, and until a month has elapsed bability of any notice being given, we are guided solely by the facts as they present cannot be levied upon the import trade themselves. As to the intentions of the Japanese Government we have no informatiou.

#### THE DEADLY PARALLEL.

Kobe Chronicle, Mar. 10th. (Referring to an article published by the Japan Times over the signature of "Yamato Chuyo") We direct the attention of

the New Tariff will introduce, may find himself most inconveniently mistaken. The position is this, stated in the briefest and clearest terms:—

(1) The Revised Treaties do not stipulate for any previous notice as to the operation of the new Tariff, but definitely and absolutely fix a date on which it may be put into force.

(2) The Tariff may not be put into operation must the goods of all countries can be subjected to its rates—owing to the existence of the most favoured-nation clause;—in other words, until all the Treaties have been revised, their ratifications exchanged and must the periods fixed by them have elapsed.

(3) The ratifications of the Austro-Hungarian Treaty have not yet been exchanged, but the catifications that the exchange of its ratifications, the annexed Tariff becomes enforceable.

(4) The periods of grace fixed by all the other Treaties have already expired, except the period fixed by the French Treaty, and that terminate and may therefore justly be inferred that the simistry makes instituted to make no distinction in the treatment of foreigners who may be inferred that the simistry and has instituted to make no distinction in the treatment of foreigners who may therefore justly be inferred that the simistry has determined to make no distinction in the treatment of foreigners who may therefore justly be inferred that the simistry has determined to make no distinction in the treatment of foreigners who may therefore justly be inferred that the simistry and has instituted to make no distinction in the treatment of foreigners who may therefore justly be inferred that the simistry and has instituted to make no distinction in the treatment of foreigners who may therefore justly be inferred that its concerned, foreigners and the position of the Austro-Hungarian Treaty, in order that our contemporation of the Austro-Hungarian Treaty in order that our contemporation of the Austro-Hungarian Treaty are exchanged in the reading and mentions of the Austro-Hungarian Treaty are contemporated to the pr

Kobe Chronicle, April 4th. The Spans Mail knows perfectly well that there have been no articles, long or short, in the Kobe Chronicle with the object or "proving" that the objections of the editor of the Spans Times ("Vamato Chuyo") to discrimination treatment were expresin treatment were expressions of official opinion.

With the above explanations before IN REGARD TO SOME ASPERSIONS ON THE CHARACTER OF REV. J. H. NEESIMA, LL. D.

BY J. D. DAVIS.

The recent reiterated quotation by "Observer," in his article in the Weekly Japan Mail, of April 2, namely, that, Mr. Neijima "played at running with the hare and hunting with the hounds in turn, etc." leads me to say that I was associated with Dr. Neesima in the closest possible way from the inception of the Doshisha school until bis death, fifteen years later. At the request of many friends I took up the task of preparing a sketch of Dr. Neesima's life, and in so doing it was my privilege and duty look over a great mass of his private correspondence and papers, and I want to say most emphatically that if there ever was a man who did nor "play at running with the hare and hunting with the hounds in turn" then Dr. Necsima was such an one. No statement could be made, in my humble opinion, which would be more untrue to his character.

Much could be written, but I will only briefly allude to a few facts. In the winter of 1871-2. the second Japanese embassy, consisting of Messrs. Iwakura, Okubo, Kido, Ito, Tera-shima and Tanaka, crossed the Pacific and reached Washington, Mr. Neesima had at this time been in America about seven years. He had left his country by stealth when it was death so to do. The kmbussy, hearing of him, wished to secure him to go with them in their loar of foreign countries. They asked him come to Washington and he did so, and in company with twelve Japanese students who were being supported in the United States by the Japanese Government, Mr. Neerima met the Embassy in one of the parlours of the Arlington House. The twelve students prostrated themselves before the Embassy, but Mr. Neeshima stood erectby himself, until Mr. Tanaka stepped forward and took him by the hand in the western style. Mr. Tanaka then gave him an order to go with him as interpreter, etc. Mr. Neesima replied that if he ordered him to go he must refuse it, but if he was requested to do so, he would gladly do any favour for him.

Mr. Neesima spent nearly a year with the Embassy and visited most of the countries of Europe with them. The Embassy travelled on the Sabbath, but Mr. Neesima always stopped off alone Saturday night and came on after them Monday morning. He always let his Christianity and his principles be known to these men, and they respected him for it. It was in this way that Mr. Neesima gained the confidence of these men who were later at the head of the Japanese Government, and that coufidence lasted till the day of his death. It was because of this course on Mr. Neesima's part, never " playing at running with the hare, and hunting with the hounds, in turu," that Mr. Tanaka, the Minister of Education, gave Dr. Neesima permission to start his Christian school in Kyoto in 1875, and sustained him in that school during six years of apposition on the part of the governor and officials of Kyoto Fu, an opposition which was raised and continued on account of the pronounced Christian character of the school. Dr. Neesima always let his Christianity be known. His first wor on his return to his native land, was to preach the Gospel in his old family province of Joshu, and he preached it so earnestly sud to such crowds that the governor of the province was alarmed and went to Tokyo to inquire what was to be done. This was in Dec., 1874, soon after the edicts against Christianity had been removed, and it was probably the first time that the Gospel has been preached in that public manner in the interior. The men at the head of the Government in Tokyo told the governor of Joshu, " If it is Neesima, it is all right; let him alone;" and the governor returned satisfied.

The appeals which Dr. Nessima put forward to the general public of Japan for money for the Original in University speak for themselves. Ex-

tracts were given from them in the communication from the writer which was published in the Japan Mail a few weeks since. The Christian foundation of the school was not covered up in them; it was emphasised. The writer was present at the first public meeting held for the purpose of awakening an interest in the university among the Japanese. It was held in a large hall in Kyoto, in the spring of 1884. About fifty of the officials and leading business men of the city were present, and there were almost no Christians among them. President Neesima, Professor Ichihara, and the writer each addressed the meeting. At this meeting Christianity was emphasised in the necessary foundation of all true education. The same was emphasized in the first printed appeal put forth for theuniversity in May, 1884. This appeal was made to the sapanese public, and was most emphatic in its assertion that the old Chinese morality could not answer as a foundation for education, and that he must take Christianity as the basis of morality.

In the second appeal for the university which was put forth in 1888, and which was published in twenty of the leading newspapers of Japan on the 10th of November of that year, Dr. Neesima asserts, in the most clear and unequi-vocal manner, that Christianity is the only sure foundation of true and permanent civilization, of true education, that the raising up of young men of "strong and noble character by which they can use their learning for the good of their fellow men, can be accomplished only by Christian principles "—the living and powerful principles of Christianity, and therefore, he says, "we adopt these principles as the form says, "we adopt these principles as the founda-tion of our educational work, and devote our energies to their realization."

These words, put forth for the general public of Japan in an appeal for funds to found a Caristian University, before religious freedom was guaranteed in the Constitution, which was given about two years later, do not sound like the words of m man who "played at running with the hare and hunting with the hounds, in turn." The body of Dr. Neesima's father rests in a Buddhist cemetery in a beautiful grove at the foot of the mountain east of Kyoto, but when permission was asked for Dr. Neesima's body to be buried beside that of his father, in was refused because he was the "very head-centre of Christianity in Japan," to use the words of the head priest who gave the refusal. Such are a few of the facts in regard to this man, the founder of the Doshisha, whose character is now being aspersed by men who do not know the facts. Would that the men on whom Dr. Neesima's mantle fell had been with him long enough and under his influence powerfully enough so that they could have had the same unswerving loyalty to principle, and devotion to "the living and powerful principles of Christianity" which the lamented founder of the Doshisha school possessed, and which he always boldly declared!

#### JAPANESE FACTS AND COMMENTS.

The Tokyo Asahi publishes the investigations of an eminent statistician in the capital, who represents that the births of males are larger in number than those of females, and that the first born child is generally comparatively weak in physical constitution and deficient in intellect, The cause is ascribed to the immaturity of the parents. The writer concludes that in cases where the husband is much older than the wife male children are generally born.

The object of the new Formosan Association is to investigate various matters relating to Formosa with a view to improving its administration. The methods of the Association are said to be as follow :- Ascertaining the true condition of Formora and undertaking the despatch of inspectors for the purpose; extending the greatest possible facilities for communiand the support of students from Formosa,

The Nitron laments the relaxation of moral ity, especially as regards writings and pic-Criminal offences, it says, are strictly punished by law, but transgressions in regard to public morality, which do not properly come within the pale of indictable offences, are utterly ignored. The sale of immoral pictures has een prohibited, but, strange to say, they have found their way into novels, into newspapers, into magazines. They are not so flagrant as the productions that have been prohibited, but their effect on youths is undoubtedly pernicious. Not only in pictures is this tendency noticeable; magazines and novels offend in a similar manner under the guise of literature. Many of the existing romances caunot be read in a pure home. Prostitution is not a legitimate occupation, and houses of ill fame are separated from the ordinary streets by the civil law. But look at photographers' shops! The portraits of loose women occupy the most conspicuous position, and are often placed side by side with littled nobility. All these shame-less proceedings ought, the Nippon asserts, to be immediately prohibited by the Home De-

The Korean Cabinet, asserts the Chuo, is busily engaged in considering steps for the improvement of the situation. Each Minister has presented a separate memorial to the Emperor, and some of them are curiosities. Chhin Sang considers the number of Privy Councillors should be limited to fifty, to be chosen from the various classes of officials and to be required to give counsel on urgent affairs of state. Chong urges the necessity of enforcing greater vigilance against thieves and of amoliorating the abuse of secret inspectors who are now a terror to the people at large. Min Chhong Muk expresses himself in favour of the redemption of foreign loans at the earliest possible period, while Li, pointing out the difficulty of acquiring accomplished soldiers, suggests the advisability of establishing a military school where good officers may be trained. To put a check upon local Governors embezzling the taxes is, in the eyes of So Prong chik, a matter of absolute necessity. Vam Chong Chol refers only to the necessity of preserving strict discipine among the Government officials, especially those charged with the inspection and superintendence of mines. It is said that some of the Ministers have proposed that the appoint ment of officers should herewiter be limited to the descendants of noble families. If that he so the reform of Korean administration, the Chuo adds, can hardly be expected from the existing ministry.

The export of coal continues to be brisk, asserts the Shogyo. The amount exported from Moji and Bakan last month reached the following large figures : —

Destination,	Moji.	Bakan,	Total.
	Tons.	Tous.	Tons.
Hangkong	44,100	10.325	54.425
China	11,710	22,150	33,860
French-ladia	400		400
British India	15,600		15 600
Казея	52	_	
For ships' use	6,020	1.998	52 8,018

Total...... 77,882 34,473 112,355 Thus the aggregate total was no less than 12,355 tous. Compared with the figures for January an increase of 16,561 tons is noticeable, while comparison with February shows an augmentation of 30,861 tons. The fact is ascribed to an extensive demand for coal in Hongkong and Shanghai.

The Hochi reports that a general meeting to organise a Japanese Painters' Association was held on the 2nd instant at the Nihonbashi Club. Tokyo, under the auspices of many eminent artists. The project was first under contemplation last autuma, and a final resolution

to time; and taking measures for the control Japanese painting and encouraging the development and extension of Japanese art. The existing Fine Arts Association, asserts the Hochi, is disposed to attach too much importance to the ancient style of moving the arm and using the brush, whereas the course adopted by the Fine Arts School tends to introduce the defects of foreign art without its good points. The association just established aims at preserving the best features of Japanese paintings, and abolishing at the same time the peculiarities noticeable in foreign productions. It is said that more that 500 members have already been secured, including many of the Kyoto school, Baron Suyematsu is the President, and Mr. Hayashi Chinzei Vice-President, Another party of artists who held their first meeting m he Kairakuyen in the beginning of this year is reported to have resolved upon publishing a pictorial magazine, Messra. Matsuoka, Asai, and Oyama being among the promoters of the

> According to the investigations completed by the Agricultural and Commercial Department, and published in the Osaka Asahi, mulberry farms throughout the Empire have increased yearly in proportion to the development of sericulture. In the 30th year of Aleiji an increase of 9,659 cho, or 3.3 per cent., is noticeable over the pre-vious year. On the other hand, tea farms have suffered a diminution of 591 cho, or one per cent. In order to show the growing prosperity of sericulture it may be stated that the number of houses engaged in the rearing of silk worms during last year totalled 1,360,000, the cocoons raised being over 2,120,000 koku. figures show an increase of 4.3 per cent. in rearing houses and 16 per cent. in cocoons ... compared with the previous year. During the 39th year of Meiji the whole country suffered from the changeable weather. In Nagano, Gumma, Fukushime, and other leading silk districts, the mulberry trees sustained injury from frost, and a considerable depression in the silk industry followed. The reverse was the case in the 30th year, and most satisfactory results were obtained.

> No scheme seems as yet to have been formuslated for the improvement of the Fine Arts School. The most important step taken by the Education Department was an earnest entreaty to professors to withdraw their resignations. The effort, however, proved unsuccessful, and a resolution was made in appoint new professors. Meanwhile, the school has to be closed; and atudents have to waste their time. The procrastination of the Education Department, remarks the Nippon, is intolerable. Dilatoriness is the chronic disease of the Department. Besides the improvement of the Fine Arts School the reform of the museum is necessary. The latter problem will sooner or later be brought upon the tapis. One would suppose from the Nippon's remarks that the re-organization of an art school was a work of a few days.

The agitators in the Takano affair have, according to the Yorodsu, resolved on further action. On the 6th instant they held a private conference at Mr. Takano's residence, with a view to organizing a society to be designated the Kempo Yogo Kisei Domeikwai. Mr. Takano has already exhaused his resources, and has found it necessary to quit his specious mansion at Younga for a cottage near Yodobashi. Here he is engaged every day, with a plough in his hand and a straw hat on his bead, cultivating a few acres of land attached to his house. The produce of this farm is the only support for himelt and his family. A representative of the Porosu paid a special visit to him a few days ago, when he made the following remarks :- "I have not the least idea of struggling for the mere post of Chief Justice in Formosa, It is because the matter has a close relation to the Constitution that I protest. The independence of the judiciary in not yet established even in Japan proper. What are the judges doing? in Japan proper. What are the judges doing? They are no more than the tools of clau statesand delivering lectures on Formosa from time with the object of preserving the peculiarities of long as I have a possible set of the organisation of the Association was made at the end of last year. It is formed simply and delivering lectures on Formosa from time with the object of preserving the peculiarities of long as I have a spirit within me, so long as I

Digitized by Google

have a mouth to speak with, I shall never cease to clamour about my removal. I intend to communicate openly with the Cabinet about my dismissal, and if my protest is not duly attended to I shall appeal to the nation at large."

Investigations completed by the Agricultural and Commercial Department show that the amount of rice produced last year was 33,001,015 koku, being a decrease of 16 per cent, as compared with ordinary years, and of I per cent, as compared with the 29th year, which was regarded to a certain extent as a year of failure. Further comparison with the 22nd year, which was characterized by a short crop, but in which the yield seached 33,007,566 koku, indicates a diminution of 6,551 koku.

The Kiciku Firen publishes statistics show ing the number of foreigners now in the employ of the Educational Department. Thus:—Law College, 4; Medical College, 2; Engineering College, 2; Literature College, 4; College of Science, 1: Agricultural College, 2; High Northine mal School, 2; High Commercial School, 5; Foreign Language School attached to the High Commercial School, 6; 1st High School, 5; 2nd, 2; 3rd, 1; 4th 1; 5th, 2; Yamaguchi High School, 1. Classified according to nationality, the following are the figures :-Germans, 13; English, 13; French, 4; American, 3; Belgians, 1; Italians, 1; Chinese, 2; Russians, Koreans and Swiss, 1 each.

The deficiency of grain can easily be supplied by means of imports, but the steady rise in its price is a source of anxiety as to the future of the poor people. Labourers and coolies of all descriptions may have been relieved of their embarrassment to a considerable extent by the enhancement of their wages, but in the case of necessitous farmers there is scarcely any means of aupport till the next harvest. Riots were of support till the next harvest. numerous in Iida and Yechigo in the fall of last year, and yet the price of rice was not so high as at present. The atmost precaution is high as at present. Indispensable on the part of the local authorities in dealing with these poorer classes. 1.8co strong is already beginning to agitate in the Shimane prefecture, and a report is to hand to the effect that on the evening of the 28th ult. a branch of the 3rd National Bank was surfounded by rioters who demanded that the monopoly of rice by that branch should at once be suspended. Being informed that the branch had never attempted a monopoly of the grain, they exclaimed that they would murder all the dealers concerned in the enterprise. The police interfered, and with great difficulty dispersed the mob, but unquiet still prevails.

As the climate was unusually mild last year. excellent results were obtained in sericulture, the number of rearing houses reaching 1,365675, These figures show an increase of 56,322 houses over the previous year, while the output of cocoons exceeded 2.124,238 koku, an increase of 292,860 koku, or 16 per cent. Following is a comparative table for the past five years :-

		Summer & Autumn		
Meil	i.	Spring Cocoons,		Total.
		In Irst.	koks.	hoku.
1016	year	1,657,139	467,096	2,124,23
20th	YEAL	1.,1,384,411	446.967	1,831.378
28th	year	1,697,893	560,370	2,258,173
27th	year	1,257.835	540,006	1.797,842
26th	VERI	1,225 018	461,876	1,686,89
	-			A 1 "

The ratio between spring cocoons, and those for summer and autumn works out as follows :-

			r and Autum
	Spring	Coccons.	Сосоота,
1807		78	22
1886	*********	76	24
1805	144-01-4-01-400 **	75	35
1801		70 82	30
		82	28

The reduction in summer and saturan cocoons is unmistakably apparent.

Referring to the situation of England, a diplowat writes in the Hochi :- Even if Russia should provoke war against England with the assistance of France and Germany, England could still command sufficient strength to oppose the allies with fair prospects of success. Cast Digitized by

England are extremely unsatisfactory. France, for instance, possesses such a station in Siam only, while in the case of England coaling stations are established in Gibraltar, Malia, and Cyprus, all the places of vantage in the Mediterranean being occupied by her alone. Nor does her advantage end here. Just after passing the Suez Canal she has Aden and then Colombo, Singapore and Hougkong. naval machinery is perfect and well arranged. From the mouth of the Thames to the inlet of the Yangtzekiang all places of vital importance are secured by England, It was sixty years ago that England first put forth her energies towards securing influence in the East, and now seven tenths of the vessels in the Orient are flying British flags. The control of Chinese Customs duties, Post, and Telegraphs has virtually fallen into her hands. To prevent Russian aggression she now demands from Chins the privilege of occupying Wei hai hai. In short, England gains most by the least exertion; other Powers who make the greatest commotion achieve the least. Though not so powerful as England Japan is attong enough to deserve the name of an influential Power in the Orient, but she fails not only to secure new advantages, but also to maintain the interest she has already acquired. Why does the Government remain ivert at the present conjuncture? Why B the nation still silent? Now is the time both for the government and the people.

While the question of the withdrawal of one yen paper notes occupies the public mind, it may be interesting, says the Nippon, to note the amount and classification of paper currency in circulation at the end of last year. Below are the figures :-

Deno		Bank	Convertible	
astic	n, paper.	p*per+	notes,	Fotnie,
Yen.	Yen.	Yen.	Yen.	Ven.
100	11,900	_	450,502	452,400
50	4 400		-	4.400
20		11,602	-	11,560
10	302,145	22,815	9,410,490	9.735.450
5	162,260	62,900	9,606,315	9.831.475
1	155,354	39 344	_	194,698
L	905,836	79 815	30,269.906	31.255.557
	2 2 1 2 2 2	256 222		
	1 541,895	216,534	49,737,211	51,495,640

1	3.354,026	1,730 944	37,811,166	42,896,137

4,098,891 4,808,194 176,491,846 185,398,932 Of the above amount 10,665,514 yen in Government and bank paper are to be gradually exchanged for convertible notes, and with-drawn from the market. In addition to this a sum of 68,081,073 yen in old and new one yen paper is likewise to be withdrawn.

The Forest publishes the criticism of Count Awa on the recent celebration of the 30th anniversary of the transfer of the capital to Tokyo: "What," said the Count, "the Forosu declined to be the promoter of the fête? That must be To say the truth, I can't understand what is the real object in making so much fuss, on the present occasion. I did not approve the scheme from the outset. In no country, I suppose, can a precedent be found for the hubbub that is now going on in the capital. We are only ridiculed by Englishmen. I have talked over the matter with Governor Okabe, but he, being only a quiet peer, was overpowered by the importunate exhortations of the promoters Nevertheless, if the Emperor had been induced to honour the occasion with his presence at Uyeno, I would have cushed into the Palace to persuade him to desist. The commotion about the Chinese question is now at its height, while the abnormal appreciation of rice has reduced the poor people to the last extremity. These hungry wretches are unable even to provide Nankin rice for their meals. Howis it possible to be joyous about the festivity? Yet the authorities appear not to be opposed to the project.

They are, many are inclined to lelieve, only atthe abnormal appreciation of rice has reduced

in the true crux of the situation. The oriental tempting to suppress popular feeling with re-coaling stations of European Powers other than gard to the Government's diplomacy. A word from my lips might at once secure a contribution of 500 or even 1,000 yes from my relatives, but the latter refused to subscribe any amount on account of my disapproval of the program-I was, however, so annoyed that I determined to subscribe fwo yen! The festivity in its true spirit should consist in sending a deputation of the citizens of Tokyo to the Emperor with congratulatory messages for the anniversary. Is the fête to be the celebration of the downfall of clannism?

> The Ryoto Chamber of Commerce has, in conformity with the decision of its general meeting, recently presented a memorial to the Government with regard to the development of practical enterprises as well as State railways. In the first place it is assetted in the most emphatic terms that the existence of various small companies which are engaged in the fur-therance of their own interests in different parts of the empire is over a source of abuse, leading to the reduction of velocity, accumulation of cargo, and irregularity of truffic. Secondly, it is noted that since State railways are managed under instructions from the Government, not only are they free from the abuses above remarked, but will be attended, both socially and financially, with considerable advantages. Thirdly, it is remarked that if, when mixed residence comes into operation, foreigners are to be prevented from buying railway shares, preparatory steps to that end must now he taken. Fourthly, the instability of the foundations of Japanese railways is proved from a financial point of view. Fifthly, comments are made in the effect that the operation of the revised treaties being close . hand, nothing can be more commendable in the interests of the country than a scheme for raising railway loans abroad, so as to enable the Government to be the sole proprietor of the railways throughout the country. The payments on railway shares now amount in over 100 million yen, and the Government may find it necessary to provide an enormous amount of funds for the purchase of railways. But the funds so spent virtually flow into the domestic market, in which case the rates of interest should be lowered and enterprises of all descriptions developed. Belgium has already set the example.

#### RUSSIA AND NORTHERN CHINA.

The following is the dislogue that occurred in the House of Commons with reference to the agitation caused in England by the originally received and errongons news of Russia's doing in Northern China :-

Sir E. Ashmead-Bartfett asked the Under-Secretary of State for Foreign Affairs whether Her Majesty's Government would communicate to the House the text of the written pledge given by the Tsar's Government as to free or open ports in Northern China.

Mr. Curzon: The pledge given by the Russian Government was shown in writing to the Permanent Under-Secretary of State, who took note of it. It was to the following effect:—Count Muraviell expressed great surprise at the agitation which appeared to prevail in England, both in the Press and official circles, on the subject of recent events in China, where English and Russian interests cannot be seriously antagonistic. Count Muravieff observed that various English statesmen of position had ed that various English statesmen of position had recognised it as perfectly natural that Russia should wish to have an outlet for her commence on the coasts of the North Pacific. Any such part would be open to the ships of all the Great Powers, like other ports on the Chinese maintand. It would be open to the commerce of all the world, and England, whose trade interests were so important in those regions, would share in the advantage.

Sir E. Ashmead-Bartlett: I wish to ask my

#### NEWS OF THE WEEK.

The yacht Haldee, purchased by Mr. O. Voigt from Mr. Baggallay, arrived here from Kobe on Wednesday morning, after a voyage of nine days, during which she experienced some rather beavy weather.

It was generally understood in Shanghai on the 4th inst. that the political horizon was clearing, and that Consols, Hongkong Bank shares, and the new loan had all improved II home.

Messrs, Carlowitz & Co. the Shanghai agents of the Hamburg America line, have received a telegram, to the effect that the second steamer to the Far East, the Adria, which was reported ashore on an island near Perim, can safely proceed on her voyage.

The Mitsui Bank put into force the following rates of interest from the 16th instant:-7 per cent. on fixed deposits for 12 months, 63 per cent, for 6 months, t sen 5 rin per day on current accounts, and 15 sen per day for temporary deposits of small sums.

The contract for the electric tramway between Machiapu, the terminus of the Tientain railway, and the Yungting Gate at Peking, has been given, the N.-C. Daily News says, to a German firm, and will be carried out with German material by Messrs, Siemens and Halake -of Berlin.

We are informed by Commodore Dewey, commanding the U.S. Naval Force on the Asiatic station, that by authority of the Honorable the Secretary of the Navy, the following values are announced for the quarter ending June 30th, 1898:-Imperial Japanese Yen, \$0.498; Mexican Dollar, \$0.444.

We are informed that Chevalier de Waepenaert, Belgian Consul at this port, is shortly going on leave to Europe, and that during his absence the Austro-Hungarian Consul, Mr. de Flesch, will be in charge of the Belgian Consulate. The archives of the Belgian Consulate have consequently been removed to the Austro-Hungarian Consulate, 76-B Bluff.

A Shanghai contemporary states that it was learnt in Nagasaki, when the Ernest Simons came through, that H.M.S. Narcissus was there, waiting to be docked in consequence of injuries sustained by her rudder, when telegraphic orders came for her to leave immediately, and she sailed within an hour with a jury

The U. S. cruiser Baltimore, 4,600 tons, 14 guns, arrived here on Monday morning from San Francisco via Honolulu, and after coaling will proceed on her voyage to join the squadron at Hongkong. We hear join the squadron at Hongkong. We hear that the Baltimore is fairly filled up with shells and other ammunition for the other vessels of the U. S. squadron.

From the Hongkong Daily Press of April 6th :- During the twenty-four hours ended at moon yesterday there were sixteen cases of plague reported and ten deaths. It is reported from Kowloon City that during the past fortnight three hundred cases of plague have been imported there from Hongkong.

Tay Chin Tee is a curiosity-a guileless Chinaman. He took a rikisha on his way from Johore to Singapore, putting some \$200 worth of jewellery in the vehicle. On reaching his destination he got out and went into his house to get money to pay the coolie, but on returning he found both rikisha and jewellery gone! Naturally,

Sir Charles Mitchell, Governor of the Straits Settlements, and Lady Mitchell, are among the Settlements, and Lain through the Empress of China.
Sir Charles Matchell is going home on twelve months' leave of absence. From Yokohama months' leave of absence. From Yokohama they proceed to Honolulu, where they will join the steamer from Australia to Vancouver, and go home by the Canadian route.

His Majesty the Emperor despatched a Chamberlain to the late Mr. Chioseone's Digitized by

with a message of condolence and a gift of yen not. Under the circumstances the steamer was 500 for funeral expense. On Wednesday 3,000 unable to go ahead or drop her anchor, and yen were presented by the late Mr. Chiossone's nearly went ashore on the French bund. trustee to the Chief of the Kojimachi District Tokyo, to be distributed, according to the will of the deceased artist, amongst the poor of that

We are asked to correct the statement made by a vernacular newspaper and translated into these columns on the 7th inst., to the effect these columns on the 7th inst., to the effect that Major-General Yanjoul, I.R.A., Military Attaché to the Russian Legation, is about to leave Japan and will probably be appointed Governor of the districts newly lessed to Russia in the Liaotung Peninsula. The story is a baseless invention.

We learn with satisfaction from the 7iji Shimpo that the rumour of Marquis Saionji's resignation owing to ill health is not trustworthy. His Excellency's condition has greatly improved, and he intends to take a trip to Hakone from the 20th instant. It is probably owing to the latter fact that stories of the Minister's resignation were circulated.

Arrangements are in progress for a young folks' evening at the next meeting of the Tokyo Literary and Musical Suciety on Monday the 18th instant. There is to be a grand display of marionettes with appropriate music, and the rising generation of the capital will contribute various items of amusement. It seems a capital idea to set aside one evening for such a purpose, and we have no doubt that the innovation will prove very successful.

It is stated that Marquis Saionji, Minister of State for Education, makes disquietingly slow progress towards recovery, and that, having been urged by his physicians to abstain from all duties and submit to a course of treatment, his Excellency placed his resignation in the hands of the Minister President on the 9th instant. Marquis Saionji's retirement will be a great loss not only to the Cabinet but to the cause of education, and it is to be sincerely hoped that his health will soon be restored.

The Kingsin Line of Hamburg has contracted for the building of a new large passenger and cargo boat, with the Fleusburg shipbuilding The new boat, which is to be delivered in the fall of the current year, is to be 415 by 46.7 by 31.9, English measure. She will be able to carry a cargo from 6,000 to 7,000 tons. Her average speed is contracted to be 12 knots an hour.

A fire occurred in Shanghai on the night of the and instant by which the Customs Bank in the Szechuau Road was completely destroyed, A curious and regrettable circumstance has to he reported in connection with the fire, says the N. C. Daily News. The Hongkew division of the brigade dashed up to the scene of the conflagration with their hose and reel, and immediately they arrived the pony was taken out of the truck, as usual. He walked a few yards and fell down dead, having done his duty.

On the 12th instant a little before midnight, a woman passed through the gale at the third crossing between the Sannomiya and Kobe stations and deliberately walked along the track News says the woman was cut to pieces, and the remains were scattered over a distance of 130 yards. Nothing is yet known of the identity of the deceased, and there is nothing in the dress or appearance of the body to suggest a motive for self-destruction,

The N.-C. Daily News of the 4th instant reports :- As the M.M. steamer Melbourne was leaving the Company's buoy yesterday morning, at about 10 u'clock, for Woosung, she ian into a foreign houseboat sailing up-river at a point just opposite the Yangking-pang Creek All the passengers on board the houseboat consisting of a number of Chinese ladies and gentlemen and their families and servants bound for a picnic at the Lunghua Pagoda,

The first-class Russian line of battleship Georgi Pobedinostseff left Sebastopol on the 18th inst. Her destination, says a home paper, is supposed to be the Far East, as it is reported that the necessary permission has been granted by the Sultan for the passage through the Dardanelles. Naturally, the above is only a test vessel sent through the Bosphorus, and if no protests come from the other Great Powers more will immediately follow. Some aver that the uncertain relations between Russia and England have caused this move, but the supporters of this theory are decidedly in the minority.

The Hongkong Daily Press says :- The Holt Line steamer Polyphemus arrived at Colombo on the rolls of March from Penang in a seriously disabled condition, which will necessitate her remaining there probably for a month, till the repairs are made good. Her after tunnel the repairs are made good. Her after tunnel shaft and bearing block broke on her voyage there from Penang; but the ship's engineers effected temporary repairs, and the vessel was able to go on at reduced speed, and reached Colombo five days behind time. The local agents wired to the owners at home for instructions. The Polyphemus has a lot of cargo, chiefly for Amsterdam.

A Hongkong exchange says that the French have been taking precautions for the defence of Along Bay, in the Gulf of Tonkin. During his recent visit to Hongay, M. Doumer, the Governor-General, held consultations with Admiral de la Bédollière, the colonel commanding the artillery, and other high officers. Batteries will be established at certain points, and the torpedo boats will be mobilised and other dispositions made for defensive operations. merely tentative measures. Steps will be taken subsequently to provide permanent defeasive works.

The New York Tribune, discussing the posaibilities of war, says :—The adequate protection of the port of New York is of vital importance in case of any danger of war. The great interests, commercial and industrial, centring in this metropolis demand defence of the most ample nature. But the policy which has been pursued has failed, in the minds of most army and navy officers, to provide for any emergency such as strained relations between this government and any foreign power may give rise to. The situation may be summed up by saying that the defences now existing are regarded as wholly inadequate in case of the invasion of this port by modern ironclads. The vessels could lie out of range of the existing batteries and could shell this city with their high-power gnus, or they could run past the forts and reach points of comparative safety within close range of the entire city.

The Hon. H.E. Wodehouse, C.M.G., left Hongkoug on April 6th by the C.P. steamer Empress of China, having retired from the public service. Mr. Wodehouse came out as a cadet in 1867 and has seen service in acting or substantive appointments in most of the Government departments. Since 1881 be has been Police Magistrate and Coroner. He was, says the Daily Press, a capable eigeniser and his services were requisitioned as Hon. Secretary to the Hongkong Commission in connection with the Indian and Colonial Exhihition, for which he received the distinction of C.M.G. Mr. Wodehouse is the inventor of the fire dispatch box used by the Fire Brigade, which has been found useful in extinguishing incipient fires.

We (China Mail) hear by the steamer Esmeralds of what may be called a serious reverse to the leaders of the Philippine Rebellion, which is stated to have taken place in Manila on Friday, the 25th March. Some bundred and fifty of the rebels were holding a meeting, so we are informed, in a house in Manifa, and many of those present worse badges of the insurgent movement. News got to the authorities, ched a hung on to the steamer's chains, but it is not that, upon a refusal to surrender, with the result shouse was whether any persons were drowned or the social dentification is were killed, some UNIVERSITY OF HIMOIC AT

URBANA-CHAMPAIGN

forty were wounded, and the remainder were taken prisoners. The prisoners, we are informed, did not long remain in confinement. They were released—by death. It may be that the modern mode of settling rebellions by a pay ment (or a so-called payment) of money has made the Philippines careless or reckless. Otherwise it seems inconceivable why the rebels should meet in the centre of the lion's den, to discuss the future government of the Philip We hear that a few of the so-called rebels who were said to have been bought off returned to the Philippines, and that several of them have paid the penalty.

In reply to a question put by Lord Charles Beresford III the Under-Secretary for Foreign Affairs in the House of Commons on the 25th Feb , Mr. Curzon is reported to have said:-The following are the arrangements which have been agreed in by the Chinese Government on the representations of Her Majesty's Minister at Peking: (1) The internal waterways of China will be opened to British and other steamers in the course of June next, so that wherever use of native boats is now permitted by treaty, foreigners shall be equally allowed to employ steamers or steam launches, whether owned by them or by Chinese. (2) In view of the great importance attached by Great Britain to the retention of the Yangtsze region in the Chinese possession, the Chinese Government have formally intimated to the British Government that there can be no question of territory in the valley or region of the Yangtsze being morigaged, leased, or ceded m any Power. The post of Inspector General of Maritime Cus toms shall in the future, as in the past, be held by a British subject, so long as British trade with China at the ports continues to exceed that of any other Power. (4) A port will be opened in Hu-nan within two years. It is not a mere verbal arrangement; it is an explicit and a definite arrangement, but whether it has been embodied in a treaty I do not know, as it has only just

reached us by telegram. In the event of a naval struggle between Great Britain and Russia in the Far East, the question as to who held Port Arthur would have, writes a naval expert in the Globe, a most important bearing on the conduct of the war. It would be in any case imperative for us, at the commencement of hostilities, to acquire a naval station for ourselves in the North. Hongkong would be too far removed from the chief scene of action for any other use than as a sepairing base for those of our ships which were actionally damaged, and which were yet able to steam 1,500 miles. What we should want would be a base for torpedo operations and a safe and handy rendezvous for the fleet. If Japan was acting in concert with us, Wei-haiwei and Nagasaki would be all that we should require in this respect. But it alone we should be forced to make strengous efforts to seize a harbour which would satisfy our requirements for docking, and be strong enough to afford a proper shelter to our fleet. There is not an officer who has served of late on the China Station who does not appreciate the urgent necessity for such a port. Chusan has been suggested as a likely place, but it has many natural disadvantages, and is devoid of dockyard or docks, or indeed, resources of any kind. What is wanted in a good harbour on the main-land as near the entrance to the Gulf of Pechi-li as possible-situated, in fact, on the narrow isthmus of Liao-tung itself. The very best, though one which has never been publicly proposed as yet, is undoubtedly that of Victoria Bay, an indentation in the large Bay of Talienwan. Victoria Bay affords a splendid anchorage in 51 to 31 fathoms, with a bottom of tenacious mud. In 1860, the chief portion of the British fleet and transports anchored in two lines along its south shore; the remainder on its eastern. The auchorage is shelted from all winds except those from E. N. E. to E.S.E., and on the south side it is sheltered even from and on the south side it is sheltered even from gales from this quarter. By acquiring Victoria Bay, and making it a properly fortified naval station, we should place an effectual check on Russian pretensions in the Far East.

Commission will be Sou or God—It they are ask. It is the officials of the Japanese Patents Buteau discriminate invidiously against foreigners. I have never made any such statement, and I obstantiantly is a Cosmopolite in religion as a general thing. The question should propound itself to the be addied with it, first because I believe it thing.

#### CORRESPONDENCE.

#### " POLICY" CHRISTIANS.

TO THE EDITOR OF THE " JAPAN MAIL."

SIR,-The Doshisha controversy has assumed proportions most inappropriate to the merits of the matter. That the donors of funds who were led to believe that they were aiding in the establishment of a School the special object of which was to be, a large degree, the tenching of the dogmas of the Christian religion, have a grievance is easy to understand. They may with reason claim that they have been deceived; but to hold the Japanese government as aiders and abettors in the sequel of the deception, to one who is without bias in the premises, appears alisard. The government had no interest in the institution, it being a private venture of the founders. All the years that it was supported by the contributions of Christians the government paid no heed to its existance—Chris tian teachers and Christian scholars might teach and be taught all the Missionary Society might demand, without question or hindrance from efficialdom. So it was well. The government in its wisdom inangurated a Public School system under which all schools established by the State were to be supervised by the State and subject to such regulations as might from time to time be promulgated by the Department of Education. One wise provision of the law under which the Public School system was established was that no religious instruction should be allowed to be given in any school recognized as a Public School, The United States of America, the cradle of the Public School system, has that provise as one of the fundamental laws of the educational system. Religious training is to be obtained in Theological Schools established at private cost. The better sense of the people has resolutely stayed the hands of the Christian Church from any control of the Public Schools; the Bible is excluded from them. The Churches, Sunday Schools, Christian associations—places where religious dogma is Implitueing considered sufficient for all the needs of Christian training. Japan is heading in the Same path, ignoring afficeligious on behalf of the State, leaving all man to follow their come way unpublicated. enving all man to follow their own way unmolested in matters of faiths; emphatically declating that all religions are equal before the law. It happens that in schools of a certain grade the immunity from conscription until the age of 28 is vouchsafed to the students thereof. Nothing wrong in that, the immunity is granted in hebalf of higher education. When a student enters a school of that grade he gives evidence of good faith that he will earn, the fruits of the immunity granted him. Discrimination cannot be charged when the government ignores all polyate institutions of learn-Discrimination cannot be charged when the government ignores all private institutions of learning, no matter how high the stendard of the curiculum, by witholding this immunity from the students enroled therein. The School law is made to govern State Schools. A private gentleman might elect to occupy a full staff of minimat professors to devote their time to the education of his only son. If that son was conscripted at the age of 10 would a wrong be done him under the law?

19 would a wrong be done thin those the law. Without a desire for mastering Theological sub-terfuge, religious instruction can be circumvented that the actual tenning for all the terings, resignous instruction can be cheanweated at other places than the school; enough for all the spiritual wants of the youth—a high standard of morality can be attained without the fetish of any religion. To come back to the "Dashisha." To judge from the acts of the Christian gentlemen judge from the acts of the Christian gentlemen, connected with the institution, the level of motal sense attained by them is not as high as it might have been, in fact it is difficult to discover how much lower it could have been. The fewer students graduating from the "Doshisha" under the motal influence of such men, the better for the future of Japan. It is hardly to be expected that the pupil shall be in advance of the preceptor. Taking things as they appear, the patrons of the "Doshisha" should congratulate themselves that they are well rid of a fraud. Perhaps, the State can improve it I. In the future it will not profess

can improve it! In the luture it will not profess to be what it is not.

There are Christians and Christians—Christians, zealous in good works, with a fad; policy Christians with a purpose; Occidental Christians and Oriental Christians; Christians who have a care for their hunour as men; "Doshisha" Christians, who profess that they are of the elect but who by their acts discover to the world that they are without hunour or common honessy. without bosour or common honesty they are Obliging Christians who will testify to God's good-ness and what He has wrought in their soulssetting forth the buly juy they experience in their communion with the Son of God—if they are ask-

minds of all those who are so deeply exercised over the "Doshisha" affair. Of what use would it be to perpetuate the supply of the sort of Christian that would graduate from the institution, the moral sense of the trustees of the School, who the moral sense of the trustees of the School, who all these long years have, until the late fished, been considered as shining examples of Christianity in Japan—is considered of as high a standard as Christianity demands? Probably there are more policy Christians in Japan—as well as in the world at large, than any other class of the great multitude who claim to be on intimate terms with their God. Do not be too severe on the "Doshisha" contingent. Foreign capital will produce any number of the same sort.

Yours, &c., Yokohama, April 9th, 1898.

FOREIGN PATENTS IN JAPAN,

TO THE EDITOR OF THE "JAPAN MAIL." Str.—As you remark in your leading article of the 5th inst., the simple statements relating to this subject which you have more than once presented could not (or perhaps aught not to) have left any doubt in the mind of an Ordinarily Intelligent Person.

But as for vacious, and possibly opposite, reasons, we cannot all of us write O. I. P. after

our names, some of m may be excused for desiring yet a little further light upon the subject. First, as regards your Japanese friend J., who registers a patent in Great Britain. As your rightly say, that patent is protected against violation by British subjects (and for that matter by his again fellow countrymen or persons of any by his own fellow countrymen or persons of any other nationality) in the United Kingdom, but it is not protected from similar violation in Japan But who on earth ever expected that it would be so protected in Japan? Not the O. I. P., I

one to protected in Japan t too the S. I. . . . I should happe.

The take the converse case: Does the solitary foreigner—an abusican, I brileve,—who has succeeded in abtaining a Japanese patent, imagine for a moment that that patent will protect him in America against intergement of his invention either by Japanese or his own countrymen, unless he takes the proper steps to protect himself by a second—United States—patent? Or if a Canadian takes out a patent in Bolivia, or vice verst, does that patent protect him in his own country? Then why should J. consider himself aggrieved because Her Britannic Majesty's Courts in Japan "have no competence whatever in regard to patents registered in great Britain," and because they are compelled to answer: "We take no cognizance of Japanese law which protects the patent" (presumably that registered in England, as you mention one only, and use the definite article) "in Japane"? Of course they can "take on cognizance," because no such Japanese law exists for protecting British patents, either in Japan or elsewhere, and whether held by in America against inhingement of either in Japan or elsewhere, and whether held by Japanese or foreigners.

Next, may I ask in what respect the practice of the Consular Courts of the United States differs from that of other consular courts upon this point. And do citizens of the United States obtain any

reciprocal advantages upon that account?

I confess that when I first read the paragraph which I have just criticized, I took its meaning to be as follows:

If J. holding a Japanese patent, finds that B, a Britisher, is infringing his patent (not in England, but in Japan), and sues him in a British Consular Court, his application will be dismissed, on the ground "We have no enguizance, &c."

On closer examination, I find that you have not said anything of the sore; but I wonder how the O.I.P., for whose benefit it was presumably writ-

O.L.P., for whose hencit it was presumably written, understood it?

Even supposing that the latter in a correct statement of the actual fact, whether you intended to make it, or not, what theo? It is not a new state of things brought about by the Japanese concession to grant patents to foreigners, but merely a continuation of the status quo ante, entirely unaffected by that concession.

Again. Robitsins a Languege matent, and

Again, B obtains a Japanese patent, and I infringes it. I sues him in a Japanese Court, and Consular jurisdiction has nothing whatever to do with it. It seems to me that Conwhatever to do with it. It seems to me that Con-sular jurisdiction may very well he left ont of the question altogether. For this reasons I retrain from importing into the discussion the Protocol signed in Landon on 20th October last.

I must now revert to a point in your former arrive of 29th March, in you accuse me of stating

Original from UNIVERSITY OF ILLINOIS AT **URBANA-CHAMPAIGN** 

would only obscure the real point at issue. I have, however, strongly protested, and still protest, against the extraordinary legal fiction which supposes that the granting of a patent somewhere on the other side of the globe a single day before the filing of a Japanese application by the person who has obtained the patent abroad, or by his legal representative, is tantamount to previous use in Fapan. I have also pointed out that this fiction, while it does not affect the bond fide Japanese inventor, who naturally applies first for his patent at home before he tries to obtain one abroad (knowing that he has plenty of time allowed for doing my presses hardly upon the foreign applicant, who must lock up his invention in his own desk until he is morally cectain that his Japanese application has been filed, and must meanwhile um the tisk of anticipation at home. would only obscure the real point at issue. I

meanwhile run the risk of anticipation at home. I wish further to remark that in the Japanese regulations, which, as you have rightly pointed out, were originally intended solely for the purpose of affording protection to Japanese applicants without any reference to foreigness, the terms "in public use," and "not novel" could only refer to "public use" and "not novel" could nay refer to "public use" and "not novely" in Japan: and I still strongly believe that, in every case in which a patent has been refused to a Japanese applicant on the ground of want of novelty, it will be found that the invention was, or might have been, know to scores of other persons

novelly, it will be found that the invention was, or might have been, know to scores of other persons residing in Japan at the time of the application. Of course I cannot prove this point, but until at least one instance to the contrary has been cited, with dates, I must be allowed to hold to my belief. I have been reprimanded for flippancy, if not for contempt of court, both by yourself and by the editor of the Fapan Times, for the expressions which I used in pointing out that the above-named Japanese fiction was absolutely unique and without precedent; but neither you nor he have impured that statement by quoting a single instance pugued that statement by quoting a single instance to the contrary except that of Germany; and I

am surprised that you fail, or seline, to recognize the signal difference between the two cases.

"The foreign official publication of a specification will not be fatal to the application for a German will not be a German will not be appli man patent until after three months from the dote man patent intil after three months from the dele-of isane, if the German patent is applied for hy-the person who has applied for the patent abroad, or by his legal representative, and if the foreign State (or each of them in which the official publi-State (or each of them in which the official priori-cation shall have taken place) be one in which, according to a publication in the Imperial Gasette, reciprocity is guaranteed."

In the first place, Japan declines to comply with the simple condition of guaranteeing reciprocity,

and has only herself to thank for the disability which she could at once remove, if she chose; and in the second place, foreign official publication of a specification even in countries which, conditionally or unconditionally, grants a term of grace is absolutely fatal to the application for a Japanese patent.

I am inclined to suspect that the failure of the I am inclined to suspect that the failure of the German agreement in this particular respect is due to the fact that it was negotiated by diplomatists who knew little and cared less about patent practice, and who probably thought that one set of patent regulations was as good as another; but even supposing that a German translation of the Japanese Regulations then existed, and that it was submitted to a patent expect to report upon, he might very easily have been misled by the was summered to a patent expert to report upon, be might very easily have been misled by the somewhat vague wording of Atticles II, and X, of those Regulations, and might have failed to suspect that they had been, might be, or could be,

Commerce take up this matter, instead of leaving it to be threshed out in the newspapers? It is one peculiarly within their cognizance.

Apologizing for the length to which this letter

has unavoidably run,

I remain, Yours, &c.,

W. SILVER HALL.

Tokyo, 11 April, 1898.

#### THE DOSHISHA.

To the Editor of the "Japan Mail."

Sir, -- Your editorial on the "Doshisha Quesin" in your issue of Maich 26th is on the whole tion" in your issue of March 26th is on the whole so satisfactory that I wish to express my thanks for the same. There is, however, one sentence in it concerning a matter of fact which seems to me a mistake; it is to state the exact case that I ask for a few lines. Referring to the special committee sent to Japan by the American Board in 1895 you state that the "Committee required the Trustees of the College to publicly endorse a certain declaration of faith. The Trustees refused. They said that in their opinion the consequence of the proposed step would be to confound edigious propagadism with secular education, etc." This

seems to be the popular impression as to the nature of the interview held by the committee with the Trustees of the Doshisha; I have come account to more than once in conversation. Yet it is quite it more than once in conversation. Yet it is quite incorrect. I think it will be found that the following is the correct statement of what took place at that time.

On account of the public utterances of one or more of the instructors in the employ of the Dushisha attacking the fundamentals of Christian belief and morality, such as the existence and personality of God, the nature of Christ, and the immortality of the soul, and the destructive influence of such anti-Christian teaching on the young men in the school, the question was forced on the Mission and on the Board as to what the Trustees understood by the term "Christian." The Constitution of the Doshisha reads that "Christianity is the foundation of the moral education promoted by this company." The American Board's Committee simply asked the Trustees to state what they understood "Christianity" to mean. They did not present to the Trustees a definite confession of On account of the public utterances of not present to the Trustees a definite confession of faith or creed which they asked the Trustees to sign, as the sentence in your editorial seems to imply, but they rather sought by conversation to learn what they meant, in order to find out whether the Board could consistently continue in co-operation with them. As I have said above, this inquiry

tion with them. As I have said above, this inquiry was forced by the utterances and actions of members of the Doshisha faculty, which utterances and actions by no stretch of the term could be called "Christian;" at least, so it seemed not only to our Mission and Board, but to others also.

The following quantation from the "Report of the Deputation to Japan" (p. 15) though cather long, will make the above statements clear. It should be noticed also that the source of the difficulty felt by the Toustees, so far at least as appeared in their conversations, was not that difficulty felt by the 10 steeps, so lar at cast as appeared in their conversations, was not that the proposed step would "confound religious propagandism with secular education," but simply that "they must not ally themselves with any party" (sect or denomination).

"Wo, the deputation, asked if they would affirm as among the beliefs for which the Doshisha stood in least the propagation of Conf. The divinity of

as among the beliefs for which the Doshiha stood in Japan, the personality of God, the divinity of Christ, and the future life. They declared they could not. While as individuals they could affirm their acceptance of these beliefs, as trustees they could not affirm them, since differences existed among Christians on these points, and they must not ally themselves with any party. they must not ally themselves with any party. When asked if they would accept the creed of the Rumiai Churches in definition of the sense in which they used the word Christians, they declined, saying that they would thus identify themselves with a single denomination. When necineo, saying that they would thus identify themselves with a single denomination. When urged at two long conferences to make some statement, however brief, in language of their own, of what they meant by "Christianity," since the word did not in their minds involve the above-named beliefs, they declined. They said it was immecessary; that, having declared their purpose to maintain a Christian institution, they should be fursted to do so; that to affirm the above-named beliefs would narrow the basis of the Unishould be rusted to do so; that to a min the above-camed beliefs would carrow the basis of the Uni-versity, would cause the resignation of professors whose services they did not wish to lose, would repel students who were encouraged now to enti-tive school by its spirit of free inquiry." After further statements and explanations, "the reply was that the whole subject had been a matter of was that the whole subject had been a matter of thought with them; that theological opinion in Japan was in a formative state, and beliefs were musettled; that for that reason and for the reason that it would be disastrons for them to act now under the appearance of compulsion, they could make no statement whetever, except that they should maintain a Christian University. They said that they had done the best possible under the circumstances; that, though there were some professors who were not Christians, efforts would be made, as changes occurred, to secure such

A careful reading of the entire statement of the Deputation does not reveal a single statement of the Trustees to the effect that the definition of what "Christianity" means would tend to "conwhat "Christianity means wond tentro bear-found religious propagandism with secular education." That question was not prominent at that time. What they desired was absolute freedom of religious thought untrammelled by definitions and pledges, and total separation from all forms of sectarianism.

professors only as would be in barmony with the Christian spirit of the institution."

Thanking you for your generous allowance of space, I am, very respectfully yours,

SIDNEY L. GULICK,

Matsuyama, Iyo.

Our explanation was taken from the published statement of Mr. Kosaki, President of the Doshisha.—Eb. J. M.]

TO THE EDITOR OF THE " JAPAN MAIL."

SIR.—I am very since that you and your readers will be interested to know that the Kumi-of Chinches (which have grown up in connection with the work of the American Board's Mission) which have just gathered in representative Council in

Tukyo, have voted:
1. That the act of the Dashisha Trustees expunging a part of the unchangeable foundation of the School was a lawless or unrighteons act,

(fuhō no shoi).
2. That we admonish the trustees to revive these expunged articles.

expunged articles.

3. That a committee of seven he appointed to follow up the matter in case the Dushisha refuse to give heed to this action.

This vote was greeted with applause from delegates and spectations, and these Churches have now in the most emphatic way possible put themselves on record as disapproving this action.

I remain sincerely yours, M. L. GORDON. April-13, 1898.

#### N.Y.K. STEAMER'S TRIAL TRIP.

The Tamba Maru, one of the latest boats of the Nippon Yusen Kaisha's European service, passed her trials on Wednesday and qualified for the Government subsidy. The Tamba is a fine steamer with the loty double bridge, the single funnel, and the high poop of the class of the Kanagawa Maru. Built to accommodate a large cargo, her segistered tomage is 3517; her length between aprights 445 feet; her beam 49 ft. 2 in.; her depth 33 it. 6 in. Her poop measures 76 feet in length, her bridge deck 110 feet, and lorecastle 55 feet. The bridge is 42 feet above the water line when the stemmer is fully loaded.

As a passenger boat the Tamba Maru, like the

As a passenger bont the Tamba Maru, like the other European boats of the Nippon Yusen Kaisha, is extremely comfortable. The accommudation is not of course so large as on some of the more purely passenger boats, but every effort is made to study the well-heing of passengers, and it must be a fastidious man or woman who could not make himself or heavy for the six must be a fastidious man or woman who could not make himself or herself extremely cosy on the six or seven weeks' voyage to Burope. The subins are exceptionally large and fitted with every modera convenience. The subous is well lighted and air y, tastefully decounted, and comfortably uplinistered, while a splendid system of ventilation lessens smuch of the discomfort experienced in the Red Sea and some tropical ports. There is a large promounde deck, a cosy smoke room, a social half, good batts, and in short all the features of a first-class liner. And, moreover, a chief steward and a chief who understand their business. chef who understand their business.

the who understand their business. The Tamba has already made one journey from Europe, but owing to the engineers' strike there were sume defects to her machinery which have had to be semedied at Yakosuka. Now, there were some defects in her machinery which have had to be remedied at Yakosuka. Now, however, she is quite in the best working order, and, nearly painted in black and red, she looks as amart a ship as any entering Yokosukama port. The Tamba was built by Napier, Shaaks, and Bell, of Glasgow, and engined by Dousmuir and Co., a Clyde firm. She is under the command of Captain H. Barnes, an able and experienced navigator, who has seen much experience on the service of first class companies like the Castle Line; and her engine department is superintended by Mr. Crawford, long in the N. Y. K's eastern service. Her crew is of course Japanese, but the officers, with the exception of Mr. Mamura, the lounth, are all English. Mr. Christiansen is first officer; Mr. H. H. Coe second; and Mr. W. McKenzie third. The trials took place under most favourable circumstances. Wednesday was a lovely dey, and, though in the early morning these was just enough breeze to make the water spatche in the sunshine, towards none even this died away, and Tokyo Bay was as smooth as a mill pond. In these circumstances the Tamba Maria was enabled to do extremely good work. Macogured by the Captain, under the supervision of Tei Shinsho

these circumstances the Tamba Maru was enabled to do extremely good work. Mangeuved by the Captain, under the supervision of Tei Shinsho (Communication Department) officials, Captain Iwato, and Mr. Paxton, Assistant Superindent of the NY.K., she made a trip across the Bay to the North West, turned and resturned, and was generally put through her paces in the approved style. The result was that she easily satisfied the Government requirement as to speed—14 knots per hour. Her average record was 14-31; her minimum speed 13.017, and her maximum 14.673. The revolutions of her screw averaged 8: to 83 per minute. Among the visitors on board were The revolutions of the sciew averaged 8; to 83 per minute. Among the visitors on board were Mr. K. Minskami, of the Customs Office; Mr. K. Orani (Chairman), Mr. T. Higuchi, Mr. T. Hanzai, Mr. I. Sudzumoto, Mr. T. Okada (Secretary), and other members of the Yukohama Japanese Chamber of Commerce; Mr. Conil

Original from

(agent principal de la Compagnie des Message ies Maritimes) Mr. Hutcheson, and Mr. A. Woolley (of the foleign Chamber of Commerce Woolley (of the foleign Chamber of Commerce and Harbour Improvement Committee); Mr. S. Iwanaga, Mr. A. Macmillan, and Mr. E. Pallister (Head Office Nippon Yusen Kaisha); Mr. T. Hayashi and Mr. I. Wada (Yokohama branch office); Captain Mackenzie (Kanagawa Maru), Captain Couk (Bingo Maru), Mr. Taylor (chief engineer of the Bingo Maru), Captain Curnow,

A profuse hospitality was extended to the visitors, who were entertained to a tiffic which spake eloquently of the resources of the chef's galley. At the conclusion of the meal Mr. Havassi addressed the company in Japanese, the effect of his remarks being as follows :-

GENTLEMAN, --- We deem it a great honour to to have your presence at the trial trip of the Company's eighth new steamer, Tamba Maru, to-day, which leaves for Europe on April 16th, being the which leaves for Europe on April 16th, being the 25th voyage since the inauguration of the Company's European service. The Company's new ships have been gradually arriving from abroad, and some of them, after passing the examinations necessary for the provisions of the law, have already made one or two trips. I avail myself of this opportunity of the presence of the Committees of the Japanese and Foreign Chambers and Commerce and company of the Press to of Commerce and representatives of the Press to make a few remarks. The development of Japanran foreign trade since the war has been remarkeve foreign trade since the war has treen remarkable, and the arrivals and departmes of vessels in Yokahama have been greatly increased in consequence. In 1896, no Company opened the services to Europe, America and Australia, and from next month, as has been our intention for some next month, as has been our intention for some time past, we shall non steamers to Europe every fortnight. As a result, the aggregate tomage of the Company's steamers entering and running from Yukohama on the above line will reach 450,000 tons per annum. This ing and running from Yokutama on the above line will reach 450,000 tons per annum. This goes to show the ever-increasing prosperity of Yokohama. Although congratulations may be expressed on that point, there is a pressing necessity for the improvement of the banhour, which, I believe, will be an important feature towards aiding the future prosperity of Yokohama. The incressant coming and going of vessels calls for these improvements, and the attention of all concerned is being directed towards such an object. Our Chamber of Commerce has already appointed a Committee to formulate a scheme for the improvement of the Yokohama harbour. I hear that the Yokohama General Chamber of Commerce, too, has recently appointed a Committee for a similar purpose. Furthermore, it has been proposed to make a joint effort on the part of the two Chambers so that the desired improvements shall be carried into effect. Without doubt, the two Chambers are, as it were, the two wheels of a cart. Especially do I esteem the proposal for a joint action of the two Chambers in the manner of the harbour invigorements in the proposal for a joint action of the two Chambers in the matter of the harbour improvements in question. I am pleased to say that I am appointed to form one of the Committee of the Yokobama Japanese Chamber of Commerce. Needless to say, the Nippon Yusen Kaisha is always prepared to give all possible support for the public interests of Yokohama, and more so since the improvements to question bear an important relation to the business of our Company. Tregret I am not qualified to ably fulfit the part of a Committeeman, but I to ably fulfit the part of a Committeeman, but I mean to do all in my power to promote the interests of Yokoliama. Lastly, I beg to state that I am pleased to avail myself of this opportunity of wishing the Chambers of Commerce all prosperity. Mr. Orans added a few words on behalf of the Japanese Chamber of Commerce. He said the

japanese Chamber of Commerce, the said the apanese Chamber longed and expected to cooperate with the Foreign Chamber in all matters affecting the improvement of the harbour. That the harbour wanted some improvement and regu-lation could not be denied. They had at present the Kanagawa Maru waiting outside the harhous unable to enter because there was no toom for her. The improvement of Yokohama harbour was a very important matter both for the part and the He wished success to the N.Y.K. and company. He wi

Mr. A. WOOLLRY said he regretted very much that the foreign Chamber of Commerce was not better represented, but, speaking on behalf of the Harbour Improvement Committee, he could only say that he should do his atmost to formulate some proposal which would be submitted to the Japanese Chamber of Commerce, and he hoped the two bodies would wouk together in a way that would benefit both Japanese and foreigners slike. He thought be voiced the feelings of foreigners slike. He thought be voiced the feelings of foreigners when he said they were most glad at the progress when he said they were most glad at the progress of the company. He wished not only that ship and its Captain every success, but also every success to the Nippon Yusen Kaisha itself.

Digitized by GOSTE

The did not believe that the German Emperor saved England from its policy of Emperor saved England from its policy of Serious Torkey, as he undoubtedly did in the feelings of the company. He wished not only that ship and its Captain every success, but also every success to the Nippon Yusen Kaisha itself.

Digitized by GOSTE say that he should do his atmost to formulate some

Mr. Conil added a few words in French, in which he wished both the ship and the Company success, and added that the foreign companies applanded the enterprise and energy of the Nippon Yusen Kaisha.

At the conclusion of the trials Captain Barnes was heartily congratulated on his success.

#### RUSSIA IN THE EAR EAST.

To the House of Commons on the 1st March, Sir E. Ashmead Bartlett rose to call attention to the advance of the Russian Power in North-Eastern Asia, and to move: "that it is of vital importance for British commerce and influence that the independence of Chinese territory should be main tained."

He said that the great importance of our mercial relations with China and the cemarkable interest shown by the outlie in this country in the recent crisis in the Far Est were a sufficient justification for the motion. The essential principle of British interests in Northern China and in the Northern Pacific was, in his opinion, the maintenance of the integrity and independence of Chinese territory. The pledge as to free commerce and open ports which had been given by Rossia to this country, in exceedingly ambiguous terms, would be of no value whatever, even if observed in the letter, were Russia allowed to oversion and control any large portion of Chinese recitory. The most remarkable fact of the last twenty years ne mast remarkable rate of the last twenty years had been the extraordinary advance of the Russian power, especially in North-Rastem Asia. The end which Russia had in view in her movement during the past fifty years was to obtain control of the rich and populous districts of Northern China and to establish herself as a great naval Power in the Northern Pacific. He should like to hear from the Gavernment whether there had been any Russian military occupation of Manchinia or other portions of Chinese territory. The population of Manchuria was fine and soldier like, and if these this territory was occupied and controlled by Russia this territory was occupied and controlled by Russia it would be used directly as a feeding ground for the Russian Army. Once given control of this enormous fighting force, then Russia's pledges, as well as China's pledges, with regard to Central China would be absolutely valueless, because Russia would have the control of a military power which would enable her to over-sun practically the whole of Chinase territory. The territorial independence of China was, therefore, of the unmost importance. The key to the military and commercial position was the Trans-Siberian Railway. The moment that tailway was completed Russia The moment that tailway was completed Russia would be mistress of the position by land, and no policy that this country or Japan could then adopt would be an effective check. He should like to know whether the Cassini Treaty was in lorce, and whether China had given Russia permission to take a short cut through Chinese territory with the railway. All the present difficulties of this country were due to the change difficulties of this country were due to the change which took place in 1893 in the foreign policy of this country. Since that time this country had been steadily poshed down hill in every part of the world. The Government of 1893 began the course of alienating all our ancient and natural allies, and locking us into a position of isolation. The establishment of the Japanese at Port Arthur would have been a bulwark against the Russian advance southward, and for us the rise of the Japanese power in the flast might be of providential benefit; for we could not maintain on position in the Northern Pacific without its help. position in the Northern Pacific without its help. But the short-sighted and positianimous policy of the late Government had deliberately abandoned Japan to France and Russia. He believed that the late Government had deliberately abandoned Japan to France and Russia. He believed that the late Prime Minister was in favour of action, but was overraled by his colleagues. Now the present Government was confinited with a present Government was community similar crisis, and if they cared they could at present control the whole Chinese question with the assistance of Japan. As to the German occupation of Kiao-chine, he regarded it as a similar stroke of policy. The object of the occupation of \$130-cline, he regarded it as a brilliant stroke of policy. The object of the move, besides benefiting Germa commerce, was to expose Russian aims in North-East Asia and arouse British interest. It was obvious that the Graman Emperor had been as successful in his lineign policy during the last ten years as the British Government had been misuccessful, but he did not helieve that the German Emperor's policy was hostile to this country. The German Emperor saved England from its policy of mad entitionatalism.

flicting interests between this country and Russia and France in Africa and China to be convinced that an alliance with those countries was injurious and illusive. He thought the House should have from the Government a clear statement as to the pledges given by Russia in regard to keeping open any ports in China which might come under her courted. He also thought there was considerable ambiguity about the undertaking given by Germany in regard to Kiao-chow, which ought to be cleared up by the Government. He ventured, in conclusion, to asset that the maintenance of the territorial integrity of China was absolutely neces-sary for British commerce and British influence; and he would add as a corollary to that that the territorial integrity of China could only be secured by an alliance with Japan and an understanding with Germany.
Mr. T. G. Bawles seconded the motion.

thought there was every justification for bringing it forward. The position in regard to China wore a less satisfactory aspect now then at the opening of Parliament, and it was doing a service to the Government to give it the opportunity of making further statement outlie question. He hoped the sult proceeding, and that therefore the Foreign Office must should itself in mystery and silence. The view of the Foreign Office probably was that China was a vulgar place connected with trade, a long way off, and having no allequate amusements for the voting gentlemen sent atmad by the Folong way off, and having no aurequate aumements for the voting gentlemen, sent abund by the Foreign Office as Attachés.—(Laughter.) But from the point of view of British hade there was not, perhaps, in the whole world a country so important as China. He did not except India from that statement; and in regard to Africa, the people in that country did not wear clothes, and where people did not wear clothes they needed very little that England could sell them,—(Langhter.) In that Engrand could see toem.—(Languer,) to Chioa the consumers were already made; and, seeing that the markets were being closed to us one by one in all parts of the world, the only hope for a great expansion of British trade in the future lay in that country.—(Hear, hear.) The exput and import trade of Chioa was, according to the £35,000,000 were conducted by Great Britain Shoulds trade was not one troth of what could, should, and would be carried on with China if only her independence was maintained and ade-quate pressure was exercised upon the Comese authorities to remove the fiscal and administrative barriers which alone impeded the circulation of commerce throughout the length and breadth of commence thoughout the length and the author the land. The interest of India, ton, was concerned, while the future of Australia was not indirectly concerned also in the fature of China. Taking advantage of the Japanese war Russia and France came to ward in China's exirremity as her friends, and Russia especially intervened as her friend. Russia had so hypnotised China that she was now absolutely injunction of the tract of the Court of Peking, In October, 1895, the Government was absolutely and fully aware of the danger of the Rossian action and diny aware of the danger of the Rossian action upon China. Whether they now so agreed, and whether so agreeing they were prepared to take steps to guard China from the dangers indicated, they would learn in the course of that debate. Coming to the more active phase of the policy of Parising of Course, the course of the policy of Russia and Germany, the former sent men-war to Port Arthur, but, so far as was known, not with, the intention of permanent occupation; but the conduct of Germany was flat phacy, seizing Kian-chow with the slenderest excuse ever put forward by any nation for such an act, and, in his belief, the action was taken in concert with Russia in opposition to British and Chinese interests. Meanwhile Figure was preparing to act, and the attitude of the three Pawers did undoubtedly excite strong freeling in this country, when suddenly a telegram announces that England had agreed to make a loan to clear off the Japanese indemnity. The importance of this lay in the expectation that conditions (avourable to England would attach to the loan and that England would abtain conside mble influence in the councils of the Court of side able influence in the councils of the Coint of Peking for the expansion of Chinese commerce. Among the conditions were the opening of treaty ports at Talien-wan and Naming, and the first-mentioned was a challenge or declaration to Russia. that her aspirations and desires for annexing the province were to be resisted, and similarly the opening of Nanting on the West River was a detection to Kiance. The challenge to Russia was taken up at once, and Lord Salisbury gave up the demand for Tactier-wan, declaring that it was a decrease of an interaction of regards taken which Emperor saved England from its policy of mad demand for Latter-wan, decising that it was a sentimentalism, and pricile isolation. By place of no importance as regards trade, which saving Torkey, as he undoubtedly did in 1896, the Griman Emperor saved India of England, because if Torkey, with its splendid fighting material, had falten under the control of Russia we ishund never have been able to hold India. It was Naming had disappeared from the English propriet in the control of the con-

be the opening of the Yangtsze river, and the telegram of Jan. 17 was received with the greatest possible satisfaction by the people of England, increased when the Chancellor of the Exchequed declared in a speech in the country that Her Majesty's Grvernment were determined to keep open trade with China even at the sisk of war. The right hon, gentleman was followed by the Under Secretary for Foreign Affairs, who said we meant to have compensating advantages equiva-Under Secretary for Poreign canana, meant to have compensating advantages equiva-lent to those given in China to other people, and even the Attorney-General used musually bel-licose language for a man of law. The English people naturally expected that the result after all these bold utterances would be that the satisfac-tory arrangements concluded would be maintained, but great was the disappointment when on the meeting of Parliament it was explained that such meeting of Palliament it was explained that such was not exactly the situation of affairs; the ports were given up, and as to other conditions only a general assurance of concessions was given. The conditions withdrawn were said not to be essential, but if all that was essential had been accepted by China how was it the loan had fallen through? A right how, triend near him suggested the premature telegram in The Times. The loan felt through because Russian out her retar that the The Itmes. The loan fell through because Russia put her veto on it. Was it not clear that the disclosure in The Times came from Russian sources. It was to the advantage of Russia to prevent the loan, and the publication of the teleprevent the loan, and the publication of the telegram prevented it. It was suggested that we had concessions from Russia and Germany, and that Prussia had given written assurances, but they had seen in the case of the Berlin Treary that such assurances were not worth much. Germany, too, had given similar assurances which he did not think were of greater value. The position at this moment was that Russia was absolutely predominant in Chinese counsels. No fewer than three military attachés were spread over the country with power to train Chinese citizens for service in the troops. She had the most absolute domination over Chinese matters, and unless something were done soon to train Chinese citizens for service in the troops. She had the most absolute domination over Chinese matters, and unders something were done soon it would be absolutely impossible to resist the execution of anything that Russia wished to see accomplished thoughout the length and breacht of China. This showed what we had host. We might have held that position, or we might have regained what we had postly lost, had we been able to carry through the loan; but the loan as it was about to be carried through now would give England, as a State, no influence whatever in the connects of China. It Russia and Garmany proceeded with the annexation of the ports indicated they would adopt their own exclusive system of trade, and the result would be they would have little, if any at all, and the trade would heave little, if any at all, and the trade would begin to flow into China through its accustomed channel. But there was the land belind the ports, and if the same process was to be applied to the Hinterland it would be far more galling, more oppressive, and more destructive to trade than even the Chinese system of levying interior duties which had so strangled trade. In the last result England was, and always must be, when it come to force, the strongest Power on the Chinese coast. We could reindonce our Chinese feet hom the Pacific, the Indian, and the Australian squadrous hefure either German or Russian ships could get Pacific, the Indian, and the Australian squadrons before either German or Russian ships could get half way to China. This country had in selfish aims with regard to China, and all it asked for itself it was prepared to share with the whole world.—(Hear, hear.) All that Bogland desired was the maintenance of China as an independent Power, and her protection against those aggressive countries which would amex her only in order to close her.—(Hear, hear.)

Sir W. Harcoutt:—I have been asking myself for the last two hours what is the object of the speeches to which we have listened and how far they and the resolution before the House will constitute the speeches to be seed to the thouse will constitute the seed of the seed of the House will constitute the seed of the seed of the House will constitute the seed of the House will constitute the seed of the House will constitute the seed of the House will constitute the seed of the seed

they and the resolution before the House will can terbate to the solution of a question which every budy admits is one of supreme importance to the interests of this country.—(Cheers.) The mover and seconder of this motion strangely enough contradict one another at almost every point. There are two great potentates in Europe who will have ene two great potentates in Entope who will have occasion to rejoice to-morrow.—(Laughter.) The Emperor of Germany is patronised by the member for Sheffield. The member for Sheffield has long suffered from a disorder which was very common in this country—that Russophobia from which he has never recovered, although I am bound

ber for Sheffield? He says Russia is making a movement in the East of Asia. So she is. She is making a great railway through her own terri-tory, and that is a thing which is necessarily hos-

tile to England, Sir E. Ashmead-Bartlett :- I said where Russia was attacking English interests was in trying to

was attacking English interests was in trying to obtain controls of northern China.

Sir W. Haccourt:—Yes, but what evidence is there of that except that she is making a railway through Siberia? What would have been said if Russia or any other Power had taken such a view of the construction of the Canadian Pacific Railway. The First Lord of the Treasiny said not long ago, and said quite truly, that it was the most natural thing in the world that Russia should desire an irecfice port in the that Russia should desire an ice-free port in the Pacific. Why is Russia to be regarded as the enemy of Great Britain because she desires an ice free port on the Pacific?

Sir E. Ashmead-Bartlett :- Through Chinese

Sir W. Harcourt:—If China chooses upon terms fair to other countries to give Russia access to an ice-free port, why should she not?—(Chiers.) Then he says all the misery we endure is because we have no allies in Europe. endine is because we have no allies in Europe. Then there is another great crime which, according to the land member, the late government committed. They did not join Japan. To do what? To make war on China. The course which the late Government took was, in my opinion, a perfectly wise course. They did not desire to be the enemies either of Japan or of China. And when steps were taken to coerce Japan the late Government declined to be a party to that action. At this moment, and ever since China. And when steps were taken to coerce Japan the late Government declined to be a party to that action. At this moment, and ever since that time, Japan has tooked upon Great Briain as her friend. If you want a closer alliance with Japan its perfectly open to the Government to enter into such an alliance. We left it perfectly free. We declined to make ourselves partisans in that contest between Japan and China. The member for Sheffield says that Germany is not hostile to Brigand.—(Hear, hear.) I hope and delieve that to be the case, but the hor, member charges the late Government with having caused hostility between Germany and England. In my opinion, Lord Salishury was perfectly right when he said that the great hope of a settlement, whether in the Near East or in the Far East, is in a good understanding between England and Russia. I believe that to be a wise and sound policy, and Lord Salishury has seen that the attempt to deal with Eastern questions in a spirit of Jealousy and hatred and hostility towards. Russia is a policy which has been ried for half a century, and has failed, and that it is only by acting in a friendly spirit with Great Powers like Russia. France, and Germany, whether in the Near East or in the Far East, that you can really advance the true interests of this country. The extraordinacy thing in these alliances as they present themselves to the lion, member is that he has extraordinary thing in these alliances as they pre-sent themselves to the hon, member is that he has sent themselves to the hon, member is that he has hut one test of the alliance which England ought to seek, and that is that it should be founded upon a lave of Turkey.—(Hear, hear.) Germany has come to the tescae of the Moslem populations throughout the world. That is the ground no which he gave his patronage to the Emperor of Germany. We do not accept that test at all. What I complain of is that for weeks all the newspapers, and many gentleman in speeches, were calling upon the English Government to do something to avert the mischief that was going to befall British trade in consequence of the action of Rossia and Germany in China. As soon as Parliament met we were told by the Prime Minister that all this had arisen from the confrom al Russia and Germany in Coma as Parliament met we were told by the Prime as Parliament met we were told by the Prime Minister that all this had arisen from the confusion of ideas, that there was no foundation for such apprehension at all. Lord Salisbury said: "I am bound at the same time to say, lest it should be supposed that we have been maintaining a desperate diplomatic battle in layour of the Treaty of Tientsin, that nobody has every yet suggested the slightest intention of infringing any of the rights we enjoy under that treaty." What are those rights? They are all contained, I think, in the last words of the Treaty of Tientsin; that England shall enjoy in China every advantage that any other country has. If that be so, if the statement of the Prime Minister is true, so, if the statement of the Prime Minister is true, as I am since it is, that nobody had ever suggested the slightest intention of infringing any of the rights which he has oever recovered, although I am bound to say it has worn itself out a great deal in the public opinion of this country.—(Cheers.) No one has spoken more strongly, more responsibly, in that sense than the present Prime Munister. Two why England should regard Russia as its enemy. I venture to say such speeches as we have listened to an edoing and will do infinite mischief to this country throughout the world. What is the sort of attack that is made upon Russia by the ment.

have received spontaneously from the Russian Government a written assurance that any port which they might obtain leave to employ for the outlet of their commerce would be a free post, free to the commerce of this country. Now, a free port is much better than a treaty port. So, having port is much better than a treaty port. So, having ascertained that Ta-lien-wan was to be a free port it interested us very little indeed to know whether it was to be a treaty port or not." If that be the fact why in the world is the public mind to be disturbed upon the subject P. I put a question this afternoon to the right hon, gentleman. I asked him to present to Parliament documentary evidence which would satisfy the country. (They have here) which would satisfy the country.—(Hear, lear.) We have had vague statements, but sorely matters of such supreme importance as these must have been have had vague statements, but surely matters of such supreme importance as these must have been reduced to writing. If we see these assurances in black and white we can judge what is intended. As regards Port Arthur, the hon, member for King's Lyan quoted certain eloquent passeges from a publication ascribed to the Under-Secretary of State. He spoke of them as the language of the Foreign Office. I do not think that is exactly correct. He says that Russia has done nothing in respect to Port Arthur which she is not perfectly entitled to do under treaty rights. Then why are we to have any alarm on the subject of Russia and Port Arthur? The hon, member for Sheffield wishes us to make war upon Russia helore the Siberian Railway is finished, a railway through her own territory. The Under-Secretary for Foreign Affairs went on to say—"Russia has sent ships of war to Port Arthur, and if blame is to be attached to her for doing so her Majesty's Government must be included in the accusation, for a fortnight ago we did exactly the same thing. That is a right we enjoy in common with other Power under the Treaty of Tientsin, and in the exercise of that right our Admiral from time to time orders ships to visit that port. He did that two ar three weeks ago, and, if the occasion arises, will do so again." If that is so, what is the meaning of all this alarm, of all these panic fears, as to the position of Russia this matter? The First Lord of the Treasury If that is so, what is the meaning of all this alarm, of all these panic feats, as to the position of Russia in this matter? The First Lord of the Treasury has very truly said, on more than one occasion, that the advantage of other countries is not necessarily one loss.—(Hear, heat.) Personally I have followed with admiration the progress Russia has made in the development of her commerce and manufactures at home. That is the case with Germany also. As we have the world for our customers it is a great advantage to us that the world Occursing also. As we have the world for our customers it is a great advantage to us that the world should be prosperint, that other contries should have the purchasing power. But there are some things in these negotiations which have account to the contribution of some things in these negotiations which have surprised me. I never understood why, it Ta-lieu-som is of so little value, it was ever asked for.—(Cheers.) That is a matter which requires explanation. Then there is the curious condition that China has agreed not to part with the valley of the Yangtsze-kiang. It is quite evident that if any nation approached us and asked us not to part with the valley of the Thames the condition is one we should readily agree to.—(A laugh.) But it is not my object to criticise to criticise the Government or to weaken their hands. On the contrary, I desire to strengthen their hands against their own supporters and against this motion, but what I do ask of the Government is that they will make to the House a bank statement of the school position of things. If you want to remove the mischief of such speeches as those we have listened to; if you want III remove the remove the mischief of such speeches as those we have listened to; if you want in remove the evil of this perpetual, I will not say nagging at, but demociation of other countries when there is no foundation for it at all, you ought to teasure us in respect to Russia as the Prime Minister did as regards Germany. Lord Salisbury said te-"Similar assurances have been made to us by the German Government with respect to the territory they have recently occupped; indeed, the German Government went further and were more flattering to us, for their Amhassador informed methey had come to the conclusion that our manner of dealing with such things, at all events in the colonies, is better than their, and that in this instance, at any rate, such things, at all events in the colonies, is better than theirs, and that in this instance, at any rate, they intended to imitate our methods." We want to see a record of that assurance. It ought to be presented to Parliament at the earliest possible time, so that we may be sure there is no real foundation for alarm in this matter, and that we may go on in concert with other nations in development the total and the children in the state and the same property of the state and the same property of the same p

sion of the Chinese question. Our proceedings and negotiations at Peking and elsewhere are still incomplete, and it is, therefore, difficult for me either to present a connected narrative of events to the House or to give them what the right hon, gentleman has asked for-namely, a statement of the policy of the Government. a sound rule, not marely of the Foreign Office, but of common sense also, that considerable reserve or common sense also, that considerable reserve should be maintained in public and Parliamentary utterances as to what is happening; and I am sure I shall not be held open to blame if in some respects I mm not able to depart from that reserve. At the same time, I quite recognise the legitimacy of the request of the right hon, gentleman, and I shall endeavour, as far as I possibly m make a clear statement of what the views and actions of the Government have been. I accept the contention which has underlain the whole of the speeches to which we have listened—namely, that this country enjoys a preponderant interest in China.—(Hear, hear.) That, indeed, is one of the commonplaces of modern politics and hisneedless either to demonstrate or for y which it is needless either to demonstrate or to endouse. We were the first people to inflock the door of China to foreign trade. We were the first Power to survey her coasts. We were the first to drive away pirates from her seas. We, indeed, to drive away pirates from her seas. We, indeed, were the first people to stud the whole line of her coasts with posts open not only to ourselves, but to the commerce of the whole world. We were the first people to send steamers up her waterways, to build callways for her, to exploit her mines, to carry into the interior of the country over thousands of miles the advantages of European thousands of miles the advantages of European commerce and European comforts. Let it not be forgotten, too, that we were the first Power to give to China the nucleus of a pure Administration at the same time that we added a great annual revenue to her Treasury by instituting an Imperial Customs service in that country. (Cheers.) It may touly be said that, in so far as China at the present moment is not in the East an anachronism, but has within it a vital living China at the present moment is not in the Bastan anachronism, but has within it a vital, living force, it is in the main due to the action and initiative of this country.—(Cheers.) All these circumstances explain the preponderant interest and priority of claim which we feel in that country. But here may I utter a word of caution? These circumstances do not seem to me to constitute for the preponderant interest. stitute for us an exclusive interest. They do not justify us in regarding with jealousy or suspicion the attitude of other competitors, perhaps just as competent now and as well equipped as uniselves, who may have arrived on the scene somewhat later. (Hear, hear.) We may, perhaps, regard with pardonable compunction the en-croachment of these rivals on the sphere of activity which, until recently, was almost entirely our own. But in so far as that was legitimate and pacific engreachment we have no cause of complaint. I submit that we should, on the contrary, endeavour to gird our litins to meet the new condition of affairs, and to retain in an age of competition what we won in an age of monopoly. With regard to the speech of my hon, friend the member for Sheffield, I of my hon, friend the member for Sheffield, I doubt whether it would be in the power of this or any Government, whatever its intentions might be, to act up to the high level of the patriotism and comage of my hon, friend.—(Laughler.) At the same time, the Government have no difficulty in accepting the motion. We agree with him that the integrity and independence of China are matters of intense solicitude to the Government, as they must be to any British Government, and as they must be to any Diffish Coveriment, and that they may be considered the cardinal bases of our policy in regard to China. Passages have been quoted from writings of my own, and I was amprised to find an hon, member of so much with and originality as the bon, member (Mr. Bowles) devoting so much of his speech—and, in my opinion, the least dull portion of his speech opinion, the least dull portion of his speech—
(laighter and cheers)—to extracts from writings for which I should not have thought that, a proof, he entertained much respect.—(Renewed laughter.) I am not one of those who have any great belief in the inherent stability of the Chinese Government. Pressed as China is from every side, and incapacitated from successful resistance, as she always hitherto has been, by defects in her Government and institutions, I can well foresee she is confronted in the future by even greater dangers than she has had to meet in the past. But our policy is and must be to prevent her disruption so far as we can, and to secure for her that fresh lease of life to which her immense and magnificent resources. to which her immense and magnificent resources entitle her. - (Cheers.) We are, therefore, opposed entitle her.—(Cheers.) We are, mereure, appused to the atienation of any Chinese territory or the ancelifice of any part of Chinese independence.—(Hear, hear.) That is a policy from which the Government have abstained, and which they have no desire to initially any conceive a circumstance.

stances arising in the future, circumstances gravely affecting, and, perhaps, seriously imperiling our interests in China, which might tempt us, and even compel us to depart from that attitude of reserve. But the seizure of Chinese territory, the reserve. But the seizure of Chinese territory, the alienation of Chinese territory, the usurpation of Chinese sovereignty, is not primarily any part of British policy; and it is not likely that that which we repudiate for ourselves we should regard will a welcome eye if attempted by others.—(Hear, hear.) I will give a short and succinct history of recent events dating from the Chino-Japanese war. The whole face of the East was changed by the result of that was. It exercised a most profound and disturbing effect upon the balance of power and upon the situation and destinies of all the Powers who either are situated or have interests around the China seas. I am not going to be tempted to embark on a discussion of the questions raised as to whether the late Government were or were not wise in taking up an attitude of abstention at the close of that war. I am so abstention at the close of that war. I am so auxious to eliminate anything in the nature of even party dissent that I prefer to put aside that question ultogether.—(Hear, hear.) But I think there can be no doubt about the fact that he steps taken at that time by the Governments of Russia, Germany, and France in the interests of China have had an immense effect in that part of the have had an immense reflect in that part of the world in increasing the interests and pretensions of those Powers and in establishing a fien on the gratitude of China,—(Cheers.) It was from the result of that war that recent events have arisen. A further instalment of the war indemnity was due to Japan at an early day, and it was the endeavour of China to raise the money that brought about negotiations of which so much has been heard. With regard to the subject of the loan I think there has been some misapprehension. We were asked to make a loan. We did not in the first place, offer to do it of our own accord. The asked to make a loan, we un not in the first place, offer to do it of our own accord. The initiative was taken by the Chinese Government; but when the request came from China to the Government the Government decided, not merely that we were better qualified than others to lend the money, but that in the interests of commercial the money, but that in the interests of commercial expansion and sound finance the assistance was such as could very properly be given. The Government offered a loan on what I think it will not be denied were most generous terms, and they asked in return for certain advantages which were not of a selfish or exclusive nature. On the connamed in return for certain advantages which were not of a selfish or exclusive nature. On the contrary, the advantages which they asked for were specially chosen so as not to offend the susceptibilities or clash with the interests of any foreign Powers; but they were of a character to benefit the of all countries as well as our own. — (Hear, hear.) Well, Sir, these efforts on our part did not prevent suspicion from being aroused or prevent agencies from being set in opposition which proved inimical to the granting of the loan in its original form. The Chinese Government withdrew their original request, and I should imagine that no one, no even my hon, friend the member for Sheffield our money down the throat of China at the point, as it were, of the camend.—(Hear, hear.) Of course, the negotiations and the conditions attached to them lapsed, or at any rate passed into another groove. Nevertheless we received from the Chinese Government an assurance that isto another groove. Nevertheless we received from the Chinese Government an assurance that the loan, which they had ceased to ask from us should not be invited from any other Govern ment, and negotiations, which I have heard this afternoon have been brought to a successful issue, have been proceeding in the interval for the through the agency of certain influential banks. through the agency of certain influential banks.— (Cheers.) The Chinese Government, further influenced by the considerations placed before them by the British Minister in discussions at Peking, intimated their desire to make certain concessions which would be beneficial not merely to British trade and toffgence, but equally so to all foreign trade and influence.—(Cheers.) I was a little surprised that the hon, member for King's Lynn made no allusion whatever to the concessions which have been published in this country and read out in this House, and which, I venture to think, are a very material factor in our considerathink, are a very material factor in our considera-tion of the whole question.—(Hear, hear.) It is not necessary for me to repeat at length what I have already stated, but I will briefly recapitulate the advantages which have been secured. In the first place, the opening of internal invigation on all rivers in China to British steamers from the middle of the ensuing summer, which means that we shall be able to take British merchandise in British ships, not merely to the ports recognised by treaty, but to every riverside town and station in the whole of the interior of China.—(Cheers.) Secondly, there is the provision upon which I think

tion put a cather forced interpretation-an interpretation certainly which the Government do not endorse-as to the non-alienation of territory in the Valley is that part of China the commercial development of which has been peculiary the work of the merchants and financiers of this country. It is the main and natural outlet of British commerce in China, and, moreover, it is worth re-membering, that the Hinterland of the Yangtsze Valley is contiguous with the upper regions of our own territory in Burmah, and it is the ambition of many in this country that at some future date, if not at the present time, there shall be railway connection between the two. The third provision was the assurance that the position of Inspectorwas the assurance that the position of inspector-General shall continue to be held by an English-man—perhaps I should say a Briton—(Cheers)— so long as British trade is in the accendant in China.—(Hear, bear.) This, I think, may be re-garded as a tribute not merely to the predominance of British trade, but to the character and services of that eminent man Sir Robert Hart-(Cheers) of that enumers than Sir Robert Hart—(Cheers)—and when I montion that, according to the statis-tics of the Imperial Customs in Clina, Great Britain carries 82 per cent, of the total trade of China that passes under a foreign flag and pays 76 per cent, of the dues and duties collected on that trade, it must be obvious to the House that if we ever forfeit that predominance it will be entirely owing to our own fault.—(Cheers.) The fourth assurance was the opening of a port in Minean in two years' time. It may be asked, why should there be delay in this? The reason is simple. The delay is due to fanaticism and the notoriously turbulent character of the population simole. of that province, into which Europeans can hardly be said to have yet penetrated, but which I believe is regarded as a vast field of potential wealth in the future. These briefly summarized are the four concessions made by the Chinese Government. I venture to say that they are considerable and valuable concessions,—(Cheers.) They have They been secured without any financial risk of obligabeen secured without any financial risk or obliga-tion on the part of this country, and I think we are entitled to regard them both as a tribute to the friendliness of the Chinese Government and to the ability of the British Minister at Peking.—(Cheers.) When Sir Claude Mac-donald was appointed there were some of my hon friends on this side of the House who doubted that appointment, and he was somewhat severely attacked in this House. I think those of my hon-friends who took that line will now admit that a more vigorous and capable representative we have rarely had at Peking, and the application of his independence and resolute personality to the time-honouted mechanism of Chinese diplomacy has already been attended with most beneficial results, —(Cheers.) I pass now to the other events which have them becoming in Chine. was the action of Germany, who, in reparation for an outrage inflicted on some of her missionaries, acquired a long lease of the port of Kino-chou, and declared her intention of making that a free port, I may add to that assurance that the German Germany have given reparated assurances to Kontantine the contant of the c vernment have given repeated assurances to Her Majesty's Government that they have no desire to disturb the integrity or shake the peace of China. or in any way to conflict with the interests and susceptibilities of Great Britain,—(Hear, hear.)

Sir W. Harcourt:—Will the correspondence

which shows these facts be presented to Parlia-

ment?

Mr. Curzon: —That is a question which I answered on behalf of the Secretary of State this afternoon. He does hope to lay correspondence at a later date, and of course he will endeavour to include that to which the right has gentlemen include that to which the right hon, gentleman

W. Harcourt:-I can quite understand that if there are further regotiations going on which are the subject of this particular matter there might be some difficulty in publishing the correspondence. But I gathered that what is before Parliament is concluded, and thefore we could have these capers. For instance, if satisfactory assurances have been given by Russia and

factory assurances have been given by Russia and Germany on this point, why seould we not have the papers? (Hear, hear.)

Mr. Curzon:—Of course, I cannot speak for the Secretary of State, but I will represent to him what the right hon, gentleman has said, and I have no doubt that when the papers are taid, and they will be as soon as possible, communications on the matter will be included. The next point is the action and attitude of Russia, and on this point what happened was as follows. A discussion having arises on the desire of A discussion having arises on the desire of Russia to possess an ice-free outlet for her commerce in the Far East—a desire with the Secondly, there is the provision upon which I think registimate to the East—a desire with the Secondly, there is the provision upon which I think registimate to the sympathy has been frequently in this country—an assurance was UNIVERSITY OF ILLINOIS AT

voluntarity given by Russia that any such pur would be open and subject to the same conditions as regards ships and commerce as those which prevailed in other open ports on the Chinese prevailed in other open ports on the Chinese coast. A slight controversy has arisen as to the exact nature of these assurances. The misapprebension, if any, arose as to the doubt which the Russian Ambassador, in representing the views of his Government, had in the first place spoken of an open port or a free post. The Russian Government have not precluded themselves from Government have not precluded themselves from declaring in the future that the port shall be a free port, but their present assurance is that such a purt shall in any case be an open port. The difference is simple. A free port is one like Hongkong, at which no tariff whatever is imposed on commerce. An open port is a treaty port like all other ports ou the Chinese coast, in which the tariff are assimilated and in which no light the tariffs are assimilated, and in which no higher due can be exacted from British or foreign comdue can be exacted from Bettish or loveign com-merce than can be exacted from commerce from anywhere else coming to the treaty ports. This is the triple series of events that have taken place in China. The principles which have underlaid the policy of the Government in each of these cames have been the same, and they are the principles which have been more than once stated by my right hon, briend the leader of the House outside these walls. The flist is that to which I have alluded, the maintenance of the integrity and independence of China; the second is the preservation of our treaty eights, and here again there seems to me much dispute as to what these treaty rights are. There are three articles in the Treaty of Tientsin of 1858 which must be borne in mind. of Tientsin of 1858 which must be borne in mud. The first is Article 24, by which it is agreed that British subjects shall be required to pay on all merchandise the duties imposed, but in no case shall they be called upon to pay other or higher duties than are required from other foreign nations. Article 52 provides that British ships of war, coming for no hostile purpose, shall be at liberty to visit all ports within the dominions of the Emperor of China, and shall receive every facility for obtaining provisions and water. The third for obtaining provisions and water. The third is Article 54, which confers what is most commonly The third is known as the most favouced-nation rights. Those three articles are the main charter of our com-mercial position in China, and we cannot consent, and I do not think any British Government would consent, either to their abandonment or infraction.
Sir W. Harcout: - Have they been threat-

Sir W. Harcount:—Have mey been threaened?

Mr. Curzon:—I think that I have answered
that question. The fact that they may not have
been threatened or infringed already does not
dispense the Government from exercising vigilance as to what may bappen in the future.
Those articles give the Government the right
to oppose all exclusive privileges or special
tariffs that may be conceded. They establish,
in fact, equality of treatment and opportunity
as the principal bases of our relations, I may even
say the principal bases of international law with
reference to China. The third principle of our
policy is that of free commerce. Our belief is
that the integrity of China, which we were asked
by this motion to safe-guard, is most likely to be
secured by throwing open China to the interests
and intercourse of the whole world, and not, so
o speak, by closing her into separate halled or to speak, by closing her min separate wateright compartments, each bearing a separate label of appellation of its own. The more Powers, the more civilised Powers, you interest in China, the more likely you are to be able to sustain her integrity and welfare.—(Hear, hear.) The concessions which were originally asked for and those which have been granted to the Government have been animated by this spirit and they will be in-interpreted in that sense. I hope in the remarks It have made that I have said nothing at all divergent from the spirit in which I was invited to approach the question by the leader of the Opposition. I should like to add that Her Majesty's Government frankly acknowledge the generous and loyal support which they have received on this question from tight hon, and line, members opposite-(Cheers)-both on the piatform and in both Houses of Parliament, since the Session began. That confidence and that support, of course, place a grave responsibility on the shoulders of the Government, but it also, I think, may give us some confidence in thirding that in pursuing the policy which I have endeavoured to sketch in outline the Government are not acting merely as the nominees of a Padiamentary majn-nty, but as the trustees of the entire nation,—

The motion was agreed to .- L. & C. Express.

#### FREIGHTS AND FOREIGN COM-PETITION IN THE IRON AND STEEL TRADE.

The following interesting correspondence has appeared in the N.-C. Daily News :-

Messrs, Collins & Co., of London and Tientsin, have sent us the following copy of some correspondence between representative shipowners and ironmasters in England with reference to the com-petition created in freight by conference steamers of to the detriment British trade;-

> 17, Water Street, Liverpool, 10th January, 1898.

Messis. The Pearson and Knowles Coal and fron Co., Ld.,

Warrington,
Dear Sus, - We enclose a copy of manifest of a
cargo landed at Bombay by one of the steamers
from Hamburg, Antwerp, etc. This is one of
many in our possession, which we shall be pleased show if desired.

Our object in now addressing you is m bring this matter more particularly before you, and to see if something cannot be done for our mutual benefit in the way of preventing these large orders going to the Continent, and securing them for shipment hence. We may mention that one of our local shippers last week informed us that they had 1,000 tons steel just going from Antwerp, in three steamers only. We have recently reduced our rate of freight to try to induce business, and would rate of freight to try to motice business, and wond point out that it is now less than charged by the Continental lines. We are therefore hopeful of your being able to help matters in the direction indicated, otherwise we fear this "from and steel" business will be drawn to the Continent altogether. Yours truly,

(Signed) Handerson Brothers. 15th January, 1801.

Messes. Henderson Brothers,
Water Street, Liverpool.
Dear Sirs,—We have to thank you for your favour of 10th instant. The figures that you are good enough to put before us tell a tale with which we are unfortunately only too familiar, but we are glad to note that you, at any late, among British shipowners, begin to realise the gravity of the position, which we have all to face, in regard to this foreign competition—it has all but extinguished our Eastern trade in fron and steel, and substitutour Eastern trade in iron and steel, and substituted German and Belgian productions for what was, only a very few years ago, exclusively of British manufacture. We look upon it that we have, mainly if not entirely, to thank the policy of the steamship conferences for this result. To trace the origin from which all our toubles have spring we must go back some years, to the time when the export iron trade of Antwerp, Rotterdam, and Hamburg was in its intancy—and the great shipping lines imagined that they had found a new customer whose trade would constitute an addition to what they already would constitute an addition to what they already carried from British ports. In vain we and others carried from British ports. In value we and others protested, in season and out of season, that every ton of into shipped from abroad meant one ton less shipped from home. Our protests were ignosed, and we were told that if one line did not do the trade, another would; and that the future and the British maker most look after themselves. Preferential rates were offered all round for the new freights from foreign ports, while similar advantages were persistently refused to old customers in this country whose trade was considered to be safe and in no danger of leaving its usual be safe and in no danger of leaving its usual channels. The opening this made was promptly seized upon by a certain section of British merchants, who, in their eagerness to underself home competitors, by any means and at all hazards, took no thought that foreign traders would inevitably follow foreign goods, to the ultimate disconsitue of the British maker, merchant, and shipowner alike. It is true that for a time our own well-known brands maintained their position, but by duct of the perseverance of our antagonists and the exercisence unined from

little better, and even home trade is imperilled by a continuance of similar tactics, which enable American and other tariff-protected producers, by American and other tariff-protected producers, by apecially low freights, to dump their surplus stocks in this country at any price they will felch. What is the remedy for this state of things we cannot yet decide, though we have revolutionised our methods of working and reduced our profits to a minus quantity in attempting to solve the problem, but the first step in the right direction is undoubtedly for the shipowners to reveree this recent policy in our favour, and give to home manufacturers and British ports a preference in freight such as they at one time accorded, and still in many cases accord, to everything that was treight Sign as they at one time accorded, and still in many cases accord, to everything that was foreign. We are not yet quite played out, but the breathing space which we have before us is in our opinion of short duration, and males we have some systematic assistance from all who are in-terested in the prosperity of British trade, the end will appear ha in sight. will soon be in sight.

Perhaps you will be good enough to place our views before the members of your conference for consideration, and, if evidence is required to substantiate their correctness, we would commend to your persual Mr. Chamberlain's Blue Book on this very subject, which shows how far-reaching have been the effects of the policy of which we

Yours truly, FOR THE PEARSON AND KNOWLES COAL AND IRON Co., LD.

(Signed) JEO. J. BLECKLY, Director.

TO THE EDITOR OF THE "N.-C. DAILY NEWS." Sin,-With much attention did I read the correspondence about the decline of the British hard-

respondence about the decline of the Bitish hardware trade in this morning's issues of your paper.

Being somewhat interested in the matter, and, till a few years ago, well at the height of all the export business in Antwerp, it is with a certain astonishment that I read your correspondent's notices about special freight rates and other favours accorded to cargoes of hardware from that port.

I am sorry to see that—although one of your correspondents beats about the busin—none of them care to go deep enough into the question.

At first, by what means has the Continental hardware trade made itself known in the East, and how is it taking gradually the place of the

and how is it taking guadually the place of the Biltish? First and above all by spending money, plenty of money, to introduce its produce to the bisyer and in convincing the latter that it is pos-sible to manufacture with reasonable profits, the same quality, if not better, of any kind of hard-ware, at much lower rates than do the B-itish, proving their words by the facts that having the inw material ready at hand and in many instances cheaper than the British, and heing able to work it just as well and at much less expense than the latter, the Continental manufacturer can sell his produce cheaper than his insular competitor.

produce cheaper than his missian competers.

On spending thus a larger percentage to bring his goods to the man and on being satisfied with a smaller profit, is it a wonder that he progresses?

Who has in late years made the most progress in the hardware trade of all Southeastern Europe? Is it not the Belgian? The same can be said of

all the Far East,

If that famous freight question was of any importance in the matter do any of your readers think that the British manufacturer should wait a day to export his goods via Antwerp or another Continental port where these favouring rates exist, considering the very low freights between the British ports and the Continent?

AN ANTWERP DUTCHMAN. 23rd March.

#### LIQUID FUEL FOR STEAMERS.

Here is an interesting item from a home Baper:-

paper:—
A new oil steamer was launched from Messre, Sir W. G. Armstrong, Whitworth and Co.'s Walker shippard on 22nd inst., to the order of Messre. M. Samuel and Co. on behalf of the Neverlandsche Indische Industrie en Handels Maatschappij She is arranged for carrying petroleum in bulk on Swan's continuous expansion trunk principle. The expansion trunk which extends almost the whole length of the vessel, forms a connection between the three superstructheir position, but the platform of Parliament, since the Sestional Confidence and that support, grave responsibility on the perment, but it also, I think, on the remainder of the pressent o pumps, connections &c., which are required for the combustion of oil are being supplied. As the printips, connections &c., which are required to the combustion of oil are being supplied. As the new vessel left the ways she was named Halistis by Mrs. Samuel, the wife of Alderman Marcus Samuel, the head of the firm of M. Samuel and

by Mrs. Samuel, the wile of Alderman Marcus Samuel, the head of the firm of M. Samuel and Co. After the launch the guests adjourned to the launcheon room. Among those present were:—Alderman and Mrs. Samuel, Colonel H. F. Swan, Captain Tomioks, and Mr. Mera.

Colonel Swan proposed the toast of success to the Halistis, coupled with the name of Mrs. Samuel. Alderman Samuel, in reply, said he wentured to say that this ship was going to inaugurate an entire revolution in the means of propulsion of vessels. They had been very fortunate in discovering in Bonneo what they believed, without exception, were the richest oiffelds in the world. The company of which he was chairman was prepared immediately to erect storage, and in a very few months they would be able to contact for supplying vessels from Yokohama to Suez. That brought the question of oil steamers within practical politics. So long as these supplies of oil could not be obtained it was almost useless to build steamers to burn oil, but the content the matter was taken no he such a comuseless to build steamers to burn oil, but the moment the matter was taken up by such a commoment the inatter was taken by since a con-pany as he was connected with; having a capital of £1,800,000, it was a guarantee to the com-mercial would that they saw their way to what he believed would be the greatest revolution in the method of propulsion they had seen during this generation.

#### PRINCE HENRY IN HONGKONG.

In Honkong a ball was given in honour of the visit of Prince Henry of Prussia to the colony. At supper the following speeches were delivered:—

were delivered:—

Sit John Carrington, the Chief Justice, proposed the toast of the evening. He said—Your Excellency, ladies and gentlemen, I have the honour to invite you to drink the toast of the health of our distinguished guest, His Royal Highness Prince Henry of Prussia. (Applause.) When His Royal Highness came amongst us he came with a three-fold title to our cespect. In the first place he is the son of the angust lady who was formedly our Princess Royal. (Applause.) In the next place he is the grandson of our beloved sovereign, Her Majesty the Queen Empress—(applause)—and lastly, he if a Prince of the reigning house of the great and hiendly German nation, by whose illustrious sovereign he has been entrusted with an important command in the German Navy. (Hear, hear, and applause.) But during his short stay amongst us, His Royal Highness has shown that he has other claims to our esteem and regard,—claims which are founded on his own personal media. Highness has shown that he has other claims to our esteem and regard,—claims which are founded on his own personal merits. (Applause.) For it is the simple truth to say that His Royal Highness, by his frank and chivalious bearing, by his courtesy and considerate manner, by his love of maily games and sports, and by other qualities characteristic of a true sailor Prince, has during his sojourn amongst on won the hearts of all with whom he has been brought into contact in this Colony. (Applause.) I call upon you, therefore, to drink, has been mought into contact in this Colony, (Applause) I call upon you, therefore, to drink, with the greatest cordiality, and with the fullest honours, the toast which I now propose to you, "The Health of His Royal Highness Prince Hearty of Prusia."

The total was drunk with great enthusiasm, fallowed by a spontaneous version of "He's a july good fellow."

Prince Henry of Prussia, in repty, said—Your

Prince Henry of Prussia, in reply, said—Your Excellency, ladies and gentlemen, you may believe me it I say that I am deeply grateful for the words Sir John Carrington has just expressed, and which I, personally, hardly deserve. At the same time, allow me to thank the civil community of Hougkong for this perfectly splendid reception which you have offered me to-night. I also thank all of you have offered me to-night. I also thank all of you for the hospitality shown to myself at d to the officers of His Imperial Majesty's Navy during our stay in Hougkong. (Applause.) Hospitality is a quality which is known amongst all the Europeans in the East, but allow me to say it is nothing uncommon in a British colony and amongst loyal subjects of Her Most Gracious Majesty the Queen. (Hear, hear, and applause.) Majesty the Queen. (Hear, hear, and appliance)
I, therefore, may be allowed to propose the toast
of the Colony of Hongkong. (Hear, hear and applause.) It is a deing, I request my fellow officers to join with me in three hearty cheers for the welfers of this Colony. Hip, hip, hurralt! (Loud

applause.)
Major-General Black suid-Your Royal High-

the gracious words which you have just intered. There is nothing that can advance the true interests of Germany which can injure the interests of the United Kingdom. (Hear, hear and applause.) The Germans and the English are tranches of the same stock; our languages spring from a common root, and I see no reason under Heaven why we should not be friends. (Hear, hear, and loud applause.) Therefore, on behalf of this community—which attempt living under the British flag still has amongst its inmates many men of your country—on hehalf of that community. I thank your Royal Highness and the officers of your squadron for the gracious way the officers of your squadron for the gracious way in which you have drunk to the health and prosperity of this Colony. (Loud applause.)

#### LATEST TELEGRAPHIC NEWS.

(FROM THE " JAPAN TIMES") UNITED STATES AND SPAIN. THE VATICAN'S INTERCESSION.

PEACEFUL SOLUTION STILL POSSIBLE. London, April 6.

There is ceaseless diplomatic activity in Rome and Washington, President Mc-Kinley has postponed his message to Congress till Thursday. Meanwhile peace is not despaired of.

#### REPORTED SETTLEMENT. QUEEN-REGENT INTERVENES.

London, April 7. President McKinley has suddenly post-poned his message to Congress until Monday. Advices from Madrid state that a settlement has been arrived at through the earnest intervention of the Queen

Regent, and the able representations of Sir Julian Pauncefote and other Ambassadors. SPAIN VIELDS TO OUTSIDE PRESSURE.

> ARMISTICE GRANTED. MILITARY PARTY INDIGNANT. AMERICAN POLICY UNCHANGED.

London, April 11.

Yielding to the representations of the Pope and the Powers, Spain has consented to grant an armistice to Cuba. The military party regards the decision as tantamount to a disgrace. Advices from Washington state that the granting of an armistice will not change the policy of President McKinley, whose message goes to Congress to-day. The American Conto Congress to-day. sul has left Havana.

THE PRESIDENTAL MESSAGE, " WAR MUST FINISH."

"USE FORCE IF NECESSARY."

London, April 12.

President McKinley's message to Congress expatiates on the barbarities of the warfare in Cuba, and the serious effects of perpetual revolution in America. declares the war must finish, and asks Congress to authorize the use of force if it deems such necessary to secure that end. He therefore deprecates the recognition of Cuban independence until a stable government is established. President McKinley adds that since his message was written he has been informed that Spain proclaimed an armistice, and urges Congress to carefully consider this. The message was referred in both Houses to Committees.

THE LEASE OF WEI-HAI-WEI. OFFICIAL STATEMENTS IN PARLIAMENT. BRITISH AND GERMAN INTERESTS IDENTICAL.

BNGLAND'S OFFERS DECLINED.

TRAINING OF CHINESE NAVAL OFFICERS.

the gracious words which you have just intered. liament. The First Lord of the Treasury said by acquiring Wei-hai-wei, which there was no intention to turn into a commercial port, Britain had prevented the Gulf of Petchili from falling under the undisputed control of any Power. hoped China would maintain not only nominal, but real suzerainty over her dominions. The British and German interests were identical, and he hoped both Powers would work together. Britain had no reason to complain of Russian commercial policy. It had unfortunately been thought necessary to acquire Port Arthur, which being a purely naval port, the occupation of it would have an undue influence on the Pekin Council. Britain had protested, offering, if Russia abstained from occupying Port Arthur, that Britain would take no part of the Gulf of Petchili. The offer was not accepted. Britain had therefore arranged for the occupation of Wei-hai-wei.

> In the House of Lords, the Duke of Devonshire added, that there was no reason to suppose the cession of Wei-hai-wei would excite any opposition on the part of Japan. China, in granting the lease, had asked for facilities for Chinese warships, and that Chinese naval officers might be trained under British auspices.

#### CHINA'S GREEDY SUITORS. FRENCH DEMANDS AGREED TO.

The Times publishes a telegram stating that China has agreed to the French demands for a railway to Yunnan, the lease of a coaling station at Kwangchwan, the non-alienation of the Provinces of Kwangtung, Kwangsi, and Yunnan, and the ap-pointment of a Frenchman as director of the Imperial Posts.

HOPES OF PEACE ABANDONED. SPANISH CABINET FRONTS THE REGENT. PREPARATIONS FOR PRIVATEERING.

[Later.]

All hopes of peace have been aban-med. The Spanish Cabinet met at doned. midnight and refused to endorse the Queen-Regent's promise to Minister Woodford to issue a decree granting an armistice. The Cabinet informed the American Minister that Spain must adhere to her resolve to wait until the insurgents asked for an armistice. Spanish patriotism is thoroughly aroused. Numbers of Spanish shipowners are applying for letters of marque, and privateering will be an important factor of the war.

THE SOUDAN CAMPAIGN.

DERVISHES BADLY BEATEN.

London, April 9.

The Sirdar, Sir Herbert Kitchener, with the whole of his force attacked the Emir Mahmud's zereba, and rushed the trenches most gallantly. The Dervishes trenches most gallantly. The Dervishes withstood the attack well, but lost heavily, Mahmud being taken prisoner. The British losses included two officers killed and fourteen wounded. The losses of and fourteen wounded. men are not stated.

LEADING EMIRS KILLED: OSMAN DIGNA ESCAPES.

London, April 11.

The British brigade lost ten privates killed and ninety wounded, the Egyptian troops 51 killed and fourteen native officers, and 319 wounded. Osman Digna Major-General Black sand—Your Royal rights of the community which I have the thonour, however feebly, of representing—to thank your Royal Highness for Digitized by OSS Chinese policy, in Particles of the Government's Chinese policy, in Particle Dervish losses are estimated at 3,000.

UNIVERSITY OF ILLINOIS AT

**URBANA-CHAMPAIGN** 

#### THE SOUDAN VICTORY. GERMAN EMPEROR WIRES HIS CON-GRATULATIONS.

The Emperor William has telegraphed his congratulations to Lord Salisbury, on the British victory over the Dervishes.

UNITED STATES AND SPAIN. EXPECTED ACTION OF THE AMERICAN SENATE.

ARMISTICE REFUSED BY CUBANS.

London, April 13. It is believed in Washington that the Senate's Foreign Committee's report is in favour of declaring the independence of Cuba, demanding the Spanish forces to quit the island, and instructing the President to employ all the forces of the country to execute these resolutions. The insurgents refuse to accept an armistice.

#### THE COMMITTEE'S REPORTS.

SPAIN TO GIVE UP CUBA. USE OF FORCE AUTHORIZED.

London, April 14.

Committees of the House of Representatives and the Senate have both reported in favour of immediately requesting Spain to withdraw from Cuba, and instructing the President to use the forces of the United States, to secure Cuban indepen-

(Received by the 子前)

THE NEW RUSSIAN MINISTER.

Söul, April 7. Mr. N. Matunine, the newly arrived Russian Minister, will proceed to Kyonyun palace, to-morrow, in order to present his credentials.

CHINA FINALLY ACCEPTS THE FRENCH DEMANDS.

Pekin, April 7. The French demands, addressed under date of March 13, have been accepted by the Chinese Government. But while China has promised to France that the former would not concede the three provinces of Yunnan, Kwangtung, and Kwangsi to other powers, a similar declaration has been simultaneously made to England.

The postal service is to be placed as before under the control of the Customs, but it has been agreed upon that a Frenchman should be elected superintendent of Posts.

#### THE INDEMNITY.

Peking, April 8.

The Chinese Government has officially reported to the Japanese Legation that the arrears of the indemnity to Japan will be fully paid on May 6th next.

#### GAMB No. 379. CHESS IN SYDNEY.

CHRSS IN SYDNEY.

The following characteristic specimen of the champion's play occurred in the match School of Arts C.C. v Country team. Mr. James, of Kempsey, the whom we are indebted for the game, writes:—"I enclose some of game between Mr. J. L. Jacobsen and myself. It is interesting partly on account of the artistic ending, and also because it serves to show how Mr. Jacobsen punishes a slip." We receive many games from winners, but it is a novelty to get one hom a player who takes a pleasme in recording his own defeat provided the game has produced good chess. provided the game has produced good chess.

#### HOTES.

(a) Or preferably 5-B to Q Kt 5
(b) A slip, because neither B nor Kt can safely retake the P.
(c) White's command of the K B file soon thus the scale in his favour.
(d) To stop 21-B to K Kt 5.
(e) A slip of which White very clevely avails binnell.

(f) The champion's conduct of the finish is in his usual finished style .- Sydney Mail.

Yokohama Chess Club.—A number of matches and tourneys have yet to be finished before the close of the season, which will be at the end of this month. The principal event is the Chamthis month. The principal event is the Championship Tourney, the third round of which has just commerced. In the Secretary's Handicap a considerable number of games has been played, but except Mr. Pollak, who has succeeded in securing three witts, none of the competitors have been successful so far. The handicap match, Pollak v. Friedlander, in which the latter conceded the adds of the course tourist tourists. the odds of two games, terminated in favour of Mr. Reiedlander by six wises to four. Other challenge matches in course of progress are Sachs v. Stornebrink and Weilbach v. Poligk.

The Boglish champion.- Incidents that occurred during a recent exhibition of simultaneous blind-fold play lead the Birmingham Weeely Mercury to express the fear that, in the case of Mr. Black burne, "the light of other days has failed." He wished to make an impossible move on one of six boards, and on another he lost his Queen and retracted the move instead of abandoning the game. tracted the move instead of abandoning the game. The Mercury regards this as an unfortunate occurrence. A great master should have abstained from setting such an example. There will be no sport left in cliess if, on observing the consequences of a move, a player is to be at thirry to take it back. A move once made — if legal—should stand. Nor as regards Mr. Blackburne himself, need he lear loss of reputation through loss of blindfold games. "His fame was established thirty years ago, and now that he has grown older an occasional stip will only make his friends support him more warmly than ever."

Mawkin: "What's become of Gambit? I have Alawkin: "What's become of Gambit? I have not seen him for some time." Skarein: "Oh, he's in the hospital. A case of neivous prostration. He over-exercised, you know. He is a great chess player, and sometimes when he gets thoroughly aroused he has been known to make three moves in ball a day. No man, you know, could bear up under such killing work as that."

It is close on seventy years since George Walker said that the strongest defence is counter attack. "A man lifts his hand to give you a blow; you knock him down before he can strike. That is counter-attack."

#### EXPORTS.

#### RAW SILK.

Demand continues slack in the extreme and is not expected to improve, for America at least, in view of the now almost certain outbreak of war between the United States and Spain. Stock amounts to 6,050 piculs. Prices have fallen about 20 yen per picul below quotations, which may be considered nominal. Shipments have been 225 bales per Empress of China and 219 bales per Gaelie, for America.

VOKOHAMA: SATURDAY, APRIL 23RD, 1898.

#### SUMMARY OF NEWS.

On the 9th inst. the Russo-Korean Bank in Soul closed its office and stopped business.

H.E. Lt KATEI, Korean Minister of Japan, had audience of the Emperor III the Palace on the

BAION Ito, Minister for the Agricultural and Commercial Department, has submitted his resignation.

On the 18th inst , at the Kinki-kwan restaurant, some of the anti-Government politiciaus delivered speeches on various subjects of the day.

A young man named Matauno Takeshi, a medical student, committed snicide by taking nittle acid in a brothel in Tokyo on the 15th

. On the 17th, at 1 pm, the Kwanto Liberals held a conference at the Konaka resignment Riogoku, Tokyo, and afterwards took dinner together.

THE Communications Department has received Digitized by

intelligence that all private telegrams for Manila are temporarily prohibited by request of the Spanish Government.

A BILL has been introduced into the U.S. Senate creating a national war force by calling upon all able-bodied men between 18 and 45 for three years' service.

THE N.Y.K.'s steamer Soya Maru, 1,725 tons register, ran on a submerged rock on the coast of Benien Island on the 17th inst., while making for the port. It is said that she is seriously

On the 16th H.E. the Minister for Italy entertained at the Legation all the Japanese Cabinet Ministers, some of the higher officials of the Imperial Household, and about 20 Italian gentlemen.

More than 150 fishermen from Wakayama, Tokyo, Shiga, Hiroshima, Kanagawa, Saitama, and Fakuoka, left by the Empress of China for Vancouver to engage in salmon fishing in British Columbia.

Six toy makers of Tokyo were arrested on the rith instant, for making and selling imitation gold coins, which were bought by women and children under the belief that they were genuine, and tendered for change.

A TELEGRAM from Chefoo reports that the two Japanese who were arrested by the Russian anthorities at Port Arthur as spies were released on the 16th inst. and arrived at Newchwang the same day.

WITH regard to the monetary system in Formoss, it was for some time a question in the Cabinet whether to use the silver standard or gold. The Committee decided that the silver standard is most suitable for the island.

A. CONFERENCE of the Principals of the Higher Schools will be held on the 19th inst, at the Department of Education. Mr. Kikuchi, Vice-Minister of Education, will give an explanation of the proposed administration of the Schools.

THE first of a series of five bicycle races by the Reliance Wheelmen of Yokohama took hence on Sunday last, on the Chiba road over a course of about 5 miles. Mr. Kay Smith finished first, Mr. McChesney second, and Mr. Dewette third,

THE Railway between Nauso and Tsuhata has been finished, and will be opened for traffic after official examination. Another branch, between Kanazawa and Tauhata, is also finished. It is said that both lines will probably be opened on the 1st June.

A POLICE impector and a constable belonging to the Hokkaido police, and a female passenger by the Icshimo Maru were sufficiented by charcoal fumes in their cabin on the 9th instant. The inspector and woman died, while the constable was resuscitated.

AT about 6 o'clock on Wednesday evening fire broke out in Hongo, Kamakura, and, several hundred houses were destroyed. It is rumoured that there was some loss of life and several persons were injured, but no official report has yet been received.

On the 17th inst., at 4 p.m., the Yekobama Commercial School gave an entertainment at the Nissel-ro restaurant, Count Okuma and his adopted son, Mr. Hayashi, Director of the Exhibition Bureau, Messra Harn and Otani, and

establishment of an Inspecting Office. It is said that as a result of the conference an office will be established in the compound of the Yokohama Railway Station, and that the Alli-, ance Tea Inspection Office in Kobe will be used for the same purpose.

AT noon on Wednesday fire broke out in a green grocer's shop in Sakamoto-cho, Shitaya, Tokyo. A strong wind was blowing at the time and the flames spread rapidly, with the result that over four hundred houses, forming several atreets, were destroyed. One man met his death and one was severely injured in the fire.

On the 18th Marquis Ito held a meeting at his official residence, which was attended by Count Inouye, Minister of Finance; Viscount Yoshikawa, Minister of Home Affairs; Viscount Katsura, Minister of War; Mr. Sone, Minister of Justice, and some other officials. It is believed that the claims of the Liberal party and the resignation of Baron Ito, Minister of Agriculture and Commerce, were the questions discussed.

PRESIDENT MCKINLEY has signed the resolutions of Congress. The Spanish Minister has demanded his passports. An ultimatum has been delivered at Madrid, compliance being required by Saturday, the American Minister meanwhile remaining in Madrid. The Spanish Cortes have been opened. The speech from the Throne upholds Spain's rights over Cubs. It is officially announced that America will not report to privateering.

THE Spanish Minister has left Washington. The American Ultimatum has reached Madrid, and Spain immediately broke off diplomatic relations, and the American Minister left Madrid. Hostilities have commenced. Mr. Balfour has notified the belligerent parties of England's adhesion to the principles of the Treaty of Paris, and that Britain cannot lay down the principle that coal constitutes contraband of war. It, he said, may frequently be so, but not necessarily.

THE Import market in Yokohama during the past week has shown no signs of improvement. In yarns, cotton piece goods, woollens, and metals there is general stagnation. Not only is no new business to speak of being done, but there appears to be the same reluctance or in-ability on the part of buyers noted last week to take delivery of goods ordered long ago. Stocks are consequently accumulating and godown and insurance charges running up, with no signs of any probable improve-ment in the near future. With regard to kerosene, the possible failure of supply from America, in consequence of war with Spain, has naturally had the effect of hardening rates, and holders will probably demand a considerable rise in prices within the next few months. There has been a fair business transacted in sugar, and Manila brands may be expected to rise in price, which will also affect other rise in price, which will also affect other classes of brown. Further large imports of foreign rice have been made without any immediate fall in prices. The Export market is still very dull. With the war outlook it is scarcely to be expected that any large transactions in silk for America will take place for the present at least and during place for the present at least, and during the past week the sales have been limited to about 500 boxes. Nothing has been done in tea with the exception of the despatch of a few cattles of samples of the new crop. It is rumoused as we close this report that the United States Government has imposed an import duty of THE Central Tea Guild was recently in con- expenses, but this requires confirmation. Ex-

#### SPIRIT OF THE VERNACULAR PRESS.

The discussions of the Tokyo journals about recent events in the Far East have been become a little wearisome, but our readers have doubtless observed that the opponents of the Govern ment have hitherto had the arena almost entirely to themselves, silence being preserved by newspapers to whose columns we are accustomed to look for expositions of political opinious. The Nichi Nichi Shimbun now abandons this attitude of reticence and publishes a scathing article against the agitators. It sets out by expressing appreciation of the patriotism that induced them to hold a meeting, appoint a committee and send a deputation to the Premier, but it demonstrates in the clearest manner that, their so-called "strong foreign policy" is a veritable myth, for not only is it without any element of strength, but also it is conspicuous for weakness and inconsequence. A strong foreign policy is one that announces an intention and shows a determination to enforce it by arms if necessary. Such, for example, was by St. St. fano. She sent her ships through the Dardanelies, and made it perfectly plain that unless ber demands were complied with, war would follow. The result is matter of history. But the agitators in Japan to-day have no intention of that kind. They do not say that, if Russia and Germany decline to respect Japan's protest, she must be prepared to send her fleet against Kiso-chou, Port Arthur and Vladivostock. What they say is that unless the Japanese protest is obeyed, the evacuation of Wei-hai-wei must be reconsidered. Was ever anything lamer or more inconsequential? Germany and Russia are to be censured for encroaching upon the integrity of the Chinese empire, and, if they disregard the censure, Japan is to follow their example. Very heartily Russia and Germany would laugh were such propositions submitted to them. They have no special objection to Japan's occupying Wei-bai wei. They would rather have her there than England, probably. At any rate, to suppose that they would abandon the fruits of their aggressions in order to save Japan the moral pain of becoming an aggressor like them, is quite 'arcical. The agilators talk of putting back-hone into the Cabinet, but in truth their so-called "strong foreign policy" is to the last degree feeble and invertebrate,

The Hochi Shimbun continues its charmingly altruistic campaign in favour of the acquisition of a Chinese port by Japan. It laughs at the Progressia's' contention that a protest should be lodged against the acts of Germany and Russia, and says that such a course would be as sensible as building a strong room after the treasure to be left there had been stolen. But it is not too like to obtain a footing for Japan on the Asistic Continent. Of course, nothing could be more immoral than to follow the example of Russia. France, and Germany, which have acquired ports in China for the purely selfish purposes of their own aggrandisement. Japan must not do anything of that kind. If she obtain a portion of Chinese territory, her object must be simply to guard it for China's sake. All the world should understand the difference between her motive and the motives of Occidental aggressors. The Hochi advances this programme with entire confidence and satisfaction. It seems to be quite sincere, and therein lies the chatm of its counsels.

"Do not lose heart" is the injunction of the Fifi Shimpo to the people of China. It is true that recent events must have proved infinitely painful to Chinese patriots—a port stolen one day, a province the next. But Japan also has had her heavy trials, and has passed safely through them. She too has had her towns bombarded by fleets and great sums ex-

days she lay at the mercy of foreign Powers. Even the revolution of 1867 supplied them with an opportunity to interfere in her domestic affairs, and while England and others supported the new Government, taking care to reap large reward for doing so, France and Russia sided with the Shogun. Looking back now at the perits through which Japan passed safely, the Chinese, on their side, ought not to demand the perits of as week and the chinese. spair. The Japan of 35 years ago was as the China of to-day. The China of a few years hence may be as the Japan of to-day. It is true that two or three harbours and some miles of territory have been lost. But compared with the bulk of the Middle Kingdom, such things count for nothing more than does "one tail-hair to nine oxen." China has not been vitally hurt. Her immense frame is still intact. She is not a poor, resourceless country like Korea. She has a vast expanse of territory; an immense population; enormous wealth. All that is needed is a little effort. She could soon put herself in a condition not merely to dely foreign aggression but even to recover the losses she has incurred. It must be confessed that if the Fiji Shimpo believes in its own oft-repeated predictions of China's dismemberment, the optimistic advice of the above article is some-

The Zekyo Shimbun (Liberal organ) has an article which derives much interest from its exposition of a positive policy for Japan. A portion of the article is devoted to demonstrating the absurdity of Japan's attempting, at this late hour, to interfere with the acquisitions made by Germany and Russia in China. Our contemporary laughs at the fruitlessness of any such effort, and then proceeds to insist that Japan has no business on the continent of Asia as an aggressor competing with France, Germany, Russia, and England; that Wel-hai-wel would be useless to her, and immensely costly, since to retain it she would have to give up the 120 million was still due by China, and would also have to devote large sums to its maintenance; and that if she in called upon at all to interfere in these matters of territorial aggression, she should have interfered at the time of the seizure of Kino-chouthat is to say, when the administration was in the hands of the former Cabinet whose supporters are now so vehicinently denouncing the Government for not interfering. All that is more or less hackneyed. But the Tokyo Shimbun then declares that Japan's true policy. so far as China is concerned, should be to lead her into the path of progress. By this means alone can the integrity of the ancient empire be preserved, and the task devolves fully on Japan as the Eastern pinneer of Western pro gress, and as having berself passed through many of the perils that menace China. Further, if Japan is to acquire any place for the sake of restoring the balance of power in the Far East, the place should be Fusan in Korea, Ever since the days of the Taiko-the close of the sixteenth century-Fasau has been regarded as a Japanese colony. There are whole streets there built and inhabited by Japanese, and in many respects the town is scarcely distinguishable from one in Japan. Moreuver, it lies just opposite Tsushima, and will certainly be connected before long with Soul by railway. Everything distinguishes it as the most suitable acquisition this country could make on the Asiatic Continent.

Two articles in the Chus Shimbun are devoted to proving that Japan's relations with China should be chiefly of a commercial character. Apart from the acquisition of Formosa and the Pescadores, the principal end attained by the Shimonoseki Treaty was the opening of new ports in China. Nearly three years have passed since then, yet the newly opened places

not be achieved without difficulty. In those mity to China and of the products that she has, well as the manufactures she might have, to sell to her neighbour, Japan's tradal relations with the great nation might easily be as large as England's are, whereas in truth they are insignificant. The blame for such a state of effairs rests partly on the Government, but chiefly on the business men and non-official classes, and if the politicians who now give themselves so much concern about the balance of power and such things, would make an earnest effort to rouse a spirit of commercial enterprise, they might escape the reproach of sacrificing national interests to party

> The Mainichi Shimbun also devotes much space to the Far Eastern question. It reviews the course of events and insists that Japan must assert herself by obtaining a port in China to serve as a naval basis. The name of the pertia purposely concealed, but indications are afforded which suffice to show that either Amoy or Foochow is in our contemporary's mind. We need not weary our readers by reproducing the Mainichi's lengthy statement of facts already familiar to everybody. Our contemporary makes one striking comment, however. It says that Japan exposed China's weakness by the defeats she inflicted on her, and exposed her own weakness by surrendering the Liantung peninsula at the first nod of three European Powers, without uttering a protest or exacting a condition. If Japan, in the hour of victory, could be so easily awed, it was plain to the Occident that there remained in the Orient nothing worthy to be feared. The latal error of that time seems likely to be repeated with even more serious consequences on the present

#### TAPANESE TEA.

Japanese teas manufactured for export to America were lately found, according to the Kokumin, to be spurious and adulterated, some of them being entirely unfit for use. Last year the United States Government issued regulations prohibiting the import of spurious lest, and steps were taken in Japan to reform the processes of manufacture. As, however, no prohibitory measures were adopted by the Canadian Government, tex growers took no pains to improve the teas exported to that colony. Consequently Japanese tea in America is fast sinking into an insignificant position, while the Indian leaf = steadily gaining in popularity. In view of this the Central Ten Guild has taken steps to induce tea-growers to improve their product, and inspecting offices are to be established in Yokohama and Kobe with a view to prevent the export of spurious munnfactures. Foreign ten merchante in the open ports appear to have adopted a similar policy, their energies being devoted to the expect of ten above the medium quality. They have in fact resolved to enforce their policy in the rejection of bad leaf with greater vigour and stringency than last year. Owing to the use of a greater amount of fertilizers and more pains in cultivation the aprouts this season are, in spite of the changeableness of the weather, much better than in previous years. But, wages having considerably rises, there is cause for apprehension that spurious manufacture is likely to be resorted to in some quarters. The utmost precaution is necessary on this point.

#### THE TARIFF.

We observe that the Japan Gasette, like the Kobe Chronicle, has been misled about the new Tariff. It says that it "knows from good authority that the Government hoped to bring the Tariff into force from the 1st of November next, and notified the various diplomats accordingly," but that, the Austro-Hungarian Trenty two Occidentals were cut down, or hecause a few shots were fired at a passing foreign ship, lished Chinese marts like Shanghai and Tients on the could by Russia and its preservation to Jepan could Digitized by I appear of the point of view of her proxi

#### MEETING OF STRONG-FOREIGN-POLICY POLITICIANS.

The advocates of a strong foreign policy continue their agitation. They held a meeting on the afternoon of the 18th inst. in the Kinki-kan, when several well-known members of the Progressist party delivered speeches—as Mr. Oishi Masami, Mr. Haseba Junko, Mr. Koizuka Ryo, Mr. Shimada Saburo, and so on. More or less accurate reports of the speeches are printed by vernacular newspapers, but we shall not reproduce them. It will be quite sufficient for our readers if we give an idea of the general spirit of the addresses. With the exception of Mr. Koizuka Ryu all the speakers appeared to think that Russia is chiefly to blame for the present complications. Her acquisition of Liaotung and Germany's action in Shantung had created a situation for Japan which might be compared to that of a house separated by a thin partition from the scene of an armed burglary. England, China, and Japan were the Powers with paramount interests in this region of the globe, and they, too, might be said to have a common policy. Russia, Germany, and France had merely found an opportunity in the results of the war of 1894-5. The war might be said to have broken down the gates of the Far East, and given ingress to States which would otherwise have remained outside. It thus became Japan's duty to stretch out a helping hand to China. A similar obligation devolved upon England in her own interests. Talien in Russia's hands meant a severe blow to the commercial status of Great Britain and Japan in the Far East. The Government seemed to be asleep at this crisis. Its theory was that diplomacy could effect nothing without the aid of armed strength. History showed how completely fallacious was such an idea. Everything would go by default unless some complainant stepped forward. It was for Japan to assume the duty of complainant. Japan had been chiefly flouted. She had been driven from territory belonging to her as the fruits of victory by Powers which claimed that her presence there would menace the integrity of the Chinese empire, and now those same Powers had appropriated the same territory themselves. Now was the time to adopt some remedial measure. A few days more would see the withdrawal of Japan's forces from Wei-hai-wei, and then it would be too late to act.

Such was the gist of the speeches. We can not discover that a single new argument was adduced or a single novel theory advanced. Mr. Koizuka thought that England's policy had been mistaken, but his demonstration of the charge was not clear or effective. No resolutions were adopted, and it does not appear that the meeting is likely to have any marked

It has invariably been observed that when men who have seemed intemperate wholesome effect is often produced when

Digitized by Google

as to the wisest course to be adopted by as to the wisest course to be adopted by their country, or as to the best means of giving effect to the views they enter-tained. There were also evidences of disagreement, or, at least, of divergent opinions, among them. But when they came to reduce their ideas to writing, a common basis of conviction was found, and a document of considerable interest resulted, moderate in tone and states-manlike in sentiment. For the purposes of our readers it is not necessary to translate the mainfesto verbatim. A very few words will suffice to convey a clear impression of its contents. It lays down one broad principle, namely, that Japan's foreign policy should be guided by the object of preserving the independence and integrity of the Chinese and Korean empires. The best way to preserve the peace of the East is to lead China and Korea into the path of progress, so as to insure for them the friendship of Occidental nations, and consequent immunity from Occidental aggression. If Japan fought with China, it was because the latter's procedure threatened the independence of Korea. That immediate purpose attained, Japan did not hesitate to retrocede the Liaotung Peninsula in deference to the representations of Russia, Germany, and France. But Russia and Germany themselves have now obtained possession of the very territories from which they declared it necessary that Japan should be ousted three years ago. The manifesto uses some very strong language against these two Powers, and roundly condemns the Government of Japan for not opposing their action on the same grounds that they employed in 1895 to oppose Japan's. It then goes on to insist that China's elimination from the map of Asia as an independent State is imminent; that Japan can not view such a contingency without grave alarm; that she must adopt vigorous steps to avert it; and that her military unreadiness is no reason for inaction, because military unreadiness is a purely relative term, and by the time that she shall have attained what she now regards as a standard of preparation, she will be as far behind the then warlike strength of the Great European Powers as she is to-day.

Such is the gist of the argument. It may be summed up in a dozen words, namely, that Japan must stand forward as the champion of China and Korea against Western aggression. No explicit state-ment is made as to the steps that she ought to take, but it is plain that the compilers of the manifesto intend her to act in opposition to Russia and Germany. There is indeed a disavowal of hostile sentiment towards any Power, but the general drift of the argument can not be mistaken, nor can the strong terms in which the procedure of Russia and Germany is denounced be misunderstood. The outcry formerly raised against Japan's evacuation of Wei-hai-wei does not find any echo in this document. Weiinto office, they are immediately sobered invite an entente with England, though wholesome effect is often produced. hai-wei is not mentioned at all. On the Assuming that the manifesto represents words have to be reduced to writing. An the views of the Progressists, we are confillustration is afforded in the manifesto fronted by the interesting and important THE JIJI'S COUNSEL.

The Jiji Shimpo evidently regards the recent episode between the Cabinet and the Liberals as an event of much importance in the political world. It considers that the prospect of an alliance has been destroyed, for the moment at all events, and justly remarks that the Government can not turn to the Progressists without making very much larger concessions than those which it has just refused to the Liberals, while the Liberals, on their side, are placed in an awkward position since they can not well resume their old combination with the Progressists, and even if they could do so for the purpose of overthrowing the Cabinet, they would not find themselves more satisfactorily circumstanced than they are now. Altogether our contemporary considers it a national misfortune that these complications should occur at the time when so many problems of great importance present themselves in the domains of domestic and foreign politics alike. It is impossible for Ministers to act with strength and decision if they are entirely without allies among party politicians, and, were that fact considered from a patriotic point of view, both sides should be willing to make wise concessions.

The same journal publishes what purports to be an official view of this difficulty between the Cabinet and the Liberals. When Marquis Ito was entrusted by the Emperor with the duty of forming a Ministry, he endeavoured to obtain the coopetion of the Liberals and Progessists, but finding it impossible to compass that object, he finally gave up the idea, and invited Count Inouve to take a portfolio on the understanding that the Cabinet should be independent of political parties. Subsequently the Liberals intimated their intention of unconditionally supporting the Cabinet. went to the constituencies on that platform and it was well understood that the members returned by the country in the Liberal interests were not opponents of the Government. Recently, however, the leaders of the Party reversed their attitude and approached the Cabinet with | proposition which they declared to be crucial o any union between themselves and the Ministry. Marquis Ito naturally replied that all the portfolios were now occupied; that he had never given a pledge of any kind to the Liberals, and that it was out of the question to suddenly change the personnel of the Cabinet in deference to the wishes of a political party. If the Liberals were prepared to form a Cabinet of their own and to carry on the administration, the present Ministry would make no difficulty about handing over the reins of office to them. But they were not prepared to do anything of the kind, yet they maintained that their views ought to be carried out by the Cabinet in power. That was most unreasonable. Evidently to yield to such demands would open the door to an unending abuse. Granting one thing to-day, the Ministry might be required to grant another to-morrow, and so on ad infinitum. It would certainly be unfortunate if a collision occurred again between the Cabinet and the Diet, but the Ministers of the Crown must not issued by the advocates of a strong fact that a large section of the leaders of the Ministers of the Crown must not foreign policy for Japan. The speeches delivered by these publicists suggested that they were not by any means agreed aggression.

fact that a large section of the leaders of the Ministers of the Crown must not allow themselves to be turned from their duty hy fear of such contingencies. They would go their way independently. would go their way independently. Original from

#### THE LIBERALS AND THE CABINET.

There can be very little doubt that the Liberals are disposed to press for some official recognition of their cooperation with the Cabinet. The representatives of the Party who reside in the capital and are fully conversant with the course of events, would probably be content to leave things as they are, for the present at all events. As to that, however, we can speak from conjecture only. But the financial question has assumed a somewhat troublesome complexion. The present Cabinet had to choose between increased taxation and a programme of retrenchment. If selected the latter, temporarily at all events, and an impression has consequently been produced that the post-bellum scheme of expansion elaborated by the former Ito Cabinet and endorsed by the Liberal Party in 1895, must now be cut down by an Ito Cabinet and the reduction approved by the Liberals. That is not altogether the case, as our readers are aware. A considerable part of the retrenchment in the armaments expansion programme is due, not to deliberate choice on Japan's side, but to delays in executing work and to corresponding deferment of payments owing to the Engineers' strike in England. These details, however, can not be readily comprehended by the Liberal Party at large, and, even if full comprehension could be secured, there would still be a considerable residue of retrenchment attributable, not to fortuitous causes, but to the Cabinet's changed policy. It would seem that these reflections have produced a feeling of uneasiness, perhaps of umbrage, and that the only feasible way of restoring confidence in the ranks of the Liberals is to admit Count to appreciate. The statesmen and Japanese politicion the Liberals is to admit Count to appreciate. The statesmen, while leaders of the Party are said to have waited on Marquis Ito on the 15th port of political parties in the Diet they instant for the purpose of setting forth the difficulty. They explained that Count Itagaki himself had no special desire to enter the Cabinet, being, for his own part, quite content to remain out of office and do what he could to promote the interests of the country as a private individual. On the other hand, the sentiment of the Liberals in the provinces had declared itself very distinctly in favour of the Count's admission to the Ministry, and the leaders of the Party saw no other means of securing its allegiance to the Cabinet. Marquis Ito is said to have expressed his appreciation of the case as presented to him, but what step, if any, he will take remains uncertain. There is at present no vacancy in the Cabinet, nor is it easy to appoint a Minister under such circumstances without seeming to violate the Imperial prerogative. We should be disposed to doubt the correctness of these details, but they appear in the columns of the Nichi Nichi Shimbun, and ought, therefore, to be credible.

It has already been related in these columns that a deputation of Liberal politicians recently waited on Marquis Ito, and urged the advisability of giving a portfolio to Count Itagaki. Rumour now supplements that version by adding that not of principles but of posts. They will, the admission of Mr. Hoshi Toru to the therefore, judge each official measure on Cabinet constituted a second proposal its own merits, supporting or condemning submitted by the Deputation. The best-informed persons deny, however, that Mr. Hoshi's inclusion in the Ministry has been terminated. At the moment they are not asked for. They allege that the desire of likely to come into collision with the Go-

the Liberals is limited to Count Itagaki's a very reasonable line of argument. It is that, however thorough may be the confidence of the Party as a whole in Marquis Ito's statesmanship, there exists a feeling among the rank and file that if they support the Cabinet without having any direct voice in its Councils, they can not hope to escape the imputation of being blind followers of officialdom. For the sake of their own fair fame, therefore, they think their revered and beloved leader, Count Itagaki, should have a seat in the Cabinet, as was the case when their Party last gave its support to those in power. Marquis Ito's reply is said to have been that he fully recognised the justice of their attitude, and that no objection existed, either on his part or on the part of his colleagues, to receiving Count Itagaki into the Ministry. His Excellency added, however, that pending the meeting of the Diet next month, he was not in a position to make a definite promise, nor could be now undertake to declare what course he should pursue after the prorogation of the Houses. At that point the conference seems to have terminated, and although no rupture has actually taken place between the Cabinet and the Liberals, their relations appear to be somewhat strained. We apprehend that it is another case of compromise, The Liberals need only wait a little. Of course, to onlookers familiar with the working of party Cabinets in England, and convinced by the experience of their own country that the Government's Parliamentary supporters ought to be duly represented in its ranks, the manceuvring and finesse that mark the doings of can not conduct the administration smoothly and salisfactorily, are nevertheless reluctant to openly endorse a doctrine which more or less impairs the Imperial prerogative. Thus there results a period of hesitation which seems more sentimental than practical. But the inevitable outcome of Parliamentary institutions can not be deferred very much longer.

#### FUTURE ATTITUDE OF THE LIBERALS.

The question of the hour at present in Japan is the future attitude of the Liberal Party towards the Cabinet. If it be an attitude of opposition, the Ito Ministry will have the record of being the first Cabinet absolutely without any party to support it in the Diet. Our readers will therefore be interested to hear what the Chuo Shimbun has to say on the subject, for, as the organ of the National Unionists, who are the Liberals' allies, that journal should be in a position to speak authoritatively. The Chuo's prediction is that the Liberals will not go into general op-position. They can not do so, indeed, without losing caste as serious politicians, for their difference with the Cabinet is one therefore, judge each official measure on

vernment at more than two points. entry, and they attribute to the Liberals first is the financial programme of the a very reasonable line of argument. It Cabinet. They consider that the reduction made in the appropriations on account of naval expansion are unwisely large, and that the policy of general retrenchment pursued by the Minister of Finance will not conduce to the interests of the country. Especially the procedure of the Bank of Japan in raising its discount rate is condemned by them as prejudicial to industrial development. The second point is the manner in which the elections were officially controlled. The Cabinet declared its determination to enforce the laws with the utmost rigour, so as to prevent all abuses, but it failed to put its promise into full operation. Should the Liberals decide to organise a campaign against the Ministry, they will choose these two weapons. In the field of foreign policy they will be careful not to embarrass the Cabinet.

> The Tokyo Shimbun, which is the Liberal organ, takes practically the same line as the Chuo. Indeed the two journals write in terms so nearly identical that it is impossible to doubt their common inspiration. The Liberal organ, however, says nothing about official management during the elections. The only subject indicated by it as likely to cause a collision between the Party and the Cabinet is that of finance. Like the Chuo, it is careful to disavow any intention of undue interference in the field of foreign politics. It may be taken for granted, therefore, that the Liberals, though they have severed their connection with the Government, are not disposed to assume any attitude of strong hostility.

#### THE CHINESE LOAN.

It is generally supposed that whatever portion of the Chinese loan wasnot successfully floated in London and Berlin has been taken by the contracting banks. But the Jiji Shimpo alleges that the course of events has not been so simple. When it was found that subscribers to the loan were likely to be less numerous than had been originally anticipated, an applica-tion was made to the Japanese Government, to ascertain whether it would be willing to participate in the transaction, the probable share of the loan allotted to Japan being estimated not to exceed four millious sterling. A favorable answer was given, contingent, of course, upon the result of the attempts to place the loan in Europe. Subsequently prospects seemed to grow brighter in the money markets of London and Berlin, and it was supposed that if the Treasury in Tokyo had to become a subscriber, its subscription need not exceed four or five hundred thousand pounds sterling. Recents events, however, have again clouded the financial horizon, and the indications at present are that Japan may have to take over from four to six millions sterling—that is to say, from forty to sixty million yen; or, roughly speaking, one-third to one-half of the whole sum (118 million yen) due to her. The rate in her case will be 88, whereas it is go for the general public. Such is the Fiji Shimpo's account. It sounds very credible.

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

#### TAPANESE NOTES.

While politicians are busily discussing the subject of Wei hai wei, the Nichi Nichi Shimbun has had the shrewdness to approach a military man, Colonel Nagaoka, and ascertain his opinion about the place. The Colonel has just return-ed from Wei-hai-wei, and is therefore competent to speak about it from a commercial as well as a military point of view. He confirms the accounts published from time to time as to the futility of attempting any tradal development in that part of Shantung. The district is barren. It produces no crops. A few vegetables can be grown, but not even fire-wood is obtainable in the neighbourhood. So far as the harbour and the defensive facilities are concerned, the place is excellent, but any Power contemplating its permanent tenure must be prepared to devote a division of troops and a squadron of fifty or sixty thousand tons to the purpose. That would mean an expenditure of some ten million yen annually. If Japan is prepared to incur such an outlay, well and good. But Colonel Nagaoka is very far from being optimistic. He talks of a petty provincial retail-dealer going to a great metropolis and setting up a wholesale establishment there to compete with big merchants of old standing and large capital; and he talks, also, of presenting to a beggar man a magnificent waitscoat and pair of breeches which the man could not use without procuring a coat to match. Indeed, the whole drift of this officer's remarks is in the direction of patience and temporary self-effacement. He evidently thinks that Japan must be careful not to " bite off more than she can swallow."

Some of the vernacular papers have begun to direct their batteries against the army and Navy, accusing the officers of having fallen into luxurious habits, and developed a desire for ease rather than a wish for war. The most extravagant of these critics is the Hochi Shimbun, which actually professes to believe that Cabinet Ministers have uttered insulting remarks about the unpreparedness of the two services and about the reluctance of their personnel to fight-remarks which have failed to elicit any indignant rejoinder from the officers, so craven is their spirit. It is scarcely credible that a sober journalist should attribute to Cabinet Ministers such atterances. Another newspaper, the Kohumin, concludes that because some 24 million yen have been reduced in the expenditure on account of the naval expansion programme this year, the inference may be drawn that Japanese naval experts could not rise to the level of the occasion, and that their failure to elaborate plans and estimates is the cause of the reduction. The real cause, of course, is the Engineers' strike in England. It would seem, however, that there is something like a deliberate attempt on the part of certain vernacular journals to rouse an impatient spirit in the two services. Colonel Nagaoka's remarks, as quoted by the Nichi Nichi, will afford fresh fuel for their fires.

The particulars of the loss of the Nippon Yusen Kaisha's steamer Toshima Maru are published by the vernacular press. She left Kobe on the afternoon of the 9th instant, bound for Korea, and at 9 "strong-foreign-policy" deputation, the livered a lecture, in the course of which p.m. on the same day entered [keda Bay owing to stress of weather. Resuming the situation, and have set them-Sunday should be no holiday at the UNIVERSITY OF ILLINOIS AT

her voyage after a brief interval, she rounded Hayatomo point, and, with the tide in her favour, steamed into the bay of Kiushu-Moji, steering between the man-of-war Oshima and a foreign steamer which was lying at anchor. Just then the Taiko Joint Stock Company's steamer Dayichi Taiko Maru, bound from Nagasaki to Moji, appeared coming from the opposite direction and taking the same course between the man-of-war and the foreign vessel. Whether there was not room for the steamers to pass each other, or whether their steering was defective, a collision occurred, and although the Toshima's engines were going full speed astern at the time, a large hole was made on her port side, and she was driven right on to the bows of the Oshima, receiving still greater damage on the starboard. The officer commanding the Oshima appreciated at once that the Toshima's case was desperate. He fired three guns to summon assistance, and, lowering his boats, went to the rescue of the sinking ship. Two minutes after the collision, the fore part of the Toshima was completely under water, but happily the stern remained affoat long enough for the Oshima's boat to remove the crew of 54 and 2 passengers. Taiko Maru was carrying more than 200 passengers. Her captain, therefore, drove her at full speed shorewards and managed to beach her in the vicinity of Moji.

The incidents connected with the building of the *Hitachi Maru* in the Mitsubishi Deck at Nagasaki have naturally caused some curiosity. A ship of such dimensions (6,000 tons) was never previously constructed in Japan. It will be understood of course that she was not built throughout in this country: the plates were imported from Europe and the work done in Nagasaki was limited to putting them together. The resident foreign expert to whom was entrusted the duty of inspecting the vessel and passing her for classification at Lloyd's, found great fault with the manner in which the rivets had been driven and condemned a great number -- 113,000 is the figure mentioned by vernacular journals. Even after these rivets had been re-driven, Mr. Robertson saw reason to be dissatisfied, and declined to pass the ship unless other changes were effected. The Dockyard people declined to accede to this second injunction, and application was made to Lloyds to send out a special surveyor, The latter, on his arrival, inspected the work and pronounced it satisfactory, but it is alleged that the Mitsubishi Company will lose 170,000 yen over the transaction. The Yomiuri Shimbun gives publicity to a suspicion that Mr. Robertson had been got at" by persons interested in making trouble between the Nippon Yusen Kaisha-on whose account the Hitachi Mara was built-and the Mitsubishi Dockyard. Such a suspicion seems extravagant. It is to be presumed that Mr. Robertson discharged his duties of inspection conscientiously. The incident is very strange, however, and we are not in a position to offer any explanation.

If the writings of some vernacular journals were trustworthy, the Cabinet's condition at present would have to be regarded as one of utter perplexity. The Yomiuri, for example, informs its readers that since Marquis Ito's interview with the

selves to examine various problems, all of which our contemporary catalogues with much semblance of accuracy, leaving its readers to infer, as even the least intelligent must infer, that had not the "strong-foreign-policy" men moved in this matter, the Government would have slumbered on, without the smallest perception of the grave issues presenting themselves for division. It can not be denied that there is a great deal of naive subtlety about the methods of some of the vernacular journals. If Marquis Ito and his colleagues were only now beginning to reflect about the wisdom of protesting against the aggressions of European Powers in China, or on the feasibility of making them restore their acquisitions, or the desirability of Japan's having a foot-hold on the Asiatic Con-tinent, and so on, the Cabinet's Rip-Van-Winkle methods might justly be criticised.

The Tokyo Asaki is informed that the Minister of State for Foreign Affairs has submitted to the Cabinet a memorandum urging the necessity of adopting a forward policy in foreign affairs. The document, says our contemporary, was couched in very strong language but failed to obtain the endorsement of Marquis Ito. This happened on the 23rd of March, and the attitude of the Premier created much discontent at the Foreign Office. Within the past few days, Baron Nishi submitted another memorandum in a similar sense, and the Cabinet held a meeting on the 13th, instant for the purpose of considering it. We believe that the Asahis informants have been drawing pretty freely on their imagination.

There is a strong movement in China, according to the Chuo Shimbun, to bring about the adoption of the Japanese syllabary-Kobo Daishi's forty-eight symbolsin lieu of the ideographs now in use. The reasons influencing the advocates of such a change need not be recapitulated. To the vast majority of the Chinese people literature is a sealed book owing to the immense difficulty of mastering the characters employed for writing. One imagines that if a change of any kind were contemplated, the reformers would be in favour of immediately adopting the Roman alphabet, which is incomparably more serviceable, scientific, and civilized than any syllabary. But that idea is curtly dismissed as impossible. The Viceroy Chan Chi-tung is said to be the chief advocate of the innovation, but it has distinguished endorsers in Canton also. The Chuo alleges that a school for giving instruction in the syllabary and also in the Japanese method of constructing sentences, has been already established at Hankow, and that similar institutions will quickly be organized at Suchow, Tientsin, Peking, Fucheng, and Shanghai. Except in the case of the Tientsin school, Japanese instructors are to be employed. had not previously heard of this interesting movement.

There appears to be some trouble at the Upper Middle School in Kanazawa (Kashu). The old question of moral education (chi sku) and physical education (tai-iku) has come upon the tapis. the vernacular press reports is that the principal of the School, Mr. Hojo Jikei, recently assembled the students and de-

school in future. This announcement naturally caused some discontent among publicists? She never puts her hand to the lads, and matters reached a climax anything nuless her own advantage is when they could not obtain permission to absent themselves from the classes on the 17th instant, for which day a boat race had been planned. Several of the instructors, sympathising with the lads, have resigned, and the business of the school is at a standstill.

Hitherto the annual allowance made by the Government to students studying abroad has averaged 1,500 yen. sum does not include travelling expenses, but is supposed to cover the cost of liv-ing, tuition fees, and so on. It has been found, however, that ends can not be made to meet with such a scanly grant, and in response to various representations the Educational Authorities have decided to raise the allowance to 1,800 yen.

It is alleged that the recent alienations of Chinese territory have aroused some opposition among the people of the Middle Kingdom. The Chuo Shimbun allegeson what authority we do not know-that a memorial has been presented to the Throne urging that Russia should be required to withdraw from Lizotung and Germany from Shantung, and that, in the event of their refusal, war should be declared. At the same time, the other European Powers should be appealed to, and asked to combine for the purpose of declaring Liaotung neutral territory. is, perhaps, not too late for the Chinese people to awake from their lethargy, but it certainly is too late to undo what has been done in Liaotung and Shantung.

The period that follows the accession of an Ito Cabinet to power is always marked by quietude. A general feeling of confidence seems to be established, and, instead of suspecting that everything is wrong, people appear to persuade themselves that everything must be right, When the present Cabinet assumed office, the burning question of the moment was brought up for deliberation. The first finance. A deficit of over twenty million relates to the advisability of establishing yen in the Budget for 1898-9 had to be faced, and there was no apparent method of solving the difficulty. That problem has now ceased to trouble men's minds, and the politicians of the Opposition are busying themselves temporarily with retiring allowances. The third, to the foreign affairs. There is also a section of the nation that finds cause for complaint in the reticence of the Cabinet. Ministers can not be induced to make any declarations of policy, and weapons to attack them are consequently wanting. It is a quaint contention. If the concrete acts of an administration afford no material for censure, its abstract principles of procedure ought not to be of paramount However, importance, one imagines. that critics should hunger for something to criticise is natural enough. Marquis Ito has, therefore, been much importuned to declare his programme at home and abroad, but he remains resolutely silent. He is determined—according to the Tokyo Asahi-not to open his lips until the Diet assembles. People that want to hear his views must wait until then. If the experience of the past be taken as a guide, it really matters very little when and where the Prime Minister speaks. If he keeps silence, he is blamed for reticence; if he speaks, he is charged with disingenuousness.

England is evidently regarded as a few the part of the murderer and saicide,

markly clever country by some Japanese clearly discernible, and, instead of toiling herself to attain an object, she prefers to shift the work to other shoulders and stand ready to appropriate the fruits. From the point of view of national prosperity and aggrandisement, that is about as good a character as any nation need desire, though, on the whole, it does not appeal to high instincts. In obedience such motives, England would have been very glad to see Japan remain to see their leader, Count Itagaki, investat Wei-hai-wei, incurring all the ex-pense of garrisoning and fortifying the place, and posting herself in the arena face to face with Russia. But the Ito Cabinet was too shrewd to step into a position so dangerous. England has been obliged to occupy the place berself. There can be no doubt that, in order to hold her own abroad, Japan must make common cause with whatever defer the matter until after the general Power has the same interests and the same policy as herself. England is such a Power. But if Japan approached such a rower. But it japan approached the party have, it is true, advanced the pains of the alliance would fall to the demands of an extensive character—the the pains of the alliance would fall to the former's share, its profits to the latter's. The wisest policy for this empire is to their partizans—but with such demands wait until the occasion arises when its services will be of such value to Great They would be content to see Count Is-Britain that she will take the initiative in gaki in the Cabinet. Unfortunately the asking for them. Then, and only then, can Japan hope for a partnership on equal terms. All this has been well understood and acted on by the Ito Cabinet. People that call the Cabinet a "do-nothing Ministry" speak ignorantly. The Cabinet has been working all the time with far-seeing appreciation of the country's best inter-That is what an anonymous diplomat tells the Tokyo Asahi.

The principals of the Higher Schools are to assemble from the 20th instant in Tokyo to discuss educational affairs. It is understood that four projects will be brought up for deliberation. The first affiliated technical schools in the provinces, that is to say, schools of dendro-logy, industry and commerce, and medicine. The second has reference to the salaries of instructors and to their erection of new school buildings or the extension of the old. The fourth, to the connexion between the Higher Schools and the University. It is pretty plain that a more liberal financial policy will have to be adopted in educational matters.

## MURDER AND SUICIDE IN TORYO

On the 17th inst. at about 1 p.m. a man. dressed like a coolie, of about 24 years of age paid a visit to the house of a merchant named Wago, No. 15. Kobikicho, Ichome, Tokyo. All the immates of the residence were absent at the time except a maid-servant, a young woman of about 30 years of age. What happened immediately afterwards does not appear, but the maid-acreant was shortly seen rushing from the house, with fatal wounds from which she soon afterwards expired. The neighbours soon afterwards expired. The neighbours soon gathered on the scene and the police were notified. In the confusion which ensued the murderer of the young woman turned his weapon, a knife or sword, against himself and expired shortly afterwards. The particulars of

#### BARON ITO'S EXPLANATION.

There is no longer any doubt that Baron Ito, Minister of State for Agriculture and Commerce, has resigned his portfolio in consequence of the rupture between the Liberals and the Cabinet. The Chuo Shimbun (National Unionist organ) publishes a statement from the lips of the Baron himself. It conveys an impression somewhat different from that hitherto gathered by the public. The Baron says that the Liberals desired from the outset ed with the office of Minister of State for Home Affairs. It was pointed out to them, however, that to go to the polls with their chief a member of the Ministry would be an anomalous procedure, not reconcilable with the spirit of Japanese politics as they exist at present. In deference to that suggestion, the justice of which they recognised, they consented to elections. It is therefore natural that they should approach the subject again at the present stage. The Kwanto section granting of three or four portfólios to Cabinet has not seen its way to give effect to that proposal, and a split has ensued between the Ministry and the Party. What may be the ultimate fate of the relations between the two, Baron Ito does not undertake to predict. As he himself, however, has been the connecting link, he sees no alternative except to resign his portfolio. He does so with much regret, for he has inaugurated many reforms over the progress of which he would gladly have watched. But such con-Though siderations must be disregarded. leaving the Cabinet, however, he does not become its opponent. Even if the Liberals assume an attitude of hostility to the Government, he will deem it his duty to stand between the two, and endeavour to soften their relations, for, in truth, there is no difference of policy. That duty he can perform more satisfactorily as a private individual than as an official, which reflection influences his present course considerably. In the interest of his official functions he will remain at his post until his successor is appointed. Indeed he had hoped that the fact of his resignation might remain secret, until all the necessary arrangements were completed. That has proved impossible, how-

It will be observed that Baron Ito's statement, if correctly reported by the Chuo, suggests that the Liberals have some warrant for thinking that the Cabinet had indirectly pledged itself to admit Count Itagaki so soon as the general elections were over. Hints that such was the case have been published from time to time by vernacular journals, the general forecast being that Count Incuye would leave the ministry when the time arrived for the entry of the Liberal leader. Count Inouye has often appeared in a self-effacing role. He has certainly showed himself one of the most generous, perhaps even Quixotically generous, of Japanese the tragedy are not yet known, but, according to statesmen. The public had, therefore, the Asahi, the crime originated through jealousy some grounds for their anticipation. But on the part of the murderer and saicide.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

pected to act the part of a mere locum tenens. At any rate, Marquis Ito is under-stood to deny very emphatically that any kind of promise had been given as to the admission of Count Itagaki into the Cabinet, and to assume the very reasonable position that, unless a vacancy exists, it is out of the question to talk of taking a new member into the Ministry. There can be no doubt that Marquis Ito speaks with perfect accuracy. Had a pledge of any kind been given to the Liberals, arrangements for carrying it out would certainly have been made by the simula care? have been made by the simple expedient of appointing one of the Ministers to the temporary tenure of a portfolio.

#### ENGLAND AND CHINA.

It was suggested some time ago by a local contemporary that Great Britain and the other European Powers should map out China as they had mapped out Africa, and agree among themselves as to the method of the Middle Kingdom's partition. Such a programme is quite contrary to the canons of British statesmanship and the instincts of the English people. In Africa there was no question of encroaching upon the territories of an independent empire with which friendly relations existed and had long existed. Several European nations had formed settlements or established trading stations on a continent, vast regions of which were virtually uninhabited, and other regions were peopled by barbarous or semi-barbarous tribes. severest of international moralists could scarcely have contended that any sovereign rights were disturbed or any independent titles violated by the spread of European civilization and the development of European commerce in such regions. The object of prime importance was to provide that the process of civilization should not involve quarrels between the civilizing Powers. With regard to China the case is wholly different. She is one of the great empires of the world, and her relations with Occidental States are regulated by treaties of amity and commerce. It is a monstrous notion that those States should enter into an iniquitous convenant in times of peace for the partition of her territories, and no British Cabinet could be a party to the carrying out of such a project. Daily News suggests that a conference of the Powers interested in the affairs of China should be held for the purpose of "arriving at a general understanding upon certain broad principles of action," and the local journal to which we have referred above appears to think that the London journal's suggestion tallies with But everything depends on the its own. object of the conference. If England went into such a conference, her aim would be not the partition of the Chinese empire but its preservation. Therein lies the whole difference. There was nothing contrary to British sentiment in the Berlin Conference, at which a general understanding was elaborated with regard to Turkey, but the same English sentiment revolted at the proposal of the Emperor Nicholas in 1853 for the disposal of the possessions of moribund Turkey, and would revolt still more emphatically tofor the partition of China. Apparently that partition is destined to come sooner or later, but it will never be hastened by British collusion igitized by

#### THE BUDGET.

On the 6th instant we published a statement of the reductions effected by the present Minister of Finance in the Budget compiled by the Matsukata Cabinet lows :for the current fiscal year (1889-9). nacular newspapers now furnish additional figures which convey a clear idea of the outlines of the financial scheme. We combine the whole for the sake of explicit-

Grand Total of Matsukata Cabinet's

Budget ......233,723,703 Grand Total of Ito Cabinet's Budget ....187,681,425

l'otal Reduction	46,042,283
PARTICULARS OF REDUCTION	S.
Riparian Improvement Funds, de-	
creased	1,700,000
Monopoly of leaf tobacco	3,000,000
Military Armament Expansion	5,186,206
Naval Expansion	24.066,678
Organization of Iron Foundry	500,000
Telephone Expansion and Railway	
Improvement	2,000,000
Aid to Formosan Admistration lands	2,500,000
Miscellaneous,	6,989,399

Total...... 46,042,283 With regard to the Revenue the following approximate figures are given :

Public Undertakings Loan....... 10,030,000 It will be observed that the Revenue (173% million yen) falls short of the Expenditure (1871 millions) by 132 millions. It is supposed, however, that the estimates of taxation returns will probably prove too low, and that consequently, the actual deficit will not exceed 12 millions. No information is furnished as to the source from which this deficit is to be met, but the probability is that a draft will be made upon the Indemnity. We believe, for our own part, that the item (323 millions) of Revenue put down under the heading " Public Undertakings Loan" is a merely formal entry. It would be exceedingly clumsy finance to make an addition to the national five-per-cent, debt while millions of yen obtained from the Indemnity were lying idle in the Treasury. But until the portion of the Indemnity still due comes actually in hand, the Minister of Finance can not show it as an available asset, and he has consequently been obliged to have nominal recourse to the Public Undertakings Loan. Our readers probably remember that the post-bellum programme was necessarily framed in accordance with the supposition that the instalment method of paying the Indemnity would be pursued by the Chinese Government. In that case the sum accruing next May (the 8th) would have been only 25 milyen, and even those twenty-five lion millions could not be included in a Budget commencing to be operative from April 1st-38 days before the receipt of the instalment. Hence the appropriation of to millions from the Indemnity, shown in the above schedule of Revenue, may be taken as representing the portion of the Indemnity now actually remaining from past payments, and therefore pro-perly available for this year's Budget. But there is no doubt that 60 or 70 million yen in cash will be paid over by China day against any international arrangement next month—we speak on the hypothesis that Japan will have to assume 50 or 60 millions of the loan recently negotiated by the Peking Government—and, as a Original from UNIVERSITY OF ILLINOIS AT

upon that fund instead of issuing a further instalment of the Public Undertakings Loan. We arrive, therefore, at the conclusion that the Revenue for the current year will ultimately be made up as fol-

Ordinary Revenue from Taxation, etc. 131.000,000 Appropriation from the Eudemnity ... 56,681,425

Total ...... 187,681,425 It would be interesting to know how the Ordinary Revenue has swelled to 131 million yen. The figure that we should have expected is 128 millions, namely :-

	Mil	lion yen	3
	Land Tax	381	
	Income Tax	2	
	Various Minor Taxes		
	Saké Tax	30	
	Tobacco Tax	8	
	Registration Tax	5	
	Trades Tax	5	
1	Customs Duties	oł-	
	Receipts from State Industries	214	
	Miscellaneous	31	

Total ...... 128 It is possible that the Finance Minister expects to see the new Tariff in operation from October 1st, in which case collections under it for half a year will be available, amounting, perhaps, to 3 million yen, more than the sum obtained under the present tariff. That is a conjecture, how-

#### RUSSIA, JAPAN. AND KOREA.

Last year, when the proceedings of Russia in Korea seemed in plain opposition to the spirit of the Yamagata-Lobanow Convention, Count Okuma approached the St. Petersburg Government with the object of arriving at some understanding. Mr. de Speyer was then acting as Russian Chargé d'Affaires in Tokyo, and the Russian Government intimated that as he did not possess plenipotentiary authority to deal with the subject, its discussion had better be deferred until the arrival of the new Russian Representative, Baron Rosen, in Tokyo. Pending the Baron's arrival, however, Russia continued to pursue the policy which Japan regarded with disquietude, and before the proected negotiations could be opened, Russian military and financial experts had been engaged for service in Korea. Just as that stage, also, Count Okuma retired from the Foreign Office, and was succeeded by Baron Nishi, who was obliged, of course, to adopt the donothing policy that marked the closing days of the Matsukata Cabinet. When the Ito Ministry was organized in January, the question was speedily reopened, and several conferences took place between the Japanese Plenipotentiary and the Russian Representative. It is understood that these conferences have now virtually resulted in an arrangement. Matters were facilitated, from the Japanese point of view, by the withdrawal of Russia's military and financial experts from Korea during the progress of the conferences, though not as a result of the latter. The terms of the new arrangement are not yet published, but it is understand that Japan's interest in Korea will be duly protected. We take this account from the Jifi Shimpo.

## A JAPANESE VERSION.

It was not to be expected that the striking events which have recently occurred in the Far East would be suffered to pass without some exposés, more or less clever, of the back-stairs by which the chief actors chimbed to achievement. The Chuo Shimbun enters into this part of the story with much minuteness, and our readers will doubtless be interested by its narrative, for whatever measure of truth the tale possesses, it represents, at any rate, the ideas current among a section of the Japanese. Up to the outbreak of the war with Japan, we are told, England was China's friend, and the statesmen in Peking imagined that they could rely on British assistance in case of national emergency. But after the fall of Port Arthur, it was plainly seen that England had turned away her face from the Middle Kingdom. Li Hung-chang then finally decided that Russia was China's last hope, and that if Japan was ever to be crushed, it must be by Russian aid. He accordingly opened negotiations with St. Petersburg and concluded a secret treaty stipulating that, in return for Russia's protection, she should receive Talien and Port Arthur, as well as permission to carry her Trans-Asian Railway through Manchuria. The parties to this conven-tion were Li and Lobanoff. The Emperor of China did not directly endorse it, but was prepared to implement it if Russia really extended aid to oppose Japan. The conclusion of the Shimonoseki Treaty, however, opened China's eyes to the nature of the aid she might expect, and the Emperor, enraged at the course things had taken, deprived Li of all his honours. By and by, the question of sending an ambassador to the Coronation of the Czar came upon the tapis, and the Emperor of China allowed himself to be persuaded that Li was the proper person to go. Li, on arriving in St. Petersburg, placed himself in communication with Mr. de Witte, the Minister of State for Finance, his object being to disarm suspicion by keeping away from Prince Lobanoff, the Minister of State for Foreign affairs. He concluded with de Witte an agreement cor-responding substantially with what is known as the "Cassini Convention." When this document reached Peking, the officials of the Tsung-li Yamen were astounded at its contents, and the Emperor, equally dissentient, refused to approve it. The arrangement would have fallen through finally had not Count Cassini taken the matter in hand. He adroitly represented to the Peking statesmen that Japan had formed an alliance with England for the purpose of recovering the Liaotung Peninsula and otherwise taking revenge for the humiliation put upon her in connection with the retrocession of her Manchurian acquisitions, and for what she regarded as China's duplicity in making a pretence of ceding territory for whose recovery secret arrangements had already been concluded. Count Cassini, by astute management and by a liberal use of money—a million and a half of taels is the amount he is said to have disbursed to oil the wheels of his diplomatic machine—succeeded in gaining the ear of the Empress herself. Through her influence, and despite the opposition of the Emperor, Li's secret convention was at length endorsed, and became known as the "Çasşini Con-Çasşini Con-

had been limited to overcoming Peking prejudices. The agreement virtually secured Talien and Port Arthur to Russia, but did not warrant her in entering into possession unless war became imminent in the Far East. She rested quite content with that arrangement until the seizure of Kiao-chou by Germany, whereupon the St. Petersburg Government, considering that the belligerent contingency contemplated in the Convention had arisen, asked openly for the Liaotung Peninsula. Great Britain was quieted by assurances that Talien and Port Arthur would be opened to trade, but it now turns out that Port Arthur is not to be opened at all, the war-ships of Russia and China alone being permitted to enter there; and that Talien is to be partially opened only. Under such circumstances, it was impossible, of course, for Great Britain to remain quiescent. The acquisition of Wei-hai-wei was forced upon her.

The above story hangs together pretty well if we overlook one most important feature; namely, that Russia did not ask for a lease of Port Arthur and Talien until long after the little war-cloud created by the Kiao-chou incident had disappeared. If the immediate prospect of a rupture of the peace was to be Russia's excuse for entering into occupation of Liaotung, no such justification was in sight at the time she selected for taking the step. It is further to be noted, that the supposed Li-de Witte convention gave no quid pro quo whatever to China. It is said to have been concluded long after the war with Japan, that is to say, long after the occasion for purchasing Russia's good-will had passed, yet we are told that Li Hung-chang set himself to negotiate the convention on absolutely one-sided lines, ignoring his country's interests altogether. Li is not that kind of statesman. The whole course of events in the Far East has been so easy to understand that these far-fetched interpretations by means of secret treaties and inconceivable covenants appear a little superfluous.

#### MEDIATION.

There is a chance, of course, that the rupture between the Cabinet and the Liberals will not prove permanent. Neither side has anything to gain by it. The Liberals do not command a majority in the Lower House, and though, by combining with the Progressists, they might render the conduct of administrative affairs very difficult, or even bring about the downfall of the Ministry, neither result would promote their own interests. On the other hand, if they persist in maintaining their resolve to sever relations with the Cabinet, it is not unlikely that the Party will break up, for it contains many members whose relations with the Ito Cabinet are of such a nature that they could scarcely induce themselves to stand aside from it. The Liberal organ (Tokyo Shimbun) frankly admits that with regard to all legislative measures and questions of local administration, the Liberals entirely approve the Ito Ministry's views, and that the only difference of opinion between them and officialdom has reference to party cabinets, a principle which the statesmen in power do not consider practically applicable in Japan as yet. That conviction is not limited to the statesmen in office. Every thoughtful observer must see that the preparations

Liberals themselves see it plainly enough. When they speak of a difference with Marquis Ito on that topic, they refer, not to any doubt in the mind of the Marquis about the goal to which Parliamentary institutions finally lead, but to his denial that a political party which is not competent to take over the reins of the administration has a right to claim portfolios for its leaders. The circumstances under which Japan received a constitution, and the conditions among which party politicians were educated, are entirely novel, and we can not be surprised that many episodes should seem anomalous from an Oc-cidental point of view. But the greatest anomaly of all would be a political party which, while agreeing with all the legisla-tive views of the Ministry, joined the Opposition in the legislature merely because a portfolio was not obtainable by the Party's leader. Such a position is too impossible to have any permanency. We expect that some means of mediating between the Cabinet and the Liberals will be found.

## THE GOVERNMENT AND THE PROGRESSISTS.

On the whole it must be confessed that

there is not very much backbone in the attack now organized by the Progressists on the Government's foreign policy. Re-peated experiences have furnished a measure of the ability possessed by these politicians to stir up an agitation when they are so minded. Their ranks include many men of eloquence, zeal, and uncompromising resolution, and they have at their command several ably edited news-paper organs. When they want to throw the public into a ferment they can do so: there is not the slightest doubt about that. Are they then exercising intentional moderation on the present occasion? appears to us that they are, and we are disposed to see a reason in the fact that the field of foreign policy justly seems to them a dangerous arena for political agitation. The Tokyo Shimbun, however, which is the chief Liberal organ, takes a different view of the matter. It maintains that the moderation of the Progressists is due to strategical considerations. They are uncertain whether it may not ultimately be their lot to join hands with the Cabinet, and they are cousequently careful not to create at this juncture a gulf too wide to be afterwards bridged over. In support of that theory our contemporary recalls the fact that the Progressists originally signified their willingness to support the Cabinet provided two or three portfolios were given to their leaders, thus plainly acknowledging that no difference of principles sepa-rated them from the men now in power. Should it happen, therefore, that a coalition between the Cabinet and the Liberals is not effected, the Progressists expect to become the pro-Government Party, and they are keeping a path open to that goal. It is for that reason that none of the politicians directly associated with Count Okuma is seen among the leaders of the present agitation. Such is the Tokyo Shimbun's view. How much of it is based upon facts, how much attributable to a desire to discredit the Progressists by representing them in the light of mere opportunists, we do not attempt to say.

URBANA-CHAMPAIGN

#### A FINANCIAL PROJECT.

Japan's great need at present being capital to start the various industries inviting enterprise, or to maintain those already started, any project for obtaining capital attracts much attention. It has been understood for some time that Mr. Sone, Minister of State for Justice, had elaborated a scheme in that sense, but the details of his plan were not known. The Jiji Shimpo has now obtained information on the subject. Mr. Sone's idea is that the Bank of Japan should be made the central banking institution of the Far East, the focus of all capital employed in these regions of the globe. Even Chinese capital might be drawn to the bank, and it goes without saying that to offer an attraction to the capitalists of England, France, Germany, America and so forth is considered of paramount importance. The details of the scheme suggest the nature of the ideas underlying it. At present the capital of the Bank of Japan is only 30 million yen, a figure altogether too insignificant for the purpose in view. The first step, then, would be to increase the capital to 250 million yen, in a hundred and twenty-five thousand shares of 200 yen each, the subscriptions payable in gold and the shares purchasable by people of all nationalities. A dividend of to per cent, would be guaranteed by the Government, and whenever the profits exceeded that sum, ten per cent. of the excess would be carried to the reserve, fifty per cent. should go to the Government, and forty per cent. would be distributed among the shareholders. In consideration of the official responsibilities incurred, the Government would, of course, exercise careful supervision of all the Bank's affairs. The director and officers would be Japanese, but a foreign advisory board would be appointed with very full powers and functions, its personnel consisting of two Englishmen, two Germans, and one Chinese. The foreign shareholders would, of course, have the same competence as the Japanese with regard to voting and so on, and would further be entitled to apply for the convocation of an extraordinary general meeting, provided that the applicants were sufficiently numer-The period of the Bank's charter would be fifty years, and its central office would be in Tokyo, with branches in Singapore and all other centres of Eastern trade, as well as in the great metropoli of the Occident. The projector believes that such an institution would attract large quantities of foreign capital. would also avert a danger. The latter point presents one obscure feature, namely, a forecast that when the Revised Treaties go into operation and mixed residence is permitted, the volume of the currency will be diminished and the prices of commodities will depreciate. Whether Mr. Sone suggests a direct connexion between the two events-the opening of the country and the economical phenome-non-or whether he intends to indicate a mere coincidence, we can not clearly discover. At all events his idea is that when the fields of trade and industry in all parts of the empire are thrown open to foreigners, there will be a period of great financial depression in Japan, during which the manufacturing enterprises Handbook of the Japanese Language.' already inaugurated will find themselves There is already an official translation o in difficulties more or less serious, and this Code in French, published in 1892-

capitalists appear upon the scene, they are not unlikely to monopolise all the cream of the country's industrial opportunities. Mr. Sone is not at all hostile to foreign participation in Japanese industrial enterprise. On the contrary, he welcomes such an outlook from a general point of view. But he thinks that if the instrusion of foreign capitalists takes place at a moment when the financial strength of the country is prostrated, an undue share of advantage may be secured by the foreigner. That contingency will be obviated if a great central bank is entrusted with the function of distributing the funds flowing into its coffers. Speaking broadly, Mr. Sone's programme seems to have two objects: first, to attract foreign capital; secondly, to attract it in such a manner that it shall not be directly invested in industrial enterprises, but shall find its way to them through the hands of an in-termediary actuated by the desire of keeping Japan for the Japanese. It is a very interesting scheme, and were it cleverly worked and intelligibly placed before the public of Europe and America, no great difficulties seem to lie in the path to success.

#### THE RESTRICTIVE POLICY.

The financial policy of the present Cabinet is certainly not expansive. It aims at cooling the fever of speculation by lessening the outflow of money in con-necion with public works, and by raising the rate of interest so as to render capital difficult of access. It is, in fact, a capital difficult of access. It is, in fact, a restrictive policy. Count Okuma has been making some interesting remarks on the purpose of the Bank of Japan in the purpose of the Bank of Japan in the purpose of the Bank of Japan in increasing its charge for loans. He has pointed out that, since the Bank is not the depository of any foreign money, the rate of interest fixed by it can not have any effect upon the stores of precious metal in the country, as similar action on the part of the Bank of England ceractive and the country of the Bank of England ceractive and the country of the Bank of England ceractive and the country of the Bank of England ceractive and the country of the Bank of England ceractive and the country of the Bank of England ceractive and the country of the Bank of England ceractive and the country of the Bank of England ceractive and the country of the Bank of England ceractive and the country of the cou the purpose of the Bank of Japan in increasing its charge for loans. He has tainly has. But it may be taken for granted that the directors of the Bank fully understand that point, and that, in raising the rate of interest, their chief object is to render it difficult for projective, complainant, or tors of speculative enterprises to obtain accommodation. The perplexing point is, how far should such a policy be pursued. how far should such a policy be pursued. At what point does evidence pre-sent itself that the spirit of speculation has been cooled and that sound enterprises only are on the tapis? The Osaka Asahi discusses that question and arrives at the conclusion that the time has now come for the Bank of Japan to adopt a more liberal line, since its restrictive programme has already produced embarrassing effects on the cotton-spinning industry, which certainly must be counted among the sound enterprises of the era.

#### THE JAPANESE CODE OF CRIMINAL PROCEDURE.

We have received from Messrs. Kelly and Walsh an English version of the Japanese Code of Criminal Procedure, translated from the original Japanese text by the author of "Kelly and Walsh's There is already an official translation of

ous Japanese. If, at such a season, foreign the French translation had the advantage of being revised by M. de Boissonade himself, the simplest plan for anyone proposing to make an English version would be to take the French as a basis. We are disposed to think that the translator of the book now before us did refer to the French version, but certainly he did not follow it faithfully, and the consequence is that his version lacks greatly in precision. To illustrate this we take a few articles at random, italicising the portions in the French that are omitted in the English or that differ in meaning or explicitness :-

#### BASE BALL IN TORYO.

It is certainly a quaint and unanticipated experience to read an account of a base-ball match in a Japanese newspaper. How completely non-plussed any student of the language would have been twenty years ago had he been required to write such a description? Now-a-days, however, the words seem to present themselves quite easily. The times have changed. Base-ball has become a favorite pastime in Japan, and a vocabulary to meet the needs of the game has naturally been elaborated. Thus far, the lads of the First Higher School in Tokyo are the champions. A great effort has just been made, however, to lower their flag. The students of the Second Higher School came all the way from Sendai to engage them, and a gallant struggle re-sulted. We find the match reported in the columns of the Yorozu Choho, and as it is the first time that we have seen a detailed account of m base-ball game in the Japanese language, we shall translate it literally :- "From 2 p.m. the day before yesterday (13th instant), a match (shiai) of base-ball was played between the First and Second High Schools on the recreation-ground of the former, Mr. Minaguchi Taken acting and Takeo acting as Miyaguchi umpire (shimbansha). The students of the First School wore white; those of the second, red. From the first contest (sen, i.e. innings) to the eighth the Reds scored 6 points, and the Whites II. This practically decided the matter, but in the last contest the Reds made a desperate struggle to recover their lost ground, and gained 2 points. They were still 3 short of the Whites, however, and when the match ended at 4.20 p.m. the ing the reasons of their rupture with the tible. Whites were victors by 3 points. The Ito Cabinet. They take, at the outset, tv in o criticism of the play (gijutsu-jo no hyo) is the broad ground that whereas the Ito that, just as lad been anticipated, the stuthat, just as had been anticipated, the students of the First School proved themselves superior in fielding (fusegi ho), and the students of the Second School carried off the palm for striking (uchikata). Running has always been a speciality at the First School. The speed shown by the lads in making bases (suberikomi) has surprised foreigners. The students of the Second School, it need scarcely be said, were not up to the same standard, but they were by no means to be despised. During the match the left field (sayoku) of the Second School won great applause by holding a fly-ball (hikiu) after three failures (sankas made tori-gataki). Mr. Shimada of the First School distinguished himself equally, and Mr. Fujii made a beautiful bit of play by catching without any trouble (ku mo naku) a direct ball (chokusetsu-kiu) that came like a bullet. Messrs. Tamura, of the First School, and Baba of the Second, goes on to say that although the Miniboth did good work, and Mr. Kasawara, the Second School's first base, (ichs-rui) and Mr. Ota, the second base, filled their places well. In short, it says much for the skill of the Second School students that they were able to meet the picked men of the First School which enjoys a national reputation for base-ball, and not suffer m on the other, the Cabinet's general policy signal defeat at their hands." We find of financial retrenchment, affecting, as it some difficulty in believing that the above does, the development of means of comappears in a Japanese newspaper, and that munication, and consequently retarding the taste for sports such as base-ball has already become so keen that a team of with satisfaction. The manifesto is to fall back on. #### MARQUIS ITO ON THE SITUATION.

It is not likely that Marquis Ito will commit himself to any explicit views about the situation that has been created in the field of domestic politics. His position is very clear. He made no promise, nor entered into any kind of engagement, to admit Count Itagaki to the Cabinet, and if such a step has now become essential to the preservation of an entente with the Liberals, there is nothing for it but to let the entente go by the board. A member of the Yomiuri's staff has waited on the Premier and sought to elicit his views, pointing out that, in the situation which has now arisen, the Cabinet will have to sustain the attack of the whole Progressist Party and m section of the Liberals in the field of foreign policy, and the attack of the whole of the Liberal Party together with a section of the Progressists in the field of finance. Marquis Ito replied, in effect, that, while fully appreciating the facts, the Cabinet could not abandon its attitude of independence. better qualified to discharge them.

#### THE MANIFESTO OF THE LIBERALS.

The representatives of the Liberal Party in Tokyo have issued a manifesto explainsolemnly promised to base itself on the support of a political party, its procedure exhibits a constant tendency to diverge from that declaration. It may be presumed that the reference here is to Marquis Ito's refusal to find a portfolio for Count Itagaki, but nothing definite is said upon that subject. Indeed, no indication is afforded as to the lines along which the Cabinet has begun to diverge from its "solemn promise," but it is of course natural that the compilers of the manifesto should avoid inconvenient explicitness. They say that in matters of legislation they are entirely at one with the Ministry, and into the margin of such a statement we can read no comment except that their objections hinge upon a question of organization. The manifesto does not limit itself, however to vague generalities. Ιt stry has introduced order into the finances, there is reason to doubt whether any stability has been attained; and that, while, on the one hand, the reductions temporarily effected in the expenditure on account of the armament tion of prices and thus encouraging in-expansion programme inspire uneasiness, ports. That disturbing factor will be as

teen students from each School entered Cabinet. Finance is the rock in the route of Japanese statesmen at present. Whichever way they steer, they can not avoid trouble. If they recognise and boldly act upon the principle that Japan, having made her debut among the nations, can no longer maintain herself on the income which sufficed during her days of semiseclusion, they at once come into collision with the opponents of increased taxation. If they adopt the economical plan and purch and pare until the petty income now contributed by the nation covers its outlays, they expose themselves to the charge of checking the development of the country's resources. It must be confessed, however, that the Liberals are consistent. They voted the post-bellum programme, and they can scarcely be expected to endorse any besitation in carrying it out. If their consistency carries them to the extent of taking the only wise course-namely, altering the taxes on land and sake so as to raise the revenue to a respectable figure—they will be the saviours of the situation.

#### THE EXODUS OF SPECIE.

During the first three months of the current year, the excess of imports over It would discharge its duty to the best of its ability, prepared alike for success or failure, and ready at all times to hand over its responsibities if others were found against Japan for 1897 will aggregate 70 over 1897 will be a corresponding to the failure over 1897 will be a corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the c or 80 million yen. Should a corresponding exodus of specie take place-and, as a matter of course, such a result must be anticipated-practically the whole of the gold reserve in the Bank of Japan will have disappeared by December next, and the paper currency will become inconver-The matter is causing some anxiety in official circles, it is said. So far as this year is concerned, the difficulty can be tided over by bringing 70 million yen of the Indemnity from London. But the Indemnity is a finite quantity. It has already discharged a great many functions and figured in numerous transactions, and the end of its potentiality is now in sight. Should it happen, as present appearances suggest, that Japan must take over 50 or 60 million of the Chinese loan, the sum actually receivable by her in London, on the 6th of May, will not exceed 60 or 70 million yen, and if the whole of that amount has to brought to Tokyo to replenish the reserves of the Nippon Ginko, what help will be available next year? There is, of course, a possibility that the balance of trade may be redressed, to some extent, when a lull occurs in the speculative tendency to import goods in anticipation of the new Tariff. But Japan is travelling in a vicious circle just now so far as her foreign trade is concerned. The large sums distributed among the consuming classes in connexion with the prosecution of public works-armaments expansion, railways, and so on-have the inevitable effect of producing an appreciaactive as ever during the current year, and there is consequently no solid ground for hoping that next year will witness any

#### BARON ITO.

The Tokyo Shimbun writes in strongly eulogistic terms about Baron Ito. describes how, since the war with China, the Baron has invariably acted as the friend of the Liberals. He is not actually a member of the Party, but to his intervention are chiefly due the relations that have existed between the Liberals and the Ito Cabinet, and he has such a keen appreciation of what is due to the Party and of his own responsibilities towards it that he does not hesitate to sever his connexion with the statesmen by whose side he has served for so many years, and to resign the first portfolio he has held, rather than show any semblance of indifference to the value of an undertaking between the Cabinet and the politicians outside the Government. In fact Baron Ito understands that from the day when constitutional institutions are established in a country, it ceases to be possible for the Ministers of the Crown to discharge satisfactorily their functions of advising and assisting the Sovereign unless they have the support of a political party. sake of carrying that great principle into practice Baron Ito has adopted a course which only a man of profound insight and inflexible resolution could persuade himself to take. His great official experience and his remarkable ability are well known. Like all men of distinguished parts he has been the butt of slander and criticism. The very vehemence of his enemies is a testimony to his worth. The Liberals testimony to his worth. The Liberals appreciate his high-minded views and will not forget what they owe him.

#### PRESERVING CHINA'S INDE-PENDENCE.

The difficulty confronting anyone that wishes to keep China on her feet is the unfortunate mania she has for offering opportunities to her enemies. Kiao-chou does not appear to have produced any sensible effect. It may have warned the Central Government that anti-missionary outrages are likely to prove costly affairs, but it has not served as a useful object lesson to the provincial communities. The recent riot at Kiangpeh illustrates the fact. Kiangpeh is a town on the Yangtsze opposite to Chungking. It has always been a turbulent place, not to be visited by foreigners having a high respect for their personal safety. It was in Kiangpeh that Dr. McCartney established m dispensary, sending two Chinese con-verts to look after it, and it was there that the mob attacked the dispensary at once, killing one of the youths and nearly killing the other, who made an almost miracu-Dr. McCartney himself had lous escape. intended to be at the dispensary on the night of the mob's incursion. His failure to go thither was a mere accident-on accident which doubtless saved his life. It appears that the leaders of the murdering mob are well known, and could be arrested at once if the Taotai dared to stretch out his hand. But the Taotai who lives in Chungking, of course—pleads that he has not a sufficiency of military force to control the people of two cities on opposite banks of the big river, and citizens of Kiangpeh have accordingly been "demonstrating" uproariously and triumphantly ever since they did the young convert to death and drove Christianity out of their town. The mission their connexion with the school permanantum in the school permanantum in the school permanantum in the school permanantum in the school permanantum in the school permanantum in the school permanantum in the sak of training the ge did not prove the subject to done. It is impossible to doubt, in the face of such presented to the Branch committee and of this month. The commit Branch will, immediately on the row of members, so that a report may the Head Office before the 30th Ju A proposal for the appointment ble agents in Kobe for the aill when they support him at the sacri-

concerned being the American Episcopalian, the duty of exacting repara-tion devolves upon the United States Consul Smithers. He is said to be receiving vigorous support from Mr. Denby in Peking, and he has preferred three demands: the execution of the actual murderers of the young man, Tang; the punishment of the gentry implicated, names being specified, and an indemnity of 5,000 taels. It is a pity that the indemnity was not made larger, since one half is to be paid to the relatives of the murdered man. All accounts received up to the present indicate that Kiangpeh is in an utterly lawless condition, and that to comply with the first two of the above demands will be very difficult for the Chinese authorities. What is to be done with such a country? How is it to be protected against itself? Many Japanese talk of stepping into the breach to defend the citadel of Chinese independence against Western aggression. How can the thing be accomplished if the Chinese persist in overtaxing the patience of the West?

#### THE ART SCHOOL.

It has been briefly stated in these columns that the Director of the Art School in Tokyo has resigned, and that as nearly all the professors and teachers in the School have followed his example, work it the institution has come to a stand-still. We have not hitherto attempted, however, to offer any explanation of the causes responsible for such an untoward state of affairs. Our silence has been due, not to neglect in seeking to probe the facts, but to the difficulty of discovering where the truth lies. The friends of the ex-Director, Mr. Okakura, claim that he has been the victim of a contemptible personal attack, planned and carried out by a Tokyo architect of whose character they speak in terms of unmitigated condemnation. Information obtained in other quarters, however, does not confirm that adverse judgment and we are consequently perplexed what to be-lieve. At one stage of the complication, a question of the principles to be followed in art instruction is said to have come upon the tapis. Baron Kuki, Director of the Imperial Art Museum, desired that foreign art should be taught in combination with Japanese, and Mr. Okakura insisted that they should be kept entirely separate. That point, however, does not appear to have become crucial. The main source of trouble was an assault upon Mr. Okakura's moral character, and the gradual development of a situation which, in the opinion of the Minister of State for Education, demanded Mr. Okakura's resignation. Of the 33 professors and instructors in the School 19 are entirely with Mr. Okakura. They so bitterly resent the treatment he has received that they have published an open letter, representing him as the victim of a miserable slander, and declaring their resolve to sever their connexion with the school perma-manently unless justice is done. It is

fice of their own official positions. Incidents of this kind remind us that we live in a country where life includes an element of romance conspicuous elsewhere by its absence.

#### THE DEMONSTRATION.

After all the talk, there was no demonstration of the British squadron in the Gulf of Petchili. The project never got beyond the columns of The Times. would have been a very explicable move, but unfortunately for the loyal Englishmen who found in it an opportunity to sneer at their country, it didn't come off. A fleet assembled at Chefoo to be ready for any emergency, and that was all that happened. On the 8th instant the ships happened. On the 8th instant the snips lying off Chefoo were:—H.M.S. Centurion, Flagship of Vice-Admiral Sir E. H. Seymour, K.C.B.; Grafton, Rear-Admiral FitzGerald, Victorious, Barfleur, Powerful, Edgar, Narcissus, Undaunted, Rainbow, Paque, Iphigenia, Archer, Algerine, Danhus Padhala Rattler Havi Phænix, Daphne, Redpole, Rattler, Hart, Handy, Fame and Alacrity. Twenty-one vessels are probably the strongest squad-ron ever assembled by any one Power in these Far Eastern waters.

#### NEW SILK UNION FOR TAPAN.

At a conference recently held by silk dealers in Kobe, a motion for the organisation of a company to be designated the Kobe Silk Trude Union was introduced by Mr. Homma Naoshi. The following rales were suggested :-

Art. I.—The Silk Trade Union is established in Kobe with a view to promote this special branch

in Kobe with a view to promote this special branch of commerce.

Art. II.—The company thus organised shall be designated the Kobe Silk Trade Union.

Art. III.—All silk dealers and others who approve of the objects may be members.

Art. IV.—The head office of the Union shall be located in Kobe, branches being established in the various cities and prefectures concerned. The following officials shall be appointed for the management of affairs of the Union:—In the Head Office, Directors, Experts, and Councillors; in Branches, a Standing Committee and a number of Councillors. of Councillors.

Act. V.—The Directors of the Head Office shall be elected at a general meeting of the Union: Experts and Councillors shall be appointed under the recommendation of the Directors.

Act. VI.—A standing general Committee shall be chosen at a meeting of the branches.

Act. VII.—The necessary expenses for the Head Office shall be borne by the city of Kohe, and those for Branches by the cities or prefectures converted. concerne

concerned.

Act. VIII.—The following are the objects of the Union:—(1) Securing uniformity in the manufacture and packing of silk as as to enhance the reputation of goods exported from Kobe. (2) Encouraging the direct export of silk. (3) Lowering the rates of interests on exchange bills. (4) Contailing fees for sellers. (5) Establishing water-houses for the use of numbers of the Union in common. (6) Organising a Raw Silk Samples Hall. (7) Promoting facilities for the speedy transport of silk both by land and sea, and lowering the rates of freight. (8) Simplifying the procedure for insmance and reducing the premium. (9) Securing communications with foreign dealers of good standing almost, in order to extend the silk market. (10) Investigating the commercial conditions almost.

Provisional Directors were elected and charge-

Provisional Directors were elected and charged with the task of framing the general regulations of the Union, that the same might be presented to the Branch committees before the end of this month. The committee for each Branch will, immediately on the receipt of the new regulations, take steps for the enlistment of members, so that a report may be made to the Head Office before the 30th June.

A proposal for the appointment of responsi-ble agents in Kobe for the silk dealers in

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

THE UNITED STATES AND SPAIN.

T is difficult to see now how war between the United States and Spain can be avoided. The Spanish Government made a great concession when it agreed to grant an armistice to the Cuban insurgents. That is precisely what all previous Cabinets in Madrid were unwilling to do, their natural contention being that a self-respecting Power could not agree to treat with rebels carrying arms. The Cubans, however, have declined the offer of an armistice. They are shrewd enough to see that their opportunity has come, and that by holding out a little longer they must gain everything. At the same time, the American Congressional Committees have advised that Spain be immediately requested to withdraw her troops, and that the forces of the United States be used to secure Cuban independence. There is thus no honourable retreat left for Spain. A situation is created from which she must retire fighting if she cares to preserve her self-respect. It may be taken for granted, we think, that she will fight. The Spaniard, if fate requires him to choose between death and disgrace, has never wavered in his choice. The question of the moment, then, is not whether there will be war, but what form the fighting will take. It seems to us that the Congressional Committees-assuming the adoption of their suggestions by the President-have settled that point. The United States is pledged to drive the Spanish troops from Cuba. That may be a troublesome task. England undertook to capture Havana in 1762, and Lord Albemarle, with a fleet of more than 200 vessels of all classes and an army of fourteen thousand men, did not effect his object until after 69 days' fighting. The Spanish forces defending the place numbered at that time twenty-seven thousand men. There must be double as many thousands available for its defence at present. In order, therefore, to expel the Spaniards, an expedition of thirty or forty thousand strong must be despatched by the United States, and, before despatching it, the command of the sea must be secured. On the other hand, since it is of vital importance to the Spaniards to maintain maritime communications with the island, they, too, will strain every effort to make themselves paramount at sea. It follows, therefore, that the first battles fought will be naval. If Spain can gain a temporary advantage over the American squadrons, she will be able to pour reinforcements and supplies into Cuba. If the advantage is with America, her next step will be to despatch a powerful expedition against Manila, unless-which is likely enough-Spain, defeated at sea, agrees to withdraw her forces and to recognise the independence of the Cubans. There is,

defensive. She may avoid naval engagements, leave Cuba to its fate for the moment, and reserve herself for another attack on the island after the American forces are withdrawn. If that be the plan adopted by her, it will be necessary for the Americans either to retain permanent possession of the island -which they certainly have no desire of doing-or to remain there until a native administration has been organized strong enough to defend the place--which would probably be a task of years. The latter might be the wiser strategy on Spain's part, but we doubt whether she could afford to adopt it. The Government's credit would not outlive such a Fabian policy, and disaster would come in the form of an insurrection at home instead of a defeat abroad. Besides, unless the Spanish fleet be withdrawn entirely from the arena, it must have access to Cuba. It can not remain at sea without coal. From every point of view, therefore, the strong probability is that the issue will be decided by the naval forces of the two countries.

An interesting question is the movements of the United States Squadron on this station. Apparently the vessels must either fill their bunkers at once, before war is declared, and make their way home, or go into harbour in some part of the Far East and remain there inactive until peace is restored. They will not be able to procure coal anywhere. The situation seems to call for world step: the leasing of Chusan, for example, for a term of two or three years. England would gladly endorse such a proceeding, and China could not refuse an application from Washington.

BAIL AND GAMBLING IN TAPAN.

UESTIONS have often been addressed to us on the subject of bail in Japan Many people seem to labour under the impression that the system of bail does, not exist, or that, if it exists, it has no practical value, owing to the inexperience or the illiberality of the judges. Perhaps the simplest way to deal with the matter is to quote the law on the subject. In the 9th Section of the Code of Criminal Procedure, the following articles occur:—

Art. 150.—During the course of the proceedings, the juge d'instruction, after having heard the arguments of the procurator, and on the demand of the accused who has been placed under warrant of detention, may order that he be provisionally set at liberty, under written engagement to present himself whenever required to do so and on condition of furnishing bail.

\* If the accused person is incapable, his liberation

If the accused person is incapable, his liberation may be demanded by his legal representative.

Art. 151. - The amount of the bail shall be fixed by the juge d'instruction, who will state it in the order granting provisional release.

Art, 152.—The bail shall consist of the deposit of a sum in money or its equivalent by the accused or by his legal representative.

independence of the Cubans. There is, amount of the sum, such sugagement to pay the amount of the sum, such sugagement to be subscribed by a third party having his domicile within the sum. She may stand altogether on the cognised solvency.

These provisions are sufficiently explicit. They show clearly that although, as a matter of course, no accused person has a right to obtain his release on bail, the examining judge possesses discretionary power to grant the privilege. We may add that the privilege is largely taken advantage of, and that the number of accused persons released on bail bears considerable and constantly increasing ratio to the number kept in prison. So far as the law is concerned, and—we think it may be added-so far as its administration is concerned, there is not more difficulty in getting out of "durance vile" on bail in Japan than there is in any European country.

But another question arises-at what stage of the proceedings may an accused person hope to obtain his liberty? It will be observed that in Art. 151, quoted above, the accused must have been placed under warrant of detention before he becomes eligible for bail. There are three methods of bringing an accused person before a legal tribunal in Japan; the first is by means of a summons, the second by means of a warrant of arrest, and the third by arrest without a warrant, the last method being permissible in the case of flagrant oftences only. A person summoned must be examined by the judge immediately on his presenting himself, or at latest during the same day (Art. 69). He is then either set at liberty or placed under warrant of detention; and in the latter event he may at once apply for bail. Thus the case of a man who appears in obedience to a summons is quite clear. He can not lawfully be detained over night without being examined and having an opportunity to apply for bail. But the case of a person arrested under warrant or without a warraut is somewhat different. The law says that he must be examined within forty-eight hours of the time of his arrest (Art. 73), and that the judge must then either detain him under a new warrant or release him. From this it would seem that a person arrested by the police may be . kept in confinement for forty-eight hours before having an opportunity to ask for bail. That is the extreme contemplated by the Code. Detention without examination and without m chance of getting out on bail may last for forty-eight hours, but must not last longer. There is here a possibility of hardship. But to guard against anything of the kind, the system pursued in Japan is to have a judge or a public procurator living always in a building attached to the Court. Not always the same judge and the same procurator, of course. The judicial officials take the duty in turn. Hence the attendance of a judge or public procurator to examine an accused person can be secured at any moment of the day or night, and there is no reason why a person eligible for bail should be kept under arrest an Original from

Digitized by Google.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN hour longer in Japan than he would be in the most advanced country of Europe.

There is another case to be noticed, namely, that set forth in the following article :-

Art. 150.—The juge d'instruction may, at the suggestion of the procurator, set an accused person at liberty under the guard of his relatives or connexious, or of his friends, even although there has been no application for release.

Such release under guard must be subject to an engagement to produce the accused whenever required to do so, the engagement to be signed by his relatives, or connexions, or filends.

It is unnecessary to comment on this pro--vision. It extends the discretion of the judicial official so that, on his own initiative, he can release a prisoner on whose tive, he can release a prisoner on whose Asama Chisen, has published over his own account bail has not been applied for or is signature a series of articles in which he treats not procurable.

An idea seems to exist among some of our fellow-residents that after the abolition of Consular Jurisdiction foreigners playing a game of cards in a tea-house in a provincial town, for example, will be kana in addition to the 47 hiragana and kataliable to be arrested by the police and kept in prison for a considerable time, inasmuch as they will not be within reach of any one qualified to get them released on bail. Such an apprehension is pro- ed that 3,000 ideographs were all that it is necesbably quite chimerical. The Japanese police make no obtrusive scrutiny into the pastimes of private individuals. Their efforts to suppress gambling are confined to cases where professionals are concerned, or where the abuse has become a public scandal, or where it is carried on by the lower orders in the open air. We have never heard of such a thing as an entry by the police into an ordinary dwelling for the purpose of apprehending private individuals engaged in playing cards or otherwise gambling, and we have never met a Japanese who had heard of such a thing. If the people of the country enjoy immunity from incidents of that kind, what reason is there to expect that foreigners will be subject to them? The gambling law, as set forth in the Criminal Code, is this :-

Art, 260.—Any person holding games of chance for purposes of individual gain, or organizing an association of gamblers, shall be punished with penal servitude for a period of from 3 months to 1 year, together with a fine of from 10 year to 100

Art. 261. - Any person taken in the act of playing Act. 201.—Any person taken in the actor playing a game of chance, or any person withingly providing premises for gambling, shall be punished with penal servitude for a period of from 1 month to Ill months, together with a fine of from 5 year to 50 year. Games of chance in which the stakes are articles of food or deink are excepted from the operation of this law. The implements used in games of chance and the stakes present shall be confiscated.

It is, in fact, necessary that money must be actually staked and the police must have evidence that it is staked, in order that the law may be put in operation against the players. We can conceive a case where, a club having become notorious for gambling among its members, the police might be induced to take an ex-treme step. But that is an exception, on the whole the private individual in letters preference to all other symbols seem to police might be induced to take an ex-Japan has as much liberty in these matters as he enjoys in a European country.

#### MONTHLY SUMMARY OF FAPAN-ESE CURRENT LITERATURE.

It is hard to account for the indifference shown by the educated in Japan to the inconventences of their native longue as now written. That it would be quite possible to invent or adopt say 50 signs that would answer all the ordinary purposes of the ideographs now in use can not be denied by any intelligent person. When we mention the fact that for writing the name of Mr. Fukuzawa's school, the Keiogijiku, no less than 53 strokes of the pen are required, it will be seen what manual labour attends the use of the Chinese characters, to say nothing of the numerous other drawbacks to their employment. This is not the place to discuss the subject from our own point of view. The Editor of the Nicht Nichi Shimban, Mr. at considerable length the whole question of the reform of orthography and modes of com-posing in Japan. We give as briefly as possible the gist of Mr. Asaina's essay, following the headings of the writer.

I. THE INCONVENIENCE ATTACHED TO THE USE OF CURRENT SIGNS.—To begin with the kana signs, there is the y (n); the sound-prolonging mark | ; 7 for holo; + for lohl; to for lome, and > for shile. There are three variations of the hiragana. Coming to Chinese characters, though Mr. Yano Fumio once assertsary to know, in the opinion of the present writer 10,000 would be nearer the mark, that is if the thorough understanding of learned subjects is the object to be attained. Then in the case of these ideographs at any rate 3 distinct forms of each character have to be remembered. There are the Kaishor the Grosho and the Soihe, the full square ideographs, the contracted form of the same, and the cursive characters. Of the latter there are endless contractions and variations. The result of all this is that whereas a child in Germany can learn to write its thoughts in 8 months and even in Russia, where the signs used are more difficult, in one year, in Japan even at the end of three years the power of expressing the simplest ideas on paper is extremely limited. But the inconvenience of the present system is not confined to childhood. It follows us through life at ever step of the journey. This we feel most keenly when coming into competition with Occidentals. Many of their devices for lessening labour we cannot use and never shall be able to use without altering our method of writing. The type writer, now so universally employed in the West, is useless The same may be said of the composing machine, which so minimizes the labour of printing. It is absurd to say as some do that the preservation of the language as handed down m us together with traditional methods of writing it shows patriotism. If in our race with other countries we find ourselves handicapped by our clamsy set of symbols, love of country should prompt us to change them without delay.

II. IS A CHANGE OF SYMBOLS POSSIBLE? What has been done in other countries may be In both Roumania and Servia done in this. the reform which we are advocating here was accomplished in about 40 years.

III. WHAT SIGNS SHOULD BE ADDITED?—Since there is in our opinion no importance to be attached to symbols apart from their phonetic value, and since the advantages of using the symbols which are best known among the foremost nations are very numerous, we are in favour of adopting the Roman letters. It is admitted on all hands that 💶 phonetic signs for the Japanese language the Chinese ideo-graphs now in use are quite unsuitable. There is no reason why Japan should not revive her beautiful Yamato kotoba and employ it when

IV. FAVOURABLE OPPORTURITIES FOR EFFECT-THE PROPOSED CHANGE .- Already Iwo anch opportunities have been allowed III pass without any permanent reform being accom-plished. One of these was in the 6th and 7th year of Melji when the pro-foreign wave of sentiment was very strong and sweeping changes were all the fashion, Elementary Schools going as far as in use literal translations of Wilson's Readers instead of the Chinese Clas-sics hitherto read. The other was when the Romaji-Kai was established and caused such a stir. The real reason of the collapse iii the Romaji-Kai was the failure of the chief promoters of the movement of realise that, in order to make Japanese thoroughly intelligible when written in Roman characters, it is necessary to use homonyma as little as possible. The writers for the Komajt kai Zasshi composed as if writing for an ordinary newspaper. Hence on account of the unintelligibility of the langauge used the whole enterprise was wrecked. The near approach of mixed residence affords another favourable season for effecting a change.

V. THE MEANS TO BE ADOPTED TO COMPASS THE DESIRED REFORM .- In our opinion all that is necessary is that the Government should summon together the best scholars we have and entrust the elaboration of a scheme of reform to them. For writing Japanese the whole of the 26 letters of the Roman Alphabet would not be needed, but they would be required for the spelling of foreign names, which would pass unaliered into the language. The Commissioners should ne composed of the following elements. There should be men who are well versed in phonetics, and who possess an exhaustive acquaintance with the language of ancient Japan, to whom should be entrusted the work of fixing on the permanent sounds to be given to words or syllables. (2) There should be men who are qualified to compile new text-books and Readers, to be printed in Roman characters. (3) There should be competent philologists set to work to write grammars and A date should be fixed compile lexicons. alter which all Government notices and all official letters should be written in the new characters and after which throughout all the schools of the land Chinese should be banished except for special ambjects.

VI. THE PRISENT WRITTEN LANGUAGE chief thing to be said about this is that it is unsuited for use without the written ideograph, Documents read out are only partially understood, the number of homenyms that they contain often leaving the listener in doubt as to the meaning. What is known as the Chinese style, very much affected by officials, has no merits to make it worth preserving.

VII. WHAT SHOULD BE THE STANDARD OF STYLE ADOPTED ?-We recommend such books as Shungui's Iroha Bunko, Ikku's Hisa Kurige and Mr. Fukuzawa's works as models of what is desirable. A listener is able to understand such books when read without examining a single character. The principle to be borne in mind in that the sound of words, and not their ideographic representation, must convey the meaning. In the reform we are advocating is it too much to expect that the Emperor himself should take the lead? If the Bareau to which is entrusted the preparation of Imperial Edicts and similar documents (the 文事秘書局, Bunjihinshokyoku) were to be instructed to no longer compose in the stilted and unintelligible style hitherto employed, but to use everyday speech, the effect would be most salutary throughout the country. Three great novelists, Ozaki Kōtō, Kōta Rohan, and Yamada Bimyō hare shown us what is capable of being effected in the way of uniting the written and spoken language. Unfortunately the scientific and learned world has not followed anit. The newspapers, too, are much to blame, with the single exception among the leading dailies of the Jiji Shimpo. Even this organ has of late been swept into the Chinese current. The

are those who in reply to what we have said will advocate the adoption of French or English instead of Japanese. This is a step that no independent country could be induced to take and a measure that even conquered countries have refused to adopt. In vain did the French my to force their language on the English after the Norman conquest. Others will affirm that to write Imperial Rescripts in everyday language would rob them of their diguity. So argued Europeans hundreds of years ago when no language but Latin was deemed classical; but such men as Chaucer, Spencer, and Shakespeare in England and Goethe and Schiller in Germany taught their countrymen that there were no heights of dignity and grace that could not be reached by their native tongues. Some will object to the scheme we have proposed on the score of expense, but a careful estimate tends to show that from all points of view the present system is the most expensive. It is all a question of labour com-pared with results. The conclusion we have reached, then, stated in a few words, is that the Roman letters should be adopted to the ex-clusion of the signs now in use, and the written and spoken languages should be made thoroughly identical.

In the Kokumin-no-10mo appears an article entitled "Questions connected with Formosa" by Mr. Torii Ryūzō, whose investigations in the island were noticed by us some months ago. Mr. Torii discusses at some length the curious practice known as "head hunting," which is still in vogue among the raw savages (Seiban) that inhabit certain patts of Formosa. He thinks that the police and the military are not equal to the task of suppressing such a practice, and that the Government should rather rely on education and religion to bring about its gradual discontinuance. To the Formosans the beheading of their enemies wherever they may find them appears to be an eminently virtuous deed, and their ideas on this subject, like those concerning the vendetta in Japan, it may take generations to eradicate.

Mr. Ozaki Yukio, in the Waseda Bungaku, to be broken, heart promises are made to be gives what he conceives to be the reason of kept. the popularity of light literature in Iapan. is to be attributed, says this writer, to a want of a certain kind of manlineas in the Japanese people. The fuse that is made over the endurance of triffing hardships that would have no reality to more hardy races of men, all of which are reflected ad nauseam in our modern fiction, are reflected at nanstant to the three show that our men are growing effectinate. The taste for light herature which has increased so rapidly in the the last lew years is no good sign. Why not leave this class of writing to women, while we men undertake works that demand more moral muscle for their pro-duction? The taste for the kind of literature that now crowds our bookshops no doub has a physical origin. We Japanese are weak in body. We shun the wind and the rain with which the Westerner takes delight We make much more of the in battling. little trifling inconveniences of life than do those who by strength of constitution are able Woat a to-do we make to defy the elements. What a to-do we make over even the falling of a tew pine-tree leaves! A foreigner to whom was shown the cover of a lacquered susuribako on which one or two falling pine leaves and a few maple leaves were painted once observed that remarkable boldness was shown by such a design. This is a good illustration of the fact that the wise man often credits the fool with more intelligence than he possesses. Such designs do no more than represent the diminutiveness of our ideas. Coming to the subject matter of our novels, our renai is entirely different from the "love" of loreign fiction. Rendi is love of the obscene type, and hence the prominence that it occupies

garded as degrading. While in Europe, says reigners on Japan." The opinious stated in the Mr. Ozaki, I met casually at restaurants and such places not a few actors and was struck by their apperiority.

The Waseda Bungaku gives the following list of writers on current literature in the undermenoi writers on current menture in the underment-tioned publications. The Tatyō: Mr. Taka-yama Renjinō. The Bungei Club: Mr. Omachi Keigetsu. The Shin-Shōsetsu: Mr. Ishibashi Ningetsu. The Teikoku-bungaku: Messrs. Fujii Shinkichi, Takesue Teishiō, and others. Fajil Shinkichi, Takesue Teishilo, and others. The Mesamathi gusa: Mesats. Mori Ogwai and Miki Chikuji. The Haniel Zasshi: Mr. Azeyagi Kaishiü (?) The Sekai no-Nihon: Mr. Ogata Ryūsui. The Kokumin-no-tome: Mr. Tsunoda Kökö The Nippon: Mr. Iwoki Hoku-un. The Shōnen-bunshū: Mr. Takeshima Ui. The Yorozu-Chöhō: Messis. Taoka Reiun and Haia Hoitsuda, &c. The Yomiuri: Mr. Togawa Shūkotsu.

The Yorozu Choho a short time ago offered a literary prize of 100 yen to be competed for on the following conditions. The composition to be written in the Kana-majiri style and to consist of not less than 80 words and not more than 100, the sentences to take the form of In a supplement to its issue of March 20th eleven of the compositions are given, in order of supposed ment. The first prize was in order of supposed ment. awarded to a Mr. Matsubara Nishiki, of Toyn-shima, Miura, Kanagawa, whose composition consists of nine short sentences. A few of these we quote and translate:

Ichi wo kikite; jū wo shiru wa yasuku; ji wo shirite ichi wo okenau wa katashi

To hear only a tenth part and infer the whole is easy; but after knowing the whole to practise the tenth part is difficult. The moral being that practical virtue is rarer than intelligence.

Okonai wa yo to utsure; Rokoro wa toki to kamaru koto nakare.

Change your practice to suit the times, but your heart, never

Kuchi ni yaku turu wa morohu; Kokoro ni chikau wa katashi.

Though lip-promises are (sometimes) made

Gimu to hwansureba kurushil; Kenri to satoreba tanoshii.

Regarded as a duty it is painful; regarded as

a personal right (or a privilege) it is pleassant.

Kako (住者) wo kurawasaru wa gū nari;
awaremubeshi. Kami (住珠) no lame ni
kurau wa kyō nari; waraubeshi. Yeisei no tame ni kurau wa ken nari sho subeshi.

He that is averse to partaking of savoury dishes is foolish and to be pitied. He that pampers his appetite has lost his wits and become an object of ridicule. He that eats in order to preserve his health is a wise man and worthy of all praise.

The Teitoku Bungaku publishes a very favourable and appreciative review of Baroness d'Anethan's recently published novel, calling attention to the particulars in which the literary taste of the Baroness differs from that of her talented brother. Whereas Rider Haggard delights in the transcendental and the improbable, his sister's mind, says the Teikoku Bungoku, is attracted to the scenes of ordinary everyday life, and portrays with remarkable vividness many of its striking incidents. The Teikoku Bungaku notes the fact that this is the second instance in recent times in which the wife of a minister accredited to Japan has come from a talented family and has possessed great literary power. The other lady alluded to is Mrs. Fraser.

No. 25 of the Sekai-no-Nihon contains an editorial autitled "The views of Certain Fo-

article are said to be those of an eminent fo-reigner whose initials are given as "R.S." 1 is evident that the editor of the Schai-no-Nihon attaches considerable importance to the views of "R.S." or he would not have gone out of his way to translate the letter in which they were stated, a letter that does not seem to have been written with a view to publication. This article in the Sehai-no Nihon turnishes one among many proofs that the most enlightened Japanese welcome criticism even of a very trenchant character. Here is the gist of what "R.S." has to say on Japan and the Japanese, which the editor of the Schaino Nihon declares to be good physic for national conceit :- Hearmg of the great progress that Japan had made, I came to see with my own eyes exactly to what t amounted. I contess that I went away disappointed. The country is only half-civilised, but the Japanese show an extraordinary amount of satisfaction with their present attainments. No one in passing through Tokyo would guess that it had been the Shogun's capital for nearly 300 years, nor that it is now the chief Metropolis of a nation which prides itself on the superiority of its act. I visited the booses of the nobility and found that they are on the whole very poor places. Although many of these houses have foreign rooms attached to them, their owners do not attempt to live in foreign style. Though externally the nobility appear occidentalised, their real lite is still that of the pre-Meiji era. Though Japan pro-fesses to be so earnest about Western civilisation her people sit, sleep, eat, and dress like theiriorefathers . . . Japan has a Constitution parties and she has political parties, but these are governed by the old traditions. All the political parties place respect for the Emperor above everything else and are habitually accus-ing each other of disloyalty, disrespect, or un-faithfulness to the Crown. Instead of discussing the actual nature of government, they are for ever dwelling on its moral aspects. They for ever dwelling on its moral aspects. do not ask, is a policy good in itself and good for the country? but, is it loyal to the Emperor? What is the use of expecting the inauguration of party Cabinets among a people who can only think in this one groove? The difference in political parties is not one of principle, but simply of interest. Despite all that has been said about liberty, there is no political party in Japan whose object it is to limit the prerogatives of the Crown. Notwithstanding all the theoretical explanations of the meaning of political liberty given by the Fiyu-to, speaking generally, Japanese politicians fail to see in what political liberty consists. . . . To me the Japan-ese appear to be a people without a philosophy of their own. It is a Question whether a great nation can be made out of an essentially unphilosophical people. The inture of the nation depends entirely on its freeing itself from the Oriental trammels which have hampered it so long. If public opinion demands and secures the greatest freedom of investigation and of consequent action, Japan will figure prominently in future history; otherwise she will sink back into the obscurity and insignificance that for centuries characterised the inhabitants of a few islands situated on the very outskirts of the world.

The Jiji Shimpo has collected some interesting statistics bearing on the development of the inventive faculties among highly educated Japanese. According to these the number of patents that have been granted for special inventions since 1885 is 60. Arranged according to subjects the inventions of graduates of the Imperial University are as follow:-Navai Architecture, 6. Civil[Engineering, 2. Mechanics, 9. Chemistry, 11. Electricity, 3. Mining, 3. Metallurgy, 1. Industrial Schools have produced 11 inventors, Handiwork Schools 4, to the minds of readers. Our stage-acting needs to be reformed and to be made a source of enlightenment and instruction after the fashion of the foreign stage. There is no reason why actors should be ostracised and their occupation.

A Society has been formed by certain University professors called the 言語學會, Gengogakkai, whose object is the discussion of certain linguistic questions. There in a talk of reviving the Rômaji-Kai in some quarters. Quite a new interest in the Japanese language especially has been awakened during the past few months, according to several magazines, of which the formation of this Society is one of the results. Professors Florenz and Ueda Mannen are among the chief promoters of the movement. The meetings of the society are to be held once a month at the University, at which free discus-sion will take place and papers by members will be read. A record of the Transactions of the Society will be issued quarterly. Members will be divided into Ordinary Members and Special Members. The subscription per month of the latter will be 50 sen and those of the former 15 sen. Teachers in Government former 15 sen. Teachers in Government Schools are eligible for membership without formal introduction.

Professor Revon has just published a work called Sensö Tetsugaku (The Philosophy of War) which, according to the preface contributed by Dr. Tomii, deals in a thorough and original manner with the two great theories concerning war that divide public opinion in Europe. The treatise in for sale at the Dobunkwan, No. 2, Shinkoku cho, Kanda, Tökyö, at 25 sen per copy. It was written in French originally and subsequently translated into Japanese.

The Zaiyō announces that a new magazine is to be published to be called the Shinobu-gusa which is designed to be longer lived than the Shirayuri, whose estate it has inherited. Its object will be to introduce the reading public in Japan to the beauties of French literature, whether by translations only or actual extracts is not stated. The Taiyo remarks that, com-pared with English and German books, the number of French works that are well known in Japan are very few—a fact to be deplored, as in many particulars French writers have never agsed.

Mr. Maebashi's Kögi's translation of Mill's "Representative Government," a work covering Representative Government," a work covering: 500 pages, has had a large sale and has reached its third edition. The latest edition, which it is said has been thoroughly revised, sells at 70 sen per copy; the Kaishindo, Omote-Jimbocho, Kauda, Tokyo being the publishers. Scott's "Laty of the Lake" has been rendered Scatts "Lary of the Lake has been rendered into Yamato-Kotoba by Mr. Shiwo Masao. The work covers 400 pages and bears the title of M上の美人 Kofo no Biiin. It is said to be extremely well done and to have been adopted as a class book in certain schools. The translation sells at 60 sen per copy, the Kaishindo being the publishers.

The Fifth Edition of the Kigo Hiteri Annai, a reproduction of Captain F. Brinkley's work bearing this title, now covering 1,000 pages and selling at 2 yen per copy, has been issued.

The Taiyo publishes the views of Mr. Kaneko Kentaro, the well-known art-critic, who li the President of the Bijutsu Kai and Chairman of the Committee of judges appointed by the Bijutsu Kyokai, on modern and ancient art in Japan, of which the following is an epitome. What is known as ancient art in Japan was only an imitation of Korean, Chuiese, or Indian models. Japan has yet to make a name for herself as an originator of style, and in my opinion we have now reached a most favourable time for the accomplishment of this purpose. It is supposed by some that in days gone by our artists originated the styles with which their names are associated, but I confess that I have for a long time had my doubts as to this, and I have in the course of my investigations come ncross evidence that shows that much was borrowed from Occidental actiests without acknow which need emphasising and developing, ledgment. For instance the sketches of Maru-yama Okyo originated with Dutch oil paintings.

A certain wealthy citizen of Kroto supplied work is of some interest as the latest develop-

Okyo with money while he was studying foreign painting under a Dutchman in Nagasaki. Okyo in this manner obtained the knowledge which enabled him to sketch scenes for the show-boxes and thus those movable pictures done on boards known as Kae-ita, which attract so much attention at festivals, came into use. And even the famous Hokusai studied anatomy under a Dutch doctor and thus attained those ideas of proportion in the human frame which imparted to the Katsushika-ye much of their value representations of real life. The way in which it is the fashion to speak of foreign art as something quite distinct from our native styles shows an ignorance of history. We have borrowed in the past and we had best go on studying everything foreign that is accessible. Thus alone can our artists obtain the knowledge necessary for enabling them to originate a school of their own. I am aware that there is much that is eccentric in the extreme in our modern painting, and as I think of this I am reminded of the queer figure that was cut by Europe as a special envoy, clad in a red shirt and a coat of the shooting jacket type full of pockets and broad in the back. Things have advanced since then, and our representatives now dress in the height of fashion. So will it be with our art. The caricatures of to-day will give place to the finished master-pieces of to-morrow. The Bijutsu Kyōkai has hitherto failed to recognise the facts to which I have been calling attention. The society must change its tactics if it is to succeed. The pictures which it praises have in many cases no kind of merit. What are the human beings portrayed by the old school artists like? Certainly not like any specimens of humanity known to us. They may be intended to represent hermits or Buddhist divinities whom nobody has ever seen. So is it with the scenes represent Chinese scenery, but who has ever seen objects grouped together as they group them? If they can portray nature, why don't them? If they can portray nature, why does they try their hand at Fuji-yams or some of the many familiar sights and scenes close at hand? They draw objects that nobody has ever seen or can see, and call this high class art. There are few people that will be deceived by this device. If any of those travesties of nature to which the eye of the Japanese art critic in Japan is so familiar be sent to the Paris Exnibition, they will afford no small amusement to foreign critics. Pictures of the Chinese school should be rejected. No prizes should be swarded for this style of painting. On the whole, though, there is improvement and no reason for despondency.

The well-known foreign-style artist Kuroda Kiyoteru belongs to a Society of lovers of art called the Hakubakai. The Society held two called the Hakubakai. The Society held two exhibitions last year. To this Society a Belgian artist has sent pictures which appeared in the last exhibition. Mr. Kuruda expresses himself to an interviewer from the office of the Taiyō as strongly in favour of the exhibition of the works of foreign arises at Japanese Exhibitions. Mr. Kuroda, who it will be remembered caused no small stir by exhibiting a picture of a naked woman, defends himself against the attacks on this exhibit based on moral considerations and says that the objectors are prudes, but not attists. He afterwards has something to say on the need of design and execution being correspondingly developed in the artist, and points out that grand ideas with no power to represent them on canvas are only too common among men aspiring to fame in the world of art.

Mr. Kimura Takataio, one of the leaders of the Nippon Shugi movement, has published a book called the Nippon-Shugi Kokkyoron, in which it is maintained that the Japanese have characteristics which constitute national strength

ment of Neo-Shintoism. It is for sale at the Kaihatsusha, No 6 Nishtki chō, Kanda, Tōkyō, m 45 seu per copy.

The annual report of the Tei-koku-zusho-

kan states that in December last the number of Chinese and Japanese volumes in the Library was 131,265 and the number of foreign books 33,106. There was an increase of 6.515 in the former, and of 1.128 in the latter class of books. The library was opened during 332 days last year and the persons who consulted works on general subjects were 79,324 and on special subjects 10,662, a total increase over last year of 15,952 persons.

The following table is instructive as showing the proportion of interest attached to the various subjects of study among the Japanese :---

Subjects.	Inpanese and Chinese Books.		Total,	Proportion to other subjects.

The Waseda Bungaku has a very carefully written article on the "Future of the Japanese Stage" which we have only space to notice briefly. The writer, whom we take to be Mr. Tsubouchi, discusses the subject under 6 head-Tsubouch, discusses the snoject under onesarings, (r) Written dramas, (2) Actors, (3) The Proprietors of theatres, (4) Stage Managers, (5) Threatre audiences, (6) Critics of stageacting. The difficulties connected with reform are represented a very formidable. Briefly empty. merated they are as follow: (1) Discordancy merated they are as follow: (1) Discordancy between the old stage and the new ideas it is sought to carry out. (2) The pride of writers of plays; which results in their objecting to having their dramas acted before low-class audiences. (3) The inability of old actors to comprehend the real purport and character of the reforms advocated by the progressionists. (4) The separation of the stage from literature in Japan and the entire lack of intercourse, to say nothing of mutual understanding, between the man connected with the former and those the man connected with the former and those attached to the latter. (5) The absence of the class known in Europe as stage-managers and a consequent want of conformity and regularity in the management of the stage, resulting in each actor doing pretty much as he pleases. (6) Old plays are all more or less founded on the No, but the new plays lack the No element and hence are not popular with a large class of theatre-goers. (7) The proprietors of theatres only think of profit and care not a straw about reform nor about high class histrionic art. (8) Modern writers of verse are not able to produce poetry suitable for the stage. The lines which have gained popularity on the stage have been of an objective type, modern verses are essentially subjective. Hence from a literary point of view reform seems very hopeless. Nor

Digitized by GOOGLE UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

permanent effects on men's thoughts they never go. As a class the actors with which we are acquainted to day are of 2 kinds. There are the old and the bigoted who have been greatly puffed up by the rank to which they have attained in public estimation within the past few years, and whose state of mind is the opposite to docile. Then there are the apprentices who aim at making a living by the profession, whose education is poor, whose experience is nil, who in many cases are living lives of profligacy, and who are without any notion of what true art consists in. The essayist concludes by recommending a more thorough discussion of the present evils connected with stage-acting with a view to the elaboration of a system of reform that shall secure the sympathy and support of the leading men of the day. He is in favour of sweeping off the boards all old plays and traditional methods of acting them, and of inaugurating an entirely new era. Of the various bodies that aim at stage reform, the Waseda Bungaku essayist says "Their ideas about what is required to meet the situation do not correspond with those that considerable study of the subject has led me to adopt.

#### THE STATE OF THE MONEY MARKET.

A financial correspondent writes: Last year various events, sudden in their occurrence and far-reaching in their effects, disturbed the financial world of Japan. The excessive expansion of commercial and industrial undertakings and the rapid development of joint-stock companies; the fears entertained by the public for some time concerning the working of the new monetary system; the sharp fluctuations of the rate of exchange upon China; the failure of the rice crop and the unfavourable state of foreign trade in general; the frequent raising of the discount rate by the Bank of Japan and the consequent depreciation of bonds and stocks-these and other circumstances worked together to produce a general disturbance and stringency in the money-market. Japanese banks, ever sensitive to the initiative of the central bank, could not depend upon the Bank of Japan alone when it raised the rate on loans and advances by 3 or 4 rin daily, and had to seek sources of supply elsewhere. The inevitable consequence of this was that a keen competition took place among them to attract money by raising their deposit-rates. Mitsul Bank, which did nothing in this direction for more than six months after the stringency was first felt, now offers a very high rate of interest for money deposited with it. The fact that this veteran bank, which has al-ways been very cautious in all its operations and has never resorted to measures inconsistent with sound banking, has at last followed the example of other banks, suggests some-thing unusual in the state of trade. It is doubtful what measures other banks, with comparatively little credit and small sums on hand, may be driven to take by this step on the part of their formidable competitor. Probably they will be obliged to raise their deposit-rates still further; no alternative seems to be left. There is, however, cause for apprehension that this will place them in a very awkward position; and as matters stand at present, disaster may The Mitsui Bank overtake some of them. allows interest on deposits at the following

Forty-eight catties of new season tea arrived at Kobe on the 18th instant from Kochi. It is stated that the quality is better than the first dency.

#### COUNT ORUMA ON JAPANESE FINANCE.

With regard to the embarrassment of the financial community Count Okuma is reported by the Hochi to have expressed his views as

The events which are now disturbing the economic world are ascribed to the adoption of a negative policy on the part of the authorities, or are interpreted as a prelude to a panic. To may the truth, the economy of this country for one or two years to come cannot perfectly recover from the effects of post-bellum speculation, though it is half-way towards recovery.

The Nippon Ginko's Weekly Return of its transactions shows a decrease of its convertible notes to the extent of over 40 million yen during the past three months, a sum of 14 or 15 million yen on the average being withdrawn from circulation. The currency during the three months has therefore decreased b per cent., and the scarcity of money has already led to the embarrassment of the econowith the reduction of the notes in circulation, the rate of interest has been raised; and the security value of bonds has been lowered. It was taken for granted that the decrease of currency referred to would tend in increase the purchasing power of money and bring about the depreciation of commodities. S range to say, however, the opposite has been the case. Intricacy is a characteristic of economics, and things do not always come out according to theory. That is why the policy of the currency-reduction proved ineffec-tual in producing the result expected. The sconomic community of Japan is yet in a state of immaturity, and the effect that may be produced by raising interest or any other measure undertaken by the Central Bank for the adjustment of financial machinery is extremely limited. The Central Bank of Japan extremely limited. The Central Bank of Japan is, in this respect, far interior to the Bank of England. Whenever the latter institution resolves to accumulate reserves by raising the rate of interest, it is always sure of success. The accumulation of the world's wealth in the Bank of England is accomplished without serious difficulty, owing to the perfect credit secured by the Bank. This capacity on Japan's part, however, is comparatively insignificant.

An enhancement of interest by the Bank of Japan has influence no further than the limits of the Japanese realin, and fails to draw money even from China and Korea. The Bank of Japan's policy in increasing interest produces sudden and direct changes, but those changes are exclusively in the domestic market. This limitation does not lie with the Nippon Ginko alone, the Government itself being still outside the pale of universal confidence. per cent. gold bonds sold abroad have fallen to 86 or 87 yen in value. It was supposed that lapanese bonds would have been accepted by foreigners enthusiastically, and would in the course of time become a channel for introducing foreign espital. The expectation, however, proved futile. Bonds mill remain unsalable in the country and are likely to fall to an embarrassing extent. Bonds are the standard of credit enjoyed by the Government by which they are issued, and that standard each nation strives to maintain. Japan, however, is utterly indifferent to it, and allows her bonds to depreciate. This fact makes foreigners hesitate to invest; they underrate the financial capacity of the country. If such are the sentiments of foreigners towards Government securities it is not to be wondered that the Bank of Japan should fail to attain its ends by an increased rate of interest.

The authorities appear to have been astonialied at the steady appreciation of commodities in spite of the adoption of their programme. There are two prominent points which must be noticed in this respect. The first is that prices at the end of last year showed a downward ten-Digitized by Google

having begun to rise again with greater speed measures being adopted for the reduction of the volume of currency. The present appreciation is too serious to be regarded as a mere reaction. The phenomena of finance are complicated that they do not admit of hasty judgment; but it may be confidently asserted that the main cause for the general appreciation was the rise in the price of rice. Rice constitutes the staple food of the natives. Had the appreciation of the grain been the immediate consequence of the expansion of currency, the reduction of the latter would, in turn, have been the chief factor in bringing about a depreciation. On the other hand, if the appreciation was attributable to other circumstances, the decrease of the currency would produce no effect on the fluctuaas well as the improvement in the mode of living have doubtless led to an increasing demand for rice, while the failure of the crop during last year and the year before last brought about a deficiency in supply. These two facts place the cause of appreciation beyond the question of currency.

Owing to the great increase in the demand for rice, the price of imported grain rose to a semarkable extent, but as rice is a commodity absolutely indispensable to the Japanese, its interest and the reduction of currency. in fact, is subject to its own fluctuations independently of other influences. The amount to be imported shortly by a single merchant is reported to aggregate 30,000 tons, and other orders will bring the total to 70,000 tons. The import of this enormous amount is to be con-summated between this and next month, and the cost, amounting to five million yes, must be paid abroad. In June new wheat may be brought into the country to supply the deficiency of rice, but it can hardly be expected that this will have any serious effect upon the market; and until the next rice crop is ready for use foreign rice must continue to be imported. Such being the case, the market can not easily to be restored to its normal condition.

Rice, being an indispensable staple, has been, as above stated, the chief factor in enhancing the value of other commodities. The general appreciation therefore must be regarded an having little or no relation to media of exchange in the market. Another point to be considered as having contributed to the excess of imports and the reduction of exports is the sudden rise in the price of coal. The appearance of war-vessels in he East from the various European States has had the effect of increasing the demand for coal, and the only coal producing country in the Orient is Japan. Even here the output is limited, and in face of a huge demand quotations have steadily risen, and serious embarrass-ment is now experienced by railway com-panies, steamers, electric and gas works, and other enterprises in which coal is the motive power. Some of the factories and steamship companies have indeed had to suspend business on this account. Domestic manufactures have therefore sustained no small increase in expenditure and prices of manufactured goods have risen accordingly. All there phenomena appear to have combined to reduce the amount of exports. Moreover, the collision in the East between England and Russia, and the complication in West Africa between England and France and the crisis between America and Spain have disturbed Europe and America and lessaned the demand for Japanese manufactures, the purchasing power of the continental nations being curtailed. This has had its due effect. Apart from these considerations, however, it is an indisputable fact that commodities are extravagantly high, and the economic community of Japan may be justified in showing a certain degree of anxiety with regard to the dimunition of currency. But, unsatisfactory are in the economic condition at present, it has the possibility of great improvement in the future. Count Okuma places great reliance on the industrial development of the country.

#### YOKOHAMA GENERAL CHAMBER OF COMMERCE.

A VISIT TO SUGANO PRISON.

Yokohama, 6th April, 1808.

TO THE COMMITTEE OF THE YOROHAMA GENERAL CHAMBER OF COMMERCE.

In my memo of the 1st instant, I informed you that several of your Committee had been invited to go up to Tokyo to inspect some of the principal Prisons there, and I think a short

report of what we saw may be of interest.

Our party consisted of Mr. W. F. Mitchell,
Mr. E. Flint Kilhy, and myself, We left by the 8.5 train on Monday morning, the 4th inst., and drove over to the Sugamo Prison.

There we were met by Mr. Ogawa, of the Prisons Bureau, who introduced us to the Governor of the Prison, and to both of these gentlemen our thanks are due for their great courtesy and for the kind way in which they afforded us the opportunity of looking into every detail of the working of the jail.

The Sugamo Prison is the one in which it is proposed that Foreigners undergoing sentence will be confined, when the new Treaties come It is situated on a high plateau in into force. a northerly direction from Shimbashi, from which it is about six miles distant, and we noticed that the soil on which the jail is built seemed good and naturally well drained, whilst the air is

evidently pure and healthy.

The Prison stands in its own grounds, which are extensive (Tsubos 62,118, or 52 Acres). The entrance is by a fine iron gate, with watchman's lodges on either side, and from thence a drive of 100 to 150 yards leads to the first series of buildings, which are occupied by the Governor and other officials, rooms for the warders, &c. Following the passage through these rooms, our party was conducted by the Governor, Vice-Governor, and Mr. Ogawa to the main buildings, 10 in number, in the form of two wheels. Each building comprises form of two wheels. Each building comprises 28 cells, fourteen on each side, separated by a broad passage, lighted from above by skylights. Each cell is 4.94 trube; evidently the arrangement is that each cell has 8 mais clear and as each is intended to hold 8 prisoners, each man has one mat, 6 by 3 feet; that is simple, an one person per mat is considered a luxurious allowance in Japanese inns for the lower orders, The huildings are solidly built of brick, and looked like long two storied godowns. The cells are raised from the level of the ground 4 in 5 feet, are 12 to 14 feet high, and have a loft-space above, left for patrol and for the installation of the electric light, with which each cell is lighted. They have wooden floors covered with stout mats, (not tatamis), the walls are of brick, plastered over in a light grey color. In one corner of each cell was a sink with tap for fresh water for washing; in the other the "W.C." arrangements, sunk into the floor about 2 feet, and with a fixed wooden screen surrounding it, quite sufficient for decen-These are kept constantly cleared from the outside by gangs of prisoners told off for the purpose, and were inoffensive. The cells themselves are lighted and ventilated by a goodsized window in the outside wall, opening and shutting on the Transom system, and at will, by s cord within reach of the inmates, also by a ventilator close to the ground opening on to the passage. These give almost too much air in the cells in the winter time, and to svoid the draught thus caused, each ventilator had a wooden box, which could be placed in the aperture by the prisoners so as to let the air in from the passage, but conducting it straight up the walls of the cell. It will be seen, therefore, that they are well lighted and well ventilated, the only objection being that they are not heated, and for that Mr. Ogawa told un that they have already made a plan for heating all the cells by hot-water pipes. As in all Japanese houses, there is no furniture in any of the cells, but we were told by the officials that furniture would be supplied in the case of cemark could pass, and some talk must go on Foreigners being lodged there. Each prisoner between men teaching and learning a trade, was well clothed with wadded coat and "con- in fact, we noticed that the men seemed in-

tinuations" of a sort of pink color and of cotton material. On the floor were piled up the "futous," one for each inmate, and these were amply large and thick and I was rather astonished to find them so clean. The doors are semi-circular in form so as to fit the thickness of the walls, and are of iron. They have two glass peep-holes above and an iron trap door below for passing in lood and drinking water. The locks worked on springs and seemed very solid. The greatest number occupying one cell was 5 persons, but there was room for more than that number. Some cells had I to 4 occupants only.

When we arrived only a few were occupied, the prisoners being mostly under sentence of "hard labor" and out in the grounds or in the working sheds. This "hard labor" seemed of the mildest kind; some were making bricks in a brick-yard, the others were mostly in solid, well-lighted sheds, learning or practising trades—carving bambon, silver smiths' work, making cloisonne vases, boxes, etc., paper making, weaving cloth for the prison use, cleaning rice and barley, also for the prison use; others were in the car-penters and blacksmiths' sheds, but the chief occupation seemed to be straw braid plaiting, in which work some of them seemed very clever. All the work is realised and paid for, 60 per cent, being kept towards defraying the working expenses of the Prison, 40 per cent. being reserved for the prisoners against the day when their sentences finish, and they are at liberty to go away. As a lot, the prisoners were well clothed, and well nourished, and there was no sign of ill-treatment; not one of them had a cringing, frightened air, which would certainly have been the case had they been ill-used. a lot, they were certainly very healthy. I only noticed one man who had the remains of "itch" on the hands, and he was evidently under treatment and nearly cured. But this did not seem astonishing, for the bathbouse, which we next visited, was excellent, very spacious, very clean, and with abundance of hot water. I understood the Governor to say that the prisoners could have a hot bath every day, but the average was three times a week. At the end of this room I noticed one bath that was for medicinal purposes, the water being impregnated with sulphur.

The kitchen was next visited; it was very large and scrupulously clean. The prisoners' food was being got ready,--rice and barley (40 per cent. and 60 per cent.) boiled together and then pressed into moulds like a square cake. There were various sizes, graded according to the work on which prisoners were employed, with small sizes for those prisoners undergoing punishment; they appeared sufficient, though the smaller ones would appear to be only suffi-cient to sustain life, and would certainly only be justified as a temporary punishment diet. Fish was given twice a week, and to each portion of rice there was a small quantity of reliab that is generally caten in Japan. There were also large tubs of a boiled seaweed. There could no question that the ordinary quantity and quality of this diet would be sufficient for an ordinary Japanese man, but I doubt if it would be sufficiently nourishing for a man who has been brought up on a meat diet; and Mr. Ogawa told us that it was intended to alter the diet

in the case of Foreign prisoners. Discipline seemed to be strict, and though there seemed to be comparatively few warders not more than one to twenty or thirty prisoners -they were armed with swords and the prisoners seemed to be well in hand, At our entrance they were all seated on mats. The warder of each gang shouted a word of command, then another, and then another, were all seated on and the men rose up, lifted their heads, and then bowed them. The warder saluted, the salute was returned, and a fresh order was shouted, when the prisoners sat down again and at once attended to their work. Silence is compulsory, but evidently an occasional whispered

terested in their work, and certainly the very fact of meeting together in large numbers, and the working in company must have been some relief to the deadly monotony of prison life, and for my part I should certainly prefer this form of "hard labour," to being left to silence and solitude in one's own cell, which seemed to be the fate of those who were in prison without "hard labour." However, these men could have work given them if they asked for it, and we saw one or two working in their own cells.

The general health seemed to be good, but

the officials told us that at the end of the third year many of the prisoners suffered a sort of relapse; for them and for all other cases of sickness there was a hospital, which seemed clean and well managed by a staff of 5 doctors; we noticed a chemist's shop, with a large supply of the usual chemicals, and there was a room that I understood was an operating room. The patients were all looked up in aick wards, well lighted with good large windows, which were shaded by cotton curtains. They were lying down with one futon between them and the mats, and another to cover them, and the usual Japanese pillow for their necks; very few of them looked seriously ill, they were mostly suffering from colds or other ordinary indispositions. In one room, where the light was shut out by a heavy curtain of blue material, two men were being treated for eye diseases.

There was a separate building used as an infectious disease hospital; we did not go in, for

it was not occupied.

Returning to the main buildings, we were shown a large semi-circular room, fitted up as a Chapel; it was large and well lighted. In another room close by we saw four or five Buddhist Priests who, we were informed, were on the permanent staff of the prison and who held regular services at stated occasions and are permitted access to the cells. The prisoners were also visited by Christian Ministers from The prisoners time to time, to whom, it was stated, free access was given. Above this room was a similar sized one used as a School for young prisoners.

There is accommodation for 2,240 prisoners (males only) in this Prison, and there were 1,957 at the time of our visit. The area of the ten cell buildings in 2,074 41 tsubo, or 207.441 tsubo per building. The whole is enclosed by very high brick walls and there was ample space for gardens, which were laid out but did not seem to be much cultivated. Trees had been planted, but us the prison has only been built three years they had not grown much.

Due regard is paid to classification of prisoners, both as to age, gravity of offences, first

offenders, or habitual criminals.

In one of the hospital wards we noticed a man who was not in prison garb and were told that he was a man whose sentence had expired, but he was detained until his friends could be communicated with; so that at any rate he would have somewhere to go when he left the prison. This, the officials told us, was invariably attended to.

The Punishment Cells-about six or eight in number, are situated apart; we were told that they were not much used (indeed four of them in the old Japanese style were never used) and of two on the European system only one was occupied by a man who was given to fighting. They were cells not more than eight feet aquare, ventilated by a narrow window at the top, which, while giving air, would leave the interior almost dark, whilst the inmate was kept in perfect solitude; his food was passed in by a trap door and he could only be communicated with by means of a speaking tube. This would be very severe punishment and in the summer time with the sun shining full on the cell (for it seemed to have no pro-tection) it would be terrible. We were told that the maximum punishment in these cells was five days, and that the more general form of punishment was by reducing the diet.

Per contra good conduct badges are given to the prisoners according to their behaviour, and many of them had one, two, or three badges of blue cloth sewn on to their sleeves.

Relatives of prisoners are allowed to call at Original from

Digitized by Google

fixed times and converse in the presence of a Warder at a place set apart for that purpose.

On the whole we could not but come in the conclusion that the general arrangements were excellent, the buildings well designed, and the management very good; and it is probable that this prison would compare favourably with any similar establishment in Europe or America.

Our inspection had taken up so much time that when it was proposed to adjourn to visit the House of Detention at Kajibashi found we had to postpone that visit. Mr. Ogawa told us that the arrangements there were similar to those we had just visited, but the prison was older and therefore not so presentable; but un the invitation was extended to any time at our convenience, we fully intend to avail of it; for whilst we think from what we have seen that the Convict Prisons at the Capital under the Government management leave little to be desired, it seems to us of equal or still more importance to know the state of the Houses of Detention, where Foreigners (and sometimes innocent people) will of necessity be confined pending their trial. We were assured that these establishments also were gradually coming entirely under Government control and that the same care would be given to them in order, as had been given the prison we had just visited.

It must be understood that this report is simply on Sugamo Prison, which is the most modern prison in Japan and cannot be taken an typical of the general prison accommodation, least of all of those prisons under provincial anspices, which leave very much to be desired in accommodation and general arrangements,

R. D. Robison, Chairman. W. T. MITCHELL. E. FLINT KILBY.

At a Committee meeting held on Friday, the 15th inst., the Secretary reported that he had been informed by the Director of Posts and Telegraphs that Mails for Europe per Canadian Pacific steamers via Vancouver are now forwarded via New York.

At a meeting of representatives of this and the Yokohama Chamber of Commerce, held lately, the new picul weight of 132.77lbs, against the old of 133.33lbs, had been fully discussed, and it was now decided to ask the Tokyo Chamber of Commerce for their opinion as to the desirability of its being adopted or whether efforts should be made to have the old weight retained.

To examine into the position of Foreigners in Japan under the new Treaties it was decided to form an International Committee consisting of one member of each nationality represented in the Chamber, with power to add to their number.

### RELIANCE WHEELMEN'S RACE.

The first of the series of three handicap races arranged by the Reliance Wheelmen of Yoko-hama, came off successfully on Sunday morning over a course of about four miles and eight-tenths on the Chiba road. The start was at the village of Komatsuna, about seven miles from Shimbashi. In spite of the heavy rain of Saturday, the road was in comparatively fair condition, though rather heavy going. Six competitors ataited, viz., Messrs. Bain (acratch) Onderdonk (10 secs.), Dewette (25 secs.) Kay Smith (1m. 50 secs.), Balcke (2m. 15 secs.), and McChesney (2m. 30 secs.) After a good race Smith came in first in 15 minutes 2 secs., McChesney second, and Dewette third. The latter rider made the best actual time, 14m. 10 sec., and for this secures 5 points in addition to 4 points for third place. After the race the Reliance men, accompanied hy a number of their comrades of the Tokyo Reliance Club, rode to the Hotel Metropole, where they tiffined together. Several Yokohama residents interested in cycling went out to witness the finish. It is proposed to hold the next race on the track at the Cricket Ground,

#### THE PREMIER AND THE LIRERALS.

On the 14th instant, says the veracions Yoosu, a deputation of the Kwanto Liberals, consisting of Messis. Yamada Taizo and Kogure Budayu, waited upon the Prime Minister to express their views on to eign policy and internal at-ministration. "We have come," said the Liberals in introducing themselves, "as representing many members of the Lower House returned from Kwanto, to give you a piece of advice on current political topics. To accept or reject it is, of course, within your own discretion, but the results in case of rejection are not lightly to be considered." After this terrific exordinm they stated that the inauguration of Count Itagaki alone to the post of a Minister would not suffice as a token of the Cabinet's cooperation with the Liberal party. Mr. Hoshi and another must be installed in office; the party was absolutely opposed to the sole appointment of Count Itagski. Then alteration must be introduced into the laws of election and the City and Prefectural Institution, so as to effect a radical reform in internal administration. Finances must be adjusted, but the delay in the naval armaments expansion programme was unjustifiable. And, lastly, the Cabinet's foreign policy must be ascertained in order to determine the course to be hereafter pursued by the Liberal party. This was the effect of the deputation's representations, hints being given that should Marquis Ito fail to listen to them he must expect to see his Cabinet beset with immense difficulties. The conversation lasted for two hours.

The Prime Minister is reported to have affected great indifference. He said: "It is needless to entertain so great an anxiety in the matter. I am determined to do what I have considered fit to do. If I lose credit with the nation on that account and receive opposition from the Diet, I don't mind. I have only to transfer my post to a man well qualified for it." Having thus "sat on " the visitors, the Prime Minister continued his remarks,
"The appointment of Ministers," said he, "is the prerogative of the Emperor, about which I have no power to say anything in public. I have to med the Cabinet with special instructions from the Emperor, and can in no way dismiss the Ministers now in office for the purpose of replacing them by fresh appointments. At the time when the present Cabinet was first becoming a member, but promised me to support the new Ministry as a private politician. His entry into the Cabinet therefore would be a breach of faith on his part. Still worse would it be to install Mr. Hoshi on the present occasion.
As regards the revision of the Flection Law I entirely agree with you, and shall give attention to reforms of the City and Prefectural systems of administration. I am very much troubled about diplomatic questions, and by no means allow myself to be negligent about them.

Yet I must confess that the unscrupulous proceedings recently indulged in by the Kairakuyen party are not only prejudicial to the interests of the country, but also utterly inconsistent with the principles of honest reform. It is impossible for me to disclose administrative or diplomatic secrets to persons other than those directly con-

In making the above reply, the Yorosu picturesquely adds, the Prime Minister, with an air of extreme complacency, struck at the table and kicked the floor with his feet. The story seems to us (Fapan Mail) very apocryphal.

#### THE TOKYO LITERARY AND MUSICAL SOCIETY.

Monday evening at the Tokyo Literary and Musical Society was a marked success. We believe that the idea of an entertainment for children only, with the children themselves as the principal performers, originated with Mrs. Page, and was carried out by her with the very which would give Yokohamaites an opportunity able assistance of Miss Schereschevsky and the barely escaping with his life. The disposit of viewing the race from start to finish.

Misses Page. The half was literally crowded was within a stone's throw of the yamen.

Original from

with children, all in the highest spirits and presenting an indescribably pretty sight. The United States Minister presided, and at the conclusion of the programme—which we append refreshments were served with, a profusion of cakes for the little ones. The feature of the evening was the three-set comedy of " Cinderells," performed by marionettes under the management of Miss Schereschevsky and the Misses Page, the former lady undertaking the greater part of the dialogue, which was capitally con-ceived and very cleverly varied. The marionettes were not only dressed in character but also looked their paus. Their costumes and modelling alike were the work of the young ladies who nig anke were the work to the spring ladies who exhibited them. Scarcely less appliance fell to the share of the "Ebony Minstrels," who sang and acted with great spirit. We need hardly add that Miss Von Fallova pianoforte solo did not belong to the list of children's performances -it was a gem in execution and feeling. Mis. Page played all the pianoforte accompaniments in her usual admirable syle :-

#### CHINESE NOTES.

Famine and its invariable companion fever are producing a terrible record in North Kiang-It is stated that forty per cent, of the su, people are obliged to eke out existence by brg-ging or by selling all their possessions, and that ten per cent, are dying of starvation. The sale of children is, as usual, one of the means employed to get food. Apparently that part of China in in a most lawless condition. The people are compelled to keep loaded guns always ready for the purpose of beating off

The Christian Mission in Yangchou barely escaped destruction on the 8th of April. During March large numbers of beggars—some ten thousand, it is said—encamped outside the time when the present Cabinet was first east gate of the city, and acores of them were organised, Count Hagaki had no intention of frozen to death owing to an exceptionally cold snap. Some of the bodies were preyed upon by dogs, and it seems that the mudat-ed head of a child was picked up by a miscreant and laid near the enclosure of the Mission compound. The following morning word was quickly circulated that the Mission-aries had been at their old murderous tricks, and hundreds of people assembled clamouring for vengeance. Happily order was restored by the Chinese officials.

> The residents of Shanghai intended to entertain Prince Henry of Prussia at luncheon in Chang Su-ho's garden on the 15th instant.

> M. Dautremer, formerly a well known French official in Tokyo and now Consul for his country at Hankow, has decided to bring before a legal tribunal the old question of the right of awnership of part of the concession. He is to sue the British subjects who claim to be the owners in Her Majesty's Consular Court, the sum in question being 200,000 taels.

> Our readers probably remember that brief reference was recently made in these columns to an anti-Christian riot in Kiangpeh, near Changking. The details are now to hand. Dr. McCartney, of the American Episcopal Mission, having rented a house to serve as a medical dispensary in Kiangpeh, sent two young Chinese medical students to live there. During the first night of their residence, the place was attacked by a mob, and one of the new comers was brutally murdered, the other The dispensary

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

#### NEWS OF THE WEEK.

An Imperial Ordinance has been promulgated authorizing the raising of the rate interest on money deposited in post office savings banks to 4.8 per cent, per annum. There is a provision appended that in the case of deposits made previously to December 3181. 1890 and exceeding 1,000 yes, the rate shall be 3.6 per cent.

We learn from an exchange that Rear-Admiral A. L. Douglas arrived at Bombay on the 19th March, and relieved Admiral Drammond in the command of the East India Station. Admiral Douglas was Vice-President of the Ordnance Committee at the time he received his appointment. He served outside the Naval Service of his country, when in 1873 4, he held the position of Director of the Imperial Japanese Naval College, for two years.

The rivalry between Antwerp and Rotterdam as the port of call for the North German Lloyd steamers has ended in favour of Antwerp; and a jubilant telegram from that city says:-

This result is due to the foresight of the Autwerp Chamber of Commerce, which invited over a bundred German bungomasters and leading com-mercial Germans to visit Autwerp last autumn. The way to conciliate a German burgomaster seems to be much the same as that of coaxing the British husband..." Feed the brate,"

It is stated by vernacular newspapers that the reform of the prison system and of the police organization is occupying the attention of the Government. Our contemporaries suggest that the motive of the reform is preparation for the epoch of mixed residence, from which we infer that apecial arrangements rather than general reforms are on the tapis. The rumour is that the Authorities contemplate employing three German exports, two to assist in the police department, and one to advise about the prisons,

The Board of Trade returns for February were not encouraging. The exports showed a decline of £223,000, or a little over 1 per cent. and the imports a decline of £1,374,290, or nearly 4 per cent. There was a falling off in the import of wool to the value of £680,000. Coincident with this decrease in the value of imported raw material there was a falling off in that of the exports of textile fabrics. The iron and machinery trades had not recovered from the injury inflicted by the protracted engineering strike.

On Sunday afternoon, eaysthe Kobe Chronicle, a man having the appearance of a sportsman, about 35 years of age, was found dead in the thicket of a hill beyond Minatogawa with a gun wound in the throat. He wore a foreign suit of black and had in his pockets a silver watch, 20 odd yen in cash, and two silk handkerchiefs, He was wearing a cartridge belt round his waist, one cartridge being missing. A piece of a cotton handkerchief was tied to the lock of the gue, the other end being tied to the large toe of the man's right foot, and these appearances indicated that the man had beyond doubt killed himself.

The Government, it is stated, find some difficulty in putting into circulation silver subsidiary coins to the extent anticipated when the system of gold monometallism was adopted. The twenty-sen and ten-sen pieces are in large demand, but the fifty-sen piece is not a favorite. It is supposed that the reason of the people's refuctance to take the fifty-zen coin is that they find the one-yes note much more convenient and rumour alleges that the Government intend to withdraw the one-yen notes from circulation as soon as possible. We doubt the truth of the statement, for, after all, the people's convenience deserves to be consulted as well as that of the Treasury.

It is now many years since we received a Digitized by GOOSIE

have been in India and China. The London Mandard recently said:-" At the Albambra, Carl Heitz attracts the most attention. He may be reckoned as the most skilful prestidigitateur of the day. His tricks are marked by a near-ness and dexierity which nonplus the most careful observer, and he is unsurpassed as a manipulator of cards." Mr. Hertz starts his Kobe season on Saturday, and will then come on to Yokohama.

The Moji Shimpo prints a sensational story of a Japanese stoker belonging to a British steamer, which has just arrived there from Calcutta, having been slain in an affray with Russian sailors at Batoum on January 8th fast. The deceased left the ship without leave with foreign members of the crew; the partly was attacked on the return journey carrying whisky for their comrades on board. The two foreigness reached the ship safely and reported the matter to the Captain. He hastened off with a party of seamen to the rescue, but found only the dead body of the unfortunate stoker. The Captain has given all the information III his command to the Police.—Hiogo News.

Dr. H. B. Guppy has spent three weeks in the crater of Mokauweoweo, Hawaii. He lived in a tent under conditions not unlike those believed to exist on the moon, viz , absolute sterility of the ground, rarified atmosphere, intensely dry air, no clouds, by day at least, and intense cold at night. During the first day the atmosphere was highly electric. Dr. Guppy could trace luminous figures on his closk, which crackled under his fingers. He suffered from headache, palpitation, lassitude, and loss of appetite. For amusements he had magnificent lunar haloes and light shocks of earthquake. At the very bottom of the crater he was wrapped in fog, produced by the vapours rising from all parts of the ground. Many insects were found on the top of the mountain, blown there by wirds, no doubt, but as a rule they were dead or dying.

The Swiss have decided by an immense majority on the purchase of the railways by State. Fares are to be reduced all over the lines, and the rates of transport for cattle and produce are also to be lowered, an inducement which went a long way with farmers and manufacturers. The advocates of State purchase also argued that it was of vital importance that the shares of the railway companies should not be held by foreigners, especially Germans, who put their own nominees into the hest posts without regard to the claims of the The purchase of the railways by the State will, however, demand an enormous sum of money to pay off the sharsholders. If the passenger fares and luggage rates are to be appreciably reduced, it is doubtful whether the returns will suffice to pay all the expenses of management and at the same time to provide for the interest of the debt.

The Osaka Asahi states that Mr. de Lucy-Fossatieu, the French Consul at Kobe, accompanied by a military attachi of the Portuguese Legation, inspected the Tennoji Mental Diseases Hospital and the Horikawa Prison, Osaka, last week, being conducted by Mr. Mayeda, an official in the Osaka City Office. At the hospital the French Cousal made close inquiries of the President as to the number of patients, the manner of treatment, the cause of disease, and the cost of maintenance, &c. At the prison, the Consul thoroughly inspected the various cells, hospitals, workshops, and the scaffold, and then obtained information from the Governor as to the clothing and food of the prisoners, the method of payment for labour, and the procedure at executions. All this, of course, says the Kobe Chronicle, 'in view of the impending operation of the new Treatica."

The case of Colour-sergeant Walker, who was kept a prisoner by the Afridis for six weeks, is now attracting attention by reason of the

seem, was ordered to lose his pay for the weeks he was absent from his regiment, the Royal Scots Fasiliers In taking this line, the military authorities acted in strict accordance with Article 954 of the Royal Warrant. But the Article also provides that, after inquiry, the Secretary of State may restore the whole or any portion of the arrears of pay. In the circumstances, the Court Martial has acted almost us meanly as Mark Twain's firm, who stopped a man's wages for the half an hour he was away from work owing to a dynamite explosion which blew him sky high.

Either Borneo prisons must be most comfortable hotels, or the inhabitants of that island must be easily satisfied. Three men who were brought before the Visiting Magistrate in an up-country station, and charged with arson. calmly avowed that they had committed the crime on purpose to get sent back m prison, which they say is the most comfortable place they have yet lived in.

Chinese have a genius for thieving: example of this talent is given by the Shanghai Mercury. A British gunboat lying at Hankow had, in broad daylight, her chain unshackled and her anchor stolen; and the same anchor was offered for sale at Her Majesty's Consulate at that port. The Consul communicated with the gunboat concerning the anchor before they were even aware of having lost it.

The depredations of the Tatao had (Great Sword Society) are giving trouble on the south-ern borders of Shantung. The other day these ern borders of Shanting. The other day these rebellions sectaries inurdered the Hunanese Taotai Han and over-ran a large tract of country which extends right up to the borders of Childi. So seriously is the movement viewed by the paralysed Peking Government that it bas ordered Tan Fu shiu, the Commander-in-Chief of Cuihli, Shensi and Shansi, to come eastward to quell the Great Swordsmen,

Encouraged by his recent successful travels, the Duke of the Abruzzi has determined to direct his course to the Far North. summer he in due in Spitzbergen, and the following year he and his followers will make for Franz Josef Land, Provided the conditions of the ice be favourable, the Duke will make a dash for the Pole by means of sledges and dogs. Should, however, the attempt be unsuccessful, the expedition will confine its operations to Franz Josef Land, which will be explored.

Who wants to buy a small and compact archipelago? A Madeira journal aunounces that the Selvage Islands are for sale. The group consists of six-three large and three smalland they are situated to the north of the Canaries. Historically and politically they belong to Madeira, where the actual proprietor lives. The islands offer numerous facilities for sport—the sport of killing the puffin-and it is said that 20 000 of these sea birds are shot every year. The puffin is sought for its flesh quite as much as for its plumage.

Peace and tranquillity have not yet been restored in Haiphong, says the China Matl. Feating of another and more serious rising amongst the natives, the French authorities have adopted measures to secure the satety of the city. They are prepared for attack should the natives become belligerent. Sentries guard all the bridges and approaches to the city, and at night-time no one is allowed to move about unchallenged. One of the Haiphong papers likens the present state of affairs to those of 1884, when Haiphong was defended by block-houses and the inhabitants lived in dread of nightly assaults from pirates.

Professor Orazio Marucchi has just discovered a wonderful "graffito" picture in the Palace of Tiberius, on the Palatine IIill, in Rome. The subject of the picture is the "Crucifixion," and wisit from a conjuring celebrity, so the forthcoming appearance in Yokohama of Mr. Carl
Hertz, from the Alhambra Theatre, London,
should prove as acceptable here seri-appears to requitted of this charge, bu', strange as it may with respect to the picture, and the details connected with th

When the "graffito" was first discovered the central cross could hardly be discerned, but by out much stronger, as has the figure of Christ pletely covering the passes. Work is actively with the word "Cristus" above it. The inspection is in Latin, and when translated reads: "Christ, having been beaten with rods, was channel. Access to the Bay of Along may now careful treatment of the walls it has been brought hanged upon the cross according to the secret

According to the China Mail, the Philippine rebellion has spread to the island of Cebu, the centre of the hemp and sugar trade. It is stated that all the foreigners, other than Spaniards, are safe, and that the natives will not seek to molest them, but the exact fate of the Spaniards is still unknown. The Governor and most of the Spanish officials are reported to have been massacred but it is ported to have been massacred, but it is hoped that some have been taken prisoner. and that they are being held as hostages. The whole of the island is in the hands of the rebels. It is feared that Panay and other southern islands will also revolt. In the Tayabas Province of Luzon, the Spanish Governor has been severely wounded and his adjutant killed. In the Ilocos Province, a Captain of the Civil Guard and a priest have both been mortally wounded. In Pangasinan, rioting is frequent.

Mr. MacAleese recently brought in a Bill to enable persons of Irish birth or extraction to adopt the prefixes "O" and "Mac" before their sur-names. This is how the Globe deals with the matter :-

Sing a song of Irishmen
Drafted in a Bill;
Some are "Macs"; the rest are "O'a";
But all are Irish still! When the Bill was ready, The House began to lough; Wasn't it a cruel shame To spoil the scheme with chaff? O'D-II-n, as a petriot, Rather liked the notion; MacR-dm-ud, not to be unidone, Seconded the motion. I lfor dido't seem to mind The Bill one little bit; But Scotia's Mac monopolists Uprose and vetoed it!

Mr. Edison, with the assistance of Professor Bell and others, has succeeded in so improving the phonograph that it is likely to come into general use. Not only is the phonograph to be considerably reduced in price, but it will be thoroughly adapted for ordinary business. For instance, a man can speak all his corres-pondence into the machine at will, and his clerk can take it off on to a typewriter at leisure, the instrument being stopped or its speed con-trolled at the will of the operator to whom it is dictating its message. Another improvement is the arrangement which allows it to deliver its message in a tone so loud that it can be heard y a large number of people at the same time. Mr. Edison has also invented a supplementary machine, a marvel of ingenuity, by means of which the recording wax cylinders of the phonograph can be reproduced from the original in endless numbers. Perhaps the most interest-ing point in the facure of the instrument is the status which will be given it as a legal doonment or as evidence.

The Bay of Along, with its thousands of rocks, between which lies a labyrinth of channels and natural harbours, is, says the Avenir du Tonkin, one of the most singular places in the world. Apart from its southern sun, it completely resembles the Norwegian fjords. It was long an assured refuge for pirates, who could easily conceal themselves in its caves or jungle. In case of war it would certainly be one of the objectives of a hostile fleet, which one of the objectives of a mostice teet, which also for the neveropment of the rainway system might possibly attempt to force the passes. It in the interior of China, and it is to be left to its was important therefore to place this weak point judgment to decide whether certain towns and in a complete state of defence. During his recent stay in Tonkin the Governor-General munication or not. The company has also the visited Hougay and the Bay in company with right of working coal mines and other mines. Admiral de la Bedoillère, the Colonel commanding the Artillery, and other superior manding the Artillery, and other superior Digitized by COSIC UNIVERSITY OF ILLINOIS AT

officers. It was decided that, besides the mobile defence by sea-going torpedo boats already organised, batteries should be constructed combe considered absolutely impracticable by any

During the 24 hours up to noon, 5th April, 19 new cases and 13 deaths from plague were reported in Hougkong, making the total since tat January (95 days) 286 cases and 243 deaths. From noon on the 6th till the 7th there were 14 new cases and 13 deaths.

A Washington telegram of March 7th says: A Washington telegram of March 7th says:—
The Katahdin, Uncle Sam's unique war vessel,
will go into commission this week with Commander George F. F. Wilde me her director.
She is the most formidable war boat in the
world. She is regarded by sailors me a monstroity in the way of naval architecture. She
is almost totally under water. Her entire fabis almost totally under water. Her entire fabric, except her strong conning tower and her turtle-block, is hidden. Her bow is prolonged into a mighty ram, which makes up the principle on which she is built. This ram, with the ex-ception of a few rapid-fire guns, is all the weapon with which she is armed, but with it the Kalahdin could do terrible destruction to any buttle-ship, no matter how heavy or well armoured. The Katahdin's back could laugh moured. The Katahdin's back could laugh at shots from any war-ship she cared to attack. Her terrible ram aimed at the weakest part of an enemy's hull should sink any vessel on the sea. Her small guns would take care of torpedo boats, the only sort of an enemy the Katahdin need fear. This odd and mon-strous boat was built in 1893 at Bath. Her extreme length is 254 feet, her normal displacement 2.155 tons, her beam 43.5 feet, her mean draught 15 feet, her horse-power 5.068, and her speed 16 knots.

The Novee Vremya publishes the statutes of the "company for the construction of the Eastern Railway of China," In addition to the Russian Government, the Russo-Chinese Bank is also charged with the construction and development of the railway from Cheu-Lun-Tjansk, on the Western frontier, and close to the Russian Trans-Baikal territory, as far as a certain point on the Eastern frontier in the Province of Girinsk, near to the Amur district. This line is to be connected with the lines which Russia is building on the Chinese frontier from Trans-Baikal to the Southern Usuri line. As the new line will have by agreement with China a Russian line of rails five feet across, it will thus be brought into immediate connection with the Siberian Railway, and form one great chain with the Tacheljabinsk and Vladivostock line, while it will thus also avoid the immense windings of the Amoor River. This undertaking for building the East China Railway must be carried out within six years by the company of shareholders. who must all be either Russian or Chinese subjects. The share capital of five millions of roubles will be paid in cash to the company by the Russian Imperial Treasury, and the shares are to remain at an agreed price for the Treasury. The financial stipulations are of such a nature that the carrying out of the undertaking in in the hands of the Russian Ministry of Finance. The president is to be chosen by the Chinese Government, and will have a diplomatic mission as representative of that Government. After 36 years have elapsed China will take possession of the railway on making certain payments, and after 80 years it will become the absolute property of the Celestial Empite. Moreover, there are stipulations that the company shall provide also for the development of the railway system in the interior of China, and it is to be left to its

JAPANESE FACTS AND COMMENTS.

Information from Shanghai published in the Osaka Asahi announces that no demand exists at present in North China for Japanese yarns. The market in general is quiescent; the exchange rate rising to 84 taels on the 7th instant. The stock of yarus on the 8th is reported to have smounted to about 3,000 bales. Chinese and Indian productions are on a downward tendency, the stock of the latter aggregating 22,000 bales. Bombay yains are present quoted at rates varying from 65.50 to 80.25 taels for 203, and from 64 50 to 76.50 taels for 160. The sales of the former amounted to 450 bales and of the latter to 135 bales during the past week. Cotton Spinning factores in Shanghai have recently, suspended night work on account of insufficiency in the supply of raw cotton. Further depreciation appears inevitable.

With regard to the Far Eastern situation a politician who migns himself "Tohissi" speaks through the columns of the Nippon as follows: -"Unless energetic steps be taken Japan wilt fall into the danger of losing permanently her title to a voice in the Continental question. Her name, her prestige, will cease to be a factor in the Far East. The spirit with which the Government rose to succour Korea a few years ago is now entirely extinct. Pressure injudiciously brought to bear upon China in regard to the Indemnity, and the evacuation of Wei-hal-wei was that considerably haste-The Cabinet seems to have aimed at ned. avoiding foreign relations altogether in matters of Oriental policy, in order to protect the coun-try from all complications. There is no remedy for the past error, but we should avoid bungling for the future. The existing Cabinet can do nothing except with the aid of an oniside Power. This, however, it can derive by concluding an alliance with England. An oppor-tunity is available for making up in Korea losses which were sustained in China. The plea of the insufficiency of national resources can not be considered. If the Government is really willing to enter upon an assertion of Japan's rights, it can count upon the support of forty million loyal, brave, and intelligent souls. If, on the other hand, the Government takes a course of reticence or retirement, it must expect soon to be surrounded by forty millions vehemently condemning it for its impotency. It ought to be remembered that the first principle in maintaining the national prestige is a definite foreign policy. Without this a host of regiments and squadrons will be of no avail. The authorities therefore should clearly see the necessity of formulating a policy to act upon, national resources and armaments being of secondary importance." How delightfully naive some of these expounders of politics are!

A certain nobleman is represented by the Tokyo Asahi as having made the following remarks with regard to the recent meeting of the Liberals at the Kairaku-yen. If the protest were to be rejected by Russia, Germany and France what would be the next step? It is easy to make a protest, but difficult to follow it up. If Japan really desires to oppose the actions of the three Powers in China, she must first be resolved to have recourse if necessary to war. But do her resources allow her to take auch a step? Is she sure of the efficiency of her army and navy for such an enterprise? The result of the protest in regard to Hawaii in the spring of lest year is still fresh in the memory of the public. Are the friends of the policy of protest bold enough to urge that Japan should at once proceed to Vladivostock with loaded guns in the event of her objections being disregarded? The protest seems to be a plea for attacking the present Cabinet, and under it is concealed a desire to promote party in-

cocoons from China, the amount of import increasing considerably of late. The figures for the 29th year of Meifi amounted to several bundred thousand yen, while a still larger amount was noticeable in subsequent years. If the quality of Chinese cocoous is really so excellent as silk manufacturers think, it may be very desirable to import them. But it must be noticed that silk worms are more or less influenced by skill in raising as well as by topographical conditions. Success in one particular district is not necessarily a guarrantee of success in another; and whether the Chinese worm is suited to the climate and physical features of Japan is a problem which can be decided only by careful experiments. Steps were taken by the Department of Agricul ture and Commerce last year to despatch an expert to China with instructions to inspect sericultural enterprises and collect different types of cocoons and silk worms, These specimens are reported to have included no fewer than twenty different species. They are to be subjected to careful inspection in Kyoto, Nagano, and other prefectures.

The Chuo publishes a comparative table showing the amount of silk exported from Yokohama to Europe and America during the past three years. Thus:--

The output of tea for this year will show considerable decrease, and the marked appreciation of commodities and of rice in particular will inevitably lead to the increase of expenses of manufacture. A rise in the price of the leaf is, under these circumstances, certain. Last year the new leaf was quoted at 40 year, but the quotation for this year will probably not fall below 46 yen, the estimated average being 32 yen as against . 26 yen of last year. If the price falls below this rate, tea growers will be unable to cover their expenditure, and will have to abandon business entirely. As Yokohama dealers have to manufacture the tea at their own expense, and as a steady enhancement in wages and freight has to be met, the price abroad will probably be 40 or 50 per cent, higher than last year. Whether America will accept ten at these rates is a question that remains to be proved. Serious anxiety is entertained as to the likelihood of Japanese teas being superseded in America by the Ceylon leaf.

Under the heading "The conclusion of the Chinese question," the Yiji says: Germany is unusually quiescent of late, and it seems that she is inclined to cultivate intimacy with England. Mr. Balfour, speaking in Parliament on English policy towards China, said :- "Both England and Germany have common interests. and I hope the two countries will work in harmony." Russia and Germany have now entirely ceased opposition to England's lease of Wei-hai-wei, while England in turn has withheld all objection to Russia's retention of Port As you tell me that the difference in patent law Original from the UNIVERSITY OF ILLIN

Arthur and Talien and of Germany's seizure of Kain-chow. Frauce, too, having skilfully avoid ed protests from her two formidable rivals, has secured the occupation of Kwang-chow. The dismemberment of China has thus been brought to an end for the time being. But Japan ought not to be content with the remainder of the Indemnity; she should consider it absolutely necessary to make some arrangements in China or Korea for the preservation of the balance of

#### CORRESPONDENCE.

#### THE NEW TARIFF.

TO THE EDITOR OF THE " JAPAN MAIL," Sin,-I was pleased to see your article this morning as to the new Tariff. Personally I am morning as to the new latin. rersonany I am inclined to hope the Japanese Government will not give notice of their intention to coforce the New Duties until after the Austro-Hungarian Treaty has been ratified and that then they will take advantage of their rights and enforce the new scale of Duties at the carliest possible date. The present state of affajis has its advantages, as it prevents, or at least checks, the speculative im-port that would take place if a six months' notice of a new Tariff were given, as the doubt that now exists prevents speculative import to a great degree which would be very disastrous with the heavy stocks of most goods afready here. The Tariff question has undoubtedly unsettled business for some time past, and the sooner something de-finite is known the better it would be for trade in general, particularly if that notice will not allow time for speculative import from the producing centres.

Yours faithfully, A.B.C. Yokohama, April 15th.

#### THE DOSHISHA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In my recent communication respecting the Harris Science School I wrote as follows:— "Under the guidance of the trustees the Science School is no help to the cause of Christ, the Do-shisha is not a Christian University, and there are no evangelical Christians in the school."

So far as the Harris Science School, which was the subject of my letter, is concerned that sentence is exactly true; but if applied to all the departments of the school it would be unjust to Prof. C. M. Cadey, the one foreign teacher in the school (who was not in my mind when I wrote) and perhaps to one or more Japanese teachers. As I am auxious not to do injustice to any one permit me to say that if my words be applied to all parts of the school the above exceptions should be made. I may add here that at the recent Graduating

Exercises in the school no Christian hymn, prayer, reading of scripture, or allusion to Christianty was heard from beginning to end. This silence at the hebest of the Mombusho indicates the present position of Christranity in the school.

I am, very truly yours, M. L. GORDON. Kyote, April 16th, 1898.

#### FOREIGN PATENTS IN JAPAN.

TO THE EDITOR OF THE " JAPAN MAIL."

Sin,-I have to thank you for the liberal space which you allotted to my former letter, and also for the great pains which you took in replying to it. It is with great reluctance that I again trespass apan your kindness.

Liegret that the substitution of "why should I consider myself aggrieved" for "why should I consider bimself" (as I wrote it) should have made what you call the mélange worse confounded. But let that pass.

ed. But let that pass.

Extrater ituriality (magnificent word!) has in point of fact very little to do with foreign or Japanese patents, as you must acknowledge, if you take a single example. I invents a new sewing machine, and patents it in Japan and Britain. B gets a quantity made in Germany or some other neutral cournry without J's licence, and dumps down a shipload in Yokohama. He may perhaps sell one or two to the foreign failors within the settlement, and to that extent defraud J of his lawful profits; but if he sells a single one to a Japanese, the machine is conficulted, and the purchase liable to punishment under the Japanese law. It is true that the law cannot touch the vendlaw. It is true that the law cannot touch the vend-or, but the protection of the patentee is perfectly by the average city and town Board of Health, effectual.

practice between the United States and the consalar courts of other nations was discussed ad nauseam years ago, I will try to obtain information about it elsewhere; but I really should be glad to know if an American subject obtains any reciprocal advantages. Reciprocity seems to be "a thing we often hear about, but very seldom see."

Since I failed, even after careful study, w comprehend a certain paragraph in the sense in which you intended it to be taken (which was perhaps not entirely my fault) I may perhaps have misunderstood another one, in your leader of 29th March. Is it really true that;

"The subjects or citizens of any State belonging to the International Union (&c.) are enti-iled to enjoy in all the other States with respect to patents or trade marks whatever advantages they enjoy in their own State under its own laws. Thus patents and trade marks duly registered in Great Britain, for example, will become entitled to protection in Japan—(of course after Japan joins the Union)?"

It is reported that when the Ordinarily Intelli-gent Person learnt for the first time that a patent gent reason tearner for the first time that a patent registered in one country was equally valid in a dizen others, " be chortled in his joy," and mar-velled that his intelligence had never led him to discover the fact before. He is now inquiring which of the dozen or so countries is prepared to which of the dozen or so countries is prepared to grant the said comprehensive patent at the cheapest rate. I regret extremely to be obliged to add that certain deprayed individuals of the other class (or classes)—"said no word to indicate a doubt, but put their thumb unto their nore, and spread their fingers out."

The gesture is vulgar, but expressive. Yours,

#### W. SILVER HALL.

(As to the international Union, we did not of course mean to say that registration in any one country confers sate to pri-vileges in all the rest, but only that the subjects of each Sate are entitled to enjoy, in all the other States (as regards patents, whatever advantages their respective laws grant to heir own subjects. This is beside the original questions, how-ever. Mr. Hall now see that his views about consular juris-diction were mistaken.—Es. J. M.)

#### "TENKEN ZUML"

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,-Now that the Boards of Health (Eisel Kyoku) of the various towns and cities are making their annual rounds of the houses to see if the dust under the bottom of the tatams has been brushed off, perhaps a lew words as to their efficiency or non-efficiency may be profitable.

I was passing along a street the other day where two physicians live-one of them a graduate of the Imperial University, and saw the work going on of cleaning out the open sewers on each side of the street. The vilest, blackest stuff imaginable was being piled up in heaps, and alterwards carts came along pretending to take it up. But no effort was made to take up more than the bulky part, leaving the ground covered at each heap with black ships that must dry in the say and be swent black shine that must dry in the sun and be swept up by the residents along the street. Thus more fever germs are scattered about than if the ditch had been let alone.

A few days ago a member of the Board of Health came to my house to see if my tatami had been dusted mader the bottom. He litted up one or two and then handed use a slip of page on which was printed the three characters, 點檢攤 (Tenken-zumi), certifying that every spot or dot (Tenken-zumi), certifying that every apot or dot had been examined and approved hygienically. I have his certificate pasted up on my from door; did it at his request. As he bowed himself out of the door I asked him if pasting that piece of paper over my door would keep out all contagious diseases during the year. He looked at me to see if I were joking and then laughingly said he would not guarantee that. would not guarantee that.

would not guarantee coat.

Then I sat down and began to think how utterly silly and worthless such an inspection is. He seems to have no thought of anything except the accumulated dust under the mats. He pays no attention to the vile cesspool in my neighbour's yard that over-flows and comes muning by my front gale, and to my neighbour's both water that is turned loose and forms a stench within two feet of my back door. There are more typhoid germs in these open ditches and stagoant water than in a whole decade of collected dust on the buttom of the fafami.

Prison reform is a good thing, but most of us hope to keep out of prisons, and to my mind it is more important to foreigners to against against the

WILL PATTILLO.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

#### MIXED RESIDENCE AND TAXATION.

TO THE EDITOR OF THE "JAPAN MAIL."

Sir,-Lately in passing through Sendai I heard that one of the missionaries there had taken the trouble to call on the Mayor of the City to inquire about what a missionary would have to pay in taxation, when the treaties go into effect. Upon a careful estimate it was concluded that is Sendai the taxes for the average Missionary family would be about sixty gen per year. The missionary fraternity there are considerably excited on the subject and others will be likewise

excited on the subject and others will be likewise affected when they hear of it.

When the subject of taxation was a little further off, it was "politics," and those devoting their lime to religion could not waste time on the subject.

Now that their pockets are being touched directly, they commence to wake up. What in to be done? I hear that Buddhist priests are exempt from taxation; will the Christian ministry

teceive the same treatment?
Or will the societies make appropriations to pay the tax, giving us an example of what the Protectionists" at home tell us is the case: "The tariff is not a tax, and the foreigners pay it?" Or will the missionaries pay their share of taxes like

Certainly from now forward all foreigners will be much interested in the tax system of the country, and the line of action they may take will have to be determined upon.

They cannot own land, that is fixed by treaties.

They must pay income taxes, even though that income comes from abroad, as it were.

I can only hope that they, with all other foreigners, and Japanese as well, will see that the only place that taxes can be located without hunt-ing labour and capital, is on land rent.

ing labour and capital, is on same rems.

If the community laxes the land rest properly, it will necessarily lower the rest of land to the

Taxing land makes it cheap; hence it will be to the interest of all tenants to have land taxed till it falls to zero in speculative price.

This has the additional advantage of being

When this subject has been brought to the attention of missionaries they have seen the justice of the system and have become Single Taxers.

They have a good field in which to

reform. When the community generally learns that the law of wages and that of rent taxation are inseparably connected, they will work for a system

separating confected, they will work for a system of land tax that will give the highest wages.

Patrick Edward Wade, the great philosopher of Scotland, has shown clearly that there are only two things that can be taxed, labor and land. A two timings and can be eased, labor and land. A lax on labor is a curse, man is lazy enough not to overwork, without discouraging him with taxes for working. Taxing bare land up to its rental value, and exempting all improvements, encourages labor by forcing land into use and by giving labor and capital their full exemings.

We cannot deny Henry George's premises without denying that God has given men equal actual rights to the ower of themselves and capital area.

without denying that God has given men equal natural rights, to the use of themselves, and that the value of land is given by the presence of the Community. If we accept his premises, we must his conclusions, that by means of taxation, the miversal right to land can be preserved to the advantage of Labor, Capital, and the Community. Here then is the subtion of the question; till we accept and apply it, we will have trouble. We must take the right or the wrong side of this question; which will in be?

It for one, am for the Smele Tax.

I, for one, am for the Single Tax.

CHAS. E. GARST. Akita, April 14th, 1898.

#### THE JAPANESE AND AMERICAN SCHOOL SYSTEMS.

TO THE EDITOR OF THE " JAPAN MAIL."

Sir,—One of your correspondents, endeavouring to exponerate the Bureau of Education from blame for discriminating against religion in dealing with the problem of education, made certain statements which are notice, in regard to the school systems of America and Japan, which may therefore mislead the public, although I acquit him of any intention to mislead.

tention to mislead.

He says the school system of Japan is founded on that of America, and, as in America, religion is wisely excluded by the State. Now a try this is meant that the Japanese system is a copy of the American it is untrue in several particulars.

T. In the first place, in America the Educational Systems, as they may be called any Sulface.

there are certain strong resemblances common to them all. They are wholly independent of each other,

2. All the American common school All the American common school systems agree in this, that the schools are open to all child-ten of school age without money and without price, and in some localities the school books for economy's sake are also furnished. This is quite different from the Japanese system, which charges fees insignificant in themselves but sufficient to exclude the children of the poorer classes who most need state aid in getting an education.

most need state aid in getting an education.

3. In some States, attendance at school is made compulsory for a certain number of weeks yearly on all children between certain ages. But provision is made that if a child is attending a private or parochial school where it is receiving a due amount of secular instruction, such attendance shall be deemed a fulfilment of the law.

There is no desire on the part of the State to discriminate against private or religious schools.

discriminate against private or religious schools, providing they fulfil the secular requirements; the State indeed welcomes the co-operation of private persons and religious societies in promoting education and virtue and often assists financially, This does not seem to be the case in Japan.
4. In some of the States the reading of the

Bible daily without note or comment is (or was all my latest information) required by law, and when

on required is in some States at least permitted,
5. Some States by judicial decisions have for-bidden the reading of the Bible and religious instruction in the public schools on the ground that religious instruction is not within the province of the State but rather of the Church and the home (a very sound position it appears to me), and in view of the practical difficulty that arises in a population of mixed religious opinions, of doing justice by them all as should be done in an institusupported by the taxation of all, But the whole moral instruction sests upon a commonly understood Christian basis, and the literature of the schools also does so,

6. But as religion would not be allowed to be directly taught in the public schools of most of the States, so in no American State would the tea-ching of irreligion and the despisal of religious

ching of ireligion and the despisal of religious sanctions and considerations by a public school teacher be tolerated. If I am correctly imformed, such is not the case in Japan.

7. If the object of the Japanese Government is to secure the education of its people on the American plan, it should freely provide for the education of all the children of Japan, and if their secular instruction comes up to the required standard, it should welcome aid from all mistingtions without regard to the religious guestions a long as without regard to the religious question so long as popils are not taught to be immust. It certainly

populs are not taught to be minuted. At certainty should not discriminate against religious schools. It is claumed that the policy of the Japanese Government is to recognize no religion, and to such a policy, impartially administered, I do not here object, but I would ask for information if the prinsciples of Shimio are not laught in the Government Schools, and if Shimio is not regarded as a religion by a large and influential section of the population, and if it is not under Government parpopulation, and it it is not under traveroment par-rounge as the established religion of the State? I have supposed this to be so. But if the above be true, what becomes of your correspondent's praise of the Japanese school system as closely following

of the Japanese school-system as closely following the American system in ignoring religion?

It is not the ignoring of religion that I now object to (though this might forcish matter for consideration), but the discrimination against religion as in the case of the Döshisha, The truly impactial way would seem to be for egal all schools according to their secolar merits and least all personnels. treat all persons applying for public employment according to their character and acquirements, without regard to the institutions from which they may have come; a position which I am glad to see The Mail is justly advocating.

Yours truly. EDGAR LEAVITT. April 19th, 1898.

#### THE JAPANESE CODE OF CRIMINAL PROCEDURE.

TO THE EDITOR OF THE "JAPAN MAIL."

Sin, I feel rather astonished at your criticism of the English version of the above, and more than astonished at your remark-"inasmuch as Prench translation had the advantage of being tevised by M. de Boissonade himself, the simplest plan for anyone proposing to make an English version would be to take the French as a basis."

Chizai-Hö (promulgated July, 1880) but not of

Chizai-Hō (promulgated July, 1880) but not of the Keiji-Soshō-Hō of 1890.
I cordially agree that the French versions of the Articles quoted by you are more explicit and ac-curate, if you are considering the text from a purely technical point of view, but it must not be forgotten that certain passages of the Japanese original itself are neither "explicit" nor "acand that some are even capable of being

translated in more than one sense.

If the examples you have furnished are fairly illustrative of the French translation, I respectmastrative of the French translation, I respect-fully venture to express the opinion that it is far too "explicit and accurate," as words occur which are not to be found in the original. M. de Boissonade's work is, no doubt, most therought and admisable in every respect as a piece of "explicit and accurate" French legal composition, but it evidently does not agree verbatims with the Japanese text which, especially in some places, appears to be the merestiskeleton of some-thing the writer ought to have stated in so many distinct words and not left to the vivid imagina-tion of readers to supply.

In short, I submit that M. de Boissonade's

French translation reads as the compilers of the Code withed the Law to read, while the English code wanta the Law to read, while the English version reproduces the meaning they actually succeed in conveying in the Japanese original, and, like the Japanese, it has been left without any of those touches which might be deemed necessary to add vertismithtude to an otherwise bald and uninteresting narrative.

Yours respectfully,
THE TRANSLATOR. Yokohama United Club, 20th April, 1808.

#### THE SALVATION ARMY.

The Salvation Army in Japan, a correspondent writer, has been just eninferced by the arrival of five Australian officers, three men and two women. They arrived at Yokohama on the Yamashiro Maru and arrived at Yokohama on the Yamashiro Maru and after an informal welcome at this port were taken to Tokyo, where a very successful meeting was field in the Y.M.C.A. hall at Kanda, lent to the Army for the occasion. One of the most interesting features of the meeting was the "transformation" of the officers. After the singing of an English song in their Western clothes they retired to antercome and shoutly afterwards reappeared in full Japanese costume, singing an Army song in the veroacular. The effect was much appreciated by the large audience,

veronentar. The effect was under the large audience,
The three male officers have received appointments in Tokyo. The two women officers will
the chief and residents of the times made officers may be received approxi-ments in Tukyo. The two women officers will take up the visitation of the ships and residents of Yokobama on behalf of the Army funds, Ensign Miss Hatcher, who has for some time carried on the work, having been appointed to the oversight of the Army work in the Okayama District,

#### THE STABBING AFFRAY IN BLOOD TOWN.

On Tuesday, at H.B.M.'s Consulate, before his Honour Judge Wilkinson and a Jury, David Logan was indicted for feloniously wounding John Jacobson with intent to do him bodily harm; and on a second count for unlawfully wounding.

Mr. Litchfield appeared to prosecute.

One of the Jiners summoned, Mr. William Gordon, was not present, and was fined \$50. The Jury was eventually sworn in as follows: Messass. F. H. Bull, C. H. Fearon, W. H. Gomez, W. K. Trenze, and H. Ivison.

Mr. Litchfield, in opening the case for the Crown, outlined the circumstances, and, commenting on the condition in which it was alleged prisoner was at the time of the struggle, said drink was a xxuse for crime, but it might be a factor in determining whather the analysis. determining whether the wound was inflicted with intent to do bodily harm. If they considered prisoner concealed the knife on his person with intent to wound Jacobson they would find him guilty on the first count; if not, and they were still satisfied that the assault had been committed, they

satisfied that the assault had been commuted, they would convict on the second count.

Thomas Hali Trippler, surgeon, said that on March 17th a wounded men was brought to his office. His name was John Jacobson. Witness examined him and found an incised wound over the left side of the foretread, from which the man had been the didner treatment that was also a wound on been bleeding freely; there was also a wound on the cheek, another on the scalp, another at the back of the neck, and another in the cavity of the abdomen. The wounds about the head and face were not dangerous; but that in the abdo-men was a very dangerous are meant that the Japanese system is a copy of the American it is untrue in several particulars.

T. In the first place, in Americanthe Educational Systems, as they may be called, are State systems and another to tailed from the French as a basis."

abdomen and piercing to the extent of an inch and a half. It did not, however, injure any vital partion, though it must have been very near it. The wound might have been daused by such an instrument as the knife produced. He had measured the blade of the knife and the width of the cuts in Jacobson's clothing, and found they corresponded. Jacobson was under treatment at the hospital for nearly a fortnight.

By prisoner—Jacobson left the hospital before witness expected, as he wished to go to Hakodate. He was convalencent when he left.

Robert Jones, publican, landloid of the Sea-

He was convalencent when he left.

Robert Jones, publican, landlord of the Seaman's Club, said on March 17th, between six and eight p.m., he heard a disturbance outside his house. On going out he saw prisoner and Jacobson struggling together. He first saw Jacobson knock prisoner down. Prisoner got up again-but as he was "awful drunk" he was soon knocked down again. Jacobson was then going away when prisoner again called to him to fight, and held a knife up in his hand. Jacobson came back and closed on him, and as he closed a Japanese policemen jumped on prisoner's back.
Prisoner then brought down his hand with the knife in it. There was a policemen present all the time, but the crowd prevented his interfering; they merely wonted to see the "sport."

By prisoner Williams had can Jacobson since

By prisoner—Witness had seen Jacobson since the eight of the fight. He said he was anxious to get aboard his ship. Witness had not prosecuted in the case on the advice of anyhody.

William Williams, attendant at the Royal Naval Hospital, said he was with the last witness on March 17th, playing billiards. He saw the knife in prisoner's hand, and cried "Look out, he has a in prison He and last witness afterwards went in-

John Neary, deposed that he was talking with Jottl Neary, deposed that he was taking with Jacobson and a man named Pariett, when prisoner passed by Jacobson went away, and witness afterwards head a noise, and saw prisoner, who was very drunk, making a disturbance with a man named Pratt. Witness and Parcett interfered, named Pratt. Witness and Patrett interfered, but "could get no sense out of prisoner," as he was very drunk. They went away is little, but heard another distribute, and, going back, saw prisoner and Jacobson on the ground together. He could not say exactly what took place, but at the end of it he saw Jacobson wounded and bleeding. Witness did not see a kuife used. John Charles Parrett gave similar evidence. Neil Gordon Munto, surgeon and physician, said he examined Jacobson after his admission to the Hospital. He had three wounds, one on the forchead, one on the right temple, and another on the abdomen. The abdominal wound was deep, and of a decidedly serious nature. Five

another on the abdomen. The abdominal wound was deep, and of a decidedly serious nature. Five layers of clothes were penetrated by the knife before it reached the abdomen. The first night was a very anxious one, but no bad symptoms supervened, and the ercovery was unintercupted.

By prisoner: The only remark Jacobson made to witness concerning the affair while in hospital was that he did not wish to prosecute.

The evidence of several Japanese police witnesses was given through the interpretation of Mr. Chalmers.

Chalmers.

Mr. R. G. E. Forster, Acting Consul-General, deposed that he had communicated with the Swedish Consul as to the production of John Jacobson, and had received a reply. The Judge, however, decided that this could not

be put in.

This was the case for the prosecution.

Prisoner called Samuel Pratt, an American citizen keeping a boarding home at No. 97; but the witness gave negative answers to all his questions, and appeared to know nothing of the matter.

Avert Kerkchoff, a Hollander, usually known

as Anderson, was also called, but his evidence was not material,

Prisoner made a short statement to the effect that Jacobson was the original aggressor, and drew attention to the fact that he had already been sentenced to one month's imprisonment for drunkenness and six weeks for assault. He was unable to engage a solicitor through lack of means, and was thus handicaped in his defence.

means, and was thus handicaped in his defence.

The Judge, in summing up, remarked that the evidence was all one way; there was no doubt an assault was committed, and there was absolutely no evidence in any way to justify it. As counsel for the prosecution had very properly pointed out, however, they must consider prisoner's intoxicated condition at the time with reference to the question of intent. If they decided that he had no intention to wound facobout or that he was incarable of forming as intention. son or that he was incapable of forming an inten-tion at the time they would convict him on the

The Judge said he thoroughly concurred in the verdict. The Jury had taken a very merciful view of the case. Prisoner had cause to thank God that he was not being tried for his life; he had had a narrow escape, for the wound might easily have been falal, He (the Judge), taking into consideration the finding of the Jury, should sentence prisoner to eight months' hard labour, the sentence to commence from that day and to run concurrently with any sentences prisoner might be serving at present.

#### THE ARMAMENT RACE.

A summary of the British Navy Estimates for 1898-9 hows that the net total of the Estimates amounts in £23,778,000, an increase of £1,440,000 compared with the original and supplementary estimates of the current financial year. The increased number of officers, men, and boys proposed necessitates a further increase in nearly every vote connected with the personnel. The aggregate of those votes exceeds by £446,300 the provision made for the same services in 1897 98. The Works Vote does not differ materially from that of the last year. The Shipbuilding Vote shows an increase of £1,571,000 over the original estimates of 1897-98. But of this a sum of about £1,400,000 represents provision for expenditure, which, but for the prolonged labour difficulties, would have been met last year.

The total number of officers, seamen, boys, cosat-guard, and Royal Marines voted for the year 1897-98 was 100,050, an increase on the previous year of 6,300. The additional numbers entered were distributed, as always, over the whole year, each mouth showing an increase on its predecessor. On February 1st the figure stood at es of the current financial year. The increased

year, each motili showing an increase on its pre-decessor. On February 1st the figure stood at 98.652. It may be regarded as certain that the aggregate voted will be practically obtained by April 1st. The Estimates for the year 1898 99 include provision for a further increase of 6,340 officers, men, and boys. The sea-going training-ship Calliope has been commissioned as an additional tender to the Northampton for the direct entry of lads. One thousand and seventy-nine entry of lads. One thousand and seventy-nine lads were entered through these training-ships during the twelve months ended March 31st, 1897, and 808 more in the nine months ended Christmas, 1897. Steps have been taken to increase the mas, 1807. Steps have been taken to increase the scale of rations laid down for the lads trained in the sea-going training-ships. Experience has shown that the naval ration might with advantage be called in the case of lads taken at an age of rapid growth, and placed suddenly in an un-accustomed occupation, involving much physical exertion and exposure to weather. With the view of retaining as many settificers as possible after they have completed time for pension, an Order they have completed time for pension, an Order in Council has been obtained extending to engineroom and other arti-on mitigs the privilege of 6d, a day "extension pay," allowed in other cases to men who remain in the Service after completing

time for pension,
The total number of Royal Marine recruits The total number of Royal Marine recruits raised during the year was 2,665. The class of secrait taken was failly up to the average as to physical conditions, age, and statute, notwithstanding life additional numbers necessary to be raised. An increased scale of ration has been granted to the recruit while under training. An increase, both of bread and meat, has been made to their delicallongues.

to their daily allowance.

The Royal Naval Reserve of Officers is so popular, and the great Mercantile Marine companie-do so much to encourage their efficers to join it that at the present moment, when there is not a vacancy on the lists, there are at the Admiralty 154 applications for entry from eligible candidates. It is as yet premature to judge of the probable result of the changes announced last year with the view of putting a larger number of men through a six months' training in the Riest. The age was reduced from 19 to 18 years, as it was felt that the younger men would adapt themselves more easily to the different life on board a man-of-war; and for the same reason it was decided that young men should be allowed to emback direct for six months' training as soon as they had completed 28 days' drill, instead of first serving for two years in the Reserve, provided they were well reported upon. At the completion of their drill, and having passed the required examination, they might be relief. the required examination, they might be rated "qualified" seamen at the age of 20. The number for which it is considered that accommodation can advantageously be found on board ships at one time in 600. At the present time 543 are embarked.

eminared.
Work has been so seriously affected by the labour difficulties, that it is even now impossible to say how far the anticipated expenditure on this head will fall short, but it is estimated that it

contracts spreading over several years, the post-postenent of work for six or seven months throws for word the instalments to later dates, and the general effect is to delay the dates of completion general effect is to delay the dates of completion of many important ships by a period practically equivalent to the duration of the dispute. The Hustrious and Hannibal have been delayed considerably, but it is anticipated that they will be practically completed at the close of the financial year. The six battleships of the Canopus class have suffered most severely—the Ocean and Goliath more especially, and the launch of the latter has been delayed some months.

In the coming financial year it is proposed to commence:—

commence ;-

3 Battleships. 4 Armoured cruisers.

to Third class cruisers, 6 Sloops.

4 Twin-screw gunboats.
41 Torpedo Boat Destroyers.

I Royal yaclit.

A new and more powerful 6-inch quick firing gan than the present one has, after exhaustive trials, been adopted, and its manufacture for future ships is proceeding. For the first time since the introduction of quick firing gues it has been foured possible to produce a gun which, while able to fire with safety and rapidly, does not require the expensive and heavy brass cartridge case which has hitherto been thought indispensable. The adoption of this plan will cause a great saving in the cost and weight of ammunition, and of the space required to stow it. space required to stow it.

The various increases and decreases may be thus

summarised:-£225800 Non-Effective Services..... ... 38,200 £1,666,220 £225,800

> Net increase ........ £1,440,400

#### LATEST TELEGRAPHIC NEWS,

(BROM THE " JAPAN TIMBE") UNITED STATES AND SPAIN.

REPRESENTATIVES' COMMITTEE'S REPORT PASSED BY BIG MAJORITY.

MORE MEDIATION BY THE POWERS.

AMERICAN LINERS TO BE TURNED INTO CRUISERS.

DON CARLOS TO THE RESCUE.

London, April 14.

The Washington House of Representatives has passed the Committee's report by 322 against 19 votes. Voting in the Senate takes place to-morrow. War is now scarcely avoidable. It is reported that the Powers contemplate again mediating, this time on more definite lines. The United States Navy Department has decided to purchase the American liners St. Louis and St. Paul as auxiliary cruisers.

Don Carlos has issued a manifesto, in which he declares that if the Government will not take up America's glove, he will come to Spain himself.

NATIONAL SUBSCRIPTION TO INCREASE SPAIN'S FLEET.

SPANISH MINISTER AT WASHINGTON RECALLED.

CONGRESS RESOLUTIONS SANCTIONED BY PRESIDENT MCKINLEY.

London, April 16.

The Spanish Government has opened a national subscription to increase the Fleet. to say how far the anticipated expenditure on this one million pesetas. The Spanish Caunt of unlawfully wounding only.

The Juny retired, and after five minutes' absence fred will fall short, but it is estimated that it returned with a verdict of "Guilty" on the count of unlawfully wounding by

Lipha Caunt of about £2,270,000, of which sum the caunt of unlawfully wounding by

sident McKinley has sanctioned the resolutions of Congress.

SENATE RECOGNIZES THE CUBAN REPUBLIC.

ALL SOVEREIGNTY DISCLAIMED. MOBILISATION OF STATE TROOPS. ANTI-AMERICAN DEMONSTRATIONS IN SPAIN.

London, April 18.
The Senate has adopted by 67 votes to 21 the Committee's resolution, with amendments recognizing a Republic in Cuba. The amendments further disclaim all intention of exercising sovereignty in Cuba, except in so far as to ensure pacification, and assert the determination thereafter to leave the Government to the inhabitants. A deadlock between the two Houses of Congress is probable. America has chartered four American Atlantic Liners. Eight regiments have been ordered up from New Orleans, seven from Mobile, and seven from Tamos. Spanish Cabinet has decided to convert the Spanish Transatlantic Company's steamers into warships. Anti-American demonstrations are being held throughout

THE TWO HOUSES AGREED. NO RECOGNITION CLAUSE. A THREE DAYS' GRACE TO SPAIN. PROPOSED NATIONAL WAR FORCE.

London, April 20. The Conference between the committees of the two Houses has agreed to the Senate's resolution omitting the clause recognizing the Cuban Republic. President McKinley will not sign the resolution before to-morrow to await the completion of the ultimatum wherein he favours giving Spain three days to comply, and also with the view of securing the completion of the arrangements for striking a decisive blow. A bill has been introduced into the Senate creating a national war force by calling upon all able-bodied men between 18 and 45 for three years' service.

RESOLUTIONS SIGNED BY PRESIDENT.

SPANISH MINISTER LEAVES. ULTIMATUM DELIVERED. SPAIN BROUGHT TO BAY. UPHOLDS HER RIGHTS OVER CUBA. PRIVATEERING TO BE NO PART OF THE WAR.

London, April 21.
President McKinley has signed the resolutions of Congress. The Spanish Minister has demanded his passports. An ultimatum has been delivered at Madrid, compliance being required by Saturday, the American Minister meanwhile remaining in Madrid. The Spanish Cortes have been opened. The speech from the Throne upholds Spain's rights over Cuba. It is officially announced that America will not resort to privateering.

THE FRENCH LEASE OF KWANG-CHANWAN.

London, April 19. The report of the lease of Kwangchanwan to France is confirmed.

#### CONGRESS IN CONFLICT ON THE SPANISH RESOLUTIONS.

The Washington House of Representatives has amended the Senate's resolutions, eliminating the clause referring to the recognition of the Cuban Republic. Senate refused to accept the amendment, whereupon the House requested a conference, to which the select agree

#### Notes by Emil Kemeny in the Ledger Philadelphia,

(a) Had Black played B takes P, or Kt takes B P, then P to Q Kt 4 and eventually P to Q Kt 5 would have tollowed, somewhat compromising the Queen's wing. The textmove prevents this.

BP, then P to Q Kt 4 and eventually P to Q Kt 5 would have toflowed, somewhat compromising the Queen's wing. The textmove prevents this.

(b) He might have delayed this move and played Kt to R 4 or Kt to Q Kt 5 first, so as to avoid the doubling of the Q B P. However, White will obtain a King's side attack.

(c) A powerful move, which threatens Kt takes R P, followed by R takes P ch and R takes B, with a winning game. Black is obliged to weaken his King's side by moving P to K Kt 3.

(d) More promising was P to Q B 4, followed by Kt to K 4 should Black capture the Pawn. White then threatens R takes P ch, as well as K to B 6 ch m Kt to Q 6 and Kt takes Kt P.

(e) Inferior play, which endangers the game, White should have moved Kt to Q 4. Black then had no other reply but R to B sq. for if R to B 2, White continues P to B 5, followed eventually by P to K 6.

(i) P to B 5 could not be played now, for 6, P taxt P would be the reply; if then P to K K Black plays B take P.

(g) Which evables Black to continue B to Ki 4, obtaining the superior game. White should have played R taxt P or R to Q 4, both resulting

4. obtaining the superior game. White should have played R taxt P or R to Q 4, both resulting in an even game.

(h) Better perhaps was R (Kt 3) to K B 3, giving up the Q Kt P, Black then would have the preferable position, yet he had hardly any winning chances.

(i) The text move in connection with R to Kt 8 gives Whire a chance to bring both Rooks in action, which, however, does not prove satisfactory, as Black's correct continuation shows.

(k) After this move White surrenders. He cannot stop the K Kt P.

#### GAME No 381. SECOND GAME.

## RUY LOPEZ.

WHITE, BLACK, Showalter, Pillsburg, I P K4 P K4 2 K KB3 K; QB3 3 B K; 5 K; B3 4 Castles Krap 6 B K; 6; A B K 2 7 B x B(b) Q x B 8 P x P(c) K x B 9 P Q R 4 P Q 3 to P x K; Krap 11 K; Q4(d) Castles 12 K; QB3(e) P QB3 13 P x P x p 14 R K x q(f) Q B2	WHITE. BLACK.  Showalter. #### FOTES.

(a) The usual condition is: 6-B takes Kt. Q P takes B; 7-P takes P, Rt-B 4;8-Q takes Q ch, K takes Q, leading to a pretty even game. The move selected was played by Pullsbury against Lasker in the sixth round of the St. Petersburg

tom ney,
(b) Pillshury's continuation in his game (b) Pillsbury's continuation in his game with Lasker was: 7-B takes K; B takes B; 8-P takes P, Q P takes B; 9-Kt takes B, Q takes Kt; to-P takes Kt; P takes P; II-R to K sq cli, B to K 3; 12-Q takes P, R to Q ·q; Q to R 3, and the game terminated in a draw. The text-play would prove satisfactory if followed up by B takes Kt and P takes P.

(c) The salest play for White was (8) B takes B, followed by P takes P, leading to an even game.

(d) Better perhaps was Kt takes Kt. White

B, followed by P lakes P, leading to an even game.

(d) Better perhaps was Kt takes Kt. White, however, could not regain his Pawn.

(e) White might have played P to Kt 6, followed eventually by Kt to Kt 5, which would have given him some chances of escape.

(f) White could not play P to B 4 followed by Kt takes P on account of Kt to Kt 5 and Q to K 6 ch winning the exchange.

(g) Which prevents White from P to B 1. This practically ends the attack.

(i) White, it seems, pays but hitle attention to

(f) White could not play Plo B 4 followed by Kt takes Pon account of Kt to Kt 5 and Q to K6 ch whoning the exchange.

(g) Which prevents White from P to B 1. This practically ends the attack.

(i) White, it seems, pays but little attention to Black's doubling of Rooks on the King's file. He should have played Q to R 4.

(k) The whoning move.

The International Cable Match.

Great Britain wins the match.

The third match between the United States and Great Britain was played on March 18th and 19th, the American team playing in the Academy of Music, Booklyn, the Britishers making their five in the Hotel Cecil, London. The match and Chamber of Lindon Cham

was finished on Saturday evening. The Bitish team won by the odd game, this hence their second victory, the score being the same as last year. A gallant uphili fight was made by the Americaus, but the advantage gained by their opnoments was too great to be overcome, and when, at 6 30 o'club, to the evening, the Britishers offered to draw the two infinished games, the Americaus accepted. As the former then had a lead of one game, this gave the match to them. Pillsbury and Baird were the last to finish, as both had been striving hard to win drawn games. The result of the match was:—

1 2 3 4 5 6 7 8 9	UNITED STATES. Pillsbury Showaltes Barry Hymes Hodges Delmar Baind Young Robinson Galbreath	0 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	GREAT BRITAIN. Blackbinere. Burn Caro. Alkins. Bellingham. Mills Leock. Jackson Jacobs Trenchaed	0 0 1 1

THE GREATEST WONDERS OF MODERN THE

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitatep constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sire Samual Bazen, in his work entitled "The Nile Tribut taries in Abyssinia," says—"I ordered the dragoman Mahometo inform the Fakir that I was a Doctor, and I had the beat medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unministrable purgative properties, they create an undeniable effect upon the patlent, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN,

### HOLLOWAY'S OINTMENT

Is a certain emedy for bad legs, bad breasts, and dicerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arcesting and subduring all inhammations, Mr. J. T. Coorse, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of holloway's Unitmer. I save some to the people, and nothing could exceed their filtude; and, in consequence, milk, lowers, butter, and horse poured in upon us, until 1 t last a two-spoonful of Olitanes. Was worth a fowl and any quantity of peas, and the demand be ne og great that I was obliged to lock us the small remaining. "stock."

Sold by all Chemi ts and Medicine Vendors throughout the Warld.

#### SUMMARY OF NEWS.

Tes Spanish Squadron has left Manila to meet the American Fleet.

FRANCE and Italy have officially proclaimed their neutrality.

THE Americans have bombarded and destroyed the half-completed batteries at Matanzas.

Two French missionaries have been murdered. by Chinese at Yunanchao in the province of Kwansi.

In pursuance of her neutrality, Great Britain has prevented the sailing of American torcedo vessels from Falmouth.

Digitized by GOOGLE

organising auxilitary cruisers, and gives American ships 30 days to clear Spanish ports.

THE Russian authorities have applied to the German firm of Kunst, Albers & Co., for the charter of eight steamers.

THE battleship and cruiser now in course of construction by Armstrong & Co. for Japan have been named the Hatsuse and Isumo.

THE Americans have captured the Miguel Fose, laden with valuable cargo, also the Catalina, Saturnin, and various smaller craft.

On the 26th inst. the branch office of the Nip-pon Yusen Kaisha, near Yokohama Railway station, was partially destroyed by fire.

THE new Oriental Hotel, on the Bund, Yokohama, is to be opened on the 2nd proximo under the management of Messra. Dewette and Muraour.

THE Americans have captured the Spanish Transatlantic Liner Panama while bound from New York to Havans, with Spanish refugees and valuable cargo.

SIR MICHAEL HICKS-BEACH, in submitting the Budget, stated in the House of Commons, that the surplus of the past year amounts to €3.678000.

As the result of the negotiations between the Japanese and Chinese Governments the latter has pledged herself not to cede the province of Fuhkien to any other Power,

THE U.S. squadron, which has been anchored in Mirs Bay for several days, left for the Philip-pines on the 27th inst., with a view to capturing the Spanish men-of-war there.

THE plague is apreading in Formosa. It is reported that from the 20th to the 22nd inst. 15 cases were reported in Daichu, 5 in. Kagi, 22 in Taipeh, and 3 in Teckcham.

An American torpedo destroyer has engaged a Spanish gun-boat off Malanzas. After eleven shots had been exchanged, the American retired, the vessel being apparently damaged.

IT appears certain that no large body of troops will be sent to Cuba for several months, partly owing to the lack of equipment, and partly because of the approaching fever season,

On the 26th inst, the United States Government notified the Japanese Authorities that all tele-grams for Cuba would be examined at Key West and that cipher messages are prohibited.

MR. BALFOUR has notified the belligerent parties that Britain cannot lay down the principle that that coal constitutes contraband of war. It, he said, may frequently be so, but not necessarily.

PRERIDENT McKinely in a message to Congress asked for a joint Resolution declaring that a state of war exists since the 21st inclusive. This resolution has passed in both Houses

INFORMATION has been received from Vladivostock that the Russian Government has recently prohibited telegrams in cipher and in the Japanese Kana, from being received for trans-

A MAN named Iwasaki Sadanosuke, living in the village of Shimo okaba, in Kuji-gori, on the 24th inst. murdered two fishermen named Yasu and Chusuke. The muiderer was arrest-

Diseases Investigation Bureau, will be despatched to the Island to investigate the condition and management of the hospitals, etc.

IT is reported that the authorities have ordered the Staff Officers of the Divisions of the Army throughout the country to assemble on the 25th inst., at Tokyo, where a council will be held for about a week.

PRESIDENT McKinley has issued a proclamation granting Spanish vessels leaving or arriving in the States till May 21, to clear unmolested, but the Prize Courts are in adjudicate on the captures already made.

THE Tea Traders' Guild of Yokohama gave a very enjoyable entertainment at the Chitose restaurant on the evening of the 27th inst., at which a number of foreign merchants were among the guests.

Tex Spanish Minister has left Washington. The American Ultimatum has reached Madrid and Spain immediately broke off diplomatic relations, and the American Minister left Madrid. Hostilities have commenced.

A TELEGRAM dated New York, April 23rd, and received by the Mitsni Bussan Kaisha the same afternoon, states that hostilities have commenced at Cuba, a Spanish merchantman has been seized, and Havana blockaded.

THE Spring Meeting of the Nippon Race Club was held on the 26th, 27th and 28th inst. and proved one of the most successful and enjoyable on record, with the exception of the last day, when persistent rain marred the enjoyment of the sport.

A LONDON telegram of the 25th inst. stated :-The blockade of Havana has been established. The cruiser Nashville has captured the Spanish merchant steamer Buenaventura, also the Pedro. The Spaniards have captured the wheat-laden ship Shanandoah bound for Antwerp. President McKinley has called out 100,000 volunteers.

THE Import market in Yokohama still continues stagmant in the extreme, no business of importance being reported in cotton piece goods, yarns, fancy piece goods or woollens. The recent rise in prices in Manchester, con-sequent on the expected short arrivals of raw cotton from America, owing to the war with Spain, is, however, expected to have the effect of moving off some of the accumulated stocks within a short time, but at present the extreme tightness of the money market and high rates of interest demanded by the banks prevents dealers from taking up goods. Metals are suffering from the same cause as cotton goods and stocks are still accumulating. The kerosene market is firmer and shows some signs of improvement, and a good business has been done in augar, both brown and white refined, at materially increased prices. Further large imports of rice have been made from Suigon, Rangoon and China and there are now large stores of the grain both in Yokohama and Kobe. Prices, however, still rule much higher than in average years. In Exports a fair business has been done in Silk, at considerable concessions on the part of holders, in view of the demand for America having fallen off in consequence of the war. Some two or three bundred picula of the new season's ten have been received and the samples dispatched by the Doric on the 30th. The quality of the leaf is considered excellent—better than for the last two years but quotations are high and appear likely to be maintained. Very little has been done Spain reserves the right of resorting to priva-teering. Meanwhile she is confining herself to moss, Mr. Shiga, an assistant in the Contagions and tobaccontage has slightly improved.

#### SPIRIT OF THE VERNACULAR PRESS.

There is a great deal said at present about m strong foreign policy and a weak foreign policy, but the fact is that the strength or weakness of a country's attitude towards toreign States must he determined by the circumstances of the moment. To talk of a uniformly stalwart, or a uniformly yielding, policy is merely to display ignorance. No one questions the loyalty of the motives by which the strong-policy agitators of to-day are influenced. The question is whether their agitation conduces to the interests of the nation. It is in the interests of the nation and nowhere else that the mainspring of foreign policy must be sought. The conditions with which the country is required to deal III present are not of sudden origin. They are the sequel of events now three years old. Japan had an nequestionable right to annex the Liaotung Peninsula, and the Three Powers, when they insisted that it must be restored, were interfering with her just rights, whatever may have been their motive or their pretext. It is natural that every patriotic Japanese should resent their action, and the unconditional surrender of the Peninsula may well furnish food for reflection. But to give way to unreasoning resentment is not the way to repair a misfortune or to redress a wrong. Japan may easily make a mistake at this juncture. The mind of the masses is not very discerning. To many persons roughness and violence seem the only means of national self-assertion. In pre-Meiji days ignorant fauatics or patriots imagined that murderous assaults upon foreigners were good methods of terminating foreign intercourse, whereas they served only to embarrass the country and to put weapons into the hands of the Western Powers. Patriotism may easily be converted into fanaticism. The strong-policy agitators should remember that danger; should remember that they are dealing with materials which may at any moment clude their control and work irremediable mischief. Japan's statesmen have their hands full at present. Never have they been called on to manipulate a more delicate or important situation. It should be the sim of all traly patriotic men to strengthen and to support them, instead of creating difficulties in which the country's enemies will find only fresh opportunities. We need scarcely say that these are the sentiments of the Fiji Shimpo.

It is much to be desired that men who agitate in favour of a strong foreign policy should consider whether the nation has kent abreast of the policy hitherto pursued by the Government. Everybody knows that to use big words and to flourish weapons can never place the prestige and influence of a country on a solid foundation. What is of prime importance is to develop the material resources of the nation. But that is precisely the end which the party politicians of the time seem careless of achieving. Compare, for a moment, the opportunities that the Government has created and the people's manner of utilizing them. After considerable difficulty the Government obtained a railway building concession from Korea, but private enterprise could not be roused to take advantage of the opportunity. The Shimonoseki Treaty provided for the opening of several new ports and the inauguration of manufacturing industry in China, but the people have remained indifferent to the chances thus created, and foreigners have been the only gainers. Is it not advisable that the nation should prove itself competent to keep up with the Government's lead before agitation is fomented for the pur-pose of urging the Government to still greater speed? The Chuo Shimbun, from which we quote, thinks that the efforts of wise patriotism should be directed to making the people discharge the duty properly devolving on them—the duty of developing industry and commerce—instead of forcing upon the Gov-ernment measures which the nation is evidently unprepared to consummate or to profit by. . . .

Digitized by Google

order: one is to reduce the expenditure; the other, to increase the revenue. The Matsukata Cabinet, unable to effect the former, proposed to have recourse to the latter only, but hevertheless shrank from carrying out its policy fully, and would have been content to face a deficiency of some 13 million yen in the Budget, Such a method of finance can not be gravely discussed. Count Inouye, taking the matter in hand on behalf of the present Cabinet, has partially restored equilibrium by lopping off 46 millions from the expenditure. Some describe his policy as one of retrenchment; others speak of it me re-organization of the finances. It is neither the one nor the other. What Count Induye has done is merely to re-apportion the outlays on account of the post bellum programme. He has not cut down the dimensions of the programme, nor has he postponed the date of its consummation. He has only distributed the expenditures differently, so that the portion falling to the present year is much less than it would have been according to the original plan. On the other hand, the portions falling to future years become correspondingly greater, so that the advent of the evil day is merely put off. The policy is purely temporiz On the other hand, it is necessary to distinguish between the extraordinary expenditures connected with the post-bellum programme and the ordinary expenditures that are independent of it. The former are to be defrayed, in great part, by public loans, when the Indemnity is exhausted. These loans should be floated in fixed amounts year by year, but, the market having been unfavourable for the operation, a sum of over 30 million yen remained unfloated at the close of last year (March 31st, 1898), and of the sums actually floated, considerable portions had been taken up by the Treasury itself. Forty-nine millions should be raised during the current year, but owing to Count Inouye's modifications that sum is reduced to about fifteen millions, Adding these fifteen millions to the unfloated figure of last year, it appears that a total of over 45 million ren worth of bonds should be issued before March 31st, 1899. There is no prospect whatever that an operation of such magnitude, or anything approximating to it, can be carried out at home. Recourse will have to be had to foreign markets, or to the Indemnity. When the Masukata Cabinet went out of office, there remained nominally 49 million yer of the Indemnity. But a part of it had been employed in buying bonds issued by the Government, and a large portion had been converted into silver yen or ingots. The remainder of the Indemnity is to be paid over in a lump sum next month, and the Treasury will thus come into possession of ample funds. Doubiless the idea is to draw upon those funds for the sums which would otherwise have had to be obtained by loan. In fact, the Indemnity is to be drawn upon for everything, and the financial methods of the be compared to those of a man who, time may finding himself in possession of a sum of bor-towed money, changes his scale of expenditure accordingly, trusting that something will "turn up" in the future. There has been no adjustment of the finances in the true sense of the term. There has been no provision for increasing the revenue or permanently diminishing the expenditures. The nation wants to get beyond the vicious circle of the Indemnity. It wants to see its way clearly ahead. To place the finances on a sound footing is the great task inviting the efforts of the present Cabinet. Foreign policy is a secondary matter. The people will be quite content if the finances are arranged. There are the views of the Shogyo Shimpo.

The Mainichi Shimban constitutes itself the mouthpiece of those that advocate the redemption of a large quantity of War Bonds by the State as the best means of restor-ing a vigorous tone to the industrial and commercial market. It is not to be denied that the prices of all kinds of shares and There are two fundamental measures to be of late, and that great depression exists owing two gunboats of the first class; adopted in setting the finances of a State in to scarcity of floating capital. Japan has not class; and four torpedo boats. securities have undergone heavy depreciation

suffered as much as Germany did, perhaps, after the war with France, owing to the different policy pursued with regard to the indemnity and the War Bonds. But she seems likely to be a greater sufferer hereafter, unless the Government takes steps to redeem the War Bonds. It need scarcely be said that the Mainichi indicates the Indemnity as the source from which money should be obtained for that purpose, but inasmuch as it does not enter at all into the arithmetic of the question, or make any attempt to show how much of the Indemnity would be available, its remarks do not bear a practical aspect.

. . In the programme of reduced expenditures elaborated by the present Minister of Finance, a sum of over six hundred and twenty thousand ren is cut out of the appropriation originally fixed (in the form of continuing outlays) for the improvement of State Railways, and a further som of over one million two hundred thousand yen in the annual appropriation for railway extension (First Period Lines). Thus the total reduction in the grants for railways is 1 # million yen. The Kokumin Shimbun condemus this policy in unmeasured terms. It declares that without means of communication a country's armaments, however powerful, are virtually useless; there can be no healthy development of the nation's material resources. These points are elaborated by our contemporary, but its arguments naturally present no novel features. The main fact is that it strongly advocates recourse to foreign capital for the purposes of railway construction and improvement, and supports its contention by reference to Europe and Americs, where foreign money has been freely used for the purpose.

#### THE TWO FLEETS.

The war between America and Spain will be essentially a naval war, and a comparison of the fleets of the two countries will therefore be interesting. Neither is a first class naval power, but both possess a number of fine, up-to-date war vessels. America has 33 armoured ships, including nine battleships, five of them of over 10,000 tons displacement; she has besides 39 unarmoured ships, many of them obsolete in design, and even some of the old monitors are included. She has 28 umarmoured gunboats, and 27 torpedo beats. In all 128 war vessels, with 1.640 guns, 15.760 officers and men, and 3.339 naval teserves. Spain has 11 armoured ships, most of them powerful vessels of modern design, ranging from 7,000 to nearly 10,000 tons displacement, she has 63 unarmoused ships, two asmoured gunboats, 40 unarmoured gunboats, and 79 torpede boats. In all 197 vessels with 960 guns, 26, 460 officers and men, and 25,000 naval reserves. The United States have recently purchased two new cruisers from Brazil and will convert the New York, Paris, St. Louis, and St. Paul, of the New York Southampton line, into cenisers.

#### MANILA'S DEFENCES.

Though the scene of war will probably be chiefly in Cuban waters and on the Atlautic sea board, the Philippines may receive attention from the American Asiatic Fleet. The islands are protected by the following war vessels: Isia de Cuba, protected and class cruiser, 1,045 tons displacement; Isla de Zuson, protected and class cruiser, 1,045 tons; Reina Cristina, sat class cruiser, 21 guns. 3,540 tons; rat class cruiser Castilla, 11 guns, 3,260 tons; Velasco, 2nd class cruiser, 7 guns, 1152 tons; D. Juan de Austria, 2nd class cruiser, 13 guna, guus, 1160; Eleano, 3rd class cruiser, 7 guns, 500 tons; General Leso, 6 guns 520 tons; Marques del Duero 5 guns 500 tons. Besides two gunboate of the first class; 17 of the second

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

#### THE WAR.

A telegram received by the Mitsui Bussan Kaisha at 4 p.m. on the 23rd instant, and dated New York 3.05 a.m. 23rd April, says :- " Hostilities have commenced Havana is blockaded; a Spanish merchant-man has been seized." There is little There is little reason to doubt the correctness of this news, though possibly French intervention may still succeed in averting a serious struggle. The blockading of Havana would be a natural measure, and doubtless to that end a United States squadron was recently assembled at Key West, which island is in Florida Bay immediately opposite to the Cuban capital. But to blockade Havana would be a step of comparatively little utility unless the Spanish Squadron is in that port, upon which point we have no information. It is of great interest at this juncture to compare the naval forces of the two Powers. A sufficiently clear idea of their relative strength may be obtained by setting down the most powerful ships only :-

201. T. C.					

The United States has 10 ships, all of considerable fighting power, against Spain's fourteen. But it will be observed that the advantage is with the Spanish vessels in point of speed—assuming Brassey's figures to be correct. Certainly this long array of 20-knot vessels on the Spanish side somewhat taxes credulity, but we can only follow the tables. Our readers understand, of course, that barbette and turret ships are much more heavily armoured than protected cruisers. A vessel like the Columbia, for example, should have little chance against the Almirante Oquendo, though their displacement is about the same. In weight of metal the advantage is with the American ships. They carry twenty 13-inch and six 12-inch guns, against two 12'5-inch, twelve 11-inch, and two 10-inch on the Spanish side. Of course these lists give no information as to the strength of the and the fight. But it is trained of war, are not liable to capture under a Digitized by

gunboats, torpedo-boats, and torpedo destroyers-13 in all-reached Puertorico towards the close of March, and that the Infanta Maria Teresa, the Vizcaya, the Almirante Oquendo, the Cristobal Colon, and the Victoria had probably reached the same place by the middle of April. It is possible that these vessels, as well as the torpedo flotilla, are now in Havana. - 16 not, it will be their first duty to break the blockade of that place. Under any circumstances a severe naval engagement may be expected to take place almost immediately, for the fleets can scarcely have any difficulty in finding each other. It has been conjectured that the Spanish ships might abandon Cuba to its fate and undertake a war of reprisals along the coast of the United States. But it is absolutely necessary for the Spanish fleet to retain a basis of operations. Puertorico would serve, of course, but the American Admiral will not leave Puertorico undisturbed if the Spaniards employ their vessels elsewhere. fact, the arena of battle seems to be narrowly localized. What is certain, too, is that unless the Spanish vessels can guard all the ports of Cuba-and they are numerous—the people of the United States will speedily take hand in the of a military expedition: the season forbids it. But the rebellion is likely to assume overwhelming dimensions with America fighting for the rebels. An anxious question is Spain's decision with regard to the Treaty of Paris. The United States Government has signified its intention of observing it, and is thus precluded from privateering. Spain will forfeit the sympathy of civilized nations unless she adopts the same course. We presume that the United States squadron on this station, or at any rate a part of it, will cross the Pacific and share the fighting. There is little employment for the ships in the Far East unless they go to Manila, and the defeat of the Spaniards in the Philippines would not greatly serve the American cause. Coaling difficulties, also, have to be considered. We do not ourselves believe that there will be much trouble on that score, however. United States Admiral has already procured two cargoes of coal, it is said, and if more be needed, it can be obtained with ease from Shanghai or Canton. Telegrams in the vernacular press say that the state of the Philippines has become very much disturbed and that fresh troops will have to be sent from Spain. Poor Spain! The waters of adversity are closing over her head,

The following appears in the Official Gazette of the 26th instant :-

NOTIFICATION No. 8 OF THE DEPARTMENT OF STATE FOR FORE ON APPAIRS.

The Edway Extraordinary and Minister Pleni The Euroy Extraordinary and Minister Pleni-potentiary; if the United States in Japan has sent to this Department a communication under date of the 23rd instant, to the effect that, on the 22rd instant, the President of the United States approved by Proclamation the Idackade of the parts on the morth coast of Coha between Cardenas and Bahia Henda, and also of Gienfuegos on the south coast; that in the event of hostifines between the United States and Spain, the Government of the United States will not resent to privateering, and will adhere to the following recognised rules of inter-national law: national law:-

1. The neutral flag covers a belligerent's goods,

3. Blockade, in order to be binding, must be effective. (signed)

ed) NISHI TOKUJIRO, Baron, Minister of State for Foreign Affairs. 26th day, 4th month, 31st year of Maiji. (dated)

It is, of course, an error to say that the United States' Government has signified its adhesion to the Treaty of Paris. The latter was a document negotiated for the purpose of settling the Eastern Question after the Crimean War. The Treaty having been concluded, the plenipotentiaries who had met to discuss its termsthe so-called Congress of Paris-took the opportunity to elaborate an agreement on the subject of the right of search and the rules generally of maritime war, and it is to the declarations embodying those rules that America has signified her adhesion on this occasion.

The Official Gazette publishes the following information forwarded from Washington by the Japanese Representative in that city:—" The Spanish Government having announced that the intimation conveyed to it by the United States Minister in Madrid on the 21st of April to the effect that the Congress of the United game, by pouring supplies, arms, and possibly men into the island to assist the insurgents. There is little chance the tranquillization and indexenting of a military expedition. the island of Cuba, is tantamount to a declaration of War, and having recalled its Representative from Washington and severed all relations with the United States, the United States Congress adopted a resolution on the 26th of April to the effect that a state of War between the two countries existed from the 21st of

> Having lived for the last four days in momentary expectation of news that a decisive battle had been fought in the neighbourhood of Cuba, people are beginning to wonder a little at the silence of the telegraph. What is the cause of the delay? The United States took the ini-tiative. Its ships proceeded to Cuba and blockaded the whole of the coast which remains in Spanish possession. By that step the object proclaimed on the part of America was virtually accomplished. Spain was shut out of Cuba, and her people there were cut off from all sources of supply and re-inforcement. Upon the Spanish fleet, therefore, devolved the responsibility of re-establishing communica-tions with the island. Why has no attempt been made to discharge that duty? We do not understand the hesitation. Two explanations suggest themselves. One is that Spain has decided to aban-don Cuba temporarily to its fate, and to undertake a war of reprisals along the coast of the United States. It has been generally assumed that such a manœuvre is impossible owing to the coal dilemma, for if the Spanish fleet gave up its base, it would very soon find itself in straits for fuel. But there would be no great difficulty in holding a station in Puertorico, and at the same time detaching a powerful flying squadron for offensive operations along the coast. America has organized a flying squadron doubtless to provide against enterprises of that kind, and sooner or later the Spanish squadron would be brought to bay. It might be "la er," however, and in that case the first news to reach us may be the bombarding and destruction of some important places on the Atlantic coast of the UNIVERSITY OF ILLINOIS AT

States. The second and more probable hypothesis is that Spain is mustering all her strength to break the blockade. idle to conjecture what she hopes to gain by delay. She knows her own business best, and she may be waiting for additional vessels to cross the Atlantic before she attempts anything. But where is the American flying squadron in the meanwhile? We presume that it is cruising off Puertorico watching the torpedo flotilla and other ships of Spain which were assembled there at the time of the declaration of war. But it is all guess work. The only thing certain is that the delay on Spain's part in attempting to break the Cuban blockade contrasts vividly with the celerity shown by America in establishing the blockade. As for the United States squadron in these waters, its first business has been to obtain and secure a base of operations. It has selected Mirs Bay for the purpose, and we shall be very curious to hear what China has had to say on the subject, for the procedure is, of course, m plain violation of her neutrality, and whether she is a consenting party or a dissenting, responsibility will rest with her vis-à-vis Spain. There will probably be some surprise that the American ships did not at once make a dash for Manila, since every day's delay will greatly increase the difficulties of any such enterprise. But as we said at the outset, the advantages of an expedition against the Philippines are doubtful, unless the tenure of the islands as security for the payment of an indemnity be in contemplation. The logical course for America is to localize the war as much as possible. She would not think of holding the Philippines permanently, and nevertheless become responsible for their administration if she drove out the Spaniards. She would be responsible, too, for the prevention of outrages on the part of the natives, and that is a responsibility which holds to a still greater extent in the case of Cuba. The Cuban insurgents have a terrible legacy of vengeance to exact from the Spaniards, and if the former get the upper hand while the latter's avenues of escape are closed by a blockading squadron, awful atrocities may be perpetrated. The only way to avert all danger of such a catastrophe is to land American troops, but the season is almost prohibitive of that step.

#### THE STRONG FOREIGN POLICY PARTY AND FUHRIEN.

The representatives of the strongforeign-policy party are not at all satisfied with the action of the Government in obtaining from China a promise not to lease or cede any portion of Fuhkien to a foreign Power. They claim that, with the strength at Japan's command, she is in a position to make her voice very audible in Far-Eastern councils, and that it is ridiculous for her to confine herself to following the futile example set by other states by way of supplementing the genuine concessions that they have gained. An engagement given by China not to alienate any part of Fuhkien is worthless, they say, for China is helpless in the face of a strong Power, and if she

State but Japan; if, in short, a reversionary interest is secured to Japan in the province, it is a very fine arrangement. But it can not be interpreted in that sense. It is an idle promise which China is not competent to implement, and no provision is made for the contingency of her violating it, or being subjected to compulsion by a Power seeking its violation. The "stalwarts" profess to think that the Government's action about Fulkien was prompted entirely by the pressure that they themselves brought to bear on Marquis Ito, and insist that since the Cabinet they shows at length some signs of waking from its lethargy, it should proceed a step further, and ask for a lease of try would be great. But the concession Amov and Foochow, the occupation of is limited to periods of famine in Japan. Amoy and Foochow, the occupation of order in Formosa. Some of the Opposition journals assert, however, that the permission, for there is no prospect what-Foochow, but that it failed to obtain m price, and its heavy cost is m serious matter. satisfactory answer.

Even an independent journal like the Asahi urges the importance of leasing a port in Fuhkien, and we have already seen that the Jin Shimpo takes the same The Asahs, however, expresses great satisfaction in connexion with the Fuhkien incident, and notes with much pleasure that the rapidity and smoothness of the negotiations may be taken as a conclusive proof of China's good-will to-wards Japan. In the case of similar proposals submitted by other Powers, the Peking Government has invariably raised objections and made delay, but Japan put in her request on the 20th and obtained an affirmative reply within four days. The concession with regard to the export of rice is also welcomed by our contemporary. Last year, nearly 5 million yen worth of rice came to Japan from China, but it was not Chinese rice. It only came through Chinese ports. (We do not understand this assertion), If no official prohibition stood in the way of the export of Chinese rice, there can be no doubt that large quantities would find their way to Japan, to the great benefit of both countries.

The Nippon is finely sarcastic. It was not aware that the possibility of China's leasing her provinces to foreign Powers had entered the field of practical politics. Does the Japanese Government intend to have been made by Count Itagaki is that place on record the fact that China may lease any one, or all, of her eleven provinces to foreign Powers provided that she reserves Fuhkien? As for the mining she reserves Funktion to the state of the concession, it adds nothing whatever to the Skimonoseki Treaty. The latter contains a perfectly explicit most-favourednation clause which secures to Japan the general right that she has now stipulated for in a particular instance. Was the Government apprehensive that there might be some special difficulty in extending the clause to mining privileges? Really its forethought does it much credit. The third concession, too, is a very noble Germany has obtained Kiao-chou affair. and a large tract of territory; Russia has obtained Liaotung; England has obtained

read in the sense of a promise that to the concession about the export of rice. Funkien shall not be ceded to any The cereal may be had in the Middle Kingdom in almost unlimited quantities for less than 10 yen a koku, whereas its price in the Japanese market is from 14 to 15 yen. Owing to the prohibition imposed on its export by the Chinese Government, all sorts of roundabout devices have to be employed in order to get it out of the country, the commonest plan being to ship it from Shanghai to Canton; then to re-ship it at the latter port nominally for the use of the Chinese in Hongkong, and finally to ship it from Hongkong to Japan. (The Customs Returns do not show any import of rice from Hongkong, so that the Jiji's reasoning is not plain). If it could be freely sent to Japan direct, the boon to the latter counthose places being essential for the pur- That greatly detracts from its value. Our pose of establishing tranquillity and good contemporary hopes that the Government

#### THE REASON.

The Liberal organ (Tokyo Shimbun) denies, with some show of indignation, the allegation hitherto universally believed that the Cabinet's refusal to give a port-folio to Count Itagaki was the prime cause of the rupture between the Liberals and the Ministry. It alleges that there were much deeper sources of dissatisfaction, and that they were submitted by Count Itagaki to Marquis Ito. The first was that never at any general elections in Japan had so much money passed hands as at the last elections. Whether this accusation is laid directly at the Government's door, or whether it merely amounts to saying that the official measures to prevent corruption were inefficient, we do not gather. is certain is that the Liberal candidates stood as supporters of the Cabinet. When, therefore, the Liberal leader charges that corruption was rife, we find ourselves obliged to choose between two hypotheses, namely, either that he accuses his own followers of bribery and the Government of having failed to interfere and perhaps even. of having abetted them; or that he accuses the Progressists of bribery and the Government of having countenanced corruption in the interests of its own opponents. It must be confessed that this point is very obscure. The second protest said to the new Budget was compiled without con-sulting the Liberals. The third, that alterations have been made in the programme of armaments expansion. On these three grounds great dissatisfaction had developed itself in the Party, and the only way to restore confidence was to admit Count Itagaki to the Cabinet. But the Ministry declined to take that step, and thus a rup-ture became inevitable. It will be seen that the Liberal organ makes Count Itagaki's non-admission merely the proximate, not the prime, cause of the trouble.

On Good Friday a large crowd gathered on the river bank in the German concession at Tientsin to witness the removal of a coffin. The corpse was found to be in a state of perfect ward proudly and gets permission to buy the sake of pleasing a third Power? If the agreement can be Digitized by Control of the sake of pleasing a third Power? If the agreement can be Digitized by Control of the sake of pleasing a third Power? If the agreement can be Digitized by Control of the sake of pleasing a third Power? If the agreement can be Digitized by Control of the sake of pleasing a third Power? If the agreement can be Digitized by Control of the sake of pleasing a third Power? If the agreement can be Digitized by Control of the sake of pleasing a third power of the

#### THE GOVERNMENT AND FLOATING CAPITAL.

In the Jiji Shimpo we find a statement of the programme contemplated by the Government for the purpose ot easing the tightness in the money market. It is not an extensive programme, nor can it be expected to produce large results. Briefly stated, the plan is to buy up public securi-ties and thus increase the volume of the floating capital. According to a law en-acted in 1889, the Minister of Finance is empowered to extinguish portions of the national debt either by employing the process of lot to redeem loan-bonds or by purchasing them in the open market. No limit is put upon such transactions. The The amount of the bonds redeemed or purchased depends entirely upon the surplus which the treasury has available. There happens to be no surplus available at present, so the power created by that particular law can not be exercised. Another resource, however, is to employ for the same purpose any funds lying in the Deposit Bureau of the Finance Department. There are three million yenthus available, the proceeds obtained from the sale of Consolidated Bonds by the Bank of Japan. Of these three millions, one million is to used for buying shares of the Industries Encouragement Bank, and two millions for the purchase of public bonds. Finally, a sum of 340,000 yen, part of the Indemnity—can also be applied to the latter object. These remedial measures, accompanied, perhaps, by a lowering of the rate of interest of the Bank of Japan, are described as constituting the Government's immediate programme. They seem like I drop in the ocean. Another journal (the Shogyo Shimpo) says that the Industries Encour-Shogyo agement Bank is relied upon as a means of affording relief to the money market; that a fresh issue of its shares will soon take place, and that, if the people do not subscribe for them, the Government will do so.

## · MENTS.

Speculation has busied itself for some time about the various enterprises plan-ned by the people. Whence could funds be obtained to carry them on, or would they have to be abandoned? With recolumns of the Tokyo Asahi that the protwenty million yen which they could not hope to obtain in the home market, recently opened negotiations with Messrs, Samuel Samuel and Company, and obtained that firm's promise to lend the required finds provided that the rate of interest was six per cent, and the price of the bonds 90 yen perioo yen face value. Official consent alone was required to complete the transaction. Official consent, however, could not be obtained. When application was made to the Minister when such a price was proposed for six-per-cent, bonds, the idea became alto-gether extravagant. He told the projecforthcoming. Digitized by GOOS sestiment.

#### STATE OWNERSHIP OF JAPANESE RAILWAYS.

The members of the Kyoto Chamber of Commerce have propounded a policy which, if pursued, will, in their opinion, put an end to the difficulties that confront apan in connexion with want of capital. They urge that the State should purchase all the railways now in private hands, obtaining money from abroad for the purpose. This theory is not based on financial considerations alone. Another element enters into the question. It is that, after the Revised Treaties go into operation, foreigners will be certain to purchase shares in Japanese railways and, in the course of time, will become virtual owners of the lines. The Chamber does not object to foreigners qua foreigners, but it thinks that the control of a country's railways ought not to be in the hands of aliens, who would naturally raise the rates of freight to the highest possible figure, and who could not be expected to afford due facilities for the transport of troops and warlike material. The best way to avert that danger is for the State to buy up all the lines. About a hundred million yen have already been invested in the lines, and two or three times that sum would be needed to acquire possession of them and carry them to completion. But discontent. the money could easily be obtained by the Government in foreign markets, and its introduction into the country would remove the one obstacle which at present checks Japan's development, lack of the journal's staff. capital.

The above views of the Kyoto Chamber are strongly traversed by the Keizai Zasshi. It is contended by that journal that the course recommended by the Chamber is economically defective, since foreign capital coming into the country for the purchase of railway shares would be obtained without any expense to Japan, whereas the raising of a loan abroad would be a very costly operation. MONEY FOR HARBOUR IMPROVE. The Chamber admits that large sales of railway shares are likely to be made to foreigners: in other words, that large sums of money will thus be imported. But it proposes to neglect that cheap means of obtaining capital and to substitute the expensive method of a foreign loan. As to the Chamber's fears about ference to this matter, we read in the foreign control of Japanese railways, the Keisai find them quite chimerical. jectors of harbour improvements at has always advocated the introduction of Osaka, Yokohama, Nagasaki, and Nii-foreign capital by indirect channels—that gata, finding themselves in need of is, by the sale of shares and bonds,—and He addressed himself solely to the quesit thinks that the plan applies to railways as well as to other kinds of enterprises. There is virtually no fear that foreigners will get the control of the lines into their hands, and, at any rate, if the Japanese are to begin by shrinking from competition with other nationalities, the only logical course is to close the country once more. Japan must take her chance. If she can not fight her battles without recourse to faulty and artificial devices, her defeat is certain. The grandmotherher defeat is certain. When application was made to the Minister her defeat is certain. The grandmother-land that the proposed by methods adovocated by the Kyoto tolios. On the contrary, the Liberal terms were not to be entertained. To sell even five-per-cent, bonds at 90 was a sensible people. If the acquisition of the tion of occupying an unofficial position transaction he could not sanction, and when such a price was proposed for six-on the general grounds that State owner. Cabinet without sharing in the duties of gether extravagant. He told the project is preferable to private ownership, the firming that review of the facts was still tors to wait. Some other means of case would be different. But this talk in Marquis Ito's possession. Hence, in

#### COUNT KURODA. COUNT INOUYE AND MARQUIS ITO.

Count Kuroda, President of the Privy Council, was naturally the first person whom the Emperor consulted after the fall of the Matsukata Cabinet. He recommended that the duty of organizing a new ministry be entrusted to Marquis Ito, and his advice was endorsed by Marquis Yamagata and Count Inouye. Count Kuroda's views on the present crisis would, therefore, be interesting to ascertain. The Tokyo Asahi gives a report of some remarks alleged to have been made by him, but they amount to nothing more than an expression of deep regret that a Cabinet apparently so strong should have got into difficulties within such a short period after its organization, and a general condemnation of the want of resolution shown by the Ministers of the Crown. It is possible, however, to read between the lines of the Count's comments a conviction that the proper course for the Cabinet is independence of the Diet. Having received the mandate of the Emperor, the Ministers should conduct the administration unflinchingly until that mandate is withdrawn, and should be careful not to trouble His Majesty by resigning merely because this set of politicians or that choose to show

Count Inouye's views are also published the same journal. They were exby the same journal. They were expressed to a friend, not to a member of the journal's staff. According to the Count, the responsibility for the present situation rests entirely with the Liberals. Even had they asked for the admission of Count Itagaki alone into the Cabinet, they must have known that their application could scarcely be granted. But they asked for several portfolios, thus making it wholly impossible for the Government to comply. They have themselves alone to blame. Referring, then, to his financial They have themselves alone to policy and to the opposition it had evoked among the Liberals, Count Inouve said that he had not in any way interfered with the integrity of the armaments-expansion programme. What he had done was merely to extend the period for its completion in accordance with the financial capacities of the State. If the Liberals would take the trouble to inquire into the facts of the case before assuming an attitude of criticism, the public would be less misled,

Marquis Ito, too, has been speaking. tion whether any engagement had been given by him to the Liberals at the time of the Cabinet's organization in the sense that their leaders should subsequently receive portfolios. There had been no such engagement, nor any talk of an engagement. Various meetings had taken place between the Marquis and the Liberal leaders last December, and correspondence had passed. But neither at interviews nor in writing had there been any hint that the Party expected portship of all means of public communication the Administration. Correspondence confirming that review of the facts was still obtaining funds would by and by be about keeping out the foreigner is mere coming forward now to ask for portfolios, forthcoming. the Cabinet, the Liberals had made a radical departure from the understanding that existed between them and the Ministry.

#### BARON IWASAKI ON THE POLICY OF THE BANK OF JAPAN.

Baron Iwasaki, President of the Bank of Japan, is quoted as having made some remarks about the policy of the Bauk. He noted the immense increase that took place in the import trade during 1896 and 1897, and alluded to the fact that the ingress of foreign goods continues to grow, the excess up to the present during this year having been some 32 million yen and the exodus of specie in the same time fully 20 millions. So long as the process of bringing over the Indemnity funds continued, the hard-money reserve of the Bank of Japan did not reflect the state of the foreign trade; but now that no such recuperative factor is at work, the reserve has rapidly fallen, so it is nearly 201 mil-lion yen less than it was at the end of last year. The volume of the convertible currency has also diminished to the extent of 40 million yen, so that only 185 millions are now in circulation. It is understood, of course, that the volume of convertible paper is influenced by the fluctuations in the specie reserve, and to this may be added the consideration that each individual of the nation knows his own wants, and that whether he buys more from foreigners or sells more to them is a matter having no special con-cern for officialdom. Nevertheless to maintain a due ratio between the gold in the vaults of the central bank and the paper notes circulating in the country is important, and financiers have to pay attention to that problem. It must not be supposed, however, that the rate of interest as fixed by the Bank of Japan depends on the exodus of specie, or that, as has been asserted in some quarters, the Directors of the Bank raise the rate from time to time in order to check the outflow of gold, as is done by the Bank of England. The conditions existing in Japan are quite different from those existing in Great Britain. The raising of on the exodus of specie since it renders money difficult to procure and so hinders the purchase of imports. But, on the other hand, the lowering of the rate and the issue of convertible notes over and above the legal limit, have an indirect effect in restoring the balance of trade by bringing capital within reach of industrial enterprise and thus increasing the quantity of manufactures for sale abroad. Such subjects, however, occupy a secondary place only in the policy of the Bank. What is primarily considered is the state of the money market—the demand for capital, the nature of the purposes for which it is needed, and the supply available. Hence there is no reason to anticipate-as some have anticipated-that because a marked exodus of specie has taken place since the spring set in, a further raising its interest by the Bank will a measure is apparent just now.

#### THE WAR AND THE JAPANESE PRESS.

The vernacular press has displayed remarkable indifference during the progress of the events that have culminated in a rupture of the peace between Spain and the United States. Now that war has actually broken out, however, we may expect some definite expressions of opinion. Monday, as, our readers know, is an "off day" with the majority of the Tokyo journals, and of those that appear the only important sheets are the Chuo the Nippon, and the Yomiuri. Not one of them, however, attempts to pronounce a verdict as to the rights or wrongs of the war. The Nippon, which is nothing if not outspoken, confines itself to a review of the incidents leading up to the crisis. Its statement is only in outline and does not lean to either side. Brief reference is made to Spain's failure to suppress the rebellion; to the umbrage taken by the Spaniards at the secret interference of the American people; to Weyler's atrong policy; to its failure; to the fall of the Cabinet in Madrid and the accession of Sagasta to power; to Spain's change of policy and willingness to grant local autonomy to the Cubans; to the rejection of any programme short of freedom; to the intervention of the United States Government for the purpose of inducing Spain to cease fighting and recognise the island's independence; to the steadily growing feeling in America that the interests of trade must no longer be impaired nor the principles of morality violated by this ceaseless struggle; to the President's unavoidable obedience to public sentiment; to the intervention of foreign States whose governments felt that the peace of the world should not be endangered and its trade impeded by such cause; to the apparent settlement of the trouble, and then to the occurrence of two events which greatly aggravated the situation, namely, the de Lome letter and the Maine disaster. With regard to the former, the Nippon says that the American authorities were to blame for not securing the rate of interest has an indirect effect the inviolability of private correspondence, and that Spain was unduly harrassed in connection with the incident after she by recalling de Lome. With regard to cerned, the nations would be on the the Maine, our contemporary seems to side of Spain, but their interests draw consider it beyond dispute that the vessel them in a different direction. was destroyed by a mine or some agent independent of the explosives on board. Having thus carried events down to their may have m very serious effect upon bids her to push it vigorously, and other Japan's trade with the United States. Powers will probably intervence: among the populations of both the belligerents, but we fail to grasp the Nippon's meaning. The article concludes by alleging that an attack on the Philippines by the United States Squadron in these waters is unlikely, the Washington and Osaka have both decided that the Government having too much respect for soon be ordered. No probability of such the peace of the world to needlessly to pursue at the present juncture is to reextend the sphere of warlike operations.

million yen last year out of a total of 375 million; and it bought from Japan 521 million yen worth of commodities out of a a total of 159 million, whereas Japan bought from it only 27 million out of a total of 219. It is further to be noted that whereas the imports from America to Japan arrive nearly entirely during the first half of the year, the exports from America to Japan are sent out during the second half. Already some 30 million yen worth of commodities have come from the States this year and practically nothing has gone thither, the season for silk and tea not having yet come. Japan is already suffering from commercial depression, and if one of the main arteries of her trade be now cut, her distress will be greatly augmented. There is further be greatly augmented. There is further the probability that the United States squadron on this station will proceed to the Philippines and seize them, in which case Japan's trade with those islandsamounting to nearly 3 million yen-would suffer, and the war would be brought almost to her doors. These considerations suggest that the Japanese Govern-ment should use its good offices with all possible energy to mediate between the belligerents, carefully avoiding, of course, all semblance of interference in the affairs of foreign countries and simply taking the ground that her material interests are imperilled.

The Yominer's writing is more original. It says that the United States' navy has a displacement of 170,000 tons and the Spanish a displacement of only 100,000, but the Spaniards handle their ships better than the Americans, so that the victory will probably be with them at the outset. Spain, however, is weakened by domestic troubles and will go under on that account. France is interested in saving Spain from complete disaster, for a successful Carlist revolution in the latter country might endanger the republican institutions of the former. England, too, has always been opposed to America's Cuban policy and does not want the United States to come into possession of the island. But England has been "squared" by means of a secret agreement that Havana shall be handed over to her, and her sympathy with America has now been shown by Mr. Balfour's declaration on the subject of had made all the reparation in her power coal. In short, so far as right is conwhile they are ostensibly neutral, they will probably take sides as far as is possible without seriously compromising

## THE CHAMBERS OF COMMERCE AND THE INDEMNITY.

wisest policy for the Finance Department deem War Bonds with the remainder of The commercial aspect of the problem and appreciate the principle underlying chiefly occupies the Chuo and the Yomiuri that decision. At a moment of patriotic

mediately after the conclusion of the war, measures would be adopted to redeem the Bonds, thus setting free the capital so much needed for industrial purposes. Hence they are not a little embarrassed by the prospect of having to hold the Bonds for many years until it suits the convenience of the State to redeem them. If the process of redemption fixed by the regular budgetary system be followed, only some four million yen worth of public securities are redeemed annually. business men want something much more rapid. Hence their proposal as to the Indemnity. But what are the details of their plan? Do they suggest that the funds accruing from the Indemnity should be at once applied to redeem War Bonds, and that the Bonds thus redeemed should be re-sold in the foreign markets when suitable opportunities present themselves? In other words, do they suggest that the Indemnity should be employed to immediately replenish the floating capital of the dimensions of the armaments ex-Indemnity should be employed to immedination without regard to the demands of State finance? That is a feasible plan, of course, but it presents many difficulties. On the other hand, if the financial needs of the State be taken into account, it appears that there are practically no funds available from the Indemnity for the purchase of War Bonds. A statement may be made in two forms, the more easily comprehended of the two being this :-

already made or to be immediately made ...... 287,868.897

> 74,315,600 Remaining

ingols .....

20,000 000

Remainder actually available. 14.315.600 According to the above method of reckoning, some 14 millions might be available for the redemption of War Bonds. But there is a deficit of about 13 million yen in the Budget for the current fiscal year, and unless it be met by a draft on the in-demnity, no source of supply is in sight. Thus the Indemnity does not seem to lend itself at all to the purpose contemplated by the two Chambers of Commerce, unless the first plan mentioned above expresses their idea. The silver lying in the Treasury's vaults represents an asset, it is true. By selling it for gold and applying the proceeds to redemption purposes, a good deal might be done. But what it is that the Chambers actually recommend; we do not yet know.

There is another claim upon the Indemnity. It figures, indeed, in Japanese finance like the widow's cruse: every one seems to regard it as inexhaustible. The other claim comes from the cotton-spinners. Things are not prospering with them, and they think that the Government should come to their assistance, buying up the shares of the amalgamated companies to the extent of some 20 million yen, and reselling them when the sun of prosperity shines again. It is alleged by a vernacular newspaper that the Minister of State for Finance has practically given his consent to a scheme of that nature. We doubt it greatly.

#### COUNT INOUYE ON FINANCE.

Count Inouye has made a brief statement of his financial policy to the Jiji Shimpo:—" People talk of my financial policy as one of restriction and imagine that retrenchment is the order of the day all round. That is a mistake. I have reduced only the unproductive expenditures. And even in that direction what I have done can not be called a real reduc-tion. I have always had my own views But to about armaments expansion. carry out those views would involve a recasting of the present programme ab initio, which, of course, is out of the question. Nevertheless, in the appropriations for the Army and the Navy as well as in those for the various Departments, I have cut down by 46 million yen the outlays estimated in the Budget submitted to the Diet last December. pansion programme, The dimensions remain unaltered, the sum to he paid out in each year being alone re-adjusted, so as to equalize the amounts, in obedience to financial convenience. On the other hand, I have kept steadily in view the development of productive enterprises. These enterprises are considerably embarrassed at present. Notably in the case of several industries connected with the export trade, there is such a want of floating capital that even the wages of operatives can not be paid; machinery and raw material are lying idle; loss is piled daily upon loss; the volume of exports is diminished; the balance of trade become more and more unfavourable, and the diminution of the gold reserves proceeds apace. It is my great desire to render every possible assistance to these enter-The public is well acquainted prises. with the financial resources at the Government's command, and understands that they are by no means sufficient to fully satisfy the needs of the time. But they will be employed as far as they go in the interests of productive enterprise. That has been my policy from the first. If was decided upon without any reference to the procedure of the manufacturers in the Keihan districts, and I am pursuing it now and intend to pursue it with all possible vigour. If I have not reduced, but only readjusted, the expenditures on account of unproductive works, still less am I likely to apply the pruning knife to the outlays for productive purposes."

A deputation headed by Mr. Nakano Buyei visited Count Inouve on the 23rd instant and addressed him at great length on the subject of finance, urging that some strong measure must be speedily adopted to raise commerce and industry from the morass of depression in which they are now plunged. The arguments advanced by the deputation are already familiar to our readers. Their cardinal point was that capitalists had emptied their coffers to purchase War Bonds; that, no steps having been taken to redeem the Bonds, an embarrassing deficiency of capital had resulted, and that the Bonds had now fallen to such a discount that their holders saw themselves condemned to heavy loss. On these grounds the deputation contended that the funds accruing from the Inpart at any rate, for the redemption of has demonstrated the need of such inwar Bonds. Count Inouge did not give structions Original from
UNIVERSITY OF ILLINOIS AT

any definite reply. He said that Messrs. Shibusawa and Nakamigawa had already approached him on the same subject, but that the matter demanded careful thought before a decision could be taken.

#### COUNT OKUMA ON THE POLITICAL SITUATION.

It is impossible to tell how much or how little reliance may be placed on alleged interviews with statesmen appearing in the Yorosu Choko. In reproducing, there-fore, from the columns of that journal the gist of a conversation said to have taken place between a member of its staff and the Count, we must ask our readers to acquict us of any responsibility. The interviewer makes the Count say that affairs have taken an exceedingly inconvenient turn for the Cabinet. Its foreign policy is vehemently attacked; its political allies, the Liberals, have deserted it, and the opening of the Diet is close at hand. With regard to foreign policy, the Ministry's apologists say that it is engaged in negotiations with Russia about Korea, and that their result will atone for the failures in Liaotung and Shantung. But, after all, what the Cabinet is doing can not be more than reducing to clearer terms the convention already existing, nor is it likely that anything will be accomplished beyond, perhaps, an arrangement for the establishment of a Japanese-Korean Bank and the obtaining of a charter for the Soul-Fusan railway. Considering that Japan has had to suspend the doubling of her own Tokaido road, and to postpone the project for the Formosan Bank, she is not likely to profit much by gaining such privileges in Korea. The fact is that the Japanese public should rouse itself to the necessity of putting backbone into the Cabinet's foreign policy. The peoples of England and Spain have lately set that example. Two great opportunities were lost, first, when China asked Japan to postpone the payment of the remainder of the Indemnity, and secondly, when England intimated her desire to occupy Wei-hai-wei after the withdrawal of the Japanese troops. It is not too late, however, even now to protest against the actions of Russia and Germany. If they can be induced to withdraw from Liaotung and Shantung, England may be trusted to leave Wei-hai-wei. Speaking of domestic politics, the Count spoke of the Ito Cabinet's Parliamentary prospects as hopeless, but added that if the Ministry resigned, the Progressists could not undertake to form a Cabinet, since they do not command a majority in the Lower House. Possibly a coalition Ministry of Progressists and Liberals would be the only feasible plan.

#### TEA.

We see it recorded in vernacular journals that the Yokohama Tea Guild has forwarded a circular to all the tea-producing districts, enjoining care in the processes of manufacture. Several points are set forth in detail-as the necessity of not mixing old leaves with new; the desirability of care in drying; the evil of allowing the leaves to be smoked; the importance of using good charcoal for firing purposes, and so on, all of which sound very rudimentary, demnity in May ought to be applied, in but it must be presumed that experience

#### FANCY DRESS BALL AT THE BRA-ZILIAN LEGATION.

A fancy dress ball was given by His Excellency the Brazilian Minister and Madame Lisboa at the Brazilian Legation in Tokyo on the 21st. instant. weather proved singularly unpropitious, for at the close of a balmy though boisterous spring day the wind suddenly veered to the north, bringing down a deluge of rain and producing a wintry temperature.

Despite these deterrent circumstances the salons of the Legation were filled at half-past nine with a crowd of guests in costumes of great variety, historical, allegorical, national, grotesque, rustic, barbarian and picturesque. Many of the ladies wore masks, but that pleasant method of mystification was not de rigueur; nor, indeed, were fancy costumes, a freedom of choice which naturally commended itself to some of the less juvenile men and to a few of the staider ladies. The English hunt-ball dress was much affected by the gentlemen, and its adoption by several different nationals, German, French, Spanish, and Belgian, constituted one of the rare tributes paid by Europe to British taste. The scene when dancing commenced might fairly be called brilliant, perhaps the most brilliant witnessed in Tokyo since the celebrated ball twelve years ago which had the distinction of being elevated to the rank of a political event and helping materially to bring the social fashions of the Occident into dis-favour in Japan. Our readers must pardon us if we shrink from the task of setting down the costumes in detail. Many of them were sufficiently beautiful and striking to deserve the most minute description, but it would be a feat beyond our powers to pass in review, unit by unit, a crowd in which a gay Pierrot might be seen escorting a Turkish lady mysterionsly veiled; a Russian noble with a stately Mary Queen of Scots; a German peasantgirl and Little Red Riding Hood attended by three admirably disguised monkeys whose sepulchral talk turned chiefly on their inability to wash clothes; a dainty little gipsy lass and a colossal Billion Squire of the roistering days; circus-Maxican warriors, Persian grandees, ante-Confucian Chinese, and so forth and so on, a picturesque but most perplexing ensemble. Madame Lisboa's dainty costume of green satin decorated with red chrysanthemums won universal admiration, and her sister's dress of Columbine with its glittering sequins and chapeau gensd'arme was probably one of the prettiest in the ball. Mrs. Macmillan in the powder and patches of the good to admit Count Itagaki to its ranks. No old time presented an exquisite picture, and Miss Howe as Klondyke, wearing m reason can therefore be discerned why white satin dress trimmed with fur and the Liberals should assume an attitude of decorated with nuggets of gold, was uni-opposition in the approaching session of versally voted "too charming for anything." the Diet. The probability is that they Madame de Frétas in blue and gold will discuss the Cabinet's measures strictly satin as a Swiss; Madame Renaud in the richly embroidered costume of a Pole; against them without any reference to the two daughters of the Chinese Minister, party feeling. As for the Liberal Union-delightfully decked out and making tinklists, they recognise the paramount importing music as they moved; Madame von Treutler wearing the gold-laced tunic of a nation—the problem of completing the hussar; Madame Schinzinger in the arrangements for carrying the Revised quaint and picturesque German costume Treaties into operation and the problem of sixty years ago; Madame de Carcer in of foreign policy. They have not the the dress of the First Empire; Viscoun-slightest intention of dragging such ques-

von Fallot as a Spanish belle; Miss Conder, as a gipsy; Viscountess du Dresnay in powder and patches; Miss Aoki as a Circassian beauty—all these and many others showed what can be accomplished by taste and ingenuity even without the aid of the professional costumier. Among the gentlemen's costumes one of the handsomest and most interesting was that the transaction our contemporary does of Mr. J. Conder, who appeared as Ota not say. The purchase rate is said handsomest and most interesting was that the transaction our contemporary oces of Mr. J. Conder, who appeared as Ota not say. The purchase rate is said Dokan, every detail of the dress perfect; and perhaps the quaintest that of Mr. Van de Polder, who figured as Fukuroku-ji, the cylinder-pated deity of longeroku-ji, the cyl table (Mr. Atcheson), in the midst of a quadrille, and a masked Zingara Queen distributing cards and telling fortunes. The cotillon proved particularly successful, the favours being of the daintiest des-cription, and the "ribbon figures" re-markably graceful. Immense merriment was afforded by a figure in which mottos found inside eggs had to be matched by would-be partners, and the most picturesque moments of the evening were during the dancing of the Pas de Patinears and the Valse Minuet. The arrangements for refreshments and supper were sumptuous, and so keen was the enjoyment that dancing did not cease until past four o'clock in the morning.

#### THE NATIONAL UNIONISTS AND THE LIBERALS.

Mr. Sassa Tomofusa, the most prominent Parliamentary member of the National Unionists, has made an interesting statement to one of the staff of the Nichi Nichi Shimbun. It has been generally supposed, he said, that the National Unionists are seeking to restore the coalition that formerly existed between the Cabinet and the Liberals; in fact, that they stand in the position of mediators. But the truth is that the relation between the Liberals and the Cabinet was always much more intimate than the relation between the National Unionists and the Cabinet. The leaders of the National Unionists were even ignorant of the causes that led to the severance of the Ministry's connexion with the Liberals. So far as the Armaments-expansion programme and the policy of national finance are concerned, the Unionists and the Liberals think alike, and will work together, nor is there any reason to suppose that a grave difference of opinion has occurred between the Liberals and the Government on either of the subjects. In fact, the only apparent reason of the split is the Cabinet's refusal point of principle is involved, and no reason can therefore be discerned why on their merits, and vote for them or ance of the problems now confronting the arrangements for carrying the Revised

#### THE INDEMNITY.

According to the Shogyo Shimbun the Government agreed to purchase through the Bank of England bonds of the new Chinese loan to the extent of two millions sterling. Why the Bank of England should be asked to undertake cash, receives a part of it in bonds. Shogyo asks why, if the Government is ready now to embark in such a specula-tion. China's request for a postponement of the time of paying the indemnity was refused two months ago. The financial result would have been the same, but large political capital night have been gained by accommodating China direct instead of accommodating the persons who have undertaken to raise the loan for her. Again, it is alleged that whereas Japan pays £88 for each bond, thus gaining £240,000 on the transaction, and recieving 41 per cent. interest, the Bank of England gets the bonds for £35, thus clearing £60,000 on the transaction. Surely better terms could have been obtained by dealing direct with the Syndicate? Further, the five-per-cent. Japanese War Bonds are now procurable in the market for 91 yen per 100 yen of face value. They thus give \$\frac{1}{2}\$ per cent. interest as an investment. If the Government can afford to lay out two million pounds sterling on paper securities, why does it not buy up its own bonds, thus accomplishing a better pecunary result and relieving the distressful tightness in the home money market?

We quote these criticisms, but they do not seem to display the acumen generally characteristic of the Shogyo Shinpo's writing. For it is quite plain that if the Government is taking over a portion of the Indemnity in Chinese bonds, the transaction is unavoidable, and must not, therefore, be judged by the light of ordinary financial principles. We have no special information on the subject, but it appears to us pretty clear that the Government takes the bonds because it can not get cash, and there is an end of the matter.

#### THE SOUL-CHEMULPO RAILWAY.

In the course of an article on the relations between Iapan and Korea the Mainichi Shimbun makes am interesting statement about the Soul-Chemulpo Railway. It alleges that Mr. J. Morse, who holds the concession for the line, promised the Matsukata Ministry that he would transfer the road to Japan immediately after its completion, and a bill authorizing the Government to acquire it will accordingly be introduced in the next session of the Diet. The statement is made in the context of various remarks about the withdrawal of Russia's military and financial experts and the abandonment of the peninsula to Japan's influence, and we infer that our contemtess de Bondy in that of a Laplander; tions into the field of party politics, and mrs. Conder as Shizu-no-me; the Misses Nishikawa as Spring and Autumn Miss Diet's session to a close without troubled hard the more decisive part which Japan von Falled his accordance of the far the more decisive part which Japan von Falled his accordance of the far the more decisive part which Japan von Falled his accordance of the far the more decisive part which Japan von Falled his accordance of the far the more decisive part which Japan von Falled his accordance of the far the more decisive part which Japan von Falled his accordance of the far the more decisive part which Japan von Falled his accordance of the far the more decisive part which Japan von Falled his accordance of the far the more decisive part which Japan von Falled his accordance of the far the more decisive part which Japan von Falled his accordance of the far the more decisive part which Japan von Falled his accordance of the far the more decisive part which Japan von Falled his accordance of the far the more decisive part which Japan von Falled his accordance of the first part of the far the more decisive part which more decisive part which Japan von Falled his accordance of the far the more decisive part which accordance of the far the more decisive part which will be more decisive part which accordance of the far the more decisive part which will be more decisive part which accordance of the far the more decisive part which accordance of the far the more decisive part which accordance of the far the more decisive part which accordance of the far the more decisive part which accordance of the far the more decisive part which accordance of the far the more decisive part which accordance of the far the more decisive part which accordance of the far the more decision of the far the more decision of the far the more decision of the far the more decision of the far the more decision of the far the more decision of the far the more decision of the far the more de East. There is, however, no suggestion of an aggressive policy on Japan's side. It is claimed on her behalf that she seeks simply to strengthen Korea's capacity for independence by leading her into the path of naval progress and material development. Our readers do not care to hear much on that subject, we imagine. They will be much more interested to learn that the French syndicate, which recently obtained a concession from the Korean Government to build a Soul-Wiju line, has been making strenuous efforts to purchase the Soul-Chemulpo line from Mr. Morse, but the latter, despite the large profit that he might secure by selling to the French, stands firmly by his promise to Japan. In short, Mr. Morse seems to have played an exceptionally dis-interested and honorable part through-out these transactions. It is easy to appreciate the importance of the line to the French Syndicate, for to connect Wiju with Soul by railway would be a somewhat futile operation unless the road can be extended to Chemulpo. Rumour says that the Syndicate is promised a guarantee of 4 per cent. by the Paris Government provided that it can obtain possession of the Soul-Chemulpo section, but it is difficult to credit that. All observers agree that, from a purely business point of view, a road from Soul to Wiju could not possibly pay, and the general impression has been that in seeking a concession for that line and negotiating the Soul-Chemulpo section, the French Syndicate merely played Russia's game, the intention being to transfer the whole line to the latter at a subsequent date. Such a theory involves the hypothesis that the Korean peninsula is to be Russia's maritime outlet, but, inasmuch as he has now turned to the Liaotung peninsula, the strong pro-bability is that the Sönl-Wiju line will remain unbuilt, and that the Soul-Chemulpo road will cease to interest the French Syndicate.

#### "THINGS JAPANESE."

"Things Japanese" has reached its third edition, and will doubtless pass through a good many more, for it fills its own field so completely that little room remains for trespassers. We have spoken more than once of this book, but not in terms of unalloyed praise. Professor Chamberlain's wide range of knowledge and exceptional powers of exposition compel admiration, but his love of humour sometimes seems to interfere with the full exercise of his sense of proportion. However, it is indeed a rare thing to find a great scholar who carries his weight of learning so lightly as Mr. Chamberlain does, and who knows how to brighten the dullest subjects with airy conceptions and graceful fancies. Descending to particulars, we ourselves have a grievance to urge against him-a triffing complaint indeed, but still a complaint. He continues to class the editor of the Japan Mail sible writer of Mr. Chamberlain's type, among the "small band of foreign enthull t is, indeed, easy to find in every comsiasts who deny that the art of Japan is munity men who imagine that all adminilimited in its scope and decorative rather strative or diplomatic proceedings which than representative," and who "put it on do not exactly accord with their own a level with that of Greece and Italy." theories are the acts of bungling states-The editor of the Japan Mail has not men and ignorant officials. But Professor spoken or written anything that justifies Chamberlain certainly belongs to a difthat it is, in his opinion, essentially Digitized by

decorative art, and that, as representative art, it can not be placed on the same plane with the art of Greece and Italy. Mr. Chamberlain in the same paragraph laughs at the same unfortunate editor for saying that "Kyosai was perhaps the greatest limner of crows that Japan, nay the whole world, has produced," and asks very wittily whether such a dictum does not recall the artist whose epitaph recorded that he was "the Raphael of Cats." That is excellent fun, and the editor of the Japan Mail joins heartily in the laugh. But the truth is that his comment on Kyosai, when separated from its context as Mr. Chamberlain separates it, wears a very misleading aspect. The comment was penned with explicit reference to an article in a London journal discussing a new departure made by certain English artists who essayed to draw birds after the Japanese fashion, and whose work the London newspaper compared with that of the Kyoto painter Bairei. Precisely in the same way, if some one were to discuss mew itinerary of the Hakone district, we might observe that Professor Chamberlain had compiled the best Japanese itineraries ever written, without inever, these are small matters. more important are Professor Chamberlain's account of Treaty Revision and his criticisms thereon. He ascribes the failsurely if the existence of such a panic among the Japanese people was sufficient to wreck Treaty Revision at the close of 1889, the Foreign Office in Tokyo would not have resumed the negotiations in 1890. For our own part-and we watched the course of events with much attention-we should hesitate to affirm that the opponents of mixed residence in Japan ever became sufficiently numerous or influential to seriously affect the question of Treaty Revision. Concerning the British Revised Treaty and the British Foreign Office, Mr. Chamberlain is very severe. He says that the Treaty abounds with defects; he pays a high tribute to the diplomatic skill of the Japanese; he asserts that the latter "adroitly caused the chief seat of the negotiations to be shifted from Tokyo, where some of the local diplomats possessed an adequate knowledge of the subject, to the European residents in Japan (that is, the class which possesses the best knowledge of the state of the case) almost unanimously regard the British Foreign Office with contempt for having allowed itself to be so grossly misled and beaten." One does not expect such wholesale statements from a responsible writer of Mr. Chamberlain's type.

gains anything by negotiation, except the being laughed at,' and still the Foreign Office slumbers and blunders on as in Nelson's day." The British Foreign Office and the British Diplomatic Service have, at all events, the best personnel that the British nation can furnish, and it ought to occur to a close reasoner like Mr. Chamberlain that if the incompetence of the British official is always so palpable to the non-official, some singularly unkind fate must contrive that the ability is invariably on the side of the latter. As to the British Revised Treaty, there is no denying that, judged by the wisdom which follows the event, it is not a perfect document. But it is by no means so imperfect as Mr. Chamberlain's criticism implies, for some of the so-called omissions regarded by him as crucial relate to subjects which do not belong to the sphere of conventional arrangement but are always left to be regulated by domestic legislation. For example, no independent country binds itself by treaty to allow foreigners to publish newspapers within its borders, or foreign doctors and lawyers to practise among its people and in its courts without any official scrutiny tending to suggest for a moment that the of their diplomas. Details apart, however, compilation of itineraries is the crown of it may be generally stated that the con-British sinologues' achievements. How ditions with which the negotiators of the Much Treaty had to deal were immensely difficult. No guiding precedents were available, and diplomacy must have been omniscient if, on the first occasion of ure of the negotiations in 1889 to "panic admitting an Oriental State to the comity at the idea of Japan being thrown open to of Western nations, a covenant perfectly foreign trade and residence." That is a satisfactory at every point, totus teres very novel conception; a conception that etque rotundus, had been elaborated. seems difficult to reconcile with facts. For Evidently Professor Chamberlain has not reflected upon these points. He seems to have devoted himself uniquely to stating the case against Treaty Revision in the strongest possible terms, and just as he forgets, or fails to notice, that the Treaty was the work, not of a Rosebery Cabinet alone, but also of a Salisbury, so, when he speaks of the scene of negotiation having been "shifted from Tokyo, where some of the local diplomats possessed an adequate knowledge of the subject to the European foreign offices which possessed little or none," he equally forgets, or fails to notice, that the diplomats who had charge of the negotiations in London were precisely the men who would have had charge of them had the scene been in Tokyo, namely, Mr. de Bunsen and Mr. Gubbins. However, it is an uncongenial task to criticise Mr. Chamberlain. Whether we agree with his views or differ from them, they are always delightfully stated foreign offices, which possessed little or and lucidly conceived, and we welcome this none;" and he declares that "from the third edition of "Things Japanese" with point of view of patriotic Englishmen, the its many additions and improvements as a its many additions and improvements as a genuine boon to everyone seeking in-formation about any topic under the sun of Japan.

#### BARON ITO'S RESIGNATION.

Baron Ito Miyoji's resignation of the portfolio of Agriculture and Commerce has been accepted, and Mr. Kaneko Kentaro is appointed to succeed him. It is stated -and we have no doubt of the correctness of the statement-that Marquis Ito endeavoured to persuade the Baron to reconsider his decision, but without success. Most people will be disposed to conclude, his inclusion in such a coterie. He has, ferent grade of critic, and with astonish-on the contrary, invariably maintained ment we find him writing:—"It is a wisely. He has associated himself closely that the scope of Japanese art is limited, hundred years since Nelson noted the with the Liberal Party during the past UNIVERSITY OF ILLINOIS AT

coalition between that Party and the Cabinet at the close of 1885—the coalition which proved of such great importance, since it secured the passage of the postbellum measures through the Diet-was brought about chiefly through Baron Ito's offices as intermediary, and the public understood very well, when he received a portfolio in December, that he represented the link between the Ministry and the Liberals. It is true that his name is not actually borne on the Party's roll, but the connexion is now almost as close as that existing between the Progressists and Count Okuma. Apart from any question of principle, the shrewdest course for rising statesmen in Japan is to ally themselves with a political party. Nothing is surer under the sun than the ultimate advent of the era when the system of party Cabinets will be established. On the other hand, nothing is plainer than the comparative insignificance to which a Cabinet Minister is already condemued unless he possesses either clan prestige or the backing of a political party. Parties may not yet be competent to assume the control of the Administration and to fill the offices of State from their own ranks, but they certainly are competent to give immensely increased weight to any official acting as their mouthpiece. Baron Ito is one of the cleverest men of his era. He would rise high under any circumstances. But on the crest of a Liberal wave his elevation will be far more rapid and exalted than his unaided exertious could have made it. We do not mean to suggest that his motives are simply selfish. But personal ambition is, after all, the mainspring of human beings' actions, and we presume that he is not more than human.

#### THE "OSAKA ASAHI" ON AMERICA AND SPAIN.

The Osaka Asahi, which ranks with the leading journals of Tokyo, observes that Japan has no reason to be partial in the struggle now unfortunately inaugurated, and that she sympathises sincerely with each of the countries condemned to suffer the horrors of war. Spain has been for several years endeavouring to quell a rebellion in Cuba and has utterly failed to do so. Her sovereignty in the island has no longer any real existence. Nevertheless she obstinately refuses to recognise the independence for which the insurgents have been fighting. Under these circumstances the Government of the United States has intervened to put an end to the struggle by securing independence for the Cubans, and thus Spain and America find themselves in the lists. Our Osaka contemporary confines itself to that brief and apparently colourless statement, but the drift of its sympathies can be easily discerned. As to the result of the war, it pertinently observes that if Spain has failed signally to reduce the insurgents to obedience after years of exhausting effort, it is difficult to see how she can hope to conquer the Americans plus the insurgents. She may leave Cuba to its fate and confine herself to reprisals along be cut off, it is hopeless to think of estathe United States coasts, which are ill-blishing full security of life and property protected, but there are reasons which in Formosa. The Chinese Authorities are throw much doubt on her capacity to evidently incompetent, or at any rate they make such a diversion. The Asaki then make no resolute effort, to check the missing discusses the effects of the war upon chief. The capacity or good-will has now journal, in connexion with the recent Japan's tradal relations with America, but been tested by three years' experience, strong-policy agitation, that although a its remarks are virtually identical with and it is plain that unless Japan can take section of the nation clamours for selfthose of other journals from which we the law into her own hands, nothing mention in the field of foreign have already motion of the law into her own hands, nothing mention in the field of foreign have already motion of the law into her own hands, nothing mention in the field of foreign have already motion of the law into her own hands, nothing mention in the field of foreign have already method to be a supplied to the law into her own hands, nothing mention in the field of foreign have already mention in the f

### JAPAN AND CHINA.

A telegram from Peking, dated 5.40 a.m. on the 26th, says :-

At the instance of the Japanese Minister Pleni-potentiary, the Chinese Government has en-gaged that no part of the province of Fuhkien shall ever be ceded to a funcing Power.

Fuhkien, as our readers doubtless know is the part of the mainland lying opposite to Formosa. If the telegram be correct, it follows, therefore, that Japan has adopted the method of Great Britain and France, and has obtained m guarantee that the portion of the Chinese empire in which she is most interested shall not be alienated. What the value of such guarantees may be, it is difficult to say. It appears rather a superfluous kind of arrangement that the Government of a country, at the instance of another State, should promise not to do something which its own interests forbid it to do. But the truth is that these engagements to which China pledges herself are intended to be a kind of polite method of delimiting spheres of influence, and the Japanese nation will doubtless feel now that it has obtained a recognised footing in any council for the partition of China; or, perhaps we should rather say, for her preservation.

The news that China has pledged herself vis-à-vis Japan not to transfer any part of the province of Fuhkien to a foreign Power seems to be received with much satisfaction in Tokyo, but as yet the only journal that has commented on the intelligence is the Jiji Shimpo. That is, of course, attributable to the fact that the Jiji was the first to receive the telegram and could thus publish its views simultaneously with the intelligence. We observe, however, that the Fift does not interpret the engagement as creating, in any sense, a "sphere of Japanese influence. If takes the line that China has not shown herself capable of safeguarding her own territories and that Japan must endeavour to assist her neighbour at least in so far as Japanese interests are directly concerned. They are undoubtedly concerned with respect to Fuhkien, for it lies opposite to Formosa, from which it is separated only by a narrow channel, and the transfer of the province, or of any part of it, to the possession of a strong foreign State, would seriously menace the safety of Formosa. Hence the step taken by the Tokyo Cabinet in obtaining a guarantee of the integrity of Fuhkin is a proper and statesmanlike measure. The Jiji contends, however, that something more is necessary. Three years have elapsed since Japan obtained possession of Formosa, yet the island can not be said to have been brought to a condition of good order. Insurrections are still rife, and there is no apparent prospect of their complete cessation. One chief reason for such an unsatisfactory state of affairs is not far to seek. The insurgents receive perpetual assistance in the form of arms, munitions of war, and money from the mainland, and unless that source of supply

She ought therefore to ask China for a lease of some portion of Fulkien. Here the Fifi is distinctly vague. We do not quite perceive, and our contemporary's readers will labour under the same difficulty, how the leasing of a position in the province of Fuhkien would enable Japan to supervise and control the intercourse between the whole province and Formosa. Foochow and Amoy at least would have to be held, and that is a pretty "tall order." However, the Fiji re-frains from defining its ideas and merely says "a portion of Fuhkien." Concerning the period of the lease, our contemporary sees no occasion to fix it. The formula "a temporary lease" would meet with the requirements of the occasion, and it would be clearly understood that Japan has no intention whatever of territorial aggrandisement or of permanent occupation, but that, while seeking primarity to reduce Formosa to a state of peace and good order, her secondary object is to assist in preserving the integrity of the Chinese Empire.

Further telegraphic intelligence from Peking is to the effect that the Chinese Government has given the following engagement:--

t.—Japanese subjects forming partnerships with Chinese subjects for the purpose of carrying on mining operations in China shall enjoy the same privileges as those granted by the Chinese Government to the subjects or citizens, of any other

foreign Power.
2. Whenever Japan suffers from a scarcity of 2.—Whenever Japan autors imposed by the food stuffs, the prohibitions imposed by the Chinese Authorities on the export of rice shall be

With regard to the former of these concessions, it might be supposed at first sight that no special stipulation of the kind was necessary, since the ground is cover-ed by the most-favoured-nation clause, But in their recent dealings with China foreign Powers appear to have travelled considerably beyond the limits of the most-favoured nation clause. The scope of the latter is general, whereas Russia, France, and Germany have been seeking, apparently, to obtain for themselves exclusive mining privileges in certain parts of the Chinese dominions-Russia in Manchuria, Germany in Shantung and France in Yunnan. That process, if carried far enough, would ultimately reduce the most-favoured-nation clause to a dead letter by excluding large sections of the Chinese empire from the scope of its operation. We read the concession now obtained by Japan in the sense that any of her subjects, entering into partnership with Chinese subjects for purposes of mining enterprise, will be entitled to enjoy, whether in Manchuria, or in Shantung, or in Yunnan, or anywhere else, the same privileges-not with regard to the same mines, of course-as those already granted, or hereafter grant-ed, to Russians, or Germans, or Frenchmen or whomsoever it may be. If that is what the stipulation signifies it is an adroit way of getting behind any monopoly that a foreign Power may attempt to establish in favour of its own nationals in China. The question is, however, how far are the Japanese people prepared to areas of enterprise beyond the seas, no adequate, or nearly adequate, attempt has been made to utilize the privileges and concessions already secured. Rail-ways are not built in Korea or Formosa; mercantile establishments are not formed last long. in the newly opened settlement in China; manufacturing enterprise is left entirely to foreigners in the neighbouring empire. Will the sequel of this mining concession be different? The Japanese are unable to find capital for a hundred lucrative undertakings that invite development at home; whence will they procure capital for mining purposes in China? Seldom in the history of the world has it befallen any nation to be so effectually held back from wealth and prosperity by the want of means to utilize its opportunities.

#### THE "JIJI" ON THE WAR.

That the United States will come out of the war victorious, no one can doubt, says the Jin Shimpo. But there will be a great deal of financial trouble. Large quantities of American securities are held abroad, and already more than once their holders have showed signs of weakening in consequence of the instability of the American financial system. It is impossible to be certain that the country will not turn to the silver standard one fine morning, and the element of doubt thus existing will be greatly accentuated by the war. For the first question to be asked is, whence will funds be obtained to carry on belligerent operations? The Republican Cabinet adopted a greatly increased scale of import duties last year with the hope that the additional revenue thus accruing would balance the public accounts. But their expectation has been disappointed. Up to the end of February there was a balance of over 10 million yen on the wrong side. Apparently, then, recourse must be had to a loan. The Treasury has a gold reserve of 150 million yen, and it holds silver bullion and silver certificates to a total value of some goo millions. If the gold be touched, there will be immediate apprehensions as to the stability of the public securi-ties, and foreign holders will unload so rapidly as to cause a heavy drain upon the country's stocks of the precious metals. It is true that a wave of prosperity swept over the country last year. But it had no permanent source. It was due entirely to the accident of a comparative failure of the wheat crop in Europe contemporaneous with a plentiful yield in the United States. It would seem, then, that the better classes will severely feel the effects of this war owing to the depreciation of the securities in which their money is invested. It need scarcely be said that the Jiji does not predict any financial embarrassment for the Americans as a nation. Its pessimistic views have reference to trade only, and especially to the trade with Japan. Tea, silk piece goods, raw silk, porcelain, and such commodities are the chief staples of export from this country to the States, and such articles are precisely those upon the demand for which the war is likely to produce a disastrous effect. There will facilities: the Pacific Ocean lies altoge-ther remote from the fighting arena, and though Spain, since she has not given her adherence to the Treaty of Paris, may cause great inconvenience by

neutral vessels, her privateering operations are not likely to extend to this quarter of the globe. But Japan's export trade will suffer severely, and it is to be earnestly prayed that the war will not

In another article the same journal expresses the opinion that victory may rest with Spain in the opening incidents of the War. Its reasons for such a forecast are that although, so far as ships and armaments are concerned, the contending forces are pretty equal, the personnel of the American navy is very mixed and the Spaniards are excellently trained in maritime exercises and naval tactics. United States, too, has been so long at peace that its capacity to make ready for war at a moment's notice is doubtful. On the other hand, Spain's finances are at a very low ebb. There is no telling, therefore, which of the belligerents will be found the better prepared, but the opening episodes may be unfavourable to America, though her great resources must ultimately give the battle to her hands.

#### THE EXHIBITION OF APPLIED ART AT UYENO.

It appears to us that the Spring Exhibition of Applied Art in the Gallery of the Art Association, in Uyeno Park, which was opened on the 1st instant, is not so fully furnished as usual. But we observe a steady tendency towards refinement of decorative design and an increasing disposition to discard the florid meretricious style which threatened at one time to come into vogue. Much of the silversmith's work, is really beautiful, but the prices-as is invariably the case at these exhibitions—are certainly higher than the figures that would be charged for the same specimens by ordinary dealers. A vase, for example, which no visitor can fail to notice-iris flowers in coloured enamels suspended in a pierced net-work of iris leaves and stalks; a very exquisite design-is marked 250 yen. The actual cost of the metal can not exceed 50 or 60 yen, so that there remain nearly 200 yen for the workmanship. Most of the specimens in this section are designed to suit Japanese taste and to be serviceable in Japanese houses. They lose nothing for that reason,

Modelling in plaster is one of the fea-tures of the Exhibition, and a very successful feature. It can scarcely be called a novelty, for modelling in wax has long been a speciality in Japan, and from wax to plaster the interval is small. What is novel, however, about the specimens shown at the Uyeno Exhibition is their essentially Occidental character. They have evident traces of the Italian school that once promised to become so flourishing under the instruction of Ragusa and Capeletti, but unfortunately succumbed to the singular phantasy that Japanese art is perfect in itself-totus teres atque rotundus - and would only be contaminated by any borrowing from Western sources. The nation has nearly, but not altogether, recovered from that vertigo, and we daresay that the fine examples of plaster modelling shown at Uyeno lose nothing scarcely be any interruption of shipping in the eyes of the present-day Japanese facilities: the Pacific Ocean lies altoge virtuoso because of their plainly foreign affinities.

Cloisonné enamels are, as usual, pro-fusely represented. But there is a happy obsence of the garish pieces that used Original from

invariably to disfigure these annual displays. Sobriety and chastity of decorative design are noticeable in the great majority of cases. Indeed, a few of the specimens are veritable chefs-d' œuvre, and the connoisseurs that buy for the Imperial Household have, as usual, show the accuracy of their judgment by selecting the very choicest examples for the Palace collection.

Carvings in ivory are above the average, though comparatively few in number, but carvings in wood are distinctly inferior. There is a species of glyptic work much appreciated in Japan — work which occupies in its class the same place as sketches in black and white occupy in pictorial art. The chisel of the carver is expected to produce effects similar to those due to strength and directness of line in painting on silk or paper. Masters of this particular glyptic faculty achieve work that charms by its combination of massiveness and grace, dignity and deli-cacy. But the efforts of the tyro are impertinently clumsy: they suggest laborious hewing rather than refined chiselling. The two kinds may be seen at Uyeno, the latter unhappily more prominent than the former.

There is not much to be said about the keramic section. Our old friend Inouye Ryosai has made a bold attempt to re-produce the celebrated "Hawthorn" of the Kanghsi era. He is still a long way below the standard of his ambition, but has at any rate succeeded in turning out one very pretty example. Considerable progress has been made in blue sous converte. The tone of the blue is, perhaps, no better than that previously obtained—a fine clear strong tint—but the quality of the white field has improved so much that we recognise a distinct approach to the grand contrast of Chinese wares in this class. Seifu and Makuzu send a few very lovely specimens; other potler are expresented by préces which, hough not of the highest grade, have unquestionable merit.

There is a profusion of delightful little objects belonging to the Komainono class -cigar and cigarette holders, rings, studs, clasps, tobacco-pouches, hair-pins, &c.,-and there are some very lovely silk fabrics. It goes without saying that the Exhibition will well repay a visit.

#### THE NATIONAL DEBT.

With regard to the distribution of the National Debt or Japan, the Shogyo Shimpo publishes the following table, which, however, must be regarded as approximate only, though the approximations are probably very close :

Inh historia and historia and a significant	
Holders III Bonds.	Amount in Yen.
Imperial Household Department	. 7,588,590
Bank of Japan,	42,303,370
Reserve for redemption of bank notes	4,818,850
Reserves for redemption of Nationa	1
Bank notes	. 4,581,900
Famine Reliel Funds (provincial)	
Finance Department	
Purchased by various Banks with the	
money of depositors	
Nobles' Hereditary Property	
Specie Bank	7.344,750
National Banks	. 35.981.335
Private Banks	
Foreign Communes	
Private Individuals	133,644,202
Total	. 370.080.728

It is stated that the Bank of Japan will immediately take steps to purchase about 20 million yes worth of the bouds held by private and National Banks.

WHAT WILL THE CABINET DO?

HERE is, of course, much curiosity to ascertain what course the Cabinet intends to pursue at the present juncture. The conciliatory character of Marquis ITO'S domestic policy is so well known that his stern refusal to entertain the proposal of the Liberals creates surprise. He is also a resourceful statesman, and men are inclined to conjecture that when he turned his back on the Liberals, he knew that he should find new supporters elsewhere. The latter hypothesis points, of course, to an alliance with the Progressists. But it may reasonably be doubted whether half-a-dozen thoughtful persons really believe that Marquis ITO has deliberately thrown over his old allies for the sake of propitiating his old opponents. Another perplexing feature of his action is that he has allowed this impasse to occur. That is not typical of his administrative strategy. His tenure of office is generally marked by the prevalence of calm and quiet in all directions. Complications do not arise. Fuel exists in abundance whatever statesman be at the head of affairs, but the essence of Marquis ITO'S management is that he prevents the application of the match. With combustibles lying around, there is no explosion. Yet now, within three months of his assumption of power, his Cabinet has broken with practically all political parties, and seems destined to achieve the record of being the first Japanese Ministry to meet the Diet with the self-chosen certainty of an overwhelming majority in opposition. That is not like the adroit, all-placating Marquis ITO, whose tactfulness we have long admired, say the critics. What is the explanation? Some of the vernacular press cast about for an answer with evident bewilderment. They look in all directions save the true one. The Chuo, as the organ of the petty political remnant still clinging to the Cabinet, ought to be "on the inner track." Yet the Chuo has nothing more explicit to offer its readers than a vague statement that Marquis ITO derived his resolution from a Cabinet decision. What decision? No one supposes that in a matter of such gravity the Premier acted without consulting his colleagues, or that he had no opportunity of consulting them before the Liberal mine was sprung. It conveys little information to be told that Marquis them. when he rejected the Liberals' demand. What we want to learn is why the Premier and the Cabinet unanimously decided that an adverse answer must be given to the Liberals' not unnatural request for a portfolio. We have not the least doubt that the if it cared to do so, but its relations with Liberal Party its support is Digitized by

purchasing at the cost of any fraction of the Cabinet's independence. Since the general elections there have been evidences that the Liberals are without the cohesion which can be derived only from a practical sense of descipline. They are divided into cliques with varying estimates of the terms upon which their aid should be given to a Ministry. It is quite plain that if the admission of Count ITAGAKI to the Cabinet, either now or at some early date, satisfied one section of the Liberals, another section would not hesitate to put up its special favorite for another portfolio by-and-by. An endless scramble for office would thus be inaugurated. In fact if the newspapers truly report what has happened, two or three portfolios were actually asked for. The Liberal leaders, speaking before the elections, did not suffer. hesitate to guarantee their Party's support of the Cabinet without any immediate reward, but found themselves unable after the elections, to fulfil their pledge. In a word, the rank and file of the Party have broken away from control, and the Liberals have lost the two essential elements of cooperative potentiality, homogeniety and descipline. It is not to be supposed that Marquis ITO would have hesitated to concede any reasonable terms, such as the admission of Count ITAGAKI to the Cabinet. He did not shrink from making the Liberal leader his administrative colleague two years ago and there is no reason why he should shrink be taken with reserve. In our opinion from the same step to-day. But he may properly shrink from inaugurating a series of concessions without any visible finality. That would be the worst course that he could possibly adopt, not merely from the point of view of public morality but also in the interests of the Liberal Party itself.

Concerning this transition from sensible moderation to office-seeking ambition on the part of the Liberals, the only apparent reasons are the increase of strength and general elections brought. A host of new came to call its roll, it found itself so powerful numerically that the time for dictating terms seemed to have come.

It is another illustration of the old criticism "persons not principles." The cohesion and discipline of political parties in Japan depend, not upon their platforms, but upon the men that lead ITO had the other Ministers at his back ality of Count OKUMA must be ascrib- and from Tientsin, Peking, Newchwang, ed the fact that, alone among politi- and so forth, might be dammed at any cal associations, his Party-the former Kaishin-to-has retained its stability and developed its strength since the day of its juncture. It is not for a moment our organization seventeen years ago. Yet desire to suggest that in stationing hereven in the Kaishin-to there exist lines of self at Port Arthur, Russia entertains Chuo could make the case perfectly clear cleavage-a Shimada line, a Hatoyama line, designs hostile to the progress and dean Ozaki line-along which the Party may the Liberals forbid it to be frank. The at any moment split into fragments, and have no right to attribute to her any fact is that in the present condition of the probably would split if Count OKUMA'S motive of the kind. She has made a

political parties in the English sense of the term. Her so-called "party politicians" seem to lack the elements most essential to working union.

What, then, will the Cabinet do? We can not see that it need do anything in the sense of endeavouring to placate this party or that. There is little probability of the Opposition's resorting to any extreme measures in the approaching extraordinary session of the Diet. At all events, the Government must face the contingency. In the event of an obstinate refusal to legislate about matters of vital national importance, the Constitution reserves ample powers to the Throne, and however reluctant the Cabinet might be to invoke the Sovereign's assistance, the public interests can not be allowed to

## FAPAN AND FUHKIEN.

T is stated by a vernacular journal that L since France's ambition with regard to the south of China is well known, the possibility of her raising some objection to the engagement recently given by China to Japan about the province of Fuhkien was foreseen, and steps were accordingly taken to secure her acquiescence beforehand. We gather that the Chinese Government is supposed to have communicated with the French on the subject, but, of course, the whole statement must England is the Power chiefly concerned. France has never suggested, however remotely, that her "sphere of influence" extends beyond the extreme southern provinces of China, and there is not the remotest possibility that any attempt on her part to establish herself in eastern Kwangtung would be endorsed by Great Britain. On the other hand, it is an undeniable historical fact that England's "sphere of influence" extends from the great change of personnel that the Hongkong to the mouth of the Yangtsze and up the Yangtsze valley to Chungking. men were returned, and when the Party Russia's proceedings in Manchuria, and especially in Liaotung, have compelled the British Government to acquire a naval station at the entrance of the Gulf of Pechili, in pursuance of England's unvarying policy that all trade routes in the Far East shall be secured against closure by any Power. With Russian war-ships at Port Arthur the great stream of commerce, To the overshadowing person- nine-tenths of it British, which flows to moment unless English war-ships were on the spot to prevent such a disastrous convelopment of the world's commerce. We UNIVERSITY OF ILLINOIS AT

coup having for its immediate object the laying of railways and the extension of trade, an object which Great Britain, least of all civilized Powers, would be justified in opposing. It is true that some critics speak of England's action with contempt, and are pleased to represent her in the light of a pusillanimous braggart who talks big until the flash of a sword is seen and then cringes. That is mere silliness. Englishmen can afford to laugh at it. No thoughtful observer has failed to see that Russia's southward march towards the Yellow Sea and the Gulf of Pechili might one day place her in a position commanding a great tradal avenue along which British commerce passes in large and always growing volume. No thoughtful observer has ever supposed that her aim in pushing southward was to close that avenue. But there are times when a State is compelled, in the interests of its own safety, to utilize to the full every opportunity offering to its hand. Were Russia and England at war, the former would naturally employ whatever means presented themselves for inflicting hurt on her enemy, and among such means a very potent one would be to close the Shantung-Liaotung gate of the Gulf of Pechili. England, on her side, was bound to secure herself against such a catastrophe. She could not, with any show of consistency or justice, offer armed opposition to Russia's commercial expansion in Manchuria. All that she could do was to insist that her own interests and the interests of trade in general should not be impaired, and as a matter of fact, she obtained whatever security was possible on that score. The Port-Arthur question complicated the situation not a little. Had Russia confined herself to purely commercial expansion England could have afforded to look on complacently. But is there in the world any Power sufficiently confiding to embark on such a scheme as Russia's Manchurian project of railway building and commercial enterprise without making at the same time some provision of armed protection? We do not think so. It seems to us that if England herself were to change places with Russia in Manchuria, she would consider it essential to have a naval station in the immediate vicinity of her new scene of activity. It would, therefore, have been an outrage had England employed force to prevent the acquisition of Port Arthur by Russia. She was justified in endeavouring to dissuade Russia from taking that step, and we know that she did endeavour to dissuade her, promising, by way of reassurance, that if the Russian Government refrained from obtaining a naval port near the Gulf of Pechili, the British Government would pursue a similar policy of abstention. In other words, Lord SALIS-BURY said to Count MUNAVISIT. Position would not remain u

we will be content not to place our ships in menacing proximity to your new sphere of commercial expansion in Manchuria." Russia would not be content, however, and, speaking friendly, her decision seems quite natural. It forced England's hand, however, Nothing remained but to occupy Wei-haiwei and thus to provide against a danger which, whatever may be Russia's present intention, would become very real and very serious in time of war. The Hispano-American contest is only a few days old, and yet we already see what losses a country can suffer if it is not in a position to effectively police the routes of its maritime carrying trade. With Russia at Port Arthur, and England no nearer than Hongkong, enormous damage might be done in the Gulf of Pechili before a British cruiser could reach the scene of that a route which might greatly facilitate It would have been a depredations. veritable vertigo had England fought to keep Russia out of Port Arthur, but with Russia at Port Arthur, Wei-hai-wei be- frequent the treaty ports. These men came sine qua non to England. On the might render invaluable assistance in Russia at Port Arthur, Wei-bai-wei beother hand, her occupation of Wei-hai-wei introducing Japanese travellers to influendoes not bear the interpretation that she has extended her sphere of influence to the gate of the Gulf of Pechili. She still remains within her former limits, the the Chinese in Japan before seeking that Yangtsze Valley and the coastwise route of the Chinese in China, yet the plain fact from the mouth of that great river to does not appear to be recognised in practice. We may observe, en passant, that Hongkong. The Formosan channel is the same argument applies in perhaps as part of the route—a most important part great a degree, to the case of the foreignof it. When England offered no protest ers in Japan. Their friendship would be to Japan's acquisition of Formosa, she an excellent preliminary to the friendship gave to this country a signal evidence of good will and confidence, for it is evident that a fleet having the Pescadores for basis commands the Formos-an Channel. The province of Fuhkien canards has again opened. We are told, cadores for basis commands the Formosforms the Western coast of the Chan- for example, that six American merchant nel, and Japan has now made that province the subject of an agreement between herself and China. It appears extravagant to assume that France's consent had to be sought by way of prelimin- the Stars and Stripes are seen there ary. Great Britain is the Power concerned-very vitally concerned, too. She has apparently raised no objection. She re-Revision; namely, the policy of regarding with thoroughly friendly eyes the growth country should not mistake her complaisance for indifference. They talk of obtaining a lease of some important position in Fuhkien, whence to check the export of arms and munitions to the Formosau insurgents. Were such a position obtained. Japan would hold both sides of the Formosan Channel. In one sense it is satisfactory to find that England's acquiescence is taken for granted, but we desire to remind the Japanese that if Great Britain amicably permits such doings BURY said to Count MURAVIEFF :- " Be on the part of this country, she certainly would not remain inactive were any other if worked, to be an important source of revenue

RELATIONS WITH CHINA.

The tendency among Japanese publicists to visit China is becoming marked. Messrs, Kioura Keigo, Matsudaira Masanao, and Hotta Rentaro recently passed over to the continent and Mr. Taguchi Ukichi is to follow soon. These names probably mean very little to foreign readers, but they are widely known in Japan, and when we say that they might be supplemented by many others of lesser note, it will be seen that there is a decided impulse to establish closer relations with the neighbouring empire. The fact is welcomed by vernacular newspapers, which justly note that while the Government has been very generally urged to show sympathy with China and to employ friendly influence for breaking down her conservatism, the people themselves have hitherto taken little or no trouble to promote that end. It is, at the same time, remarked access to the object in view is practically neglected. China has sent here an able Minister and clever Consular officials, and a great number of her shrewd merchants tial circles in China and conveying information as to the best methods for them to pursue. It is obviously of the first expediency to cultivate the friendship of of foreigners abroad.

### CANARDS.

steamers have been captured by a Spanish war vessel in the Mideterranean. could six American steamers have been doing in the Medeterradean? We do not believe that so many steamers flying in as many years. Then, again, rumour says that the Olympia has been sunk. telegram received on the 24th said that she had left Hongkong, in company with mains true to the policy frequently enun- the Boston, the Detroit, etc. on the 23rd, ciated by her in connexion with Treaty apparently for Manila, and a telegram received on the 25th says that she is destroyed. The thing is incredible. If the ship had met with disaster, the news could of Japanese influence in the Far East. not possibly have come so soon. The But it is well that the publicists of this blockade of Cuba by a United States squadron is undoubtedly true-not the blockade of the whole island, of course, but only a section of the northern coast, including Havana. The reported cutting of the line of railway is not unlikely to be true. It could have been effected by landing a party from one of the ships, and such dashing exploits are just what may be expected of American seamen.

> Native advices from Peking, says the Peking and Tientsin Times, relate the discovery of a coal mine about 55 11 outside the city gate near Mo shi kac. The coal is said to lie near the surface and to be vastly superior to the coal of any other mines in the district, and promises,

### A USEFUL MAGAZINE.

The Gailloku Gogaku Zasshi, or "magazine of foreign languages," appears to be achieving great success. It is in large demand, a convincing proof that the failure of previous attempts in a similar line has been due to want of efficiency on the part of the authors, not to lack of interest on the part of the reading pub-lic. The magazine is chiefly subscribed for by students. To them it constitutes a veritable instructor in English, German, French, Russian, Italian, Spanish, Korean, and Chinese. Its appearance each month is doubtless welcomed innumerable learners, whose access to books is limited, who can not afford to enlist the aid of a foreign teacher, and who find in each number of the magazine material to nourish their knowledge throughout the month. Some of the best men available in Japan are engaged in edi ing the magazine, the English department being supervised by Professor Kanda, the German by Professor Omura, the French by Professor Imamura, and so on. It would be too much to say that there are no mistakes. Open ing the book at random, we find the sentence Yokohama to kurabemaru to koko wa yohodo samui derho, which is translated "It is very cold here compared with Yokohama, inn't it?" the true translation being, "I expect it is very cold here compared with Yokohama?" Again: "Can you tell me whether Mr. Tanaka is coming back to Tokyo at once?" is given as the rendering of Tanaka kun wa sugu ni Tokyo ye kacile kuru no dare ka kimi ga shiran no ka. The translator loses sight altogether of the two no. Yet their presence has an important significance. They make it necessary to translate the Japanese into "Do you not know, then, whether Mr. Tanaka is to return at once to Tokyo?" This is a subtle but vital point. In an English letter, too, we find the phrase "would you believe it that I have already been, "would you believe it that I have already been, &c." Correct usage does not sanction "it that" in such a sentence. Again, at page 69, we read "the police was summoned," a grammatical error; at page 72, a lady is made to say "it is after every possible reflection that I have thus stolen myself out;" at page 73. a father "roars out, taking it, doubtless, for a mischief of some naughty boy; "at page 76, a grandmother says" I trust Master Taio is all the same well, being quite bury with his postte. the same well, being quite busy with his pretty mischiefs;" and at page 77, a daughter "takes two or three puffs at her tiny pipe in order to dissemble herself." and "makes two or three dry coughs." It is evident, in short, that the magazine needs just a little more care to be magazine needs just a little more care to be really excellent, and since it now commands such a wide circulation that every error contained in its pages is liable to become fixed in the minds of hundreds, perhaps thousands, of students, the want of that trifling modicum of additional attention is much to be regretted, especially an the plan of the magazine is so good and the choice of material generally so

### THE LIBERALY AND THE GOVERN MENT.

Commenting upon the dispute between the Cabinet and the Liberals, the Jiji says that the Liberals' demand for a portfolio is quite justifiable, and that nothing can be more unreasonable on the part of the Government than to altempt to secure the aid of the Liberal politicians without any terms of concession. The Government appears to think that, should the Liberals withdraw, their vacancy can immediately be supplied by the Progressiats. But the latter would not venture to support the Cabinet, and even II they did their adhesion would be attended with claims still more formidable than those advanced by the Liberals. If the two leading parties are not to be relied upon, the finure of the Government may easily be imagined. It is deeply to be regretted that the Government, at this critical moment of the Eastern question, is unable to formulate a firm policy on account of the instability of its form

dation. The Government ought to make what concessions are necessary, while the other political parties should make sacrifices on their part in order that the difficulties now on the political horizon may be safely passed through

The Nippon thinks the Liberals quite justified in claiming the Count's admission to the Cabinet. To the Liberal Party, indeed, the present Cabinet owes its footing, and the Government's loss of the support of the Liberals must shake its whole foundation.

The Kokumin is consparatively cautious in its tone, but suggests action for the restoration of the balance of power in the Far East and the revision of Count Inouye's financial programme, which looks extremely unsubstantial

### HON. A. N. HIGINBOTHAM.

The Hon. Mr. Higinbotham, formerly President of the Chicago World's Fair, is now visiting Japan with his wife and two daughters. Some leaders of Tokio Society are exerting themselves to help the visitors to see whatever is worth seeing, but unfortunately the period of Mr. Higinbotham's stay is so short that there is difficulty in meeting all the demands on his time.

Last Friday evening, the party were invited to Mr. T. Hayashi's residence at Akabane, Shiba. Mr. Sone, the Minister of Justice, Mr. Okuda, the Vice-Minister of Agriculture and Commerce, and Mr. S. Saito (Mr. Okuda's predecessor,) were among the invited, besides several of the host's friends who have had the advantage of visiting Europe and America. Mr. Hayashi's name must be familiar to our readers as an art critic and the exhibitor of the celebrated Twelve Bronze Falcons made by Chokichi Suzuki.

After a sumptuous dinner, showing all the resources of the Japanese cuisine, a band of some thirty geishs from Shimbashi enlivened the evening with dancing and music. The solection of performances was cleverly made so as to show a wide range of the fair criticia. cieverly made so as to show a wide range of the fair artistes' accomplishments. There were five principal dances, commencing with the usual sambaro and ending with the Temptation of the Priest Kisen. This last was very ably performed by two young geisha. They pourtrayed with remarkable histrionic power the priest struggling against the emotion of love which threatened at every moment to master When this dramatic incident was at its climax there came upon the stage-which had been specially erected for the evening -a band of young girls personating the disciples of the priest. After these had carried on a brief dialogue, the spirit of the dance gradually changed. the music passed to a livelier atrain, and anddealy the four pretty disciples threw their apper robes off their right shoulders, and showed the stars and stripes embroidered on their sleeves. It was a pretty and courteons conception, and of course the patriotic pleasure of the guests found warm expression. This was followed by the well known harvest dance in which all the geisha of the evening joined, except, of course, the musicians. The brilliant colours of the dancers' costumes and their graceful motions made the onlookers so enthusiastic that, by the time the ring of gersha, which grew gradually larger at each turn, had extended beyond the stage and reached the place where the gnests were seated, the latter rose en masse and joined the merry measure. Conspicuous among the dancers of the evening was Masaya of Shimbashi, whom the popular verdict places head and shoulders above her contemporary attiates.

Mr. Higinbotham was the guest of the United States Minister on Saturday, and of Mr. Okura Kihachiro on Monday. The members of the Tokyo Chamber of Commerce are to entertain him to-day (Tuesday) at the Maple Club.

gined. It is deeply to be regretted that the Government, at this critical moment of the Eastern question, is unable to formulate a firm policy on account of the instability of its foundation.

THE NEW M. M. STEAMER.

A large number of Yokohama residents on Saturday afternoon had an opportunity, thanks to the courtesy of Captain Vaquier and M. Conil, agent of the Messageries Maritimes, of inspecting the new steamer Indus which has been placed on the Company's Far Eastern Service. The Consular services and shipping offices were well represented, and many ladies graced the proceedings with their presence. A most liberal hospitality was accorded the visitors; an elegant cold collation was served in the saloon; the Yokohama Band played a capital selection of music; and altogether the whole affair was of the most enjoyable description.

The Isdus is of the same design and dimensions as the Laos, which was described in the Japan Mail a few months ago. She was built at La Ciotat, near Marseilles, at a cost of nearly seven million francs, and has the rig and appearance of all the French mail boats. She is 141.75 metres long, 15.50 beam, and 11 deep; her gross tomage is 8500, and her engines develope a horse power of 7200. This enables her to make an average speed of 14 horse an hory though on heart the state.

knots an hour, though on her trial she did 18.4.
It is, perhaps, in the richness and completeness of their interior arrangements that the French mail boats make their chief appeal to the public. Other lines have steamers as large, as fast, and as punctual, but few aim at making their boats so luxurious and artistic-more, indeed, like a fine hotel than a seagoing ship. The Indus probably passes the high water mark of excellence in this respect. The decorations are more than rich, more than tasteful—they are magnificent. The saloon, for example, is saloon, for example, possible to imagine an apartment on board ship. It is in the Louis Quinze style; all the woodwork is of oak, and beautifully carved; and the massive chimney piece is a really spleudid piece of work; while some paintings by Mr. Fels, in the best style of French decorative art, add immensely to the effect. A splendid staircase, also sitistically carved, leads to a handsome corridor above; and close at hand, is the music room, most elaborately decorated in two shades of salmon and silver, and containing a splendid grand plane. The ceiling and walls are beautifully painted, the former by M. Moreau-Leret; and the latter by M. M. Esbron and Fels.

The reading from and smoke room are two other features which merit a passing notice. The first is decorated with linerasta in gold and green, and all the woodwork is of mahogany, while two chaiming landscapes by Mr. Fernand Gingon relieve the walls. The smoking room, though naturally not so elaborate as some of the other apartments, is very tastefully decoated, the Louis Quinze style being adopted here also, while the art of M. Felz is seen in some

pretty monochrome designs.

The second class accommodation, though of course plainer in style, is good; and the cabins, mon all the French steamers, are tolerably roomy and very well fitted, all the details of lighting, toilet, and emphoard accommodation being on the best modern plan. And the elegant confections served in the salcon of the Indus on Saturday afternoon showed that the chef is well up in the sirier and more ethereal branches of an art in which his compatriots are unapproachable. If his more solid efforts are equally successful the Indus will maintain the reputation of the French boats for keeping a first-class

### THE NEW MINISTER OF AGRICUL TURE AND COMMERCE.

Mr. Kaneko Kentaro receives his first portfolio as Minister of Agriculture and Commerce. For many years he has occupied a prominent place in the official world and been recognised as one of the ablest among the rising statesmen of the era. We offer him our hearty congratulations on his accession to Ministerial rank and trust that he may achieve the auccess his talents committed desorre.

### JAPANENE FACTS AND COMMENTS.

The National Unionists, remarks the Hochi, are now considering the formation of a new Ministry in the expectation that Marquis Ito will retire from the Cabinet. Marquis Yamagata is alleged to be the head of the movement. Steps were taken to induce a section of Libera's to make common cause with the National Unionists, with Mr. Nakamura Motoo at their head. Viscount Takashima's mansion is the head querters of the party, and their programme has in view the following appointments:—Prime Minister, Marquis Yamagaia (N.U.); Minister of War, Viscount Takashima's Marquis Hashima (S.); Minister for Foreign Affairs, Mr. Hoshi (L.); Minister for Communications, Mr. Shirane (N.U.); Finance, Mr. Sone (N.U.); Navy, Count Kabayama (S.); Home, Count Itagaki (L.); Agriculture and Com-merce, Viscount Shinagawa (N.U.); Justice Mr. Matsuda (L.); Education, Marquis Kuro-da Nagashige (S). This programme, the Bochi adds in the picturesque language of Oriental allegory, "is like a monster having the head of a dragon, the face of a monkey, the body of a cat, and the tail of a dog. The notion deserves in itself extreme wonder, and imparts, in fact, a new aspect to the political world."

The excitement in the political atmosphere since the rupture between the Liberals and the Cabinet has not yet calmed. Nothing definite is forthcoming from the Liberals as to their policy, but the members of the Party may, according to the Yorozu, be classified as follows: -(1) Those who, with the Progressists, are disposed to make an absolute attack upon the government. (2) Those who, though they will assail the Government on a certain points on which they consider attacks are absolutely necessary, insist upon the desirability of avoiding a vote indicating want of confidence in the Cabinet. (3) Those who are diametrically opposed to Count Inouye's financial policy, and who, while assuming a most judicious attitude In regard to diplomatic questions, are resolved to reject the budget now leady for presentation at the extraordinary session of the Diet Which of these three classes of politicians will command the majority in the Diet is quite un-certain. If in regard to the Government's financial policy the Progressists take the same attitude as the Liberals, and reject Count Inonye's programme, it is quite natural that Marquis Ito should either quit the Cabinet, or change it entirely, or form a new Coalition The Progressiate are is dulging in Ministry. The Progressists are i-dulging in whimsical forecasts of the future of the Cabinet, among them being the following: (x) A coalition Cabinet consisting of Liberals and Progresslets. (2) A Coalition of the Satsuma elique, Liberals, and National Unionists, with Marquis Saigo at their head. (3) Marquis Yamagata as Premier. (4) Count Inouye to resign his position as Minister of Finance in the Cabinet. The policy of the Liberals, however, will not be determined until after s general meeting on the arrival of the local Representatives in the capital. If it be found that the Tosa Clique commands the majority, then the Kwanto and Hokushin sections will probably form themselves into a new party.

From the Jijj we gather the following:—The price of rice in Soul rises day by day, being quoted at 26 sen per sho in Korean measure and 17 sen in Japanese. The Korean people are reduced to the last extremity; but nevertheless, in view of the acarcity of grain con-sequent upon the failure of crops in Japan during the past two years, the Japanese merchants in Korea are assiduously engaged in the export of Korean cereals to this country. Wheat, owing to the unusual warmth of last winter, did not turn out as bad been an icipated, and the poor have been obliged to feed on roots and backs. Disquietude prevails throughout the country, and the Emperor has found it necessary to issue a special rescript for the suppression of local commotions. As the misery of the people is growing too serious between the overlooked neighbors. Their trial shipment in October last proved extensions which is a good briar with pure tobacco," is her pretty tremely successful, a large order being sub-life dided dyspepsia among women smokers." A be overlooked neighbors where the suppression of local commotions.

between the Korean authorities and the Chinese Consul with a view to quantities of grain being imported from Shanghai. Arrangements are now being made to carry this scheme into practice, A certain Korean has presented an address to the throne in which, after pointing out the necessity of promulgating preventive laws against the export of rice, be exhorts the Emperor that foreign troops should be kept away, that aliens should be limited to their settlements, that no stranger should be allowed to travel in the interior without passports from the Korean government, that the circulation of foreign coins and notes should be peremptorily forbidden, and that the taxable boundaries in Deer Island should immediately be determined. These propositions are quite reasonable from a Korean point of view, but they can hardly be carried into practice.

Mr. Kataoka Chokuun, President of the Japan Land and Sea Insurance Company, is reported by the Nichi Nichi to have addressed a meeting of leading business men in Osaka. He urged that the Government ought to support the Industrial Bank in the issue of loans, so that the Bank might be enabled to extend help to the various private companies engaged in productive enter-prises. The present resources of the Bank do iot allow any single loan to exceed 125,000 yen, but these restrictions ought to be replaced by more liberal regulations. He also argued that the Bank of Japan should be directed to proceed with the redemption of public loan bonds, and he denied that any necessity existed for raising rates of interest on the part of the Nippon Ginko. The step taken in this direction is generally construed as having arisen from a desire to restore the currency to its vaults, to prevent the appreciation of commodities, or to check the mania for speculative undertakings. But it is not at all a judicious plan to sacrifice legitimate enterprises for the sake of suppressing speculation.

The Ito Cabinet, remarks the Kokumin, line begun to show instability within three months of its organisation. Two plans suggest themselves at this juncture. The Government has either to secure a fresh promise of cooperation from the Liberals, or to adopt a policy in-dependent of political parties. There is some talk of the possibility of the Progressists being consulted, but now that the Ito Cabinet ha declined the demands of the Liberal party, how is it possible for it to acquiesce in the claims of the Progressists? Will the Premier try to restore the former understanding with the Li-berals? In that case, the portfolio of Home Minister must be granted to Count Itageki, while the installation of the Count is likely to be attended with other radical changes in the Cabinet. The Liberals are strenuously opposed to the financial policy formulated by Count Inouye, and it seems that no alternative exists for the Premier but to resort m the policy of standing about from all parties,

Ever since the Government monopoly in leaf tobacco was established the import of the leaf has steadily increased, the figures for January and February reaching 884,435 and 1,419,721 cattees, valued at 82,629 and 152,952 yen respectively. The import of cigars, cigarettes, and cut lobacco, on the other hand, in January did not exceed 66 263 ren in value, while the amount for February scarcely reached 124,330 ren. The enormous import of foreign leaf is doubtless attributable to the abnormal appreciation of the native product consequent upon the monopoly. The Japanese Consul in Shanghai makes the following comments :- " At the end of each year accumulations of tobacco in the various warehouses do not fall short of 100,000 bags on the average, containing 200 cattles each. Merchants in Shanghai were shrewd enough to predict that quotations would rise the Japanese in Shanghai were induced to compete in the purchase of the leaf, and the quotations at present are more than double those in October last." There is, says the Tokyo Shimbun, cause for anxiety that the increasing import of Chinese tobacco will produce an injurious effect upon the Government, monopoly.

The depreciation of silver bullion and the rise in Shanghai exchange rates, together with the standstill in the export of yarns to China during the latter half of last year, have, according to the Nichi Nichi, combined to bring about serious decline in the cotton-spinning industry of Japan. The export to China began to revive at the end of last year, and in the beginning of 1898 a certain degree of prosperity was restored, quotations in February having risen to 96.50 yes per bale. This, however, proved only temporary, and the tradal depression in Shanghai. as well as political events, have again influenced exports to China. Prices have thus rapidly fallen, the rate at present being less than 85 yen, a decrease of over ten ven as compared with the maximum quotation of one or two months ago. To make matters worse, tightness of the money market has set in, with a corresponding enhancement of rates of interest. The Noda Spinning Company was the first to succimb. and, unable to continue work, the factory, which originally cost 4,000,000 yen, was recently sold to the Hirano Spinning Company for a sum of 180,000 yen only. Shareholders who have paid 20 yen will only receive 4 yen. The Asahi Factory is in a most embarrassed position, and other companies are also on the verge of disaster. With the exception of one or two they will not only be unable to declare dividends, but will probably go into bankruptcy should the present state of affairs continue for any length of time. A little grain of comfort, how-ever, comes from Osaka. Yarns are, it seems, ever, comes from Osaka. Yarns are, it seems, quoted in Shanghai at 78 taels while the exchange is fixed at 82 taels, at which price export yields a profit. It is reported that the demand may also revive in other parts of China.

According to the Jiji the foreign trade of Yokohama, Kobe, and Osaka during the first half of this mouth may be tabulated as follows .-

	Exports.	Imports.

### THE NEW YOROHAMA HOTEL.

Since Yokohama has become to rich Americans something like Boulogne and Ostend are to middle class Londoners the prospects of the hotel business have become particularly rosy. Already the Treaty Port has two or three establishments which do not yield, in point of solid comfort, to average first rate hotels in Europe, though of course the necessities of the case do not demand the huge structures and ultra laxury of arrangement that one associates with the great modern hostelry. The latest addition to hotel accommodation in Yokohama is certainly one of which the Settlement can be proud. The Oriental, which is fast nearing completion and will shortly be opened to the public, is a large and haudsome structure in red brick, with stone dressing, occupying a commanding position on the Bund, and possessed of an architectural finish that places it far beyond the average of the rather amorphous European buildings in Japan. It is the largest building under a single roof lu Yokohama and occupies a space of 500 tsubos. Its exterior is in the style of the Italian Renaissance, and the decorations of the principal rooms are on the same plan. There are two rooms are on the same plan. large and handsome entrance halls, one facing the Bund, and the other the side atreet to the right. On the left of the main entrance is the dining room, with an elaborately moulded hiski wood ceiling, carved wooden panels seven feet high, and an elegant design of wall decoration in green. The room is about 40 feet by 70 in Almost equally large is the har room, but the great feature of the place is the stair-case hall behind. It is 50 feet by 70, and lighted by skylights of richly stained cathedral glass. A great central staircase of solid stone, with massive and richly carved balustrades, leads to the great upper corridor which entirely encircles the whole building and into which the bedrooms (of which there are 40), ladies' drawing room, and other apartments open. The floor of the hall is handsomely tiled, and at the back of the staircage is a winter garden, which will be furnished with flowers and shrubs, and will form a pleasant lounge or "sitting out" ground during balls and dances. The rooms are all nicely furnished, filled with every "modern convenience" (that classic phrase covers more in this instance than an electric bell which won't work, as in some hotels we wot of), lighted by work, as in some notes we do to.). I specified by electricity, and warmed by an ingenious heating apparatus which can be regulated to a nicety by the occupant. The kitchen, too, is all that an artist like the Oriental's chef can desire. In fact, the hotel is more than a credit to the enterprise of the owners, Mesars. Muraour and Dewette, and to the architectural ability of Mr. Richard Seel, on whose design it has been erected. Those that have had the pleasure of testing M. Muraour's cuistne—he is probably the best cook in the East-and Mr. Dewette's managing ability can scarcely entertain any doubts of the hotel's success.

### MIRS BAY.

Mirs Bay is a particularly fine harbour on the coast of Kwangtung, a little to the north of Hongkong. If the report be true that the United States squadron on this station has proceeded to Mirs Bay and occupied it with the intention of employing it for the purpose of a basis of naval operations during the present war, we must suppose that China is a consenting party. In any case she becomes responsible for a breach of neutrality vis-d-v x Spain. In all probability England, too, has been consulted, for the necessity of acquiring Mirs Bay has so long been insisted on by the people of Hongkong that Great Britain has a kind of prescriptive right to the place, and certainly would object very strongly if any Power but the United States attempted to occupy it. We appreciate the absurdity of alleging that to have coveted a certain place for a length of time constitutes a title to its possession, but such appears to be one of the fin de siècle canons that the world has come to recognise. Of course nothing is yet definitely known about Mirs Bay and the

### A PLEA FOR THE POLICE.

That the re-adjustment of the various administrative Departments will become necessary when the revised treaties come into operation is beyond question; and the greatest difficulty will probably be in connection with the police and prison institutions. With respect to the former measures must be taken to appoint officers well versed in English in the leading ports and cities likely to be thronged by foreigners when mixed residence takes place. Even at present the policemen in large towns are required to devote some of their time to the study of English, but owing to the inadequacy of their salaries constables who have attained proficiency in English generally change their profession. In a certain prefecture half the constables who were sent to school for the study of English are reported to have left as soon as they obtained a grip of the language Unless the treatment of the force Is improved, any attempt to retain constables in office after they are perfectly trained for special duty will prove futile. The same remarks apply with equal force to police Inspectors and Superin-tendents of experience. The Chief Police tendents of experience. The Chief Police Inspectors are charged with great responsibili-ties in regard to the welfare and tranquility of the State; but the honours granted them are comparatively insignificant. In short, sweeping changes must be introduced into the existing system of police. The in Japan also needs reform. The prison system in Japan also needs reform. Japan ought not to be behind other nations in making improved arrangements in her houses of correction. So remarks the Tokyo Asahi.

### CAPITAL IN JAPANESE ENTER-PRISES. .

Now that the scarcity of capital is creating anxiety in the economic market, it is interesting to note how fast the demand for capital bas increased of late years and is still increasing. The following table shows the increase in the capital of various enterprises since 1895:—

CONSELIDATED C-PITAL.

Prior to Increase in Increase in Increase in 1895.
1895. 1896. 1897.
Yen. Yen. Yen. Yen.

Agricultural 184,197. 68.033 69.05 99.05 11,000.570 11,000.00 11,000.517 (0mmsrci=1 29.79.33 26.05.79.610.00 17,013.900 63.375.517 (77) 17,013.900 63.375.517 (77) 18,000 77,013.000 77,

A large proportion of this increase is, how ever, nominal, and exists only in the account books, and it is necessary to refer to the following table for the funds actually absorbed in enterprises of various descriptions:—

# CAPITAL INVESTED IN POPULAR ENTERPRISES. CONSOLIDATED CAPITAL.

### Private | Increase 
States attempted to occupy it. We appreciate the absurdity of alleging that to have coveled a certain place for a length of time constitutes a title to its possession, but such appears to be though i is believed the vessel can be raised. The Toyothima lies in 5½ fathoms of water, has come to recognise. Of course nothing is about three cables distance from the land, and yet definitely known shout Mirs Bay and the American squadron.

### CHINA'S NEW OPEN PORT.

Chinwan-tao, otherwise Tangho, which was declared open to foreign trade after the agreement to lease Wei-hai-wei to England, is in the Funing district of the province of Childi, a little to the south-west of Shanhaikuan. We do not know whether even that explicit statement will convey much information to the majority of our readers, and it may therefore be well to add that Shan-haikman lies on the Western Coast of the Liaotung Gulf, to the north of Taku-in other words, to the north of the mouth of the Peiho. The advantage gained by opening Chinwan-tao is that it is accessible for steamers all the year round, and as it will be connected by rail with Tientsin, Peking, and the Siberian road—when-ever that is finished—the result is that Tientsin and Peking, instead of being shut off from all maritime communications throughout the winter, will now be in touch with the sea from year's end to year's end. Another feature of the new port is that Shanhaikuan would be the natural place for a force to land if an attack on Paking were contemplated. From other points of view, also, its strategical importance is considerable, and with Wei-hai-wei in England's hands and Chin wan-tao open to foreign trade, Peking's chances of security are greatly improved.

### MR. MCLEAVY BROWN.

We take the following from the Soul Independent:-

We have received the following communication from a certain Korean guild (literal translation from Korean):

To His Excellency,

The Editor of The Independent:

Lofty Sir:

We hope your Excellency will insert the enclosed copy of an inscription which has been engraved on a tablet exected in honour of the Chiel Commissioner of Customs and Adviser of the Finance

on a tablet erected in honoin a fire conservation of the Finance Department, the great Englishman, Brown, so that the great and small people of Great Han will never forget Mr. Brown's services:—

"Brown, the great Englishman, Chief Commissioner of Dalhan. He understands Chinese, long connected with the Korean service. He is firm yet tender, he is accurate and economic in financial administration. He studies and plans for our welfare, Because of unfortunate circumstances he was relieved from the Finance Department too soon for our good, Whoever succeeds him cannot surpage this sage. His fame spreads worldwide and his deeds will be written on silk and bamboo."

on silk and bamboo."

(We insert this copy of the inscription with great pleasure. Though humble in origin and of quaint and simple style we believe that the message comes from the hearts of a grateful peuple. We have previously announced Mr. Brown's worthy recognition at the hands of his government. We are glad to print this hearty recognition from the people whom he has faithfully served. Though conched in the extravagant terms of Oriental language we believe there is a truth underneath which makes it an amusual tribute.—Ed. I.)

### JAPANESE TEA PROSPECTS.

The tea season opens in a few days. The expenses of manufacture have risen greatly, and it is believed that provincial tea growers will not part with their goods if the rates fall below 55 ven. The first tea steamer leaves Yokohama on the 30th instant, and foreign firms may expect to be compelled to buy at high quotations, insamuch as the arrivals by that time will not exceed 20,000 or 30,000 catties. The total output this year may reasonably be expected in be 20 ercent, less than in ordinary years. At a gathering of tea merchants held in Yokohama on the afternoon of the 19th instant it was resolved that the "superfine" from Suruga and Totomi should be quoted at from 54 to 55 yen; "medeiun" from 47 to 48 yen; "common" from Hamamateu and Im at 40 yen, and "best common" at from 44 to 45 yen,

The Chinaman who was removed from the P. and O. steamer Robilla and sent in the quarantine station at Nagasaki suffering from plague diel in the 3rd inst.

### FAPANESE LEPROSY.

Mr. Murakami Shosei, of the Epidemic Investigation Institute, publishes a lengthy article in the columns of the Tiji on the subject of Japanese leprosy. The article may be epitomined un follows:-

Leprosy in Japan has long been regarded as a non-infectious disease, but the recent deve-lopment of medical science has proved it to be In point of danger it is indeed contagious. more formidable than any of the eight epidemic diseases hitherto known.

The origin of this terrible disease has been ascribed to the wrath of Heaven. Whoever is tormented by the malady incurs in Japan the imputation that he has reaped the fruits of sins committed by his father or ancestors. Prayer and supplication to deities and Buddhas have therefore been the only courses taken by the sufferers; and it is for this reason that the sacred mountains of Nariassau in Shimosa, Minobu-san in Kai, and Shoto-san in Sannki are always crowded with aufortunate people infected with the malady. The disease being considered as hereditary, all the family and relatives of sufferers are shunned and isolated from social connexion. But the notion that the malady is hereditary is really quite erroneous; it is only contagious. As to the origin of the maindy no definite records exist in Japan, but its traces were already discernible as early as the middle ages. No preventive measures were then adopted, nor was the contagious nature of the disease known. Leprosy therefore rapidly spread, and of late it has begun to show signs of increasing in still greater measure. A few years ago, a village in a certain prefecture was infected, and in a short time the whole place was simply an abode of lepers. An adjoining village is now threatened with contagion. A family of six in Gumma prefecture is said to have lately been seized with the malady, one after another. Investigations completed by the Sanitary Bureau in September last show the aggregate number of lepers throughout the empire (Hokkaido being excepted) to be 23.660. It is quite certain that this calculation is under the mark, the real number being probably more than double the figure above mentioned. That in a country possessing only forty millions of population the number of lepers should be so large is a fact which must be ascribed to neglect in adopting preventive measures; and future failure to take resolute steps involves a serious menace to the whole nation. The one practicable method of dealing with the disease is isolation— separation of the infected from the rest of the community. Norway has set the example with perfect anccess, and the sooner this scheme is adopted in Japan the better. Japan has al-ready lost opportunities for taking decisive measures, and further delay may mean utter disaster.

Properly speaking, leprosy is a chronic infections disease: its duration is 30 to 40 years at maximum and 5 or 6 years at minimum. Secrecy and the success with which leprosy patients conceal the disease in the earlier stages are the great difficulties with which sanitary reformers will have to contend. The law of notification must strictly be enforced; and isolation places for lepers, where they may be kept in decent comfort, must be provided.

Isolation can be effected in two ways: the first, by providing special residences for lepers; the second, by doling out a tract of land for their exclusive use. The former process is the better, but it requires an immense outlay for buildings and a considerable amount in allowances to sufferers. If the Government be unable to bear all the expenses at once steps may be taken for the present to separate patients only in the three leading cities and the five open ports where communication is extremely brisk. At any rate lepers should be subjected to medical treatment.

The meeting of the Yokohama Literary So ciety, which was to have been held this evening is unavoidably postponed to May bili.

### A GOLD FINLD IN MANCHURIA.

From eastern Manchujia comes news that an apparently rich gold-field has been discovered. Just a year ago, travellers having bowlstull of gold became tolerably frequent visitors at the small inna in the district. They proved to be fatmers and labourers who had discovered gold in a valley in the neighbourhood and who were carrying their "piles" to the nearest city. Of course a rush was made to the place, and it was found on the Western slope of m hill traversed by a small stream which disclosed, along its banks, a substratum of richly auriferous soil. Very soon two thousand diggers were working within a distance of one-sixth of a mile along the stream. From an arithmetical point of view it will not at first be perceived how they managed to fit in, since each man's claim must have been only 10 inches wide. But the ex-planation given is that 12 men occupied each claim, sharing the outcome equally, and that only two worked in it at a time, one plying a mattock, the other a spade. A great rush to up this spring. It is an interesting question whether the region in the neighbourhood of the river and even the adjoining monutains may not prove to be rich in gold.

### THE INDUSTRIAL BANK.

The shares of the Industrial Bank do not seem to attract subscribers despite the premia that they bear. The first issue is twenty thousand shares of 50 yen face value. Up to the 22nd instant, however, only two thousand applications had been received, the shares applied for totalling ten thousand. In other words, only five hundred thousand yen have been forthcoming. Several places have still to be heard from, however-as Osaka, Nagoya, Kyoto, Gilu, Miye, &c -and the list may possibly have filled before the 25th, when the period for subscription closed. But the chances are that even this first issue will have to be assisted by the State, and if that be the case, the second issue will probably have to be taken up entirely by the Government. Capital is evidently very scarce in Japan at present.

## THE NATIONAL UNIONISTS.

The National Unionists have been left in the lurch, so to speak, by the action of the Liberals in severing connexion with the Government, Added to the Liberals they made a powerful party, quite competent to secure the passage of the Cabinets' bills through the Diet, but, standing alone, they are unable to accomplish anything. It does not appear, however, that they have any intention of following the example of the Liberals. They mean to stand by the Cabinet either as its sole supporters, or as intermedia They mean to stand by the Cabinet, ries working to restore the old relations between the latter and the Liberals.

### NEWS OF THE WEEK.

Mr. R. B. Bardsley, who was known in Yokohama, was recently found dead in his bunk on the Hangchow, bound from Chesoo to Swntow. It is thought that death was caused by laudanum poisoning,

The following is the result of the last Manila Lottery :---

Third Prize ..... 10,304 Fourth Prize ...... 18,000

It is reported that a well-known Shanghai re-sident has won the first prize.

An example of the unconscious satire of Deceased died "on his way home after consulting a specialist." An inquest was held, and a verdict returned of "Death from natural causes." Which reminds one of the junior reporter who wrote: "Deceased died without the state of the property of the propert

medical assistance, and an inquest was there-fore necessary." Poor doctors! A Jury of that kind is worse than a conscience.

The Medical Press and Circular urges The Medical Press and Circular arges society to pay no attention to the ingenious Frenchman who professes to have discovered the microbe of baldness. It says that baldness is "determined by a readjustment of the peripheral circulation," and "the incidence of this retrograde process is greatly influenced by heredity." That is quite clear, we trust,

A lifeboat believed to belong to the N. P. boat Pelican has been sighted by Captain Helm, of the ship Falkirk, near the Aleutian islands. The sea was too furious to permit of the lowering of a boat to examine it. It is feared that the Pelican's crew, numbering forty-one, were drowned, or died of starration, even if they reached shore, unless they found some Indian settlement, because the steamer was provisioned for only an ordinary trip.

Lord Justice Vaughan Williams, speaking at the annual dinner of the Solicitors' Managing Clerks' Association, claimed that the prejudice with which the legal profession has to contend is smaller than it was, but pointed to the stage lawyer and to the anecdotes aimed at the profession as evidence that a considerable body of ill-feeling remains. As an instance of the bitterness with which lawyers are sometimes spoken of, he mentioned that a modern wit had lately described a well-known solicitor to him as : professing Christian and a practising attorney."

It is stated that the Russian government has decided to adopt the metric system. United States and the British Empire will thus soon be the only important countries which have not adopted the decimal system of weights and measures. An imperial commission has also been appointed at St. Petersburg to consider the best means of abandoning the Russian calendar in favour of that which prevails in other parts of the civilised world.

A terrible disaster is reported from Illinois. By the bursting of a dam on the Ohio the Settlement of Shawneetown was flooded to the depth of fifteen to 20 feet in parts. Scores of people—some of the newspapers place the number at 250—perished, and the destruction of property was terrible. The Sheriff, a Mr. Galloway, lost his wife and four children. The disaster was aggravated by a terrific atorm, the wind blowing at the rate of 35 miles an hour,

Fleet Sargeon Christopher Knox Ord, M.D., F.L.S., died at Lewisham, London, recently, aged 72. From 1864 to 1866 he was surgeon of the Royal Marine battalion sent out for service in Japan, and was present at the bom-bardment of the batteries at the Straits of Shimonoseki and the capture of the batteries, stockade magazines, &c., from Sept. 5 to Sept. 8. 1864.

The Osaka Shosen Kaisha has been granted by the Government a sum of 16,056 ven, as compensation for the loss of the Company's ateamer Ajikawa Maru, while under charter to the army during the war with China. The vessel stranded in the port of Newchang in April, 1895, and was blown up with dynamice by order of the Japanese military authorities. The sum granted is said to be only one-third of her value.

German Consulates are to be established at Vladivostock and Nicolaiefsk. In these ports there are not only many important German trading houses, but the fitting and chartering of ships is largely in the lands of the Germans. The present brisk state of trade between Germany and Eastern Siberia shows prospects of rapidly increasing. A direct and regular steamship line is about to be started between Hamburg and Vladivostok.

quickest and best way in which I can inform its many friends that, owing to the rise in rice and the fact that there have been very few contributions of late, they are sorely pressed to know which way to turn, and I would urge all who can do so to leud a "helping hand." During Mr. Pettee's absence contributions for the Asylum may be sent to me at Okayama.

A certain school-board, shocked at the vulgarity of some of our nursery rhymes, has Bowdlerised them. Here is a specimen of its labours :-

VOLGAR RNULTSO.

If I had a dookey as wouldn't go,
Do you think I'd wallop him? Oh, dear no!
I'd give him some corn, and cry: "Gee wa!
Gee up, Neddy!" VULGAR ANGLISH.

THE LANGUAGE OF THE YOUNG PERSON. THE LANGUAGE OF THE YOUNG A SECOND IT I had an animal average to speed,
Do you think I'd chastise him? No indeed!
I'd give him some outs and cry; "Proceed!
Go on, Edward?"

A German statistician has been making calculations as to beer-drinking in certain towns in Germany, Austria, and Hungary. The inhabitants of Munich consume on an average 566 litres per head every year; at Prague the figure falls to 172; at Berlin to 160; and Vienna on 145. On the other hand, the Nurembergers drink 321 litres each. According to the same suthority, they do not care a great deal for beer at Paris. The Parisian is content with only II litres a year. As to the brewing of beer, Germany is first with 61,300,000 hectolitres a year; Great Britain comes next with 3.000,000; and the combined output of the United States and Australia is 55,400,000.

Recently while Mr. Jordan, H.B.M.'s Chargé d'Affaires in Korea, was walking along a street in Soul in the company of another foreign gentleman, a drunken Korean soldier, belonging to the first regiment of the Imperial Guard, saluted him by "a friendly whack across the shoulder," Mr. Jordan seized the offender and handed him over to the nearest police station. The Minister of Foreign Affairs, hearing of the episode, immediately called on Mr. Jordan and made suitable apologies, while the War Department took the prisoner into its hands and sentenced him to be shot. Mr. Jordan' expressed a wish that the man should not be dealt with so severely. and the sentence was commuted to ten years' banishment.

Rester's special agent writes of Peking: It is the dirtiest and worst kept town I have ever seen. The atreets are crowded with carts, which make deep ruts, and there is no pave ment. The gates are closed at nightfall, and re-opened at midnight, to allow Ministers to proceed to audiences, which are held at two o'clock in the morning. I was struck by the spathy of the inhabitants. Nobody displays the slightest interest in public affairs, except the officials, of whom a great number, it is stated, receive grants from the Russian secret service fund, representing a very large amount yearly. Nothing could convey a better idea of the utter conservation, and childishness of the Chinese than two sights which I witnessed yesterday, The first was a body of soldiers engaged in practising with hows and arrows, and the other was the picture of a huge cannon painted on a canvas acreening a part of the town wall, the object apparently being to frighten intending invaders. A European temarked to me that it was a good thing the loan had been concluded. for in a week's time it would be difficult to do business, as the kite-flying season would then have begun.

Newspaper enterprise has apparently broken out in a new and altogether reprehensible direction. At Bow Street a few weeks ago, Albert Eavres, allias Frederick Mason, inquiry agent, of Dalston, was charged with forging an order or request for admission to H.M. Prison at Holloway. It was stated that prisoner presented himself at Holloway Prison, gave in m paper representing himself as a solicitor's clerk, and statement for the defence. He afterwards sold Eugland between English girls and Chinese to Aloyd's News a statement which he alleged subjects. "Such unions," the committee rethe prisoner had made to him confessing his guilt. The newspaper published this sensational copy with flating headlines, and paid £20 for it. The prisoner was committed for trial,

Mr. Goschen gave un one reason for not enlarging his new naval construction estimates that it would be impossible to procure sufficient armour and probably guns for any greater number of ships than he has provided for. He further went on to say that it had been suggested that the Admirally should themselves construct works where armour could be manufactured; but he did not think the House generally would be inclined to encourage them in such a task. But why, says a paval expert, it should be had policy for the State to make a portion of her own aimour, and yet good for her to manufacture the greater part of her own guns, and even to build some of her own propelling machinery, is beyond my comprehension. Year by year we shall want more armour-plates, and surely this ought to be a reason for at once in-creasing our means of supplying them. But instead of this, Mr. Goschen merely gave utterance to a few weak platitudes about the unwisdom of checking the development of private enterprise by the Government undertaking the works. As well talk of checking the develop ment of any one of the various trades daily carried on in the Government yards.

Paris has invented a new method by which misguided women can either mar the good tooks with which they have been gifted or accentuate their natural ugliness. It is the feather blouse. This is usually composed of the green and blue plumage of the lophophore bird, but the flamingo and the peacock are also requisitioned. The hope is expressed, indeed, that because feather blouses "are expensive and easily go out of order," the fashion will not last long; but human nature is so constituted that these manifest defects in a material for clothes are often accounted its greatest merits. Thus the main reason why the popularity of the silk hat cannot be shaken is that it is expensive compared with other hats and easily gets out of order. A bowler does not in itself reveal a man's position and character; neither does a straw or one of the indented soft felt constructions. But a single glance at a silk hat, its shape, condition, and gloss, will tell whether its owner belongs to the feunesse dorte of Piccadilly, the city clerk species, or the mysterious shabby genteel personages who get their living in all kind of dark by ways.

In the course of a week or two the first through express train will start from the Moscow station at St. Petersburg on its journey of six days to the furthest point reached in the construction of the Great Siberian Railway. The Russian Minister of Ways and Communications has decided to compose an express train out of the railway carriages now in use on the Moscow and Kursk line. This train will be made up every fourteen days, and will consist of six luggage vans, one first-class, and two secondclass carriages, a restaurant car, in which only cold meals and wine will be served, and a saloon car, which will contain a small library of railway guide-books, and about twenty newspapers. As on the line between Warsaw and Vienna, it will be possible to order dinner by telegram, and the meal will be served in the carriages if so desired. The "Siberian Express" will take the following route:—St. Petersburg to Moscow, 404 miles; thence to Riazan, a distance of 115 miles; at Riajsk, 60 miles south of Riazan, the train will take an easterly direction to Samara, 450 miles distant; here the line leads in a north-east direction to Ufa, which is 250 miles distant, and is sinated in the southermost alopes of the Ural mountains. From this point the traveller will begin his journey through Siberia.

The committee of the Shanghai branch of

subjects. "Such unions," mark, "are not illegal and from some points of view possibly not improper, and it is consequently impossible to call upon the authorities to interfere; but the committee desire to point out as strongly as they can that the present condition of affairs in China is such as to make the chances of a happy result to auch a marriage almost nil, while there is not the slightest prospect of any change taking place during the lifetime of the present generation sufficient to justify an Englishwoman in counting on even a tolerably comfortable life if allied to a Chinese husband. The committee wish to place on record their opinion that even when the strictest inquiries show the Chinaman in question to be an honourable and well-educated man, of social standing in his own country equal or superior to that of the lady to whom he is anxious to be engaged. and with ample means to justify his getting married, the final result is likely to be of the most disappointing description. So long as the married couple reside in Europe the result may be tolerable, but almost every Chinaman returns sooner or later to China, and there, whatever the husband may do, the position of the foreign wife is, in the present state of Chinese society, absolutely intolerable."

The Channel Squadron was recently in a really bad way with measles. On March 13 there were four battleships and one cruiser in quarantine at Gibraltar from this cause. All the ships left Gibraltar on March 2, and arrived at Carthagena on the 5th. There they heard that small-pox and typhoid fever were rife, Therefore on anchoring a signal was made that there was to be no leave for gunroom officers, no fruit or vegetables were allowed to be taken on board, and all milk was ordered to be coiled. The same evening the Squadron took up anchor and got under way again, but on the morrow fell in with bad weather, and anchored in Moryrea Bay. On the 7th they left again, arriving at Valencia the same day; but as with so many measle-stricken ships it was useless to go any-where else, they arrived at Gibraltar again on the 13th. A correspondent writes to the Globe as follows :--- " What is to be done? The measles are constantly recurring in the infected ships, and the Vice-Admiral cannot take them anywhere. I datesay you know the exaggerated funk of nearly all Mediterranean ports at any infections disease, and they all think you have a little cholera up your sleeve if you show a yellow flag. The whole thing is an awful pity. It would seem to most people that the best way out of this difficulty-and it is a source of much anxiety to the Commander-in-Chief-would be the return of the Squadron to Pouland, where all the usual drills could be carried out.

The Speaker has a very incisive article on Lord Salisbury and his Eastern policy. It observes that what Great Britain needs is a firm and clear sighted diplomacy. "Alas!" it adds "this is just what she does not seem at present to have at her command, and herein lies the real danger to the peace of the world. We cannot shut our eyes to the fact that one of the gravest dangers at the present moment is to be found in the feebleness and untrustworthiness of Lord Salisbury as Foreign Minister. Of his feebleness and lack of nerve there is no need for us to speak, eeeing that so much is being said upon the subject by his own anpporters. The myth which acclaimed Lord Salisbury as a great Foreign Minister is a thing of the past. By displays of weakness, vaciliation, and absolute timidity in the face of our rivals, repeated again and again, he has absolutely destroyed the national confidence in his firmness of purpose, He has, at the same time, sown a deep and wide feeling of distrust with regard to his statements of fact. To add to our sense of helplessness we have to face the astounding fact that, at this most critical moment, Lord Salisbury is proposing to absent himself from England for several weeks. He is bound, in the terribly on the representation that he was proparing a the public to the contracting of marriages in absence of Mr. William Terriss, on the representation that he was proparing a the public to the contracting of marriages in absence of ILLINOIS AT

present moment from his villa at Beaulieu. If he attempts to do so he will be guilty of a crime against the Commonwealth. Before he leaves England it is his duty-a duty from which no-body can relieve him-to place the control of our foreign affairs in the hands of a competent aubatitute. If he does not take this step, he will make himself personally responsible for the disasters into which we shall inevitably drift.

Carl Hertz, the conjurer who is shortly to give n performance at Yokohama, was recently Colombo with a yachting party, fishing. wanted him to while away the time with some feats. Hertz finally consented. He borrowed m gold waich from an old gentleman, who was horror-stricken to see the valuable instrument (apparently) thrown overboard. Hertz then procured a fishing-rod and line, and sat down with the air of an experienced angler, with his legs dangling over the side of the yacht. Presently he got a "bite" and hauled his capture—a good sized fish-on board, which, on being cut open, disclosed the gentleman's watch in all its pristine beauty and undamaged. Such are his powers of palming. Once during his career Carl Hertz was sold. It was by a little boy when he was performing in the Southern States of America. One of his tricks consisted in patting a dollar borrowed from the audience into an orange, and afterwards placing it in a boy's pocket. The boy is, of course, a confederate, to whom a dollar has been given by the conjurer before he appears on the stage, On the night in question the boy, when called up in the presence of the audience to take the dollar out of his pocket, replied, as he produced a quantity of small change, " Here's 98 cents.: I got thirsty and changed the dollar you gave Atter that Mr. Hertz decided never more to work with a confederate.

It is now settled that two new battalions are to be added to each of the three following regi ments-the Royal Fusiliers, the Royal wickshire, and the Lancashire Fusiliers. Recruits in these territorial districts are fairly plentiful, and the authorities do not doubt their ability to raise the six battalions in a short time. The Royal Warwickshite, Royal Fusiliers, and Lancashire Fusiliers are all old and distinguiahed regiments, and should, on that account, be popular in the recruiting market. The Royal Warwickshire is one of the "Holland" Regiment of the Stuart days; it saw much service in the wars against Louis XIV., and after its return to England with William of Orange it fought bravely in the Iriah and Flanders campaigns. After distinguished service in many quarters of the globe, it served in the Peninsular War, for which it hears the honours—Rolica, Vimiera, Corunna, Vittoria, Pyrenees, Nivelle, Orthes, and Peninsula. Its other battle honouse are Niagara, South Africa 1864-47 and 1851-53. The Royal Fusiliers, the old 7th, was added to the Army at the time of the Monmouth rebeltion, and is the oldest fusilier regiment in the service. It bears the battle honours-Talavera, Martinique, Albu-hera, Badajos, Salamanca, Vittoria, Pyrenees, Orthes, Toulouse, Poninsula, Aima, Inkerman, Sebastopol, Kandahar 1880, and Alghanstan 1879 So. The Lancashire is the old 20th, and its establishment dutes from 1688. Its battle honours include Dettingen, Minden, Egmontop-Zee, Egypt with the Sphiux, Maida, Vi-miera, Cornina, Vittoria, Pyrenees, Ortehs, Toulouse, Peninsula, Alma, Inkerman, Sebastopol, and Lucknow.

Mr. Woolf Joel, who was shot a few weeks ago at Johannesburg first went to the Cape when he was 15 years of age. Three years operations on the diamond fields at Kimberley brought him a fortune. He returned home, but again set out for the Cape in 1881, and such was his grasp of the undertakings with which his uncle, the late Mr. B. I. Barnato, was associated, that he was admitted a full partner in Barnato Brothers. He became Chairman of the Kimberley Mining Board

of De Beers. It was upon Mr. loel's suggestions that Barnato Brothers turned their attention to Johannesburg, and it was the large business concerns built up there which engaged most of his attention during the last few years. When Mr. Joel went to Johannesburg in January, it was with the intention of putting the mining companies in the Barnato group on a solid basis. He was exceedingly popular throughout South Africs, and the promoters of charities there found in him a ready supporter. His death naturally recalls the incident at Monte Carlo in 1895, when he won £16,000 at the tables in half an hour. This arose out of a walking match from La Puible to Nice with his friend, Mr. Frank Gardner. The stakes were £100 aside, and the arrangement was that the winner should at once proceed to the Casino and place the whole of the loser's money on the red for joint account. Mr. Joel won the match, and carried out the bargain. The incident culminated in the famous "Read Dinner" m the Savoy Hotel in November, 1895.

### SPRING MEETING OF THE NIPPON RACE CLUB.

PATRONS:-H.I.H. Komatsu no-Miya, H.I.H. Fushimi-no-Miya, and H.I.H. Takeshito-no-Miya. PREMINDENT CONMITTEE:—Sir Ernest Salow, R.C.M.G. President; Dr. Wheeler, Vice-President; W. B. Walter, Esq., A. Dumelin, Esq., Jas. Dodds, Esq., R.D. Robison, Esq., F. Strabler, Esq., W.W. Till, Esq., Bann d'Anethan, E. Knaff, Esq., Count Offini, G. Philip, Esq., T. Thomas, Esq., S. Isaacs, Esq., and W.F. Mitchall Esq., Saloss, Esq., and W.F. Mitchall Esq. chell, Esq.

EXECUTIVE COMMITTEE: W.W. Till, Esq. Chairman; T. Rinoiye, Esq., V. Blad, Esq. E. Rusff, Esq., S. Isaacs, Esq., T. Thomas, Esq., J.C. Nicholson, Esq., and H. Tennant, Esq., Secretary.

### FIRST DAY .- TURSDAY, APRIL 26TH.

After one day's postponement owing to the heavy rain of Sunday and Monday the Spring Meeting of the Nippon Race Club was opened on Tuesday under fairly favourable circumstances. The course was rather heavy going from its recent drenching but scarcely an bad as might have been expected under the circumstances. Though not sunny the weather was fine and there was a good average attendance on the Grand Stand for a first day. Most of the events were well contisted and afforded ex-cellent sport. In spite of the heavy course one record was broken, by Saikio winning the All Aged Stakes, three-quarters a mile, in stith of a second less than Idaho's time last autumn. The arrangements were time last autums. The arrangements were satisfactorily carried out by the executive committee consisting of Mr. Bianchi, Judge; Mr. S. Warming, Assistant Judge; Mr. J. C. Nieholson, Santer; Mr. E. Hutchinson, Assistant Starter; Dr. Wheeler, Clerk of the Scales; Mr. F. J. Hail, Time-keeper; Mr. J. McArthut, Assistant Time-keeper; the extra stewards being Messrs. W. F. Mitchell, L. Abel, C. Gibbins, J. Naudin and G. M. Woolsey. Clerk of the Course, Mr. E. Knaff.

The various events were m follow:-

Mr. Worthington's Tomist, 1441b.....(Yasu) o Mr. Worthington's Inpiter, 1411b....(Hayashi) o Mr. Nemo's Royaliste, 1561b......(Nakayama) o Mr. Tatsusa'. Maidzuru, 1441b.......(Riki) o Mr. Avis's Gauder, 1441b......(Goto) o Mr. Russia's Cozack, 1471b.......(Hořikoshi) o

Tomist appeared to be the favourite at the start, Mr. Worthington declared best of his two to win. Ten out of thirteen entrants turned out, and, after a little delay noting to trouble given by Tourist, got away fairly well together. Jupiter took the lead, with Tradesman next, and Royalist third, at the Trees almost the same order was maintained. On entering the straight a fine race tained. On entering the straight a fine race ensued between Tradesman and Martings@chiller when he was little over it years of the and ensued between Tradesman and Marting a Chair a live bound in the control of the co

cie a poor third about three lengths behind. Time 1.37%

SECOND DAY .- WEDNESDAY, APRIL 27TH.

Ideal racing weather favoured the second day of the Spring Meeting on Wednesday, while the course had also hardened into a firmer and more satisfactory condition. There was probably the largest attendance of speciators in the enclosure of any recent seasons, the ladies also gracing the scene is their charming spring toilettes in strong force. There was a considerable contingent of visitors from Tokyo, which included amongst others the German and Belgian Ministers, Mr. Paget, Secretary of the British Legation, etc. His Majesty the Emperor had been invited to attend the Races on that day, but was unable to do so through indisposition, Baron Sannomiya was present, however, and after the third race presented the prize given by His Majesty for the Banzai Stakes, a pair of beautiful inlaid vases, to Mr. Isaacs, owner of the winner. In presenting the prize the Baron expressed His Majesty's regret at being unable to accept the invitation of the Club on that occasion, Mr. Thomas replied on behalf of the Club, and three hearty cheers and banssi were given for His Majesty the Emperor by all present. The fourth race of the day, for the Ladica' Purse, brought out the large field of eleven ponies and aroused the keenest interest. The coveted prize was presented to the winning rider, Mr. Pakenham, by Miss Morse, who accompanied the presentation with a graceful little speech, to which Mr. Pakenham made a suitable reply. The winner has been a popular and successful gentleman rider for near macore of years, but this was his first win of the Ladies' Purse. Most of the events were well contested and excellent sport was afforded to the numerous speciators. The pari-mutuel was almost blocked throughout the afternoon by crowds of speculators. The Town Band contributed to the enjoyment of visitors by performing the following programme of music:--

1-Here, There and Everywhere March, by A. I—Here, There and Everywhere March, by A. Rose.
2—Overline z. Op. Zampa, by Herold.
3—Faotasie a Op. Faust, by Gounod.

### THIRD DAY .- THURSDAY, APRIL 28TH.

After such a glorious racing day as Wednesday, the weather on Thursday came as a sad disappointment to all interested in the races. Up to moon there had been showers, with oc-casional glimpses of the sun, but after one o'clock a steady drizzle set in, with periodic heavier downpours of rain. Naturally the at-tendance was limited and there was little enjoyment either for participants in the races or speciators. In spite of the unfavourable conditions, however, some good sport was offered, and the mud larks had a good time on the sodden course. The first race of the day, the Cezarewitch, brought out the biggest field of the meeting and was a very open event. Mr. Worthington, the owner of Kirigomi, the winner, was fortunate in securing four wins out of eight races during the day. The results of the eight races during the day. races were as follow:--

....The Chranewitch, 1st prize, yen 300; 2nd, Ponces; a forced entry of yen 20 for all China
Ponces; a forced entry of yen 20 for all China
Punies entered at the meeting; non-starters half
forleit; handicap after second day's racing. t

### THE TEA MERCHANTS' GUILD.

On Wednesday evening the Tea Traders Guild of Yokohama held their annual social entertainment at the Chitose restaurant, to which a number of the foreign merchants in Yokohama interested in the business were invited. In the course of the proceedings Mr. Otani Kahei, President of the Guild, delivered the following

GENTLEMEN .-- I feel very much honoured with your presence at this gathering, which gives us an opportunity of coming into even closer relationship at this juncture when the opening of the tea season of the year is close at hand,

On hehalf of the members of the Tea Guild of Yokohama, I thank you for this favour, and, at the same time, I beg your permission to avail my-self of this opportunity of making some remarks which, in our opinion, bear with much importance upon the tea trade. I wish to call your attention to the present movement of the Japanese tea merchants, stimulated by the U.S. Laws prohibiting the importation of musholescent tea, instituted and put into effect during last year, and also by the raising of the "standard sample" to a quality superior to that of the lormer. As you are aware, gentlemen, of the tea-exported from Kobe and Yokohama during last year, the amount rejected at American ports as On behalf of the members of the Tea Guild of year, the amount rejected at American ports as unqualified for importation reached the large iniqualized for importation reached the large quantity of some 2,000 packages. It, indeed, so great an amount of lea meets with the disapproval of the States inspectors during this year as in the last, not only will the reportation of Japan tea in the estimation of the tea purchasers of the United States be defauted, but the demand for on tea in Canada might also suffer a string decrease. Canada might also suffer a serious decrease, If such a state of affairs should transpire, it will not only be a misfortune to the Japanese merchants, but, I fear, also to your good selves. In view of preventing this, the Central Tea Traders' Association held ordinary and extra-ordinary ungerings, and discussed the question of ordinary meetings, and discussed the question of establishing Tea Inspection Offices at Vokolsama, Kobe, and Nagasaki, to exercise strict supervision against the exponention of poor quality tea. It was hoped to put this into practice from this year,

of the "standard sample" to a superior grade. Therefore, it behaves us that we tea dealers, whether native or foreign, who are engaged in the direct exportation of tea, should pay every care direct exportation of lea, should pay every care to the quality of tea we export. At present a fear and uncertainty is entertained by an all whether or not any lea of the grade lower than good medium, however much care may be taken in the selection of quality, might be rejected by the U.S. inspection after arrival at the other side of the Pacific. It is indeed to do away with this ancertainty that we earnestly desire that a thorough inspection of lea may be made at the ports of exportation, so that the American at the ports of exportation, so that the American and Canadian purchasers may rest assured that all Japan ten is sound and reliable in quality, and that we may be able to feel no fear of inspection at the port of importation,

But I consider that the urgent need of the present time is to inform the producers of the actual condition of the tea market in the consuming countries, to nege them to produce a better quality of tea, and in general, to do away with former majoractices. To this end, I visited the tea districts and personally interviewed visited the ten of the subject, and to my great the producers on the subject, and to my great satisfaction, I received their concurrence with my opinion. I trust the ten of this year will show an improvement, as the native merchants of Yakohama will exercise strict control against the ex-portation of poor tea, and it is our sincere hope that you will be also good enough to exercise strict supervision in order to check the marketing of poor tea,

You have always been and are now directly endeavoring to win a good reputation for Japan tea, and to increase the demand for it. For this, we have always been thankful. The measures we have been taking in the United States and Canada for the extension of the tea market under the protection of the Government, were tools designed to retain public confidence in Japan tea and nothing further, and the advantage that may accrue will result in direct benefit to yourselves as well as to us.

In short, any foreign merchant who exports a to snort, any foreign inercuant who experts a good quality of tea only, and thereby increases the demand for Japan tea is our benefactor, but any native who exports poor grade tea aiming only at a chance of obtaining temporary gain, is our enemy.

It is our sincere and earnest hope that you will thoroughly understand our desire in this matter, and that in future we may, hand in hand, exert our united efforts for the prosperity of our tea

ade, I thank you again for the honour you confer non us by your presence and wish for the upon us by your presence and wish f prosperity and good health of all of you.

## CORRESPONDENCE.

### "'POLICY' CHRISTIANS."

TO THE EDITOR OF THE " JAPAN MAIL."

DEAR SIR,—In your weekly issue of the 16-h
"X" delivers himself on the Doshisha. And he
has told as "spank-dondle" all about it, just like
"Observer" did before him. In fact he seems "Observer" did before him. In fact he seems to have taken his copy from his medecessor; and has perfectly illustrated his "policy." He has written one column in order apparently to make it appear that his concluding paragraph of stale venom was quite a natural and logical observation. These two nameless champions of darkness would be reminded by their own conduct of a very ancient Bible story if they were at all ac-quainted with that Book. It was indeed a valu quainted with that Book. It was indeed a value hope that Christianity entertained if it hoped that its entrance into Japan would be attended by a feast as merry as Job's children made, but minus the presence of the devil. Wherever the gospal has gone, there also have gone just such character's as are being exemplified by Messus, "X Rays" and "Observer," They come tike Satan, to and fro, up and down the earth; at times like buzzards flopping down upon fifthy carrion, they take up anew the thread of their almost but lated task. They do indeed in the sense of that humble American bird serve a most healthful purpose. Yet few indeed would relish that calling. These wanderers who have found their way to the East, and who seem to feast with delight on every sin among professed Chris-

banishing all religions from her schools. This is not true of the U.S. in any sense of the term. In some localities where Roman Catholicism is powerful, and has got the upper hand, the public reading of the Bible has been removed. This is the pure work of the Papacy, done to build up that system of ignorance and the destruction of liberty and enlightenment. But even here the books laught are saturated with the Christian doctines, and it cannot be correctly said that the Bible has been banished from the U.S. Schools. The Schools are truly Christian. It is absolutely preposterous to think of a school without a moral basis; and equally preposterous to think of a moral basis without a religious basis. We should like without a religious basis. We should like "X Rays" to turn on his wonderful light and give

us a few examples to the contrary, if he pleases.

Not only does religion permeate the whole educational system of the U.S., but throughout, the Bible is publicly permitted to be read. I have attended three State universities in I have attended three State universities in as many States, and the Bible was read publicly by the president of each. Moreover, instead of the U.S. ignoring (eligion, she gives the strongest encouragement to all (with one exception, Moreonoism, I think), by permitting denominational bodies to establish Biblical chairs in connection with her universities. The U.S. believes that nearly all kinds of religious are better than or religion, and is liberal in aiding with the public funds any educational enterprises which these bodies may conduct. Thousands of dollars. these bodies may conduct. Thousands of follars are granted each year to denominational educational work. And if Buddhism should ever plant an educational institution in the U.S., I have not the least doubt that it would receive like favors.

Japan, in her educational policy is by no means eading in the path of the U.S.

I have not the least doubt that the Educational Department has adopted its present course with a view of avoiding seeming partiality in matters review or avoiding seaming partiality in matters in ligious. But in so doing, the Department goes just contrary to the course of the U.S.; for the latter recognizes the educational work of all denomina-tions. I emphatically say that the Department cannot maintain its present position as the spirit of enlightenment and freedom of thought advances. Such a course would not be tolerated for a moment in the U.S. It would not seem at all just to favour young men who obtain their moral and religious training at one place above those who obtain it at another place. And is this not practically what the present Regulations do? The observations of another place. And is this not practically what the present Regulations do? The observations of "X" here are utterly worthless. In fact, even if he had the ability to touch the subject, he did not intend to duso; since his concluding effusions were his sole object. Take two schools. One gives religious instruction to its students, who are, however, perfectly free to accept or reject it. The other school omits such instruction, but may encourage its students to the very strictest religious observance out of school. Neither school costs the Government a rin. They do the same kind of secular educational work. And the students are turned out with the very same kind of education. But the one obtained his religious knowledge inside the school, while the other obtained it outside. Now, sir, if the Department, by maining a lavor to the students of the former school, becomes an upholder of the religious doctrines they have been taught, why would it not in favoring the fatter measure become an upholder of the religious doctrines that learned, though not within school hours? The U.S. by no means considers a favor granted in have learned, though not within school hours? The U.S. by no means considers a favor granted to a school as equivalent to upholding its religion. The only difference in the case of Japanese schools is that the Department favors a student school is that the Department invois a student with a religious part is not obtained in school. To say that the Department would become an upholder of a religion tanght in a school if it should grant a favor to said school would be the same as saying a rayer to sain school would be the same as saying that it becomes the upholder of each student's religion in any school to which a favor is granted. The position of the Department is untenable, and I prophesy that it will soon be changed.

But since this phase of the question seems III we been beyond the logical sounding of Mr. X Rays," and has from the first been a one-sided "X Rays," and has from the first been a one-sided discussion, we pass on to the remarkable discoveries this "brilliant light" has and ended. He has discovered "Christians" and "Christians." "zeal-ous-fad Christians," "policy-purpose Christians," "Occidental Christians," "O' cental Christians," "honour-as-men Christians," "Doshisha Christians, " Deshisha Christians, " "elect-without-honour-or-common-honesty Christians," "obliging-testify Christians."
Probably it was too smuch to be hoped for that

Digitized by Google

the ne plus ultra of the matter. There are no genuine Christians! This is the conclusion, after "X Rays" has turned on his light. There is ab solutely no use to debate the question seriously when science has testified.

That the management of a great institution has failten into great sin is no reason at all for suppos-ing that all Christians are no better. Such logic is no credit to the mental perception of the logi-cian. And to asperse the character of Mr. Ni-shima, who is now dead and gone and cannot eturn to defend himself, is malignant and grossly disbolical.

Finally Mr. "X Rays" tells us that " a high standaid of morality can be attained without the fetish of any religion." We infer from the context that he means that religion, and especially Christian ity, is unnecessary to the highest moral development. This we emphatically deny, and challenge ment. This we emphatically deny, and challenge him to prove his assertion or step down and out. We do not care to mince matters, and expect to stand square to the wind against the poisonous blasts of infidelity seeking patronage in this country. It is our business to show our fellow men in Japan what a rickety raft they embark upon when they board the ship of infidelity and agnosticism. I should think the experiment of France ought to give every infidel the blues even yet when he thinks about it. Probably it does.

B. SNODGRASS. Very truly, Tokyo, April 22nd, 1898.

### RUSSIA, CHINA, AND YAPAN.

The following translation is given by the Globe of a remarkable article by the well-known Russian writer "Sigma" which appeared in the Novoe Vremya recently:

Vremyz recently:

"The invasion of China by the Japanese, for which they had long been making preparations, was bastened by the ukase of the late Emperor of the 19th of May, 1891, regarding the construction of the Siberian Railway. One of the most highly thought of public men in Russia, a man of considerable political experience, gave utterance in 1895 to these words:—Rollowing as far as one can the Japanese press, I am convinced that if it had not been for the Siberian Railway, Japan would not have been in a hurry to commence the late war, which was above all an attempt on her part to wake up dormant China and Korea, and, by pointing out to them clearly the threatening pointing out to them clearly the threatening nature of the bitme, to join hands with them in a struggle in which the existence of each and every one of them was endangered. However much Japan may have developed her own strength and japan thay have developed he was strength and resources, that strength by itself would ne strength be far inferior to what it would be were she in close alliance with an awakened China and Korea. However, the atempt of impatient Japan did not succeed. Her unseasoned young strength did not suffice; China and Korea showed themselves wholly suprepared for it; and, what is more important still, France and Grimany came to the support of Russia. The present Japanese Government wisely withdraw from the most important results of her victories, the footbold she had acquired on the Asiatic mainland. It is but too clear that had only Japan become a continental Power of Asia she could have spread her wings widely over China and Korea. But Japan, having where your China and Rotest. But Japan, having lost the basis for a future alliance of the whole yellow tace, now enjoys an opportunity of carrying on the stringle by substituting for Asiatic allies those European Powers—above all, England -whose interests suffer from the Siberian Rail-Now, if Japan is striving to arouse the way. Now, it Japan is strong to atoms the whole yellow race, Russia can at the same time play her old historic part: that is, of pacifying that race from the West, where in days of yore we pushed back from the heart of our kingdom the bordes of Poloutzi, Petcheniegi (Turkish Mongotian races), and of Tartais. Our action at Chilu and the Russo-Chinese loan are but a continuation of the policy of peaceful subjugation of those nations of the yellow race who inhabit the huge tract of country between the Volga and the Pacific, whose blood, besides, flows in our veins. There is no political sentimentality in this.

"We do not live in the East by virtue of our Pacific Squadion, or of our diplomatists, or in the persons of the directors of the Russo-Chinese Bank. No; we live there by virtue of the greatness of the Russian name and the spirit of our policy. The Chinese know that Tchengis-Kuan held an honorary rank under a Russian Czar, and that he commanded Russian troop, the same as Prince Russian dees testar. Thus know that this discoverer, since he provis in the darkness, that he commanded Russian troops, the same as should have discovered any genuine Christian. However, this discovery he has not made. Of course, he knows all about it, just like "Observers of the Russian people, and they trust to yet" (7), and we must consider his investigations as our merchants, our consuls, and our officers to help

them in the day of need. They do not confound

us with Europeans.

"The London Globe publishes articles on "How to Checkmate Russia," in which it advocates the to Checkmate Russia, in which it advocates the immediate seizure of the peninsula of Port Arthur, or the demand that our future railway shall not approach nearer than 50 miles of it, and that Clima should not be allowed to hand that port over to any other Power. The author of these articles, whose profound knowledge of his subject is only equalled by his deep antipathy to Russia, advises England to take Victoria Bay, one of the bays of the wide Talies wan Gulf, in which some afthe British fleet and its transports was anchored. of the British fleet and its transports were auchored

of the British fleet and its transports were auchored in 1860, saying that by its seizure a heavy blow will be dealt to Russian aims in the East. I bring this forward to show the feeling of the hour.

"Prince Konoi, the President of the Japanese House of Peers, writes an article in one of the Japanese papers, in which he urges an alliance between China and Japan, so as to form an opposing force to the pretensions of European Powers in the East. Contemporary diplomatic considerations, says the Prince, may result in combinations liable to obscure the main issue for the present, but they are only the details of a great struggle but they are only the details of a great struggle which is going on between the white and yellow races, in which the Chinese and Japanese must inevitably stand side by side. Europeans do not look upon the yellow race in the same way as they do on the African and sawage races. Their contempt for them is mixed with fear. The Prince advises his contraymen, especially these living in China, not to follow the bad example of European ans, and openly show their contempt for the Chinese. He deplores the more than foolish rechinese. He deplores the more than foolish re-joicing of the Japanese at the fate of China. He advises them to be friendly to the Chinese, and especially to semove from them any feelings of envy and suspicion."

ENGLAND ADHERES TO THE TREATY OF PARIS.

COAL NOT NECESSARILY CONTRABAND OF WAR.

HOSTILITIES REPORTED AS "COMMENCED." London, April 22.
The Spanish Minister has left Wash-

The American Ultimatum has ington. reached Madrid, and Spain immediately broke off diplomatic relations, and the American Minister left Madrid. Hostilities have commenced. Mr. Balfour has notified the belligerent parties of England's adhesion to the principles of the Treaty of Paris, and that Britain cannot lay down the principle that coal constitutes contraband of war. It, he said, may frequently be so, but not necessarily,

[The above telegram having been received by us somewhat ambiguously worded, our rendering of it was given only after considerable basitation, especially in regard to the point of the actual outbreak of bostilities, which was not quite clear.—ED. F. T.]

TROOPS TO SUPPORT THE FLEET.

London, April 23.
A squadron has left Key West for Havana, which is to be blockaded. As soon as the troops have been concentrated, they will be despatched to co-operate with the warships.

A telegram dated New York, April 23rd a.m. and received by the Mitsui Bussan Kaisha the same afternoon, states that hostilities have commenced at Cuba, a Spanish merchantman has been seized, and Havana blockaded.

HAVANA BLOCKADE ESTABLISHED. CAPTURE OF MERCHANTMEN ON BOTH

SIDES. ONE HUNDRED THOUSAND VOLUNTEERS

CALLED OUT IN AMERICA. AMERICAN HARBOURS TO BE MINED. GREAT RISE OF WHEAT IN ENGLAND.

London, April 25. The blockade of Havana has been

established. The cruiser Nashville has captured the Spanish merchant steamer Buenaventura, also the Pedro. The Spaniards have captured the wheat laden ship Shenandoah bound for Antwerp. President McKinley has called out 100,000 volunteers. The utmost secrecy is maintained regarding the movements of the Spanish squadrons; meanwhile Spain is still hesitating about renouncing privateering. President McKinley repudiates all intention to annex Cuba. Admiral Sampson is tion to annex Cuba. Admiral Sampson is in command of the blockading squadron. Orders have been issued to mine American harbours. The war is causing a great rise in the price of wheat in England.

SPAIN STICKS TO PRIVATEERING. THIRTY DAYS' GRACE TO AMERICAN SHIPS.

London, April 26. Spain reserves the right of resorting to privateering. Meanwhile she is confining herself to organising auxiliary cruisers, and gives American ships 30 days to clear Spanish ports.

CONGRESS RECOGNIZES STATE OF WAR SINCE APRIL 21.

President McKinley in a message to Congress asked for a joint Resolution declaring that a state of war exists since the 21st inclusive. This resolution has passed in both Houses.

MOVEMENTS OF THE SPANISH SQUADRON.

The Spanish Squadron still remains at St. Vincent, but will probably sail to- the importation of the cereal into Japan.

AMERICANS CAPTURE RICH BOOTY.

The Americans have captured the Miguel Jose, laden with valuable cargo, also the Catalina, Saturnia, and various smaller craft.

### BRITAIN'S NEUTRALITY,

London, April 27. The British declaration of neutrality has been published in the London Gazette. The Governments of India and the Colonies are also instructed to enforce its stipulations.

AMERICAN VOLUNTEERS CALLED OUT.

The Washington Government has summoned the different States to furnish their quotas of volunteers.

### PROTRACTED CAMPAIGN PROBABLE.

It appears certain that no large body of troops will be sent to Cuba for several months, partly owing to the lack of equipment, and partly because of the approaching fever season.

ENGLAND'S REVENUE. SURPLUS OF NEARLY FOUR MIL-LION STERLING REDUCTION OF TAXATION.

London, April 23. Sir Michael Hicks-Beach, in submitting the Budget, stated in the House of Commons, that the surplus of the past year amounts to £3,678,000. As a result the tax on incomes ranging between £400,000 and £700,000 (?) is to be abated, and the Tobacco duty is to be reduced to sixpence per pound, but there is no reduction in

KWÖN CHAI HYONG AND YUN CHÖNGKU.

Soul, April 23. Mr. Kpön chai hyong, Vice-Minister of Agriculture and Commerce, and Mr. Yun chongku, Vice-Minister of the Imperial Household, have been appointed Acting Ministers.

### YE TO CHAI.

Söul, April 25. Mr. Ye To Chai has been appointed Minister of Agriculture, Commerce, and Industry.

CHINA AGREES TO JAPAN'S WISHES.

Peking, April 26. As the result of the negotiations between our Minister Yano and the Chinese Government, the latter has pledged herself not to cede the province of Full-Kien to any other Power.

In compliance with Minister Yano's representations the Imperial Chinese Government has agreed to the following stipulations:

That when Japanese subjects enter into mining industry in the interior of China, in partnership with Chinese, China shall extend to the former all the rights and privileges granted to the subjects of other foreign powers.

That in the event of a bad crop in Japan, China shall suspend the law prohibiting the export of rice, and grant facilities for

POK CHÖNG YANG.

Söul, April 26. Mr. Pok Chöng Yang has been appointed Minister of Home Affairs.

### YON YUNG-SÖN.

Söul, April 26. Mr. Yun Yong-sön was appointed Mini-ster President of State to-day,

### AMERICAN NAVAL MOVEMENT.

Hongkong, April 28. The U.S. Asiatic squadron, which had assembled in Mirs Bay, left there for Manila yesterday afternoon. The object of the departure is to secure the safety of American merchantmen by capturing the Spanish warships in the vicinity of the Philippine Islands.

[SPECIAL TREEGRAM TO THE "JAPAN MAIL"]

Kobe, 22nd April, 4.20 p.m. A Kobe firm has received this cable: Minister at Madrid handed passports: American gunboats ordered to Cuba,

### SATURDAY'S EARTHQUAKE.

Hakodate, April #3 A severe, prolonged earthquake occurred here at 8 45 this morning.

### RESON THE " KORN HURSES."

COMMODORE DEWEY'S SQUADRON.

Shanghai, 3 47 p.m., April 26th. The American Squadron is at anchor in Mus Bay.

### (FRUM JAPANESE PAPERS.) FLOODS IN HOKKAIDO.

Sapporo, April 23. Owing to the melting of the snow on the surrounding mountains, all the rivers about Kamikawa and Sozachi have overflown, rational bridge and many other bridges are destroyed. The rational file of the Trako Tetsudo between Yubari and Sarachi is damaged. The floods are still increasing.

### PROBLEM No. 367. By T. D. CLARKS, Merino.

White mates in two moves.

### THE NEW AUSTRALIAN OPENING.

The following is one of two games recently played by correspondence between Messis, G. B. Hall, of Sydney, and H. Charlick, of Adelaide, to test the reply to P to Q 4, which the latter player introduced to the notice of the cheas world in 1891. The Queen's opening view with the Ruy Lopez in popularity in congresses and tournaments, for the important reason that each of these two openings yields a greater majority of wins for White than any other debut. The inventor claims for his counter-gambit that, although he sacrifices a Pawn, he at once obtains the attack, and is able speedly to develophis game. The manœuvring that ensues is much livelier than that produced by the ordinary Queen's Gambit Declined, which is one of the dulest of openings. Black has considerable scope for counter attack. For instance, instead of playing 2—Kt to Q B 3 he can play 2—P to Q 3, 2—P to K B 3, or 2—P to Q 4, all of which are worthy of analysis. The postum of Mr. H. H. in Australian chess circles, ranking as he does in Sydney in the

Digitized by GOOGLE

same class as Messrs, Crane, Jacobsen, and Walface, entitles each of the following games to special attention. The inventor is quite satisfied with the result, and considers that his counter-attack the result, and consulers that he could have a Queen's opening against a first-class player. He hopes that the publicity the new counter-gambit has received will elicit an opinion from competent judges.

Begun September 28, 1896, ended Mar. 1, 1898. (The Charlick Counter-Gambit.)

(a) This device has been employed before. (a) I mis nevice has been employed before. It gives White an opportunity to play P to Q B 3, in anticipation of Black's P to Q B 4.

(b) P to 1 5 is possibly here best; with care it might prevail.

(c) Black has done very well, and may be said blave at least an equal game. (d) This move forms the turning point of the

game. It seems to have been too ventuesome. Black had a safe draw in hand,

Hack had a sale draw in liants,

(e) Better and more ambitious than 28—Q to

Ki 4, Q takes Q B P.

(i) It R takes P, 31—Q to Kt 3 ch, K to R sq.
32—R to K Kt sq. &c.; or 31—Q to Kt 2 ch, K

(g) Yielding to the latal temptation.

(h) Black must have overlooked that K to Kt

is the nearline we are defense.

2 in this position was no defence.

### LATEST COMMERCIAL,

### IMPORTS.

No business has been reported in yarns, shirtngs, fancies or woollens, but it is considered proballe that in view of the recent advance in Manchester rates consequent on the war between the United States and Spain, a move will shortly be made in the market. Quotations for the present are purely cominal. A rise in price of American law cotton is expected, but has not as yet influced the market to any appreciable extent.

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitatep constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills,

Putity Can De Ministained by the use of these Pills, Sir Samus Basia, in his work entitled "The Nit Tribut taries in Abyasinia," says..." I ordered the dragoman Mahometo inform the Fakir that I was a Doctor, and I had the hese medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Hollowsy's Pills. These are most useful to make plorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

### HOLLOWAY'S OINTMENT

Is a certain emedy for bad lags, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, eurong skin diseases, and in atresting and subduling all inflammations. Mrs. J. T. Course, in his account of his extraordinary travely in China, published in 1871, says—"11 had with me a quantity of Isloways. Cointment. I gave some to the people, and nothing could exceed their gratthade; and, in consequence, milk, flowly, butter, and horse feed poared in opon us, until at last are asypportial of Olistment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "atock."

### SUMMARY OF NEWS.

THE American navy continues to capture Spanish merchantmen.

Marquis Saionji's resignation of the portfolio of Minister of Education has been accepted,

THE Americans have bombarded and destroyed the half-completed batteries at Matanzas.

On the 28th ult, the Italian Minister gave a din-ner party at his official residence in Tokyo.

Two French missionaries have Been Digitized by

by Chinese at Yunanchao, in the province of Kwansi.

THE blockade of Havana has been partially raised, most of the U.S. aquadron returning to Key West for coal.

In pursuance of her neutrality, Great Britain has prevented the sailing of American torpedo vessels from Falmouth.

HE American steamer Shenandoah has arrived at Liverpool. The report of her capture by the Spaniarda was untrue.

Mr. News Tresunosure has been appointed Secretary of the Red Cross Society, with the sauction of His Mujesty.

THE Spanish defeat at Manila is causing disgraceful scenes in Spain and martial war has been proclaimed in Madrid.

THE split between the Liberal Party and the Cabinet continues, and is not expected to be healed before the meeting of the Diet.

At the meeting of the Meijl Fire Insurance Company on the and a dividend was declared at the rate of 13 per cent, per cent, per annum.

THE United States Government has chartered eight large steamers as transports. It is supposed that they are intended to carry troops at once to Cuba.

The submarine cable between Manila and the mainland has been destroyed by the U.S. Navy so no news of the actual position of affairs can be obtained.

It is reported that the marine telegraph cables between Shimonoseki and Naruto Straits and between Isenoumi, Shikoku, and Sanyodo have been completed.

THE Americans have captured the Spanish Fransatlantic Liner Panama while bound from New York to Havana, with Spanish refugees and valuable cargo.

Congress is to be asked to authorize immedi ately a bond issue to provide funds wherewith to carry on the war, the estimate for the next two months being \$50 000 000.

A woman named Udukawa Tatsu, 50 years old, living at No. 13, Nagaoka-cho, Houjo, Tokyo, on the 2nd instant committed suicide by taking a large quantity of hydrochloric acid,

IT is stated that America will hold the Philippines until the close of the war, and then, if the indemnity is not paid, will sell them to a Enropean power, preferably Great Britain.

Notifications of neutrality have been issued by various governments in connection with the Hispano-American war. Japan is taking the usual steps to carry out the regulations.

Owing to the protests of European Powers, the Washington Senate Committee has decided to suppress the increased tonnage dues on shipping which the Lower House had passed.

An American torpedo destroyer has engaged a Spanish gau-boat off Matanzas. After eleven shots had been exchanged, the Americans retired, the vessel being apparently damaged.

THE Yokohama Central Tea Guild bus received a telegram dated 27th ult., from the New York branch to the effect that Congress has rejected

in the States till May 21 m clear unmolested, but the Prize Courts are to adjudicate on the captures already made.

A REPORT comes from Formosa that on the 23rd ultimo the Imperial troops attacked a band of native robbers near Tamsui. Thirty natives were killed, 7 wounded, and over 26 made

THE Japanese battleship and cruiser which are now in course of construction by Armstrong & Co., England, were recently named by the authorities, the former being called the Haisuse and the latter the Idsumo.

Owing to the prevalence of the plugue in Formosa, it is said that Mr. Shiga, an assistant in the Contagious Diseases Investigation Bureau, will be despatched to the Island to investigate the condition and management of the hospitals,

An employé of the Normal Dispensary in Yokohama, named Kohayashi, 32 years of age, living at No. 36 Bandaicho, was recently arrested and sent to the Court for trial on a charge of selling a patent medicine without a license from the Government.

On the morning of the 1st inst., a man named Horikiri Renemon, 61 years old, living at Asa-kusa, Tokyo, cut his wife's throat and fatally wounded his adopted son. He afterwards nusuccessfully attempted suicide. Jealousy was the cause of the crime.

THE U. S. squadron on the Asiatic station, under command of Commodore Dewey, engaged the Spanish squadron near Cavite on the 1st, silenced the forts, and put the Spaniards to flight. Manila is said to have been fired and half destroyed before the close of the fight,

In the House of Commons Mr. Chamberlain stated that the Government was not prepared to re-enact the Contagious Disease Ordinance for the Straits Settlements, but that the former was in communication with the Governor of the Settlements as to whether some other measures could be adopted as a possible check to the further spread of venereal disease.

THE rising at Sierra Leone now practically involves the whole Colony. Factories have been burned, and a native manager and a number of missionaries massacred. The rebels are now close to Freetown. Reinforcements have been despatched. The cruiser Blake has left Gibraltar, conveying a naval brigade to be landed at Freetows.

Business has been very small this week, the little business that was doing being "held-up" pending war developments. A few deliveries of yarns have taken place, but at rates that indicated a desire to clear godowns at any price, Prices are nominally the same as last week in the Metal market in view of no business offering. Sugar remains fairly steady for Formoga sorts, in other varieties no business it attring. Raw Silk some little has been done, chiefly in filature and re-reels for the United States, both by foreign and native shippers, and prices have risen by \$10 to \$20 on the week. Weste silk is very dall with very little enquiry, though if holders would make themselves current business could be arranged. New season's leaf is still very discouraging, the new tea Parsident McKinier has issued a proclama the date. Exchange is steady on gold the granting Spanish vessels leaving or arriving building the modern weaker on China. offered this week not showing the improvement hoped for. Some 6,457 piculs have been set-

### SPIRIT OF THE VERNACULAR PRESS.

The two questions of the hour are foreign licy and finance. Our readers have already policy and finance. Our readers have already formed, we do not doubt, a pretty clear idea as to the attitude of Japanese public opinion towards these problems. The Liberals, who, until recently, were allies of the Cabinet, atil remain supporters of its foreign policy but are strongly inclined to oppose the financial programme adopted by Count Inouye. The Progressists denounce the Ministry's foreign policy, but as yet show no sign of attacking its finance. Each party is acting consistently. It was with the consent and by the sid of the Liberals that the posi-bellum programme of 1895 was ela-borated and passed through the Diet. They pledged themselves then to a very bold and spirited scheme of national economy, and it is not wonderful that they should now rebel against what, to superficial observers, seems a morement of retrenchment and besitation. On the other hand, they endorsed the retrocession of the Liaotung Peninsula in 1885, and have ever since favoured a moderate line in foreign affairs. Hence they find themselves now in agreement with the Cabinet at one point but in collision with it at another. The Progressists, on the other hand, have been more or less identified with economy of public expenditures, a less vigorous expansion of the Army than the Ito Ministry planned after the War, and abstention from the imposition of fresh taxes. Therefore they can not, with any show of consistency, attack the make-ends-meet methods of Count But, ever since the days when strict treaty enforcement came upon the lapis, they have been "stalwarts" in the field of foreign affairs, and they are consequently free to attack any Ministry which fails to plant the national standard on ideal heights of prestige and self assertion. Such are the broad lines of the assertion. Such are the broad lines of the situation. Each party opposed to the Government occupies a camp with conveniently vigue limits. The Progressists, while they clamour for something signal in foreign affairs, do not attempt to state clearly what that something should be. The Liberals, while they denounce a policy of hesitation and halting in financial affairs, avoid any exposition of what they consider resolute and progressive. It is true that, within the past few days, Count Itagaki, the Liberal leader, has come forward with a programme for State purchase of private railwayby means of a foreign loan, but, in enunciating his plan, he was careful to explain that he spoke simply as Itagaki, not as the head of the Liberal Party. Thus the Liberals are in the irresponsible position of decrying the Cabinet's method of extricating the nation from a financial dilemma, without offering any alternative method of their own. It is also true that some of the Progressist organs have begun to advocate the acquisition of Amoy and Foochow by lease. But their tone is tentative and uncertain, and, on the other hand, the "stalwart" agitators confine themselves to declaring that the engagement obtained from China with regard to Fubkien is an abortive and valueless affair, calculated to disturb still further rather than III redress the balance of power in the Far Rust. How that balance is to be redressed they do not indicate, though, perhaps, we shall be justified in interring that nothing short of an attempt to drive Russia from Liaotung and Germany from Kiao chou, by way of preliminary to the withdrawal of England from Wei-hai-wei, would satisfy them. On these bases journalistic discussion is now proceeding, but readers of the vernacular press will doubtless agree with us when we say that the nebulous and shadowy of weariness and impatience.

In finance the catch-words of the time are shokroku and sektyoku, which signify "negative" and "positive," with all the secondary meanings that individual interpretations may devise. The Liberals say that Count Inonye's devise. The Liberals say that Count Inonye's imoney—that is to say, foreign capital—that an imoney—that is to say, foreign capital—that an embatrassent state of affairs now exists; yet the proposal is to relieve the embarrassment by a is indicated by "negative." Count Inouge has proposal is to relieve the embarrassment by a further introduction of foreign money.

Digitized by To Sittle in Korea, and dender the difference. Now, once more, the Korean areas offers itself for Japan to exploit. How should she proceed? The Yiji sees only one way. As many Japanese is indicated by "negative." Count Inouge has further introduction of foreign money.

UNIVERSITY OF ILLINIOIS AT

not reduced any programme or cut down the dimensions of any scheme. He has merely dimensions of any scheme. He has merely readjusted the public expenditures so that they shall fit the public income immediately available. How can such procedure be rightly called negative? Empirical financiers have sundry nostrums to cure the malady of the hour. Some would sell bonds abroad; some would raise a foreign loan; some would have the State purchase the private railways; some would apply the Indemnity to redeem the War Bonds. There is no general agreement as in the wisest course, and, at any rate, all these schemes are special measures lying outside the limits of the ordinary finances with which Count Inouye has hitherto been dealing. That there is distiens among manufacturers and that many enterprises are threatened with rule, no one can doubt. But how to assist them impartially and prudently is a problem of immense difficulty. It is not to be denied that the responsibil ty for the present state of affairs rests in some degree with the Government and not altogether with the people. The Government doubtless recognises the fact, and Count Inouye is understood to be revolving plane to ease the situation. The utmost care and circumspection are necessary, however, lest in removing one cause of trouble another and perhaps a greater be created. Public opinion now seems to be inclining towards the purchase of all the private railways by the State as a device for increasing the stock of floating capital in the hands of the people. It is impossible to doubt that State ownership of railways is the only policy really conducive to public convenience, material progress, and strategical expediency. (The Nicht Nicht devotes two long articles to demonstrating this proposition, but we refrain from epitomising them, the arguments, though forcible, being already familiar to our readers). But an operation of such magnitude and importance is not to be undertaken merely for the sake of putting capital into the hands of the people or restoring vigour to the share market. The step must be well and maturely considered. (It will thus be seen that the Nichi Nichi neither opposes nor endorses the proposition with which Count Itagaki has now identified himself. In theory it is an ardent advocate of State ownership, but in practice it is fastidious as to times and methods).

The Tokyo Shimbun (Liberal organ) discusses the same question at considerable length, but nine-tenths of its arguments are devoted to establishing the economical, technical, and national advantages of State-owned lines as compared with private lines. These arguments, being of a general character, without any bearing on the special case of Japan, need not occupy our attention. As to the particular pro-blem a solution of which is sought by this device, the Liberal organ confines itself to a bold but undemonstrated assertion that the intraduction of foreign capital is absolutely necessary at the present juncture and that the only wise way of obtaining and employing it is a national loan for the purchase of the principal systems of railways, namely, the Nippon, the Sanyo, the Kobu, and the Kiushin.

There is much to be said in favour of State ownership of railways, and, as Count Itagski has always been an advocate of that policy, his proposal to put it into practice now for the sake of relieving the dearth of floating capital can not be regarded as strange or unreasonable. Is such a measure desirable, however? Going to the root of the present embarrassment, we find that the responsibility rests with the extraordinary appreciation of commodities. To what is that appreciation due? Evidently to redundant currency. To what is redundant cur-rency due? Plainly to the fact that large sums have been brought over to Japan owing to receipts on account of the Indemnity and the sale of bonds abroad. In other words, it is because of the rapid introduction of foreign renders such a programme still more questionable is that a large sum is about to be received from China and brought over to Japan, so that, under any circumstances, many millions of money are to be added to the stock already in the country. That result can not but be viewed with some uneasiness by economists. If, then, 150 or 160 millions were obtained abroad and scattered among the people as the purchase money of the Nippon, Kobu, Sanyo, and Kiushin railways, can there be any doubt that still further and more rapid appreciation of commodities would ensue owing to a plethors of media of exchange, and that the present evils of tightness of capital, excess of imports, and exodus of gold would be sharply accentuated, so that the country would ultimately be plunged into a worse slough than ever? Such is the gist of the Fomiuri Shimbun's argument on this important subject.

The Mainichi Shimbun (Progressiet organ) opposes the project. In fact, the public seem likely to divide along the lines of political parties, the Liberals advocating State ownership, the Progressists denying the wisdom of such a course. On the side of the latter there is virtually only one solid argument, namely, that the question of railways is one which concerns the permanent welfare of the country, and that its solution must not be prostituted to the temporary purpose of rel eving a dearth of floating capital. The Mainichi itself does not besitate to admit that the construction of several lines. can not be continued owing to the shareholders' inability to pay up the calls on their shares, and that not only the progress of railway-making is threatened with interruption, but also much of the capital already invested may be lost. But it contends that difficulties of that kind must not be allowed to influence the country's attitude towards the general problem of State or private ownership, and it condemns Count Itagaki for allowing himself to become the tool of needy speculaters.

Turning to the question of foreign policy, we find in the Jiji Shimpo two articles directed to prove that Japan's great faults in dealing with foreign countries are romantic altruism and a tendency to regard herself as the depository of a civilizing mission. In proof of this somewhat startling assertion, our contemporary points to the war with China. Nine apanese ont of every ten entertained but one idea about the war, namely, that it was a fight undertaken by Japan on behalf of the weak against the strong. Such sentimentalism is graceful enough in its way, but it is apt to entail great disadvantages when it is one sided. Peo-ple do not succeed in the affairs of everyday life by perpetually turning their cheeks to the a simile which our contemporary tenders by funket bakugyaku, or not tudging till one's bend is cut off; still less can any long suffering or romance of the kind be permitted in international dealings. Other peoples simply laugh at the victim of the fad and take advantage of his silliness. The Koreaus, for example, never comprehended the long-suffering action of Japan in 1873, 1881, and 1884. They attributed it to weakness or timidity, and despised the Japanese. All quixotism of the soit—gikyo, the Yifi calls it—must be laid aside. The idea must be abandoned, too, that Japan's mission is to propagate by direct processes the civiliza-tion which she has berself adopted. It was by pursuing that programme that she made herself dishked in Korea, and opened a door for the interference of a Power not at all troubled by such moral yearnings. It is a mistake to assume that the Koreans are in a condition resembling that of the Japanese immediately before the Restoration, and that the forces which moved the latter can be efficacious to prise the former out of the rut of stagnation. The Koreans are far behind what the Japanese then were, and

mining, industrial enterprise, agriculture, and other employments. There is room for five millions of immigrants. Thus and thus only can Japan utilize her opportunity, and lead Korea gradually but surely into the path of progress and prosperity. The Government's hand should not appear in the matter, beyond obtaining for Japanese subjects the criviles of obtaining for Japanese subjects the privilege of owning real estate in Kores.

The Kohumin Shimbun urges the importance of an understanding between Great Britain, the United States, and Japan to secure the peace of the Far East. America opened Japan; England opened Chins. America is Japan's neighbour on the east; England is her neighbour on the south. Four-fifths of China's foreign trade are in British hands, and Great Britain is at the head of Japan's importers, while the United States takes far the largest share of her exports. As for Japan's position and relations vis-à vis China, they need not be discussed. Obviously the three States chiefly concerned in keeping the peace of the Far East are England, the United States, and Japan, and it is equally plain that the state of China's affairs and the Hispano-American quarrel constitute a unique opportunity for an understanding between the three Powers. That is the gist of the Rokumin's article. It is decidedly vague.

### JAPANESE FACIS AND COMMENTS.

On the 26th ult. a spring regatta was held by the students of the Meiji Law School on the upper part of the Sumida river. After the sports about two hundred of them, the worse for drink, invaded the Yoshiwara, which they had been strictly forbidden to enter. There a quarrel ensued between them and some 300 leafers, and a free fight quickly arose. The constables of the two out stations proved insufficient to queli the disturbance, and a message was sent to the Head Police Station in Asakusa to obtain reinforcements. Many were severely wounded on both sides, and it was with great difficulty that the commotion was quelled. Twenty five students and a great number of the other combatants were arrested.

The predominance of the Tosa clique of the Liberal Party, remarks the Yorosu, has aroused indignation among Liberals who are really and atrougly attached to the Party. The Kwanto members are strongly opposed to the inauguration of Count Itageki and Mr. Hayashi, as leaders, and have resolved to recommend Mr. Hoshi. Should the Tosa clique prove too powerful the members from Kwanto will have their names struck off the list, and form a separate party for themselves.

According to the Hochi, Mr. Bockman, Director of the Oriental Agency for a certain engineering company in France, has proposed to provide the Formosan Railway Company with machinery and appliances on easy terms, the cost to be paid in yearly installments after the opening of the traffic. It is also stated that through the efforts of Mr. One Kinroku and a few others, Messrs. Pocock & Co., London, are prepare to advance a loan to the amount of £1,500,000 (15 millions yen). Marquis Ito is reported to favour Mr. Bockman's programme, while the company itself advocates that of Mesers, Pocock & Co.

According to the Shogro, the number of Japanese immigrants to Hawaii aggregates 30,000, and their money is probably not less than 1,000,000 year. The banks in Hawaii, however, do not pay interest on these moneys and the labourers have frequently applied to the various Immigration Companies with a view to more advantageous arrangements for their savings. All negotiations with local banks

security-money and reserve on behalf of contract labourers, interest to be paid on such deposits. (2) If any immigrant be found unable to provide security for himself, the amount, not exceeding 40 yen, shall be sent to him by the Bank, under the guarantee of more than two trustworthy surcies responsible for repayment.

(3) Each labourer is bound to pay expenses emigration in installments at the rate of one dollar per month during the first year of immi-gration, and of two dollars during the four months of the second year. The Bank has pledged itself to devote its utmost energies to the furtherance of immigration enterprises.

The Nippon Ginko's report of transactions during the week ending the 23rd instant, pub-lished in the Mainichi, shows a reduction in the reserve of 3.430,000 yen,—a fact which proves that the exodus of specie is increasing day by day. The general tendency may be perceived from the following figures:-

Specie

Reduction B

compared

with the Reserve. prev. month. Van. 3.799 256 19,377,136 8,274,039 Thus the amount of reduction from the end of last year up till the 23rd instant does not fall short of 41,450,000 yes, and the largest dimi-nation is for this month. The briskness with which the outflow of hard metal takes place M present is truly surprising. The stringency of the money market continues as serious ever, and the embarrassment to popular enterprises is daily becoming more pressing. With the tea and silk seasons at hand portion of floating capital will be absorbed in these enterprises. So unless an increase of the reserve be undertaken by appropriations of the Indemnity the immediate issue of 10 or 20

The libel case instituted by the ex-Minister for Agriculture and Commerce against the Porosu was continued on the 29th ultimo at the District Court, Tokyo. It was alleged that the paper had charged the ex-Minister with the receipt of bribes to the amount of 30,000 year in reference to recent proceedings against the Osaka Rice Exchange. The defence was a plea of justification, alleging that the publication of the article was for the public good. case was adjourned.

million yen of notes above the legal limit will

be absolutely indispensable at this juncture.

According to the Yorosu Mr. Tsutuhara, President of the Banking Bureau, recently spoke on the redemption of public bonds by appropria-tions of the Indemnity. He says:—"As the present embarrassment results, not from the faults of the economic world alone, but chiefly from the policy adopted by the Government, the Government itself ought to exert its utmost energies for amelioration. The redemption of public loans would alone bring about a relaxation in the money market, restore the issue of notes to the logal limit, and, in short, change the economic aspect entirely. It is alleged that redemption would require funds of at least 100 million. That is, however, unnecessarily million yen. large; 50 millions would be sufficient. Simultancously with the liquidation of loans, the programme for increased taxation must be carried into effect." This programme, the Foresu thinks, would disorganise the financial system instead of proving a remedy.

The Chun states that the Meiji Cotton Spinning Company in Oaka recently, in combination with eighteen other companies, submitted the following resolutions to the President of the Industrial Bank: -That the Bank shall issue loans to the value of existing securities; that new companies shall be entitled to loans

points (1) If the spinning industry fails to realize a profit at the current price of yarns how can it be maintained? If yarns are really on the verge of over production, what remedy can be adopted? What process can be recommended for extending the market for yarns both in the interior and in foreign countries? (z) What is the ratio of floating capital to the funds required for the purchase of coal and other materials and for the payment of wages?

(3) The advantages or disadvantages of time bargains.

(4) The life of machinery and the ratio of reserves set apart for depreciation.

(5) The maximum amount of receives. A special committee was appointed by the six leading companies to prepare a reply.

The Osaka Asahi deals at great length with the economic situation. Its chief conclusions are: (1) That the Government has, by the over-issue of convertible notes after the war, brought about an abnormal appreciation of commodities. (2) That the authorities having adopted an unusually liberal post bellum policy, a mania has arisen for the organisation of companies and corporations. (3) The Governments' collection from the domestic market of an enormous amount of funds in the form of war bonds has had a tightening effect on the money market. The last of these three propositions is regarded with serious concern. The Government has collected war bonds to the amount of 100 million yen, and as yet has adopted no measures for redemption. Thus the market has been deprived of its working funds exactly to the amount mentioned. But the decrease in the supply of capital in connection with the retention of war bonds is really insignificant compared with the increase of the demand for ca-pital among private individuals. Count Inouye's investigation proves the aggregate funds of various joint stock companies in 1894 to have scarcely reached 330 million yes, whereas this amount was augmented by 1897 to 500 millions. That the Government has erred in permitting the Nippon Ginko to lower its rate of interest as a means for encouraging popular enterprises is beyond doubt; but the authorities can hardly be justified in attempting to relieve the market of its present embarrassment by schemes destined to impair the existing enterprises which they have themselves encouraged to start. The issue of convertible notes is also commented on. The notes in circulation on 21st April, 1894, did not exceed 137,904.751 yen, against 179,776,033 ren for the cor esponding period of this year—an increase of 40 million Prices of commodities have extravagantly Ten. risen in consequence, the rate having increased by 50 per cent. in Tokyo and 70 per cent. in Osaka. That is to say, the over-issue of notes has impaired the efficiency of money by 60 per cent. on the average. Where 40,000 year were formerly sufficient in the case, say, of a railway, a sum of 64,000 year is now required. To adopt a measure for bringing about the depreciation of commodities is therefore absolutely indispens-How can this object be attained? able. introduction of foreign capital, the state ownership of private railways, the purchase of war bonds by the Indemnity—all these are clamoured for, but they are no better than temporising schemes. Increased taxation only can be recommended, asserts the Osaka Asahi, at this conjuncture Business men should devote their energies to formulating a scheme for radical reform, instead of being content with raising "importunate cries" against the government.

### THE BOUNTY FOR DIRECTLY EXPORTED SILK.

Among the bills prepared by the Government for presentation to the Diet last session, there was one for rescinding the law by which a bounty is granted for silk directly exported. The dissolution of the Lower House made the passage of the measure impossible. Vernacular having failed, steps were taken by the silied after commencing work; that machinery passage of the measure impossible. Vernacular Emigration Council to come to an arrangement with the Tokyo-Yokohama Savings Bank, and plant may be pledged for loans, that newspapers say that it will be introduced at an and the following points were finally agreed upon:—(1) Each Emigration Company shall the President is reported to have presented to the bounty principle, the reacinding measure

deposit in the Tokyo-Yokoh me Savings Balk a request for information or the following migjeted expensed to pass without deficulty.

Digitized by UNIVERSITY OF ILLINOIS AT **URBANA-CHAMPAIGN** 

### COUNT ORUMA ON CURRENT TOPICS.

Count Okuma, who utters his opinions very freely on current topics, or, at any rate, is represented as uttering them very freely, has been interviewed by the Yomiuri Shimbun, and has expressed himself in somewhat contemptuous terms about the concessions said to have been obtained by the Cabinet from China. He ridicules the stipulation about mining operations as altogether superfluous. The Shimonoseki Treaty guarantees mostfavoured-nation treatment to Japanese subjects. To make a special stipulation now on such a subject is not merely m work of supererogation, but also a proceeding calculated to throw doubts upon the binding force of the Treaty. As to the removal of the restriction upon the export of rice, the fact appears to be that the Cabinet failed to obtain any such pro-mise from China. The agreement about the non-alienation of Fuhkien is all very well in its way, but, after all, it is a poor kind of affair. Japan comes in at the tail of the hunt and gathers up the crumbs that have fallen from the feast of the big Powers. It is a petty piece of imitation. Besides, rumour alleges that the Ministry can not even claim originality for its coup. The idea was put into its head by a certain foreign Government, which said "Why do you stand with your finger in your mouth when Powers are making a feast of China. Step in and claim a morsel for yourself." A great parade is made of A great parade is made of these concessions, but they have been sought simply for the purpose of taking the wind out of the sails of the strong-foreign-policy party. As for the State owner-ship of private railways, it is nonsense. The State has shown itself quite incompetent to discharge even the limited functions already devolving on it. The railways under its control are mismanaged; its postal, telegraph, and telephone services furnish ground for perpetual complaint. Who would be silly enough to saddle it with largely increased responsibilities? The very men now agitating for the pur-chase of the railways by the State, agitachase of the ranways by the State, age of the lines to be bought and their cost. State rankays to the people. In a word, lines to be bought and their cost. The method he recommended was as convenient instruments for influencing the share market. The Liberals are even less scrupulous, for they pervert this question of State ownership into a means of winning over the "business men" to their side. The interests of the country are altogether secondary considerations in the eyes of such politicians.

We reproduce the above-it is only an epitome, of course-because everything attributed to Count. Okuma has interest, but we greatly doubt whether he used such language. In the first place, his information is quite incorrect and that it and information is quite incorrect, and that is a defect seldom exhibited in his utterances. He speaks of the three concessions as having been actually asked for by the Japanese Government in connection with recent events. But it is well known that the questions of mining privileges and the export of rice did not form the topic of any serious discussion. No demands about such matters have ever been formulated by Japan, nor have any concessions been obtained from China. The proposal with reference to Fuhkien stood entirely alone, and had become a subject of pourparlers

Digitized by

in Peking long before the agitators for a "stalwart" policy took the field. In the second place, Count Okuma speaks of a great parade being made of the concessions, whereas the talk about them has been chiefly confined to the Opposition journals, and the only person responsible for coupling them together is the Jiji Shimpo's Peking correspondent. These are misconceptions into which Count Okuma is most unlikely to have fallen.

### COUNT ITAGAKI ON FINANCE.

Count Itagaki, the Liberal leader, has just delivered a lecture in Tokyo on the subject of the nation's economical condition. We have not space to translate his remarks in full, neither is there any occasion to do so. The main point is occasion to do so. The main point is that he advocates the State purchase of the principal private railways with the object of converting into floating capital the capital fixed in those enterprises. He thinks that although the industrial and commercial fever which overtook the people after the war has its disadvantages, its benefits greatly predominate, and it would be little short of a calamity were the Government to adopt a negative financial policy at this juncture, as there seems to be reason to apprehend. The Government itself is not altogether free from responsibility in connexion with this outburst of fever, for by stipulating, at the time of the Shimonoseki negotiations, that new ports should be opened in China, that industrial facilities should be granted there, and that a considerable part of Manchuria should be handed over to Japan, the statesmen of the day helped materially to create a spirit of enter-prise. What has to be done now is to take care that a disastrous reaction does not take place, and that many sound undertakings calculated to enrich the nation are not swept away by the wave of impecuniosity now threatening to inundate the country. The only sound palliative is to introduce foreign capital. There are several ways of effecting that end, but the best and simplest seems to be the State purchase of private railways. Count to regard 5 per cent, as the normal profit of a road, and to purchase the shares of the various lines on that basis-paying 120 yen for a 100-yen share where 6 per cent. profit was obtainable; 160 yen in the case of 8 per cent.; 80 yen in the case of 4 per cent. and so on. He indicates the Nippon, Sanyo, Kiushiu, and Kobu as the four principal lines to be dealt with, and estimates that it would cost 95 million yen to acquire them, their paid-up capital, however, being only 53 millions. These figures were based on returns compiled at the end of 1896. If the extensions made since then and the Hokkaido line were included, it would probably be found that a total of from 150 to 200 million yen must be paid. His idea was to submit to the Diet in its approaching extraordinary session a Representation urging the State purchase of the lines, and the convocation of another extraordinary session as soon as the Government could complete the investigations necessary for compiling a detailed bill.

### IBERALS & THE GOVERNMENT.

If we may credit the Yomiuri Shimbun, which on such a subject is not altogether trustworthy, there is a strong prospect of renewed coalition between the Liberal Party and the Cabinet. The Progressist organ enters into very minute detail as to the extreme section and the moderate section of the Party, their composition, and the measures that have been adopted to reconcile them on lines favourable to the Cabinet. We need not reproduce these explanations. The main facts are sufficient; namely, that the Tosa wing of the Party had never any paramount desire to sever relations with the Ministry; that the concurrence of views between the Party and the Government, with regard to foreign affairs and the virtual concurrence with regard to finance now that Count Inouye's explanations have been heard, render separation unreasonable, and that, a large majority of the members having been persuaded to reconsider their decision partly by the exertions of the leaders, notably Count Itagaki and Messrs. Hayashi and Kataoka, and partly by the efforts of Baron Ito and the National Unionists, a rapprochement is now almost assured. The Yomiuri predicts, however, that all the members will not be induced to return to their allegiance, and that a split in the ranks of the Party will take place, though the seceders will probably be few. It further alleges that after the Diet rises, on the conclusion of the pending session, Count Itagaki will become Minister of State for Home Affairs and Baron Ito will receive the portfolio of Foreign Affairs. It will be understood that we reproduce this news for what it may be worth. We have never, for our own part, believed in the permanency of the rupture between the Liberals and the Ito Cabinet, but it appears to us that a renewal of the tie after so brief a period of division could scarcely have been anticipated.

### THE INDUSTRIAL BANK.

The subscribers for the first issue of the Industrial Bank's shares were required to put up one-fourth of the amount of their subscriptions at once. It results that the capital immediately flowing into the Bank's coffers is as follows, the places of its provenance being also indicated :-

		Yen.
Tokyo		. 87,5000
Chiba

The pettiness of these subscriptions is is striking, especially in the case of Tokyo. Nevertheless they represent a total of over five million yon, when the whole of the instalments are paid up. It is alleged, however, that many of the subscribers will be puzzled to meet the second call. That seems a strange apprehension. At all events we may assume that if the issue of these premium. bearing bonds has produced such an insignificant result, any attempt to float an ordinary loan would be signalty unsuccessial iginal from

### COUNT INOUYE'S EXPLANATION.

The prominent members of the Liberal Party called on Count Inouye within the past few days and obtained from him an explanation as to his financial policy. His Excellency said that it was a great mismake to suppose that he had meddled with the programme of armaments' expansion as a whole. The fact was that a considerable portion of the outlays originally appropriated for 1896 and 1897 had not been expended—it had been found impossible to carry out the works with the rapidity originally contemplated. To add these unfinished portions to the previously designed operations for 1898, and carry out the whole in one year, would be quite out of the question. Hence a readjustment of the method of apportioning the outlays for the various years had become neces-sary. The new arrangement would effect greater equalization of the annual ex-penditures throughout the remainder of the period, but if some slight postponements took place in the immediate future, there would be compensatory accelerations later on, so that the general result would not be altered. With regard to productive enterprises, the sum to be spent was 70 million yen, of which about one half would be paid out in the form of wages, thus increasing the purchasing power of the consuming classes, and accentuating evils from which the country was now suffering, namely, appreciation of prices and dislocation of the balance of trade. That inconvenience might not be felt so much if the money were drawn, in the first place, from the domestic market, and subsequently restored to it. But it was out of the question now to think of floating a domestic loan. Consequently the Government had to fall back upon the Indemnity, and since to obtain the money from that source would exercise a correspondingly disturbing effect on the market, it became inevitable that a slight reduction of the expenditures on account of railway construction should be made. Count Inouye spoke also of the project advocated in some quarters, namely, the redemption of War Bonds, and ad-mitted that it might be necessary under certain dircumstances, which, however, he evidently did not regard as now He explained, also, that the plan of affording assistance to enterprises by means of accommodation from the Industrial Bank was only a temporary expedient.

### RAILWAYS AND THE INDEMNITY.

There appear to be two sections among public men-we exclude political parties the Government's part to relieve the present distress in the money market. One wise not to see that the composition of section is headed by the Tokyo Chamber these insubordinate and graceless appeals of Commerce; the other, by the so-called to public sentiment indicates a defect "business men" in the Diet and the somewhere in his system. Perhaps he The manufacturing interest generally. former advocate the employment of the Indemnity-due next month-for redeeming War Bonds; the latter recommend the purchase of private railways by the safely pass so many years without making any general endorsement of the Indemnity device is that its promoters do not indicate any method of obtaining money to meet the outlays which would be defrayed with the Indemnity were it not applied to the purchase of War Fonds. We purely the purchase of War Fonds We purely taking a large quantity of hydrochloric acid.

In the Sneeteign rights at the Middle Kingdom shall not be impaised by the transaction, Au. II.—With regard to the limits of the leased land, steps shall hereafter be taken to determine by survey to what distance the boundary should to the purchase of War Fonds. We purely taking a large quantity of hydrochloric acid.

UNIVERSITY OF ILLINOIS AT device is that its promoters do not indi-cate any method of obtaining money to

sume that practical men like the members of the Tokyo Chamber of Commerce have fully thought out that phase of the problem, but their ideas about it have not been clearly enunciated. So far as we can discover, they are satisfied to assume that if the Government purchases War Bonds now, it can easily sell them by and by in the foreign market. In fact, they recommend a foreign loan, but, instead of waiting until the preliminaries for it can be arranged, they would have the Government utilize the Indemnity at once to relieve the embarrassment of capitalists, and then proceed leisurely to get money abroad at a subsequent period. But, as we have said, that part of the programme lacks explicitness. As for the railway plan, it is evidently incapable of immediate realization. Viscount Katsura, the Minister of War, is said to support it, and the National Unionists are expected to introduce, in the next session of the Diet, a But long Representation favouring it. and careful investigations and inspections would be necessary before the programme could be reduced to a practical shape, and the prospect of so much delay doubtless deters many people. Our readers will observe, however, that the introduc-tion of foreign capital is the final goal of both projects.

# SERVICE.

The N.-C. Daily News gives space to article, apparently communicated, which contains a bitter and most unseemly attack upon Sir Robert Hart. The writer alleges that Sir Robert's only answer to the petition addressed to him on the subject of the Customs employes' pay has been to promote four thirdclass assistants to the rank of Deputy Commissioner over the heads of 50 of their seniors. Of course he does not pretend that it is a direct answer, but he claims that it is Sir Robert's method of showing his resolve not to brook any interference with his autocracy. In short, having received a petition which by implication accuses him of arbitrarily neglecting the just claims of his subordinates, he replies by a defiant display of fresh arbitrariness. The accusation is elaborated and presented in uncompromising We are astonished that the N.-C. Daily News gives space to such scandalous writing. It must know per-fectly well that the Inspector-General is fectly well that the Inspector-General is and a copy of it has been forwarded to incapable of any action of the kind, and the Fifi Shimpo by the latter's special that if he has not yet succeeded in obtaining an increase of salary for the members of the Service, his efforts to do so -both of whom favour some hold step on have been unsparing within the limits of prudence. Sir Robert, however, is too somewhere in his system. Perhaps he would do well to note, too, that the Chairman of the China Association in Shanghai recently alluded to him as "a recluse in Peking." No commanding officer can What chiefly militates against a tour of inspection to the various posts under his contral.

### THE " OTHER " CONCESSIONS.

The same telegram that brought intelligence of China's engagement not to alienate any part of Funkien announced that the Japanese Representative in Peking had simultaneously obtained two other concessions, one relating to mining privileges, the other to the rescinding of the prohibition on the export of rice. The whole of the news seems to have been implicitly credited by the general public, and several vernacular newspapers have commented on it as true. But it now turns out that the only trustworthy part is that relating to the province of Fulkien. Only one thing was asked for by Japan the engagement about Fulikien. She submitted the request informally just a month ago, and after various pour-parlers had prepared the way, it was formally laid before the Tsung li Yameu on the 20th instant, China's consent having been practically secured by that time. mention these dates because of their interest in connexion with the recent agitation of the "Stalwarts," The latter will doubtless be disposed to conclude that their proceedings acted as a spur to the Cabinet and were directly responsible for the demand about Funkien. But the Chinese Representative in Peking had his instruction on the subject long before the Stalwarts" made their voice heard. As to the concessions about mining and rice, THE IMPERIAL CHINESE CUSTOMS they formed no part of Japan's demands. Indeed, they may be dismissed as altoge-ther apocryphal. Some talk about an engagement on the subject of mining took place a considerable time ago, we understand, but it never took the form of an engagement of any kind. The same is true about the export of rice. More than once that question has been raised, but quite independently of any negotiations growing out of the recent complications. China, however, is understood to remain obstinately conservative on the subject of her people's main bread-stuff. She can not be persuaded to see that if they prefer to sell their surplus rice abroad at a lucrative price rather than keep it at home for the sake of its almost imperceptible effect in cheapening the cost for domestic consumers, they are entitled to choose freely.

### THE RUSSO-CHINESE CONVENTION.

The Russo-Chinese Convention with regard to Liaotung and correlated matters, was signed in Peking on the 27th March, correspondent in that city. It runs as follows :-

Li and Chang (here follow their titles and degree) having been invested with plenipotentiary powers by His Imperiat Majesty the Emperor of China, and M. Pauloff, Russian Changé d'Affaires in Peking, having been similarly invested by His Imperial Majesty the Emperor of Russia, have this day—3rd of the 3rd month of the 24th year Kwangsu—concluded the following convention with regard to the lessing of Port Arthur and Talien:— Talien

anen :---Art. I.--In order to provide for Russia a suit-Att. 1.—In order to provide for Russia a sustable basis on the northern coast of China, and thereby to render her awal position complete and secure, His Majesty the Emperne of China agrees hereby to leave Port Arthur and Talien together with their adjacent waters to Russia. Provided that the Sovereign rights of the Muldle Kingdom shall not be invasited by the transaction.

But the exact limits and all other details con nected with the operation of this Convention shall nected with the operation of this Convention shall be determined after consultation between the Chinese Representative in St. Petersburg and the Russian Government. Provided that, within the limits thus determined, Russia shall enjoy the rights and privileges of a lessee.

Art. 11i,—The period of the lease shall be 25 years from the date of signing this Convention. Provided that, at the conclusion of that period, it may be prolonged by mutual agreement between the contracting parties.

may be prolonged by mutual agreement between the contracting parties.

Art. IV.—The district, territorial and maritime, described in Art. I, shall serve as a depot of military and naval supplies for Russia, and the principal officials administering its affairs may be Russians, acting under a chief who shall have general responsibility. Provided, however, that such officials must not bear the tille of government of the finding of the leaved land, but within subjects of the Middle Kingdom shall not be permitted to encamp within the limits of the leaved land, but within subjects of the Middle Kingdom shall be entitled to reside these provided that they do not behave lawlessly. In the event of a breach of the law by a Chinese subject, he shall be handed over to the nearest Chinese local tribunal for judgment and the infliction of a penalty. All details relating to the administration of justice shall be determined in accordance with the Russo-Chinese Treaty of 1860 (the 10th year of Hien-Chinese Treaty of 1860 (the 10th year of Hien-

Chinese Treaty of 1800 (the 10th year of Fleinfung).

Art, V.—Beyond the northern boundary of the leased land an uninhabited space shall be left, its limits to be hereafter determined by the Chinese Representative in St. Petersburg and the Russian Government in consultation. All affairs within this space shall be under the control of Chinese officials, but Chinese troops may not enter there except after consultation with the Russian authorities.

Att. VI.—The contracting parties agree to regard Post Arthur as a naval station. It shall be used by Russian and Chinese ships only, and be used by Russian and Chinese ships only, and neither the men-of-war nor the merchant-men of any other Power shall have access to it. Similarly, in the case of Talien Bay, one part shall serve as a naval station for the war-ships of China and Russia, but the rest shall be a commercial port, open for the ingress and egress of the ships of all outions.

Act. VII.—In view of the importance of Port Arthur and Talien, Russia undectakes to construct, at her own expense, whatever barracks and forts may be required, and to adopt whatever other means are necessary, for the defence of those places.

those places.

Act, VIII.—It shall be permitted to construct a railway, from a point in the part of the Trans-Asian truck road for the building of which China gave her consent in 1896, to Talien, all the details of construction to be in accordance with the Chinese system of Manchurian lines. Moreover, a broach of the lines or constructed may be carried branch of the line so constructed may be carried from some place midway between Yangtsze (Newfrom some place midway between Yangtsze (New-chwang) and the Yalu River to a convenient point on the sea coast. All details relating to the direc-tion of the roads and their building shall be settled by the Chinese Representative in St. Petersburg in consultation with the Director of the Trans-Asian Railway. Provided that the Russian Go-vernment explicity engages that there shall be no trespassing upon, or seizure of, Chinese territory in connextom with the above railway works. Art, IX.—This Convention shall become opera-tive from the day of its conclusion, and the ratifi-cations shall be exchanged in St. Petersburg.

The above appears to have been rendered from the Chinese into Japanese, so that our interpretation is only a translation from a a translation, and can not be relied on for accuracy. One very important point, however, appears quite plain, namely, that a portion of Talien Bay is to be converted into a naval station accessible to Chinese and Russian war-ships only. That is a new feature of an open port. Another interesting point is that there is to be a branch of the Liaotung railway, leading from a point mid-way between Newchwang and the mouth of the Yalu to the sea. What sea is contemplated we can not yet tell-whether the Gulf of Pechili or the Yellow Sea. If the former Newchwang will probably be the objective point. If the latter, the line will probably traverse Southern Shinking and emerge at Taku- point outside, and such would seem to be shan, which is about 25 miles west of the the truth, though it must be confessed that mouth of the Yalu.

### THE FIR I ENGAGEMENT.

Tuesday, May 3rd. The telegraph on Monday brought news of the first naval engagement between the American and Spanish squadrons. Spanish ships, we are told, were almost completely destroyed, with very heavy loss of life, the American vessels also suffering more or less. It is a singularly unsatisfactory telegram, for it affords no information whatever as to the place where the fight took place or how many ships were engaged. "The Spanish squadron in Manila" are the words used. It is not to be supposed, however, that the Spanish vessels lay quietly in Manila to be bombarded. Their programme would have been to cruise off the mouth of the Pasig so as cover the auchorage from attack, and the probability is, therefore, that the battle took place within a few miles of Luzon. Its result could never have been in doubt, for the Spanish force was inferior at every point to the Ameri-The squadrons were probably comcan. posed as follows :--

The great advantage of the American ships is in point of quick-firing gans, the quick-firers on the Spanish side being all of comparatively small calibre. The American ships are also much superior in respect of protective armour. We judge from the telegram that the Spaniards fought gallantly. That, indeed, might have been expected. But they never had any chance. It must be confessed that these operations at the Philippines furnish much ground for apprehen-sion. Commodore Dewey has no force at his command to preserve order in the islands, and it is more than probable that the destruction of the Spanish squadron and fortifications will be the signal for another outburst of rebellion against which the Spanish troops will now find great difficulty in making head.

Wednesday, May 4th.

Nothing could be more unsatisfactory than the particulars thus far received of the naval operations at the Philippines. We remain in doubt even as to the important question, where was the original engagement fought. Our own impression, as stated when the first news came to hand, was that the fight did not take place within the Bay of Manila, but at some things are still very vague. The entrance simple and unmistakable translation hodai Digitized by Google

to the Bay of Manila is through a comparatively narrow channel, the navigable dimensions of which are still further reduced by the islands of Corregidor and This channel was defended by Faile. torpedoes and mines, and could not have been attempted by ships under fire. town of Manila lies some 25 miles distant from the entrance of the Bay. Now as we know that Manila fell ultimately within range of the guns of the United States Squadron, it follows that the latter must have effected an entrance into the Bay. The wisest plan of defence for the Spainards, we imagine, would have been to keep their ships within the Bay and use them for cannonading vessels attempting to find a passage through the torpedoes at the entrance, Military obstacles are not intended merely to check an enemy's advance. Torpedoes and are mines, if skilfully used, may, indeed, not only check his advance but disable him completely. Still no system of obstacles has ever yet been contrived which a resolute assailant can not remove, or render innocuous, if he has ample time at his disposal. Hence every military engineer, when planning obstacles, is careful to fulfil the essential condition of such devices, namely, that an enemy while attempting to destroy or negotiate them shall be continually under fire. Provision in that sense was partially made at the entrance to Manila bay by means of batteries on the islands of Corregidor and Faile, but of course the defences would have been immensely strengthened had all the available ships-of-war been disposed in such a manner as to be able to concentrate their fire on the site of the torpedoes and mines without being themselves exposed to the cannonade of vessels outside. That does not appear to have been the method pursued at Manila, however, and doubtless there were good reasons for departing from the fundamental rule of defensive works. So far as we can understand from the meagre intelligence thus far received, the Spanish Squadron of four vesselsprobably the Castilla (wooden cruiser, 3,342 tons), the Reina Christina (steel cruiser, 3,500 tons), the Isla de Fuzan (steel cruiser, 1,030 tons) and the Isla de Cuba (steel cruiser, 1,030 tons)was cruising along the coast to the north of Manila when it encountered the United States Squadron - the Olympia cruiser, 5,800 tons), the Detroit cruiser, 2,000 tons), the Raleigh cruiser, 3,183 tons), the Boston cruiser, 3,000 tons), the Concord cruiser, 1,700 tons) and the Petrel (steel cruiser, 890 tons). In the engagement, which is said to have lasted only one hour, two of the Spanish ships were blown up (the Reina Christina and another), and two escaped to Manila in a partially dis-abled condition, and made for the river Pasig, where the other craft flying the Spanish flag were probably lying. Com-modore Dewey's Squadron was then able to remove the torpedoes and get into the Bay, having first silenced the batteries. It has been stated in two telegrams that "Pachini" was occupied—so, at least the transliterated name reads-but unless "Pachini" be an incorrect rendering of "Faile," we have no clue to its where-abouts. Some suggest that "batteries" was the word telegraphed, but we think it most unlikely that the Japanese syllabary would have been employed to transmit an English word in its original form when the

as though the point of saturation had been

was available. After entering the Bay, the first object of Commodore Dewey would have been to complete the destruction of the Spanish Squadron, and the projectiles directed against the vessels lying in the Pasig doubtless set fire to the town of Manila. It is out of the question, of course, that any bombardment of the town was deliberately undertaken. Such appears to have been the sequence of events, but it is virtually all guesswork.

### YAPAN AND THE HISPANO-AMERICAN WAR.

The Japanese Government having issued a declaration of neutrality in conformity with the rules of international law, the Minister of State for the Navy has given instructions to the effect that steps must be taken to guard against the use of any of the open ports, or any harbour in Formosa and the Pescadores, for the export of contraband of war, or for any purpose connected with belligerent operations. The disposition of the naval forces required to give effect to these instructions is to be determined by the officers in command at the Yokosuka, Kure, and Saseho admiralties, and the Governor-General of Formosa.

The only point of special interest in the rules enacted by the Japanese Government for the enforcement of neutrality is that men-of-war of the belligerents are allowed to procure in Japanese har-bours a supply of coal sufficient to take them to the nearest port of their own country. That regulation might work very conveniently for the ships of the United States, for they could obtain at Nagasaki coal sufficient to carry them across the Pacific, whereas a Spanish vessel could obtain only enough for the voyage to Luzon. Spanish vessels, however, are out of the reckoning for the pre-sent, at all events. Such of them as are not completely disabled appear to be blockaded in the barbour at Cavité. Privateers may appear upon the scene, but the rules distinguish between privateers and ships used for warlike purposes, the former not being permitted to enter Japanese territorial waters except under stress of weather, or disablement, or owing to lack of articles indispensable to navigation. Coal is an article indispensable to navigation. but coal-within the limitations mentioned above-is to be supplied only to "menof-war and other ships used for warlike purposes," from which category privateers are excluded. We congratulate Japan upon this rule, though it follows as a matter of course from her adoption of the Paris Conference's principles. It is a disgrace to civilization that armed outrages against private property should be perpetrated, as they are now perpetrated, by war-ships of the United States and Spain. The United States has eschewed privateering, but suffers its warships to pursue and capture Spanish merchantmen, the Spaniards adopting the same tactics. It seems to us that there is no difference between such proceedings and the deenough without the addition of such barbarons features.

On the 3rd inst. a fereign firm in Yokobanta received a telegram from Hongkong to the London Economist. On two or three occaeffect that the price of rice is new lower by 3 pr sions be has referred in terms almost of wisdom of precautions such as keeping the 4 per cent. Digitized by OS Chinese source of supply always open.

### THE RICE PROBLEM.

far passed. The concession reported to have been obtained by Japan from China regarding the export of rice is a mere canard, but it re-directs attention to a question of great importance to this country. The difficulty that Japan is beginning to experience in providing herself with food can not be even approximately measured by the discrepancy between the rapid growth of her population and the slow extension of her rice-growing area. A lay on account of the war was 230 million sufficiently disquieting prospect is, indeed, yen. Of that total, 130 millions were suggested by the latter statistics alone, but the truth is that the number of riceeaters has increased of late years with caters has increased of late years with enterprises had they been available for rapidity enormously disproportionate to such a purpose. In other words, 130 the increase of the population. In provincial districts where, thirty years ago, nine persons out of every ten regarded pure rice as a rarely attainable luxury, and were content to live, from year's end to year's end, on barley alone, or barley mixed with a modicum of rice, six persons out of every ten now count it a hardship if they can not sit down to at least one square meal of unadulterated rice daily. That is one of the chief reasons why the price of rice has steadily appreciated during the past two decades, until it stands to-day at a figure quite the treble of its quotation in 1875. Think how busily the brains of political economists in England would be cudgelled were the people required to pay a shilling for the loaf that cost only four pence twenty years ago. Yet that is precisely what has happened in Japan-neither more nor less. Is it difficult to understand not only why such an appreciation of the cereal's value has taken place but also why the prices of commodities in general have appreciated simultaneously? More than once statistics have been adduced in these columns to show that that if the agricultural classes in Japan-and they constitute the great bulk of the nation-were taxed to-day according to the scale of taxation in feudal times, they would be paying from six to seven times as much as they are actually paying. Can there be any doubt that such a conspicuous lightening of their burdens has sensibly affected their prosperity? There are publicists who affirm that a plethora of media of exchange and the scattering of large sums of money among the consuming classes in connexion with the war and the post-bellum measures have caused the appreciation of rice and of commodi-We do not ourselves ties in general, believe that there is any plethora of currency in Japan. Here are some comparative figures :-

Amount of currency per capita or various coun-

yen	yen
Austria19	England
Denmark25	United States46

Grimany	•

It must be remembered, too, that in every struction of private houses or the robbery one of the Occidental countries shown in of private warehouses. War is bad the above table, the system of credit is more highly developed than it is in Japan, and the work thrown upon the currency is correspondingly lighter, There is a critic who writes from Yokohama to the

We wonder whether it ever occurred to him to construct a table like the above; or by what process of reasoning he arrives at the conclusion that media of exchange are so redundant in this country. There can be no doubt, in this country. There can be no doubt, of course, that the great sums of money distributed among the consuming classes in connexion with the war must have influenced the prices of commodities. But, after all, the magnitude of that factor of disturbance is not so striking as many Japanese writers affirm. The whole outcapital, and would probably have been invested in industrial and commercial millions would have reached the pockets of the consuming classes independently of the war. By how much, then, did the war actually increase the purchasing power of the consuming classes? Probably by less than Ioo million yen—a great deal less, we imagine, but let us say 100 millions. Such a sum is a mere trifle when measured by the arithmetic of the It is estimated that the total taxes. annual income of the classes who live by the land in Japan does not exceed 1,000 million yen. Some statisticians put the figure much lower, but our own calculations indicate about 900 millions. We take the estimate of 1,000 millions, therefore, in order to err on the right side if we err at all. Now out of that income of 1,000 millions, the taxes actually paid are 38 millions, approximately, whereas, if the rates of former times were exacted, the land-owners would have to pay about 280 millions. Here we have a difference of 242 million yen, or nearly a quarter of the landowners' total income. The effect of that change, operating as it does year after year, is plainly very great. people, having so much more money to spend on rice, have ceased to regard it as a luxury and now count it among the necessaries of life. Increased demand has, therefore, pushed up the price, and, as an inevitable consequence, the prices of all other commodities have risen correspondingly, for rice is still, and has always been, the real measure of value in Japan. If the artizan and the merchant must pay more for their rice, they want to sell their manufactures and goods at proportionately higher rates, and so one thing reacts upon another. This rapid appreciation of prices-in other words this greatly enhanced cost of living-handicaps Japan very heavily in her industrial and commercial competition with other coun-If the supply of rice could be doubled, the nation's prospects would be immensely improved. Such considerations show the importance of providing that the Chinese cereal shall be always available. There used at one time to be a universal prejudice against Chinese rice, and even now no Japanese will eat it if he can get home-grown grain. But that partiality Thousands of grows weaker every year. dainty palates have become reconciled to a mixture of the Japanese and the Chinese cereals, and necessity will constantly operate to render folks less fastidious. The rice problem with all its far-reaching corollaries may well occupy the attention of Japanese statesmen, and suggest the

## THE QUESTION OF THE DAY.

In a very brief period a large section of the nation may be said to have declared in favour of raising a foreign loan for the purpose of purchasing the private railways and placing them in the hands of the State. When Count Itagaki first made public his advocacy of that course, he was careful to represent himself as a private individual, not as the spokesman of the Liberal Party. But he has now assumed a different tone. It will be remembered that his original utterances were made to a meeting of "business men" who came together at his invitation. The same business men reciprocated by getting up an entertain-ment in his honour at the Imperial Hotel on the 2nd instant, and on that occasion Count Itagaki declared that not only the Liberal Party, but also the National Unionists, were in favour of the project; that a measure in that sense would be introduced in the next session of the Diet, and that it would certainly be carried by a majority. These important statements occurred in the course of an address in which the speaker referred, also, to the satisfaction he experienced in finding that cordial and cooperative relations had been established between the Liberals and the business men, and in which he further offered an explana-tion of the policy of the Liberals in supporting the extensive scheme of armaments expansion whose dimensions had been more or less criticised by the busi-ness men. There was some talk of appointing a committee of business men over tifty of them attended the meeting -for the purpose of investigating the question, but, on the motion of Mr. Incuye Kakugoro, it was decided that the sense of the business men should be obtained by means of a circular. There can be no doubt, however, that this question has now entered the field of practical politics. It would be interesting to know whether the Liberals entertained any such programme when they were still in alliance with the Cabinet, or whether their con-demnation of what they call the "negative" · financial policy of the Administration has taken the practical form of State-owned railways and the introduction of foreign capital.

The Liberal organ (Tokyo Shimbun) has a paragraph combating the criticism of the Progressionists, namely, that this railway scheme is prompted simply by a speculative desire to improve the price of shares. Our contemporary uses very general terms, but if its representation of the conditions existing in industrial and commercial circles be even approximately correct, save the situation.

### PRESIDENCY OF THE HOUSE OF REPRESENTATIVES.

Kazuo as President and Mr. Taguchi marriages come to him, in both cases post Ukichi as Vice-President. It has never factum. The charge was indeed most exbeen found that the election of the travalgant, as we noted at the time.

UNI

President and Vice-President constituted a certain guide to the relative strength of parties in the House, but Tokyo journalists seem to think that the election in this session will be an important index as showing the inclination of the business men and the indepenthe business men and the independents who hold the balance of power. We imagine that there can not be much doubt about the business men. Count Itagaki's State-railway policy has won them com-

### THE LIBERALS AND THE FAR EASTERN QUESTION.

A general meeting of Liberal members of the Diet was held on the 30th ultimo, under the presidency of the Count Itagaki. It is stated that some 65 members were present, but their debate is not reported. Three resolutions were submitted by the Committee and unanimously adopted. We translate them from the columns of the Tokyo Shimbun (Liberal Organ):-

I. With reference to the leasing of important positions in China by the Great Powers of the West, there is at present no necessity for our country to office any protest.

2. Suitable steps should be at once taken to preserving the peace of the East and maintaining

the balance of power,

3. Every effort should be made to induce China and Korea to adopt material civilization (bummer no jibutsu).

Mr. Kataoka Kenkichi and two others were elected to form a deputation for the purpose of submitting these resolutions to the Premier and explaining their import. It is evident that considerable explanation is required, for while the first resolution is in direct opposition to the views enunciated by the Progressists and consequently presents no obscurity, the second indicates some programme which the public will be very curious to see unfolded. One thing, however, is made quite plain by the re-solutions, namely, that the Liberals have no sympathy with the "strong-foreign-policy" agitators, and that, consequently, any attempt on the part of the latter to impeach the Cabinet in the Diet will be failure.

### ENGLISH WOMEN AS CHINESE WIVES.

Sir Halliday Macartney has penned a justly indignant protest against the curious action of the N.-C. Daily News in attempting to hold him responsible for marriages contracted between English women and Chinese subjects. It may be remembered that the Shanghai journal's It may be indignation was raised on behalf of four most unhappy English girls who were deserted by their Chinese husbands in there is very great embarrassment, and Shanghai and left in a state of destitution. nothing short of a wholesale measure will "Some" of the husbands were said to have been members of the Chinese Legation in London, and in view of that fact the N.-C. Daily News was betrayed into remarks about Sir Halliday that could scarcely have been penned unless some malice It is believed that the Liberals and prepense existed. Sir Halliday comments National Unionists have agreed to put up on the significant fact that not one of the Mr. Kataoka Kenkichi for President, and husbands' names was given by the Shang-Mr. Hotoda Hajime for Vice-President, of hai journal, and then goes on to show that the new House of Representatives. The only once during his twenty-two years of former is a prominent member of the service at the Legation has he been Liberal Party; the latter, of the National consulted about a marriage between an Unionists. The candidates for whom the English woman and a Chinese man, and Progressists will vote are Dr. Hatoyama that only twice has the knowledge of such

### THE REVISED TREATIES.

In referring to the very wholesale criticism of the Revised Auglo-Japanese Treaty penued by the author of "Things Japanese," we might have mentioned two points which will probably interest him and his readers. He thinks it remarkable that such a treaty should have been concluded by England except in the sequel of a war of defeat, and he attributes, by implication, the supposed defects of the document to the fact that it was negotiated in London where little knowledge existed on the subject. As to the former point, the critic and his fellow thinkers seem to forget that the object of the compilers of the Treaty was to place Japan on something like an equal footing with European States, so far, at any rate, as the essential forms of international intercourse are concerned. The Treaty was therefore drafted upon the lines of similar covenants between the civilized, independent States of Europe. The author of "Things Japanese" and certain other critics would have preferred a very much fuller covenant, securing to foreigners various privileges and immunities of which no mention appears in the Treaty. That would certainly have been very pleasant. We should all have liked But a document of that nature would have been a novelty; a radical departure from the kind of agreement sanctioned by precedent in Europe. Japan would never have accepted it. She would have justly objected that it differentiated her from the nations of Christendom quite as emphatically as the old Treaty differentiates her. Concerning the second point, namely, that the Revised Treaty was the result of London's ignorance, the critics will probably be surprised to learn that, in all its main features, the document was simply a replica of the draft elaborated and accepted by all the Western Powers consulting at the Foreign Office in Tokyo during the celebrated three-years' negotiations of 1885, 1886, and 1887. The lines of the latter draft were purposely followed as closely as possible by the London negotiators of 1893-4, in order to obtain a document which would be tolerably sure of universal endorsement. It seems to us that if the author of "Things Japanese" had devoted five minutes to conversing with some of the persons who possess a knowledge of the facts relating to the Treaty, he would have saved himself penning a criticism which doubtless he now regrets very sincerely.

### COUNT KABAYAMA.

Count Kabayama, Minister of Home Affairs in the former Cabinet, is now in Kagoshima. It will be remembered that he was represented by rumour as having contrived, or cooperated in, various schemes for effecting a disruption between the Matsukata Cabinet and the Progressists, and that he was even suspected of entertaining a plan to organize a "militaryforce" ministry. No one acquainted intimately with Count Kabayama could have attributed such intentions to him. He probably felt considerably hurt at the imputations, for he left the capital after the fall of the Matsukata Ministry and has been little heard of lately. His voice reaches us now, however, from Kagoshima through the columns of the Tokyo Asahi. He strongly condemns the conduct of politicum នៃ politicum po

the Cabinet in the field of foreign affairs. The one thing above all others that party agitators should refrain from making capital of is the country's foreign policy. After laying down that thoroughly sound maxim, the Count went on to pay a very high tribute to Marquis Ito. He said that no man is free from faults and probably Marquis Ito has some, but that, taken all round, the country has no statesman like him for either foreign or domestic affairs. The trouble is that he has no colleagues to support him loyally and intelligently, and that the nation, instead of uniting to strengthen and sustain him, was, in some sections, lukewarm if not hostile. With regard to the present Cabinet, it was not Marquis Ito's ideal. He had organized it as a makeshift, and if any statesman could put together a Ministry stronger and better suited to the needs of the time, the Marquis would doubtless hand over the reins of office without hesitation. Meanwhile it was probable that some minor changes in the composition of the Cabinet would be found inevitable.

### THE OLD QUESTION.

Once against the old question of party cabinets is paraded in its rusty uniform, and with all pump and ceremony thrust into the forefront of the political fight. It is a weary question. Party cabinets have to come : that is quite certain, and, though the route by which they are to arrive seemed interesting at one time, the nation is at present confronted by pro-blems of so much greater immediate importance that it must be indisposed that a number of the applicants were not to turn again to the ancient cause of dis-pute. We do not think, indeed, that there is any prospect of the question's becoming vital just now, but still in pur-suance of our business as recorders of current events, we note its re-appearance upon the scene. Count Itagaki, speaking at a meeting of his Party last Tuesday, said that the Ito Cabinet was not a party Cabinet; that it had, indeed, departed from the principle of party Cabinets. "Nevertheless," he added, "that fact alone did not constitute a reason for attacking it. If the Liberals were to attack a Ministry merely because it was not organized on party lines, how would they proceed towards a Cabinet organized by the Progressists, for example." Such a statement seems to involve the idea that a Ministry may be efficient and satisfactory though standing aloof from political parties. So Count Itagaki is roundly criticized by the Progressist organs, and accused of deserting the colours under which he and his followers have fought so long.

Concerning the above, the Fiji Shimpo alleges that a conviction is more or less prevalent among the Liberals that the time for genuine party government has not yet arrived. There is no one party strong enough to organise a stable Cabinet, and if the attempt, being made, were to end in failure, the clan statesmen would recover a stronger grasp of power than The Liberals have now learned that Count Inouye's financial policy is not negative, and that they have no reason to complain of it. On the other hand, they endorse the Cabinet's foreign policy. Hence there is no reason why they should into practice.

### THE IMPERIAL GARDEN PARTY.

It was announced on the invitation cards to the Imperial Garden Party on the 28th ultimo that, in the event of rain, the Party would be abandoned. When, therefore, rain began to fall heavily in the forenoon, most of those who had the honour of being invited must have abandoned all hope. A momentary semblance of skyclearing in the afternoon, however, in-duced a number of persons to repair to the Shiba Detached Palace. But very soon the clouds closed again overhead and the rain poured down unceasingly, so that the Imperial Princes who had come to welcome the guests in the absence of the Emperor and Empress, made only a brief stay, and the Party degenerated into a mere calling and leaving of cards. was particularly disappointing, doubtless, in another respect also, for instead of the gorgeous invitation cards hitherto issued with the Imperial crest embossed in prised us so much as to find a journal like gold and hearing the names of the first shimps lending the weight of its Emperor and Empress — cards which were preserved by the guests as valued souvenirs — small, insignificant tickets did duty on this occasion, and their holders were directed to surrender them at the entrance to the Palace. The Japanese Imperial Garden Parties have become one of the features of the country, and many tourists, if they do not come to Japan expressly to be present at them, certainly time their arrival so as to be here at the proper season. It is stated that between fifty and sixty names were sent in from one legation, and we suspect a little chagrined at not being able to carry off the usual memento. We do not sympathise with them ourselves, but that is another matter.

### PRINCE HENKY IN SHANGHAL

Prince Henry of Prussia had a busy and apparently a pleasant, time in Shang-hai. The German Consul-General entertained His Royal Highness at dinner and afterwards the Prince held a reception at the Consulate, about 150 persons being specially invited. A public tiffin was given in honour of the Prince in Chang Su-ho's garden; and a ball at the Club Concordia the same evening. The following day—Wednesday, 20th—he lunched on board the Prinz Heinrich and in the evening a grand torchlight procession was organized. On the 21st His Royal Highnessinspected the German-drilled Chinese troops at Woosung, and seems to have found them very proficient. The North-China Daily News says:-

Their Excellencies Governor K'uei and Provincial Treasurer Nieh have prepared some very excial Treasurer Nich tave prepared some very ex-pensive and rare ancient works of act for presen-tation to Prince Henry of Prussia. The first named official will present a number of milk-white jade carvings and ancient gold work. H.E. Nich's presents consist of a rare and valuable dark-coloured jade sceptre of the Han dynasty, nearly 2,000 years old, and some fifteen pieces of ceramic act of the Tang dynasty which existed some twelve centuries ago, all of them being most satefully and exceptively set arone stands and tastefully and expensively set upon stands and enclosed in boxes of beautifully polished sed wood lined with bronze and souff-coloured satin. The last-manted official is said to have spent some Tis, 30,000 upon his tribute to Prince Henry.

Twelve genuine specimens of keramic

### AMOY.

The "stalwarts" continue to cry out that Amoy must be leased by Japan, and some of them are now prepared to declare that the Japanese Government actually asked for that place and obtained only a promise that the province in which it is situated should not be made over to any foreign Power. The assertion seems to us as extravagant as the project is absurd, and we congratulate the Nichi Nichi Shimbun on ridiculing the whole affair. Not one of the four Powers which have obtained leases of harbours and lands in China during the past few months has dreamed of asking for a port already open to the commerce of the world. If any Government were fatuous enough to formulate such a request, it would find itself vehemently opposed by all the Powers whose subjects or citizens had vested interests at the port in question. Nothing has surgreat influence to popularise this outcry of a section of the "statwarts." We could understand a proposal for the lease of Takushan, which virtually commands the mouth of the Yalu River, is not without considerable tradal prospects, and lies within the "sphere" which events seem to be mapping out for Japan. But to think of asking for Amoy is mere childishness.

The "Stalwarts" held another meeting in the Nakamura-ro on the 1st instant There were nearly 300 persons present, and several speeches were delivered, but beyond the fact that the Government's "weak" foreign policy was denounced, it is difficult to discover what took place, Mr. Komuchi Tomotsune distinguished himself. He argued that in seeking and obtaining an engagement from China about the non-alienation of any part of the province of Fuhkien, the Cabinet by implication declared its willingness that all other provinces and districts in China might be leased or ceded to foreign Powers. the engagement became an additional factor of disturbance. Apparently this politician would not be content with anything less than a guarantee for the integrity of the whole Chinese empire, just as his fellow-politicians aim at driving Russia and Germany out of Liaotung and Shantung.

### A DECLARATION OF POLICY.

There has arisen a secret hope in the breasts of many foreign residents that the severance of relations between the Cabinet and the Liberals may imperil the passage of the Civil Code through the Diet and thus result in a postponement of the much-dreaded event, the abolition of Consular Jurisdiction. As individuals all units of the Settlement Communities may be excused for harbouring that hope. Japan herself assume the responsibility of postponing the operation of the Revised Treaties, the foreign residents would be justified in rejoicing, supposing them to be really disturbed by apprehensions; a supposition which we, for our own part, find much difficulty in entertaining. question then is, will the disaffection of Hence there is no reason why they should attack the Ministry except on the vague principle of party government, a principle which they are not themselves able to put into practice.

Ware dating from the Tang dynasty are the Liberals affect the passing of the Code? Evidently not. Count Itagaki principle of party government, a principle which they are not themselves able to put into practice.

Prince Henry cares for such things. They has just delivered to the members certainly will not appeal to his sense of of his Party a speech which is coninto practice.

the Ito Cabinet in pursuance of the general principle of Parliamentary mandates and for the special purpose of carrying out the post-bellum measures, which were of paramount national importance. They were willing to continue the alliance, but Marquis Ito had declined to entertain their reasonable proposals, and they had no choice but to sever the connexion. They were now independent. It did not follow that because they had broken off one relation they must cement another, or lish statesmen use the word, is given that because they were not united with point." Such things are very easy to the Cabinet, they must unreasoningly write, and we presume that some English-oppose all its measures. For years past men are so curiously constituted as to find the Party had been pledged to the principle. of Treaty Revision. In order to consummate that object, it was necessary that the remaining portion of the Civil Code like to hear a statement of the justifica-must be passed without delay through the tion, or even the excuse, that England Diet in the approaching session. The Party would devote its energies to that

Passing on, then, to speak of other matters, Count Itagaki said that there were strong reasons to be dissatisfied with the manner of conducting the last general elections. It was now quite plain that the present system needed reform, and a bill would be introduced next session for that purpose. The leading leatures of the measure would be the lowering of the property-qualification for voters from 15 yen of direct taxes to 5 yen; the recasting of electoral districts so that their limits should coincide with those of cities and prefectures; adoption of the system of unsigned ballots, and an increase of the number of members to 560. His idea was that if the bill passed through the Diet in the extraordinary session now been uttered by German statesmen at about to open, the general elections on the England's expense, not much need be reformed lines might be held at once, so as to enable the new representatives to meet next December in Tokyo.

Concerning the strength of the Party, the Count said that the National Unionists and the Business Men were with them, so that they could count on a majority in the House. In connexion with that, he referred to the third plank in the Party's present platform, namely, the introduction of foreign capital. No reasonable doubt could be entertained that such a step was absolutely necessary at this juncture. The State purchase of private railways was the best way to manage the matter. State ownership of railways was unquestionably the wisest principle, and its practical adoption might now be combined with the supply of a crying want. By hypothecating the railways there was little doubt that foreign capital might be obtained at 31 per cent. interest.

Itagaki practically threw his glove in Marquis Ito's face. He said that the Liberal Party had three grounds of complaint against the Ministry. The first was the matter of the elections: the promised policy of strict neutrality and suppression of all malpractices had not been carried out. The second was connected with finance. Count Inouye's financial policy was certainly of a negative character, and other port is expected to be in the south consequently approach to the rolling and the port is expected to be in the south consequently approach to the rolling and the rolli consequently opposed to the policy ad-vocated by the Liberals. The third was The Yomiuri is a little "off colour," we printed, and that no portion of it remained in the matter of party Cabinets. Marquis imagine.

he said, originally formed a coalition with Ho had pledged himself to build his Cabinet on the foundation of a political party. He had not done so. Events would indicate the nature of the measures to be adopted by the Liberals in consequence.

### THE HACKNEYED SNEER.

"At the same time," says the Japan Gazette, "the German sneer that there is never less danger of war than when Engpleasure in writing and reading them. But setting aside flippant jibes and turning to practical common sense, we should tion, or even the excuse, that England The could have found for going to war in connexion with recent events. Will any of the flooters and jeerers take pen in hand, and soberly tell us when, where, and why England should have drawn the sword. We want a working theory, not a mere froth of verbosity. What reason had Eng-land to go to war? With whom should existed for recourse to arms-quite impossible. There was excitement in England on receipt of false and sensational news about Russia's proceedings and intentions, but to say that the excited mood should have been translated into bellicose action after the absence of all just cause for passion or violence had been discovered, is really too silly.

> said. We daresay the Germans, after their "Mailed Fist" episode, will be disposed to laugh with us rather than against us. That "Mailed Fist" was waved in England's face if in anybody's, yet it never could have found its way to the East without England's continued assistance, and when we recently heard of it, it was being dined and wined at Government House in Hongkong with its flagships undergoing repairs in a British dock, or entertained at public tiffins and balls in Shanghai. The danger of war does not seem to be very imminent when German mailed fists are raised aloft. Sic sit sem-

### PRINCE HENRY AND KIAO-CHOU.

The Yomiuri has a tale about Kiaochou. It says that Germany's reasons for occupying the place were to facilitate the With respect to the Cabinet, Count Parliamentary adoption of her naval expansion programme, in the first place; Marquis Ito's face. He said that the and, in the second, to obtain m foothold Marquis was a fool for not yielding; that for commercial and military purposes he would have to yield; that if he did not, in the East. Prince Henry, however, his Cabinet could not stand, and that now has come to the conclusion that was the time to make him yield. The Kiao-chou is not all suited to the objects contemplated; that to convert

### EDUCATIONAL DEPARTMENT.

Marquis Saionji's illness has finally necessitated his retirement from the post of Minister of State for Education. His tenure of office was very brief, yet he succeeded in winning the full confidence of educational circles, and great regret will doubtless be felt at his resignation, expecially from such a cause. His successor is Professor Toyama, hitherto President of the Imperial University. Professor Toyama is a comparatively young man, being only in his fiftieth year. He has been connected with education throughout the whole of his life. Before the Restoration, his talents attracted the attention of the Tokugawa Government, by whom he was sent to England to study, and after the Restoration the Imperial Government despatched him to the United States for the same purpose. He took his degree at the University of Michigan, and on his return to Japan became Professor of English Literature, rising subsequently to be dean of the Literature College, and finally, in 1807, to be President of the University. He possesses a perfect knowledge of English she have fought? On what occasion? It and is deeply versed in English litera-is impossible to show that any valid cause ture. In his own language, too, he has greatly distinguished himself as a writer, and his eloquence and wit have gained him a high reputation for oratory in the House of Peers, of which he is a member by Imperial nomi-nation. There can be no doubt that the new Minister is a man of most vigorous intellect, and his management of educational affairs will be watched with much interest. His appointment raises to no less than six the number of new men holding portfolios in the present Cabinet; namely, Baron Nishi (Foreign Affairs), Viscount Katsura (War), Baron Suyematsu (Communications), Mr. Sone (Justice), Mr. Kaneko (Agriculture and Commerce), Professor Toyama (Education). The elder statesmen are only four: namely, Marquis Ito (Minister President), Marquis Saigo (Navy), Count Inouye (Finance) and Viscount Yoshi-kawa (Home Affairs). It need scarcely be said that some sensation-mongers are endeavouring to interpret Marquis Saionji's resignation as a protest against the appointment of Mr. Kaneko Kentaro to the Department of Agriculture and Commerce—an extremely silly suggestion. They further allege that Baron Nishi, tired of being mere locum tenens, has definitely resigned, and that Baron Hayashi will probably be recalled from St. Petersburg to take his place-another canard. It seems pretty certain, however, that Pro-fessor Kikuchi, the present Vice-Minister of Education, will resign and be appointed to the Presidency of the Imperial University. Some people allege that Professor Kano will also resign, but on that point we are unable to speak.

### REDEMPTION OF WAR BONDS.

Messra. Suyenobu, Nakano, Toyokawa, and Ikeds, representing about a hundred men of affairs, called upon Count Inouge on the 4th instant, and urged upon him the advisability of applying from 50 to 100 million yen of the Indemnity to the redemption of War Bonds. Count Incure, it is said, did not deny that the redemption of War Bonds might afford great relief to the money market at present, but he explained that the Indemnity was all approfor such a division

### STILL THE LAND-TENURE QUESTION.

We observe that the Kobe Chronicle returns to the question of the tenure of land under the kind of lease described in the new Code as a "superficies." Our contemporary is still apprehensive that the Code in operation may be found very different from the Code in theory, and its apprehension seems to have been accentuated by reference to the judgment delivered by the Osaka Appeal Court in the Mascarenhas case. Perhaps our readers remember the case. A Portuguese obtained a perpetual lease of a plot of land in Kobe at a rent which, owing to the appreciation of property in the district, became notoriously inadequate 25 years subsequently. The owners of the land applied for a revision of the rent, and the Court entertained the application, from which fact the Kobe Chronicle is disposed to infer that the Courts may interpret the new Code in accordance with some now We would point unforeseen principle. out to our contemporary that the new Code is not yet in force, and that, consequently, the import of its provisions can not be inferred from the practice of the Courts at present. We would also point out that a perpetual lease, like that of Mascarenhas, would, even under the new Code, be subject to revision by a Law Court on application by either the lessor or lessee. We would also point out that a lease for a fixed term, however long, is explicitly exempted by the new Code from such revision. We would also point out that, according to the decision of the very Osaka Court which disquiets our contemporary, when rent is fixed for a definite term of years, as would be the case with a superficies of the only kind useful to a foreigner, no legal tribunal will have competence to alter it. We would also point out that when a question as to the nature of superficies was recently put by a leading Yokohama resident, in the presence of three other foreigners, to the Vice-Minister of State for Foreign Affairs, the latter replied that, according to the rendering of legal experts and of the Government, a superficies, as defined by the new Code, may be for any period—a thousand years, for example. We presume that the subject will be understood one of these days, but the perplexity about it is very strange.

### WAS IT "DISSIMULATION?"

With reference to the Doshisha affair, the following criticism appears in the Japan Gasette :-

From the point of view of strict integrity of conduct the American Board of Missionaries were from the first in the wrong. They attempted by artifice to evade the conduions of the Treaty and artifice to evade the conditions of the Treaty and they have been by artifice defranded of the magnificent institution they succeeded in erecting. This seems a harsh thing to say, but if the American Board could have legitimately obtained the site at Kyoto does anyone imagine that they would have handed over their property to a Japanese Board of Trustees? They certainly would not, or if they obtained Japanese assistance they would have kept strict hold of the title-deeds. Truth is not served by evasion. They should have shunned the appearance of evil, and waited with patience until they could have built and owned the college that generous Christians in America endowed, not that the Japanese might have a secular education, which the Government provides, but an education, as the founders and benefactors intended, based on Christian principles. based on Christian principles.

certain form of dissimulation." We are quite unable to appreciate the justice of such a criticism. Where was the departure from strict integrity; where the dissimulation? If a man employs a Japanese friend to purchase real estate outside the settlements, and registers it in the name of the friend while holding possession of it all the while for his own use, and regarding it as his own property, he is certainly evading the law. But if he says to a Japanese friend, "I will furnish funds to establish a school for benevolent purposes and you shall own the school as well as the site on which it stands, provided that you, too, give your services, and provided, also, that the school is conducted on certain lines," how can it be said that such a philanthropist is guilty of even the small-est dissimulation? The transactions connected with the Doshisha were all straightforward and above-board. The site the college was openly acquired by Mr. Nishima, who had been the projector of the whole affair-with money subscribed in response to his appeal. Mr. Nishima did not purchase the land and erect the buildings in order that they might be the property of Mr. Harris or the American Board Mission. He acquired them in order that they might serve an educational purpose to which Mr. Harris was willing to contribute money and the Missionaries to devote their services. The principles of "strict integrity" were not departed from by so much as a hair's breath in such a transaction, so far as we can see.

### REUTER.

Reuter's agent in Yokohama, telegraphing to London on the 31st of March, said :

The official organ and other journals comment-ing on the expected British naval display in Chin-ese waters describe it as a piece of mere bluff, It is not likely, they say, that it will be followed by action, as had Great Britain been in earnest she would not have allowed matters to reach the pre-

What does the sender of this message call "the official organ," we should like to know. And what are "the other journals"? The leading Japanese journals certainly did not describe the British naval display as "a piece of mere bluff," and we presume that Reuter's agent understood that people in London would read his telegram as a reference to the contents of Japanese newspapers and no others. It certainly never would occur to them to suppose that he could think it worth while to send a statement about the opinions of two local English journals published in Yokohama, and we do not see to what others he can have been referring. The telegram is most misleading, and is also absolutely false in one respect, for there is no such thing as an official organ. It is not to be supposed that Reuter's agent had any intention of deceiving the British public, but unless he is more circumspect he may discover to his surprise and inconvenience that the Japanese Government objects to having wholly erroneous versious of its views dis seminated abroad.

A Hongkong telegram appearing in the China Gazette reports that two passengers were pan about "your the and your Okumas," pronounce at Singapore, for having in their possession a quarter of a million of forged Hongkong Bank like "Q." Professor Chamberlain probably notes. They had already disposed of apurious adopted the rule for that reason, but it seems a Our contemporary concludes by saying notes to the face value of two thousand dollars physical weight of his great authority should that the missionagies by the lent to a misleading method.

UNIVERSITY OF ILLINOIS A

### ACCENTUATION OF TAPANESE WORDS.

Mr. Walter Dening in contributing to the Gaikoku Gogaku Zasshi a series of assays entitled "Practical Hints to atudents of English." They seem to be well thought out and full of information that should prove very useful. In the second of the series-which has just appeared—we find the following interesting paragraph :---

Now to come to the subject of access, Professor Chamberlain in his Handbook of Colloquial Japan-ese (Second Edition, p. 19) makes some remarks on the subject of accentuation with which I am not able to agree. Speaking of the Japanese language, he says: "There is little or no tonic accent and only a very slight rhetorical accent; that is to say, that all the syllables of a word and all the words that all the syllables of a word and all the words of a sentence are pronounced equally or nearly so." Mr. Chamberlain somewhat qualifies this observation in a note on the same page when he says:—"The statement made in the above paragraph concerning the absence of secent in Japanese is intended rather for purposes of practical instruction than of scientific accuracy. There is a slight tonic accent in Japanese. But so expenditude the state that they have been marked instruction than of scientific accuracy. There is a slight tonic accent in Japanese. But so extremely slight is it, that it has never been marked in any dictionary whether native or foreign, it has no influence on procedy, it votes from province to province, and inhabitants of the same province contradict, not only each other but themselves, in their usage and the explanation which they give concerning it. If this theory were correct, we might account for the general instruction to accent shown by Lapanese students when reading Russinown by Lapanese Russinown by Lap inight account for the general inattention to accent shown by Japanese students when reading English by saying that it is caused by the absence of accent in their own tongue. But I must contest as unable to accept this explanation. Whether the accent heard in the pronunciation of Japanese should be called a tonic accent or a rhetorical accent is a nice question which I cannot pane to discuss here. But what I have no desitation in affirming is that there is heard in the case of the nonunciation of all three-villable Japanese words. affirming is that there is heard in the case of the pronunciation of all three-syllable Japanese words a distinct accent on one syllable, which could not be omitted or changed to another syllable without shocking the native ear. Take such words as wata'kushi, dorobo', Hako'ne, Ko'koro, wasure'ita, Miya'ko. In every case you will find that the voice rests on one syllable. Inattention to this fact accounts for much of the mispronunciation of Japanese among foreigners. The distinctness of the Japanese accent struck me so forcibly when I began to study Japanese more than 20 years ago that I invariably marked the accent of every new word which I took down from the lips of my Japanese friends. The fact that the accent is out marked in dictionaries goes for nothing, as anothody can maintain that I review; apply in Japanis in an advanced state of development. The compilers of native dictionaries would not think it accessary to furnish guides to their own countrymen in the matter of accent. That foreign dictionaries give no accents only proves their defectionaries give no accents only proves their defectionaries, I have often level of missionaries and tionaries give no accents only proves their defec-tiveness. I have often heard missionaries and others deplote this imperfection in Hephana's Decimary. That provincial Japanese annetime differ on the matter of accent is easily accounted differ on the matter of accent is easily accounted for, on the ground of prevailing inaccuracy and general slipshodness of articulation prevalent among semi-educated people whose attention has never been called to the importance of distinct promuciation. Whether the accent in Japanese is important or not can easily be tested by dropping it or changing it. I once knew a foreigner who always said wolakushs, and another who pronounced the town Ora'in Oran', much to the antisement of their heaters. As for Mr. Chamberlain's theory that in a word like Miyanoshisa the stress of the voice should be placed equally on each syllable, I have nover heard a Japanese carry it out in practice. carry it out in practice.

We are entirely at one with Mr. Dening in this matter. The rule that all the syllables of a Japanese word should be equally accentuated has had considerable vogue, and may, perhaps, have served some useful purpose, for the soverest syllabic monotony would be in many cases preferable to the excraciating blunders often made by foreigners, as, for example, when the gentleman in the Foreign Office warned a visitor from

## THE DOSHISHA TRUSTEES EXPLANATION.

THE Rev. Mr. YOKOI, President of the high reputation in Japan, has contributed from America, and the control of its to the Far East for April an article setting forth the views of the Trustees hands, though legally and nominally in with regard to the question that has of late attracted so much attention in this country. It is a brief article, occupying only eight pages of the magazine, and its diction proves that no foreign hand con- fifty thousand yen were obtained. Thencetributed anything to its compilation. In forth the number of Japanese trustees was short, we have in these eight pages a considerably augmented and the power of statement which may be accepted as an unadulterated exposition of the Trustees' convictions. The tone is eminently quiet taught; the Doshisha remained a Christian and moderate. Mr. YOKOI obviously institution. But now questions came up writes with perfectly clear conscience about the quality of the Christianity that and consequently remains undisturbed by the storm of hostile criticism that his acts, and the acts of his fellow-trustees, have evoked. That is a very curious fact. On the one hand, we have a number of men of unimpeachable integrity, thorough competence to form an impartial judgment, and a disposition the reverse of hostilewe have a number of such men declaring vehemently that a great wrong has been perpetrated and that funds subscribed by American Christians have been perverted to uses never contemplated by the donors ; on the other, we have the men against whom the charge is brought, men, also, of the highest repute, explaining with calm confidence that no fault lies at their door and that they have been guided throughout by principles of right and justice. How are these two positions to be reconciled, or do they admit of reconciliation? The answer seems to us to be contained in the one word "compromise," a word with which every observer of Japanese conduct soon becomes familiar. The Trustees of the Doshisha have compromised. They have excluded the teaching of Christian morality from the carriculum of the middle school attached to the institution; they have included it in the curriculum of the theological school. That is the case in a nut-shell.

Mr. YOKOI claims that there were two elements in the Doshisha, the Japanese pervaded by Christian influences." foreign element, however, desired that education should be subserved to Christian propagandism; the Japanese element wished that religion should be merely "altried to state it with the utmost fairness. foreseen that this conflict of views would that it amounts to a compromise. Chris-

Thus the institution grew to maturity hefore its parents had agreed as to its final career. During the first twelve years of its existence, the funds for its Doshisha, a man who enjoys a very support were contributed nearly entirely affairs remained practically in American the hands of the Japanese who figured before the law as the owners of the land and buildings. An appeal was then made for Japanese contributions, and some control began to be increasingly assumed by them. Christianity, however, was still ought to be professed. The American patrons wanted a special type of Christianity; the trustees insisted upon Christianity "free from all dogmatical or denominational colouring of whatever kind." Here the rift widened, and assumed the dimensions of a gulf when the Japanese trustees decided that religious teaching must be purely voluntary, whereas the American patrons wished to have it compulsory. The Japanese gained the day, and gave practical expression to their views in 1896 when, on the occasion of organizing a middle-school curriculum, fund. Mr. NISHIMA was an eminent Chris-"religious instruction was formally omit- tian. He had become conspicuous for his The considerations of expediency that dictated the latter step are already known to our readers; namely, that it thus became possible to obtain official recognition for the school, and official rebe exempted from military service up to for which contributions were sought was the age of 26. On the other hand, "the was secured by providing a sphere for it" Christian lines in the framework of the deal has been said about the arbitrary "not imposed on the Doshisha as a condition for any gift," but was voluntarily element and the foreign element. Both after the founding of the place. The American Christians be employed on acelements had originally in view "the trustees were therefore competent to count of the middle school, a wrong is building up of an educational institution amend their own work, and their amend- committed. But assuming that a strict The ment consisted simply in the elimination division of the institution's resources is all change.

bending between two burdens, have been able to find some support for their conscience in the views expounded by Mr. YOKOI, and, speaking for ourselves, we should have welcomed his explanation with the utmost satisfaction and readily acknowledged its cogency, had there been any reasonable possibility of doing so. But no one can examine Mr. YOKOI'S vindication without observing the contradiction between its terms. He tells us that both the Japanese element and the foreign element had originally in view "the building up of an educational institution pervaded by Christian influence." Is the middle school of the Doshisha "pervaded by Christian influences?" If so, whence do they emanate, and how are they operative? Mr. YOKOI tells us that the Japanese element wished religion to be "a factor in education." Is religion a factor in the education furnished at the middle school of the Doshisha? If so what constitutes the religious factor and how does it work? We fail to see that, even on the showing of Mr. YOKOI himself, a middle school such as he and his co-trustees have organized in connexion with the Doshisha can ever have been contemplated by the Japanese philanthropists who, in response to Mr. NISHIMA'S appeal, contributed some fifty thousand yen in 1888 to the Doshisha University earnest propagandism of the Christian creed in Japan long before he appealed to his countrymen to assist his educational work. There can not have been the remotest doubt in the mind of any person cognition meant that the students would responding to his appeal that the object the endowment of an educational institupermanency of the missionary principle tion on Christian lines. Are there any -the theological department-" distinct middle school constructed by Mr. YOKOI and different from the middle school and his co-trustees? If so, where do they where the Japanese held sway." A great appear and how is their presence exhibited? It must be assumed, of course, that alteration of the constitution by the Mr. YOKOI intends the public to undertrustees. Mr. Yokoi meets this charge stand that the middle school of the Doby pointing out that the constitution was shisha is supported entirely with Japanese money. He can not doubt for a moment, indeed he evidently does not doubt, that drawn up by the trustees twelve years if even a yen of the funds contributed by of an unpractical clause which prohibited thus made, we want to hear from Mr. YOKOI whether he believes that American Such is Mr. YOKOI's case. We have Christians would ever have subscribed funds for the endowment of a college with factor in education." It should have been Our readers will agree with us, we think, which an absolutely non-religious school was to be associated. If Mr. HARRIS and become more and more accentuated as tianity is preserved in the theological the other philanthropists of the United time went by. It was not foreseen; or, department and banished from the middle States who gave large sums in response if foreseen, no provision was made against school: the middle school is organized to the appeal of Mr. NISHIMA and the it. Both sides shrank from an explana- on purely secular lines; the theological American Board Missionaries, had imagintion which might have involved a rupture department, on religious. The answer to that criticism is Prison. We do not know that dark cells ing to his own showing, the intentions of very simple. Two points have to be inve- are ever intended to be comfortable, but even the Japanese subscribers have been stigated; first, the treatment of foreigners they certainly might be better than those immediately concerned. What we have ment of foreigners suspected of crime. be put there. Again, the absence of to ask is whether he, or his co-trustees, The committee visited the Sugamo Prison warming apparatus throughout the prisare in a position to answer for the to satisfy themselves on the former point, on is a blemish, but, as the Commit-American subscribers. Surely not. The since it is there that foreigners convicted tee's report clearly states, steps are themselves by the mouths of the American to the latter point, had the editor of the the necessary and the supposed effluyia, Board Missionaries, and so long as their Kobe Chronicle read the Committee's verdict, namely, that their money has that their original intention was to visit it is an unintentional wrong. Mr. YOKOI'S tion of the Sugamo Prison alone having life, that is all that punishment rations do apology is that of an earnest and con-occupied the whole forenoon, and the members of the Committee having no became necessary to postpone the visit to Kajibashi. With regard to the Yokohama district, our contemporary does not seem to be aware that a new prison is now being built at Negishi, to supplant the present jail at Tobe. An inspection of the latter would therefore be useless for the purpose which the Committee have in view.

> The Kobe Chronicle further says :- " It centralization." As to that, we can only say that the Committee received its inwho added that the Government's present

> Our contemporary has some comments and since the dark punishment cells,

at Sugamo, if foreigners are liable to about to be taken to remedy it. As to there is no effluvia and there need not be any. Everything is scrupulously clean, and a free use of lime in summer entirely obviates the danger alluded to by our contemporary. Finally, as to the punishment rations being barely sufficient to sustain everywhere. The plain fact is that the Sugamo Prison is planned and constructed on the best and most modern system. and if the editor of the Kobe Chronicle has an opportunity of visiting it, we venture to predict that he would be agreeably surprised.

One other point may be referred to. " Promises by prison board officials, semiofficial newspapers, or members of the Government are of absolutely no value," says our contemporary, "unless they take the form of diplomatic assurances." Well, it certainly would be very pleasant and comfortable if a definite and binding engagement could be obtained from the Japanese Government not merely with regard to the treatment of foreign prisoners, but also with regard to many other 1899. All of us endorse that general principle, but its application must be within the bounds of reason, and we can not think that it would be within the bounds of reason to seek from the Japanese Government a diplomatic assurance that the treatment of foreigners in Japanese jails shall differ from the treatment of natives. Would the Government of any independent State give such an assurance? Imagine the Japanese Government approaching HER MAJESTY'S Ministry, and saying :- " The hardships of imprisonment will be as greatly augmented for our people if they have to eat skilly and drink buttermilk in your jails, as would the hardships of your people in our jails if they had to live on rice, barley, and daikon. We must ask you to give us an official pledge that exceptional arrangements shall be made in your prisons for the ac-MAJESTY'S Ministry would not be in the least degree likely to give any such assu-

### REVIEW.\*

In our humble opinion the ideal work on Iapan has yet to be written. The books that have appeared might be profitably classified as scientific and non-scientific, or an historic and practical. The value attached to each volume that has been published must depend on the bent of individual minds. Before we can determine this in any given instance, we must ask, which faculty predominates in the inmost recesses of the reader's mind, reason or imagination? For what is he searching thoughout the journey of life, truth or beauty? A close analysis of earnest and powerful minds tends to show that there is no such thing as dual government in the soul. One faculty occupies a throne shared by no rival. In the case of such writers as Sir Edwin Arnold and Mr. Lafcadio Hearn it is quite apparent that the logical faculty is in abeyance: imagination reigns supreme. As poetic flights or outbursts the works of these authors on Japan are delightful reading. But no one who has studied the Japanese in a deeper manner, by more intimate daily intercourse with all classes of the people than either of these writers pretends to have had, can possibly regard a large part of their description as anything more than pleasing fancy. Both have given reins to the poetic fancy and thus have, from a purely literary point of view, scored a success granted to lew, They addressed an audience. They have pleased addressed an audience. They have pleased that audience beyond all expectation. Their chapters of word-painting rank high as prose poems, and as such may be read a bundred ears bence But as exponents of Japanese life and thought they are unreliable. They have done for Japanese thought what Christian Greek philosophers did for Hebrew thought, what Hindoo philosophers did for ancient Hindoo thought, and what far keener intellects than that of Confucins did for his indefinite atterances, They have given form and beauty to much that never existed except in vague outline or in nudeveloped germs in the Japaness mind. In doing this they have unavoidably been guilty of misrepresentation. The Japanese mind as seen through their kaleidoscope is a much more exquisite piece of mechanism than the oldest and best-informed residents of this country have ever met with in actual life. The Japanese nation of Arnold and Hearn is not the nation we have known for a quarter of a century, but a purely ideal one manufactured out of the authors' brains. It is high time that this was pointed out, for, while such works as we are now considering please a certain section of the English public, they do a great deal of haim among a section of the Japanese public, as could be shown in detail did space allow.

But there is something to be said in defence of this style of writing. The exaggeration and poetic license in which the authors indulge is easential to the success of their work as literary artists. It is recorded of a famous Latin his-torian how he declared that he would have made Pompey win the battle of Pharsala had the effective turn of the sentence required it. "He may sland for the true type of literary artist," says Professor Raleigh, in his delightful essay on Style. "The business of letters," continues this writer, "howsnever simple it may seem to those who think truth-telling a gift of nature, is in reality two-fold, to find words for a meaning, and to find a meaning for words Now it is the word that refuses to yield, and now the meaning, so that he who attempts to wed them is at the same time altering his words to suit his meaning, and modifying and thaping his meaning to satisfy the requirements of his words. The humblest processes of thought have had their first education from language long before they took shape in literature." As Professor Raleigh shows in another part of his essay, to use words in a strictly scientific sense is fatal to art. Definition acts on art like a palsy. It kills the creative faculty to subject it

\* "Feudal and Modern Japan," by Arthur May Knapp: 2 vols. Second Edition. L. C. Page & Co., Buston.
† "Style" by Walter Raleigh, p. 63.

to scientific rule. The conclusion to which this somewhat long introduction leads us is that before selecting the books to be read on Japan readers must ask themselves one question, do I

read to know? or do I read to be amused?

Now we come to Mr. Knapp's little work bound up in a daintly volumes. "Feudal and Modern Japan 'does not presend to be anything like a thorough account of Japanese live and thought, and many parts of it need to be labelled poetic, being written from the Hearn and Arnold point of view; yet it undoubtedly fulfils a most useful function in popularising know-ledge hitherto stowed away in the archives of the Asiatic Society of Japan and elsewhere. In the first volume, which treats of Feudal Japan, Mr. Knapp has utilised to good purpose the investigations of the late Dr. Simmons and of Professor Wigmore. Many of the facts culled by Mr. Knapp from Dr. Wigmore's long essays are of great interest, and are, we venture to think, not generally known. Such, for instance, are the high position occupied by the farmer in ancient Japanese society, the great consideration shown to him in assessing taxes, and his corresponding readiness to contribute towards the maintenance of the State. On this latter point, quoting from Dr. Wigmore, Mr. Knapp says, "The payment of taxes did not a says, "The payment of taxes did not seem to be considered by the peasantry as a burden, but as a loyal duty in which they took more or less pride. It was an offering, as the word mitsugi mono signifies. The time of the annual payment of the rice at the collector's storehouses .....instead of being an occasion of sorrow and irruation, was more like a fair where each vied with the other in presenting for official inspection the best return of rice, &c." and similar sketches are decidedly refreshing, read at the close of the nineteenth century when most of the world is groaning under the burden of ever-increasing taxation.

The last chapter of "Feudal Japan," entitled Religious Invasious," predicts that Occidental "Religious invasions, predicts mat Octinema, Christianity will meet with little permanent success in this country. Two difficulties stand in the way, argues Mr. Knapp. One a race difficulty. Christianity is not found in force to-day outside the Aryan family. The other than the intense nationdifficulty is connected with the intense nationalism of the Japanese and their attachment to ancestral worship - a practice that is unspar-ingly condemned by the Christian church.

Among the contents of Volume II. are two chapters on the Japanese language which leave a good deal to be desired in point of accuracy, but which nevertheless contain some useful information for those to whom the Japanese language is a terra incognita. Thise times Mr. Knapp prints Shibaraku o me ni kakarimashita as the equivalent of "It is a long time since I saw you." And several times we have O shikk i itashimashita. Much of what Mr. Knapp says on the negatives in Japanese is founded on misconception and imperfect knowledge of the subject. He seems to over look the fact that even in our own language the strongest of all positive affirmations often consists of an accumulation of negatives. Take our English translation of Paul's assertion of his oneness with Christ. What could be more grand than the passage:—"For I am persuaded that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the love of God, which is in Christ Jesus our Lord." These negatives are introduced only with a view of increasing the strength of the positive asser ion. In writing on the sacredness of the Japanese ideographs much of what Mr. Knapp says, following Professor Hearn, is purely imaginary. But it is harmless and will no doubt please certain readers. The same may be said of the unparalleled patriotism the Japanese are said to possess. From the writing of Messes. Hearn and Knapp one might be led to suppose that patriotism no longer existed among Anglo-Saxons. These

of other European nations. We would recommend these gentlemen to study a very remarkable modern book on this subject:-"Deeds that won the Empire," by Rev. W. H. Fitchett, which is not a romance, but a caref fly compiled his-tory of the deeds of our forefathers. If our American friends think that this spirit exists no longer in Anglo-Saxon breasts they have read accounts of our Indian Frontier war and recent Egyptian campaigns to no purpose.

We cannot help saying from the point of view of a critic we could wish that Mr. Knapp's book had a little less of the glamour that characterises the works of Sir Edwin Arnold, Mr. Hearn, and other men of their class. What we want is discerning criticism of Japanese life and thought. Too strong a sympathy with the Japanese blinds the eyes to facts. Antipathy on the other hand is fatal to a right understanding of the subject of study. The ideal book would be one in which the real facts are stated with all the grace and charm that has been given to fiction. A knowledge of the facts, however, in not to be gained in a day. And, with all their talents and industry, it cannot be said that the authors of some of the most popular of modern works on Japan have reached the bed-rock of Japanese life. The huge superstructure on which so much time and labour have been expended has very little basis in real fact,

Notwithstanding all we have written we have no besitation in saying that Mr. Knapp's little volumes are full of interesting matter and from many points of view descrive the success they have met with. When describing Japanese customs pure and simple Mr. Knapp is at his best, and the chapter on "Inversious and Contradictions" is very amusingly written and is for the most part true to fact. Mr. Knapp is, we understand, engaged in collecting materials for another work on the same subject.

### PAUPERISM IN TOKYO.

The Tokyo Poor Asylum contains at present 248 panpers, inclusive of women. The public may have been inclined to suppose that the abnormal appreciation of commodities, which has brought many to the verge of starvation, must have increased the number of paupers in the Asylum. The fact, however, has proved the contrary. The inmates remain the same in number as they were three years ago. The appreciation of commodities seems not to have influenced the matter; and it is said that the increase of inmates was most prominent when prices were at the lowest rates. Most of the paupers in the Asylum are deformed persons or invalids unable to work for themselves. men are engaged in the manufacture of tadon (balls of powered charcoal), the women in washing. Foundlings now number 133, lost children 9, and uphans 59. Each aurse takes care of twenty or thirty children. A special school is organised for these children. There are special apartments for the medical treatment of the sick, who are entirely separated from the rest of the children. The necessity of establishing a penitentiary was early feit, and subscriptions have already been secured to the amount of 14,900 yen, of which the greater portion was contributed by Marquis Tokugawa, Baron Iwasaki, the two Mitsui families, and foreign philanthropists. The above facts we gather from the Tokyo Asahi.

The annual meeting of shareholders of the Kingsin line accepted by about 2,400 against 100 votes the amalgamation offer of the Hamburg-American line. Therefore, the Kingsin shareholders for each of their shares of m. 1,000, which present are quoted 1264 per cent., obtain Bamburg-America line share of m. 1,000, which at present are quoted at 1151 per cent., and in addition m.120 for each Kingsin share. Thus the Kingsin shareger ex-holders receive from the Hamburg-American writers line 1154 plus 12 per cent. equals 1274 per have read English history to no purpose if they think that Japanese patriotism surpasses all that is recorded in English annals, or in the annals covered original from

### TORYO LODGE INSTALLATION.

The ceremony of installing the Worshipful Master of the Tokyo Lodge of Freemasons took place on the 29th ultime, the Right Worshipful W. H. Stone, District Grand Master, officiating. The most graphic description we can give of the ceremony is to reproduce the programme of the evening, a veritable work of art and arudition, prepared, we believe, by Brother H. J. Terry :-

OFFICERS OF TORYO LODGE, No. 2015, E.C. And though that he was worthy he was wys.
"Prologue."

Wor. Bro. Davidson Macdonald, M.D., D.G.J.W......I.P.M. There was also a Doctour of Phisik; There was also a Doctour of Phone; In al this world ne was ther name him like, "Prologue.

### THE TEA GUILD'S REGULATIONS.

The Yokohama Tea Guild has inaugurated the following rules for the inspection of teas and the rejection of inferior qualities;

Art. I.—Dust tea, wet, overficed, swept, calcuted, or decayed tea or powder is forbidden.

Art. II.—Each foreign firm shall be communicated with in regard to the processes for the control of the dust tea, and requested to undertake the strict enforcement of the same.

Art. III.—It any member of the Guild shall have dealt in the spurious teas mentioned in the

preceding Article, he shall be suspended for one

year.

Art. IV.—Any member of the Guild dealing in the spurious teas mentioned in Article I, shall be required to pay to the Guild, for breach of faith, a sum of not less than 60 year and not more than 100 year for each offence.

Note.—The amount of the fine shall be determined by a disciplinary committee specially appointed for the purpose.

Art. V.—Any member falling within the provisions of Article IV, shall be punished by the disciplinary committee.

ciplinary committee.

Art. VI.—Whenever spinions tea is found it shall be presented to the Guild's Office for

A.t. VII.—The disciplinary committee shall consist of the entire members of the Guild, but three of them shall be chosen every month by lot as agents to deal with matters arising during that month, a conference to be held if necessary with the rest of the members.

Note.—Such agents are empowered to appoint special employes in cases of necessity.

Art. VIII.—Inspectors are authorised to enter at any time the waterhouses or godowns of any of the members for examination.

members for examination.

Att. IX.—Any person who gives authentic information to the Tea Guild concerning members dealing in spurious tea, shall be presented with half the amount of fines to be exacted in accordance with Article II.

ance with Article III.

Art. X — Wholesale merchants shall not buy from retail dealers any tea other than that recognised by Inspectors as pure and genuine,

Art. X I.—Any broker attached to the Guild who is found to have been concerned in the sale.

of spirious ten to any of the members of the Guild shall be suspended for one year.

Art. XII.—If any member of the Guild or Inspector shall become aware of spirious teas having at any time been transported to the interior, the fact shall be reported to the Guild's Office and to the members of the Guild,

the members of the Guild.

Act. XIII.—These regulations shall be enforced from May 1st of the 31st year to April 30th of the 32nd year of Meijf.

Notes—If, on the expiration of the term, the enforcement of the regulations is to be continued, the decision shall be taken by a fresh conference.

Act. XIV.—Revision or amendment, when necessary, of these tubes shall only be effected by a conference of the entire members of the Guild.

### KOREAN ITEMS.

The following is from the Yorosu :- Chinese marauders are swarming about the Korean frontiers, and owing to a serious disturbance a troop of 200 men was despatched on the 15th instant to the acene of depredation. The commander of the Phyong-an-do garrison reports that nine of the adjoining provinces have been infested by Chinese freebooters whom he with his whole force failed to repel, and against whom he has applied for reinforcements from Sönl.

The new Russian Minister to Korea is reported to have reproved Kim Heung yuk in these terrific sentences:-"Despite thy being a mere Secretary-Interpreter, thou impairedst the national honour of Russia in the time of my predecessors. Refrain thou from all interference hereafter." Kim, it is said, bowed at the Miniter's feet and presented most humble apologies.

On the 16th just, over 200 men of the Body Guards were disbanded for superannuation.

A project was on foot some time ago in the Korean Court for the institution of a national assembly. However, Puk Chong-yang, Minister of Finance, together with three others, represented to the Emperor that the establishment of a Parliament would be attended with the expansion of popular rights and the gradual diminution of the royal prerogatives. On this the Emperor was extremely surprised and announced his resolution to relinquish the scheme for a Parlia-

The land to be appropriated for the construction of railways between Soul and Inchhon has already been surveyed and fixed on, but nothing has yet been paid for it. Some 300 landowners recently repaired to the Finance Department to demand payment. The total cost is said to amount to 40,000 year.

The Independent notes the fact that a company of Koreaus has been formed to publish a daily newspaper in Soul. It is a four page paper printed in pure Unmun. It is called Myail Sinmun or Daily News.

One comes across some strange items of news in the Korean Independent, but quainter still are the comments that its editor occasionally tacks on to a paragraph. Witness the following :-

The agent of Ye Yongik, the chief director of mines, went down to Keumfin district in Chulla Original from

gold mine. About 1.500 miners arose and mobbed the office of the agent and tried to kill him. Fortunately the agent escaped through a hole in the wall and reached Soula few days ago. The chief director became very indignant over the action of the miners and ordered the governor to punish the leaders of the mob and to protect his agent hereafter from further danger.

[If the chief director refrains from sending down robbers as his agents he would accomplish his purpose better. When one is robber he is apt to chase the robber forgesting the robber's rank or

this purpose better. When one is rabbed be to app to chase the robber forgetting the robber's rank or

According to the statute law all the mines of the country are under the control of the Dep't of Agric, Com, and Ind., but last year the power of controlling was taken away by the Imperial Household Department. Ex Governor Ye Yongik has been made Chief Director of Mines and he has been empowered to send his own agents to the interior to collect revenues from the miners. These agents have been committing most unlead of ourrages in various places, causing many clots, and the Home Dep't has been flooded with comand the Home Dep't has been mouded with com-plaints of every nature. A few weeks ago the Council of State passed a resolution forbidding the Chief Director of Mines from sending his own agents without consent of the Department of Agriculture, and reminded him to observe the laws and regulations governing mines. The director promised the Council that he would obey laws and regulations governing mines. The director promised the Council that he would object the order of the Council in the matter, and went away. Two days fater he sent a telegram to the governors of the various provinces staring that the Imperial Household Dep't was pressed for money and in order to relieve the department he had sent his agents to the mines to collect gold dust for the use of the Imperial Household Dep't. He did this through his loyalty to the Imperial house, but to his susprise the Dep't of Agriculture, Commerce and Industry interfered with his noble work. In view of his true loyalty and patriotism he could not obey the order of the Council, to the detriment of the interests of the Imperial house. If any governor has the same loyal splict be mint show it by driving out the agents of the Dep't of Agriculture and sustain the actions of the agents sent by the Imperial Household Department.

The message of the Chief Director caused much alarm in the Council and the Dep't of Agric. Judging from present indications the Clief Director is on top and the law and regulations are on the downward path.

Our Korean contemporary thus relates the story of a recent assault upon the British Minister and its consequences to the offender :-

A few days ago while J. N. Jerdan, E.q., the Botish Minister, was walking along the stone bridge near the forme site of the Sörl Cremipo Ry, depot in company with Rev. II. H. Apppearabler, a Korean soldier belonging to the first regiment of the Imperial guard was coming was regiment of the Imperial guard was coming was coming toward the bridge from the opposite direction. He was very drunk and appeared to be unable to control his limbs. When passing Mr. Jordan the drunken man suddenly rased his arm and saluted the Minister by a friendly whick across his (Mr. Jordan's) shoulder, Mr. Jordan was at the time maware of the soldier's approach and the unexpected and foreithe salutation startled him considerably. The gentlemen seized the effender and banded him Henen seized the effender and banded him over to the police station near by. The Minister over to be proces station near by. The amisses of Foreign Affairs, beating of the episode, immediately called on Mr. Jordan and made suitable apologies and the War Department took the prisoner into its bands and sentenced him to be shot. However, Mr. Jordan expressed his desire that this summary punishment should not be meted out. In view of the Minister's request the War Department commuted the sentence to leaves to the transgressor for his audacious conduct on the ground of his being under the influence of liquor, but we cannot excuse his indulgence in drink which led him to commit such an act.

The Minister of Agriculture, Joung Nak yong, has resigned. His resignation, says our contemporary, was received with undisquised joy by everybody in the city except his few friends among the palace runners. Before he resigned his post, however, he secured the governorship of South Chungchong for his

The underwriters of the steamer Pelican paid the insurance due on her on March 16th.

### JAPAN BREWERY COMPANY.

An extraordinary meeting of the shareholders of the Japan Brewery Company, Limited, was held on Saturday afternoon. Mr. J. Dodds presided, and there were also present Messis. sided, and there were also present Messis. Hayneman, W. R. Bennett, and J. D. Hutchison (Directors); Messis. W. Kirkwood, A. B. Waltord, T. Duer, F. Cunmins, Captain Weston, C. W. Ure, H. Heckert, F. S. James, F. S. Adrian, A. Band, W. Sutter, H. Z. Wheeler, A. Woolley, C. B. Stedman, D. Reess, T. Il Glover, Dr. Divers, and Capt. Lee.

The Chairman remarked :-

After an absence from Yokuhama of a year, I am much pleased once again to meet the Shareholders of the Company in this room, and to be able to address them from the chair which your Directors have been as kind as m invite me to occupy once more. On my return here, one of the first things in connection with the Brewery that attracted my attention was the large adventisement in once more. On my return here, one of the first things in connection with the Brewery that attracted my attention was the long advertisement in the newspapers, under which the present meeting is called. Before making any inquiries, it appeared to me to denote a want of second between the shareholders and the Board—a feeling, possibly, on the part of the former that the Ducctors were moving too slowly. Since, however, I have had the opportunity of perusing the minutes of the Board meetings, I have proved that this feeling, if it existed, was entirely without foundation—that the Ducctors were moving towards the same goal as that pointed to by the resolutions to be brought forward to-day, namely, that, in view of the rapidly-increasing business of the Company, it is absolutely necessary to caise additional capital to enable the Company to cope with the ever increasing orders that pour in upon the Brewery. But, naturally, in the interests of the Shareholders, the Board moved with circumspection and caurion in view of circumstances, of which the Shareholders had not full knowledge. The signatories to the requisition only anticipated the action of the Directors—betwendthing and called The signaturies to the requisition only anticipal the action of the Directors—they would be to be course have submitted a scheme to the Share-holders, but are now practically at one with the requisitionists in an amended series of Resolutims, which they have recently sent in; and as the Directors find themselves so full accord with the scheme proposed in the amendment, I will read it from the chair and commend it for adoption to the meeting.

The CHAIRMAN then read the requisition as

April 25th, 1808.

To the Directors.

JAPAN BRAWERY COMPANY, LIMITED, Yokohama.

Opinions having been expressed by certain shareholders that they are not willing to support a portion of the Resolutions that we a portion of the Kesolutions that we gave notice we should bring before the Extraordinary General Meeting of Shareholders, to be held on the 30th April, and considering, as we do, that it is most desirable in the interests of the Company that changes such as we propose should meet practically the unanimous support of all concerned, we now beg to give notice of our request to the Chairman of that meeting to lay such Resolutions before the shareholders amended as follows:--

1. That (h) and (c) of Resolution 3, be omitted, 2. That in consequence of such unissian, Resolution 3 (d) be amended as follows:—The words in line 1. "That the halance of 300,000 yen of Capital," to read 6 That 300,000 yen of such Capital."

Capital."

The words in the last paragraph "with the 6,000 shares in (a) (b) and (c) mentioned" to read "with the 3,000 shares in Resolution 1 and Resolutions 3 (a) mentioned."

The words in the last paragraph "on the other 6,000 shares." to read "on the other 3,000 shares."

3 That in consequence of the ounsion of Resolution 3 (b) & (c) this further Resolution be added to take the place of such unission:

"That the balance of 150,000 year of Capital be obtained in such manner and at such times as the

obtained in such manner and at such times as the Directors for the time being may see fit."

and further:

4. "That throughout these Resolutions the word year to read Dillars in the event of the carrying into effect of Resolution their ginepracticable."

We are aware that difficulties may arise in

converting the Company's Capital from dollars Digitized by Google

position for this Company or any other Compuny in Japan to be in, to have to keep its accounts in dollars when all its transactions are

We appreciate fully that some shareholders desire to see the Reserve Funds increased and built up to a sum equal to our original Capital or even more, and as our Articles give full power to use such funds in the concern; that is first as Capital, although not so treatedfurther balance of Capital of 150,000 yen will not be at present required, although it may be at some future time. To meet this very reasonable desire the present amendments are chiefly directed.

We believe we are right in saying that the great increase of late years and still daily improvement in the Company's business; creating a demand that the Brewery is unable to meet, necessitate the expenditure of the money now asked for, and that when this has been expended the Company will be in a position to withstand any opposition no matter from what quar-

ter it may come.

We, therefore, confidently trust that our resolutions as amended will meet with the onanimous support of all shareholders,

We are, Gentlemen, yours faithfully;

THOMAS B. GLOVER (Signed) MONTAGUE K REWOOD. R. A. WYLIE. WM. SUTTER.
AMBROSE II. WALFORD. BELLA A. JAMES. F. S. JAMES.

The Chairman said that was signed by the same signatories as the original resolutions and, therefore, was an amendment now proposed from the chair because the directors gave it their full support, according, as it did, with their own ideas. Their only objection to the first proposals was the dealing with the reserve fund, in which, he thought, even some of the requisitionists had also agreed since. In fact, by this amendment they signified their accordance with the board. The original resolution and the amendment were now both before the meeting if any shareholder wished

to say anything on the subject.

The resolutions as finally adopted were as

I. That the present Capital of the Company of \$150,000, in 1,500 shares of \$100 each bu converted into a Capital of 150,000 yen currency in 3.000 share of yen 50 each.

II. That the Capital of the Company be further increased to make in all a capital sum of 600,000 yen by the issue of 9,000 shares of yen 50 each.

III. That such conversion and increase of

capital be effected as follows:

(a.) That each Shareholder on the registered list of Shareholders on the 1st May, 1898, receive in lieu of each \$100 share then held by

him 2 shares of 50 pen each,

(b.) That 300,000 pen of such Capital he obtained by the issue of 6000 shares of 50 year each. Such shares to be offered at par to shareholders on the registered list of shareholders on the 1st May, 1898, in proportion of 4 new shares for every \$100 share then held by them.

Applications to be sent in on or before the tst July. This time to be extended up to 1st September for shareholders non resident in

Payment to be made as follows:-

to yen on application.

10 ,, ,, 1st September, 1898. 10 ,, ,, 1st lannary, 1899.

Shares not applied for by Shareholders to be disposed of at such premium and in such manner as the Directors may see fit, and such pre nium to be passed to Reserve Fund.

These shares (6,000) not to be entitled to rank for dividend for the year ending 31st March, 1899, with the 3,000 shares in Resolution I. and Resolution III. (a) mentioned, but Both owners and insurers are resident in Great to zen, but we hope they may not be insuper- to receive interest at a rate of 7 per cent. per Britain.

Li is obviously a most unsatisfactory annum en all installments from the time of the

same being paid. If the dividend for the year ending 31st March, 1899, should be 5 yen per share or more on the other 3,000 shares auch interest to be 10 per cent., and if 7 yen 50 or more-than 15 per cent.

(c.) That the balance of 150,000 yen of capital be obtained in such manner and at such time or times = the Directors for the time being may see fit.

IV. That throughout these Resolutions the word yes to read Dollars in the event of the carrying into effect of Resolution I. being impracticable.

Dated 14th March, 1898.

In the course of the discussion on the various clauses of the resolutions Mr. Wheeler asked what was the motive of the directors in changing the 100 dollar shares to 50 dollar shares.

The CHAIRMAN said it was to facilitate dealing, and also to spread shares among a large number of shareholders by bringing them within the reach of small investors.

Mr. Ugz asked whether, if that was the view of the directors, it would not be better to make

them of even a lower nominal value;
The Chairman: I think myself that 50 yen is low enough. I may mention that the proposal to reduce the value of shares comes from the requisitionists and not from the Board, and I do not see any actual necessity for it, but still I agree with the reasons the requisitionists have adduced.

Mr. Ung said he thought that it would be more effective to the purpose in view to make the shares to dollar shares.

Mr. WHEELER: I think brokerage would come in there.—(laughter.)
The point was not pressed.

With reference to resolution III, section B, WHEELER moved that the paragraph "Shares not applied for by Shareholders to be disposed of at such premium and in such manner as the directors mas see fit, and such premium to be passed to Reserve Fund " should be amended so as to preclude such shares from being allotted at a premium of less than 100 dollars.

The CHARMAN said he did not think it was usual to fetter the hands of the directors in that way. It was generally left to their discretion, and

he thought it could safely be left to them. Mr. WHERLER said that under the English law the powers of the Directors seemed to be unlimited; they seemed to have a Star Chamber power, and the shareholders had no check over them in the matter of disposing of these shares. He did not in any way, however, impute anything to the present Board. The object of the amendment was to prevent speculators possibly taking possession of the market.

Captain WESTON seconded the amendment, which was lost by a large majority.

The CHAIRMAN:-The Directors will bear

the caution in mind.

With regard to the resolution for changing the accounts of the Company from dollars to yen the CHAIRMAN said an application would have to go to Hongkong and it rested with them whether they would admit the change or not. He amounced that the directors would endeavour to make the necessary second extraordinary meeting correspond with the general meeting of the Company.

A vote of thanks concluded the meeting, and the Shareholders present afterwards went over the Brewery premises.

### NEWS OF THE WEEK.

Three sons of the Gaekwar of Baroda, accompanied by their English tutor and his wife, and a native doctor, were passengers on board the Lass from Bombayto Yokohama.

We gather from the Robe Chronicle that the crew selected for the Interport match at Yokohama on the 21st inst., comprises Sorhagen (stroke), Kalkhof, Brockhurst, Mancini, and Meek (cox).

It is rumoured that both the Crescent and St. George are coming out to the Far East.
One of them should bring a relief craw for the

Barfleur, whose ship's company are now over their three years' turn of service in that ship. The Crescent and the St. George are sister -first class cruisers of 7,700 tons, built in 1892 and steaming 19.7 knots.

A Brussels telegram says :- Four Belgian officers will shortly leave for Chiun in order to reorganise the Chinese field and siege artillery. The members of the mission, MM. Five, Wiltamer, Servais and Richard, are all prominent officers in the Belgian army, thoroughly versed in the technicalities of their profession,

The first through train de luxe for the Siberian line is finished. It is composed of four splendid cars built at Moscow, an open saloen dining car, bathroom, library, telephones, electric lighting, refrigerators, ventilating apparatus, piano, chess, and means for gymnastic exercise. Nothing like it has ever been seen on Russian railroads.

Prince Henry of Prussia, according to a waters until the autumn of next year. After delivering the Emperor's presents to the Chinese Emperor, he will visit Tokyo to perform a similar courtesy. The Deutschland will remain us the flagship in Asia for some years, Prince Henry returning in 1899 on another vessel.

Russian journals state that the coal discovered last autumn by a Russian expedition on the shore of the Sea of Okhotsk is, as regards quality, better than any other coal beds discovered up to the present are extremely rich. This discovery should be, beyond question, of great value to the Russian Fleet In the Pacific.

Information has been received in Hongkong, says the China Mail, that the American sailing ship Daniel Barnes, bound from New York to Hongkong, with a cargo of 5,700 cases oil, gone ashore near Lampong in the Sunda Strait and is filled with water. The Daniel Barnes, which left New York on 16th December, is a wooden vessel of 1,485 gross tonnage. was built in 1877 in Bath, Me.

The plague seems to be steadily making headway in Hongkong and the adjacent mainland : meanwhile the Sanitary authorities of the colony are indulging in what seems to outsiders a series of petty squabbles as to the best way of combating the disease, each official having "his own little plan." Still there is not at present much cause for alarm, and so soon as the wet weather sets in a steady abatement may be expected.

At the regular monthly meeting of the O'Tentosama Lodge, No. 1263, held at the Masonic Temple on Tuesday evening, occasion was taken to present the Worshipful Master, Bro. A. Bellamy Brown, with a wedding gift. It took the form of a massive marble clock, suitably inscribed, together with a pair of handsome silver candelabra, Wor. Bro. Stanley E. Unite, I.P.M., made the presentation on behalf of the members of the Lodge in an appropriate speech, and the W. M. afterwards returned

The Iloilo Heraldo reports the arrival m that port of a tugboat purchased at Singapore for the Itoilo harbour works. Stormy weather was encountered and the voyage occupied twenty seven days, of which seven were spent waiting at Labuan for weather to clear and two at When nearing Hoilo she had to Balabac. borrow a couple of tons of coal from a Spanish gunboat to help her on to her destination. All the stores she had left was the proverbial "half bottle of whisky,"

It is now certain that the celebrated Viceroy Chang Chi-tung has awakened in a thorough appreciation of the advantages of Western civilization, and that he is about to give a very aignal proof of his altered mood by sending a hundred young men to study in Japan. How the youths are to be chosen or exactly when they

and naval affairs and technical matters in general. Such action on the part of the Viceroy is very remarkable, for the mood of the Chinese hitherto has been to despise the Japanese and regard them as upstarts and renegades from the revered systems of antiquity. The times have certainly changed.

The result of the race-for the Jubilea vaseby the members of the Nippon Bicycle Club on Saturday, over a 32 mile course from Yokohama to Kodau, was Scott first, Kingdon second, and Collaco third. The time of the winner, who started scratch, was then 50 minutes, the best time on record in Yokohama. The first four men fell near the finish, but Scott was first up and away and so won a capital race.

The International Committee to study the position of foreigners in Japan under the new freaties was constituted in Yokohama on Mouday, the 2nd instant, and consists of Messas. R. D. Robison, Chairman; James R. Morse, Vice-Chairman; H. Abegg; F. Bianchi; G. W. Bramhall; James Dodda; C. Giussani; L. Gouilloud; H. J. Holm; Ryle Holme; E. Knaff; F. Nabholz; and E. Wismer, with power to add to their number.

Since the four principal marine insurance companies — the Teikoku Kaijo, the Tokai Kaijo, the Nippon Kairiku, and the Nippon Kaijo-formed a combination, they have in-creased rates all round and made their rules more stringent. A meeting of ship owners and shippers of cargo was held in Osaka a few days ago (27th ultimo) to protest against this action, and to ask for modifications of various regula-tions. The united companies asked for two weeks to consider the matter, but intimated their inability to postpone the operation of the new system, as it had already been advertised throughout the country.

The accident on the Tokaido Railway is said to have been caused by a blunder on the part of a pointsman. The time was 1,15 a.m.—on the 30th instant—and the place Totauka. In attempting to shunt the through luggage train from Yokohama to Kobe, the pointsman worked a wrong lever, and the engine, leaving the line, dragged the wagons after it, the whole upsetting. The engine and cars were considerably damaged and the rails were broken, but no injury resulted to life or timb. Assistance was speedily sent from Yokohama to clear and repair the line, and communication was restored after some eight hours' interval.

The Church Missionary Society in April entered upon its centenary year, and the Bishop of Exeter has written strongly urging the committee to make an effort to raise the sum of one million sterling during the year. As a beginning he offers the sum of £1,000, and intimates his readiness to give at the close of the year a second £1,000 II it should be the year a necond to make up the million suggested. Although the rooth birthday of the Society will not come round until April, 1899, preparations are already being made for its observance.

Three Europeans recently succumbed in ongkong to the plague. One was a lad of Hongkong to the plague. One was a lad of 14, the second a child, and the latest was Sister Higgen, one of the European nurses of the Government Civil Hospital, who contracted the disease whilst on duty. Since this paragraph was set up in type, news has been received in Vokohama of the death by plague on Tuesday of the eldest son of Mr. D. R. Crawford (of Messrs. Lane, Crawford & Co.) who died after barely a day's illness.

About 3 o'clock on Wednesday morning, fire broke out at the Tokiwa Hotel, which closely ad-joins the Jiyutei Hotel, Kohe. The flames spread rapidly and before they could be got under had completely destroyed the Tokiwa, half burned the Jiyutei, and involved three other houses in almost complete min. The cause of the fire is unknown, but it is believed to have originated will arrive we do not know, but it appears that in the hitchen quarters. There was a good the subjects of their studies are to be military supply of water, and the firemen and police UNIVERSITY OF ILLINOIS AT

worked with a will. The outbreak was entirely Governor, Sir W. Robinson. It was in the suppressed by 6 o'clock. The body of a maid-servant belonging to one or other of these hotels was found during the excitement on the railway bank not far away, a handkerchief stuffed in the throat, and seemingly dead by suffocation. A man suspected of the murder and also of starting the fire has been arrested, and is now in hospital owing to one of his feet having been run over by a passing train. He is said to have tried to strangle himself, and then to have thrown himself on the track .- Hiogo News.

The new 6-inch quick-firing gun just adopted for the British Navy is claimed to be, in view of its recent trial performances, the best in the secondary battery of any warships in the world. The 6-inch quick-firer throws a 100-pound armour piercing shell, and the new guns fire one round in 61-2 seconds, and eight rounds in 56 seconds. The atriking force of these shells is rated at 5.374 foot tons, against 3,241 foot tons in the old quick-firers of the same calibre in use up to the present.

A letter from Mark Twain to a friend shows he is still the same old Mark:—"Thank you for your good messages. I think it very pleasant to be out of debt, and shall try to not let anyone put me in again. At work? Yes, after a fashion, but if Vienna were less attractive, and its people less engaging, I could work harder. Lecturing? No, I was intending to lecture in Austria and round about, but when I got out of debt I cancelled all that. Honest people do not go robbing the public on the platform, except when they are in debt. Disseminate this idea-it can do no good."

M. Pierre Leory-Beaulieu, writing in the Economiste Français on the country and rural population of Japan, makes the following remarks :-- The Japanese, even in the villages, are seriously engaged in the way of progress: it is not, of course, a question of changing everything at once as by the magician's wand; but the first impulse was given and did not meet with any resistance. As far an agriculture, they would have, indeed, a great deal to learn, not so much for what they are now cultivating as for the advisability of varying the products according to regions and not to restrain their culture, as is the case nearly everywhere, to the exclusive production of rice alone; their me thods also apply to the question of cattle breeding. These reforms are difficult, because small owners, in spite of their qualities, especially with such a laborious people, have the great draw-back of not being innovators. These reforms should be of great importance in a country where the population, so dense already, angments yearly by 300 000, and where so small a portion of the soil is utilised.

Experiments were recently made in the United States with regard to the Lee rifle adopted by the Government for the Navy. The tests were conducted by the same surgeons and Army officers who conducted similar experiments about two years ago with the Krag-Jorgens-n Army Two cadavers were used, one of a fat negro and the other of a very thin white man, These were bound to planks and placed behind white canvas targets, at which the marksmen simed. According to one member of the board, the rifle did not prove a success as compared with the Krag-Jorgensen Army gun, neither for penetrative powers nor humane qualities. At a range of 1,000 yards, supposed to be the distance at which the Lee rifle will be used most frequently in naval warfare, the steel-jacketed bullets of the Lee tifle failed to go through a corpse, and one bullet failed even to go through the right arm below the elbow. From a humane standpoint the weapon proved worse than the Krag-Jorgensen, for the bullets shattered bones

course of a reply to Sir J. Colomb, who asked in the House of Commons whether Mr. Chambersin's attention had been called to statements alleged to have been made by Sir William Robinson, the late Governor of Hongkong, relative to the defences of that place; whether Sir William Robinson did make such state-ments; and whether Colonial Office regulations prohibited ex-Governors communicating to the public Press information relating to the defence of colonies acquired during their tenure of office. Mr. Chamberlain said,—My atten-tion has been called to the statements alleged to have been made by Sir William Robinson to a Press representative. I do not know whether the report is correct or not, but I may say generally that I entirely disapprove of the practice, which has recently become common, of officials in the colonial service, or recently in that service, allowing themselves to be interviewed on leaving or arriving in England and giving their opinions on debateable questions public policy or on matters affecting the defence and military resources of British possessions. I am causing a circular to this effect to be addressed to all officers in the colonial service abroad .- (Cheers.)

### TENURE OF LAND IN FORMOSA.

The following is extracted from the report of the China Association presented at the annual meeting held on the 23rd March m No. 122, Leadenhali Street, London:-

Among the various questions that arose in Formosa, in consequence of its annexation to Jupan, and in which it was necessary to have the rights and privileges of foreigners clearly established, was that of the ownership of land at the treaty ports. The official autouncement made by the Japanese Government in January, 1895, was that foreigners would be allowed to reside and carry on trade at Keling, Tamsui, Anping, and Takao, and in the city of Tainan.

Mr. Midzumo, Chief of the Civil Department,

adds that, though it follows as a matter of comes that foreigners will not be able after the fixing o these limits to reside, carry on trade, make lead leases of lands or buildings, or to purchase buildings outside the limits—yet the authorities will recognise, as buildered, existing leases of lands and buildings, or the ownership in buildings (at the four ports and Tainan), acquired before the deli-mitation of the boundaries of mixed residence, notwithstanding that such houses or lands may be situate outside the newly-fixed limits of mixed residence. As regards the northern part of the island, therefore, the matter has now been satis facturily disposed of.

facturity disposed of.

The town of Twatutia had been in a different position. Although for many years this port has been the headquarters of the foreign trade of the north of the island, no foreigners had the right of lease of lands or tuildings. The practice bad been for English firms and others to hold the tand or buildings necessary for their business in the name of their Chinese compradures. It consequently became necessary to regularise this position. These properties have consequently been registered in the shape of perpetual leases in the names of the British subjects interested, and foreign firms at Twatutia can now claim. and foreign firms at Twatutia can now clain and toreign times at twattitia can more crain as a right what until now they have only enjoyed as a privilege. This official regularisation of the position is, Mr. Bunar, H.M.'s Consul at Tamsui, considers, a matter of especial ratisfaction; as, although Twatutia has for many years past been the headquarters of foreign trade in the north of the island, no B itish subject had been allowed to own or lease lands or huddings in his own name. The question, therefore, which sooner or later must have been decided -- whether the acquisition of lands or buildings since the cession to Japan, in a place where rights of leave even had never been granted to foreigners, could have been maintained—is now disposed of. In answer to inquiries on the subject, the acting Chief of the Civil Department replied in the terms of a letter onto tragments instead of piercing them. In point of accuracy the gun did not seem to compare with the Army weapon, and this feature is attributed to the lightness of the bullet.

The Right Hon. Joseph Chamberlain, H. M. Principal Secretary of State for the Colonies, has been publicly snubbing Hon kong's late.

Digitized by Contracts of sale or lease between British subjects were taken to make those contracts in conformity with the allusted city will doubtless see to it that no harm befalls there will be able to own land (though within the limits of "mixed residence" parse regarding the kindness he and other America citizens have received at the hands of Mr. Williams speaks in terms of the highest of the principal Secretary of State for the Colonies, has been publicly snubbing Hon kong's late.

Digitized by Contracts of sale or lease between British subjects after make those contracts in conformity with the allusted city will doubtless see to it that no harm befalls the family.

Mr. Williams speaks in terms of the highest reaction carried residence." It became necessary, therefore, the colonies, that British subjects should make arrangements

UNIVERSITY OF ILLINOIS AT which leaves no doubt as to the recognition of contracts of sale or lease between British subjects

before that date to place their relations with Chinesa Define that date to prace their relations with Chinese compradores in respect of land on a proper basis. Under Mr. Bonar's advice such arrangements, mostly in the nature of perpetual leases from the Chinese, who themselves become lessess in peretuity, were practically completed; so it is vale to conclude that British subjects have now done all that is necessary to secure their interests.

### THE WAR.

### THE LATEST NEWS FROM MANILA. (From the China Mail.)

On the morning of April 26th, about seven o'clock, the China and Manila S.S. Cu.'s steamer Esmeralda (Captain Tayler) arrived in Hongkong from Manila, bringing sixteen European and over three hundred Chinese and other Adatic passengers. Amongst the European passengers was Mr. O. F. Williams, the Consular representative of the United States, for whose arrival Commodore Dewey has been waiting with his squadron at Mis Devey has been waiting with his squadron at Miss Bay. Mr. Williams has remained in Manila as long as it was possible, to look after the interests of the Republic. Although his position was one of great danger for the last week or more, he pluckily elected to semain at his post, and has thus baen able to bring away information of the de-tences of Manila and environs, the disposition of the Spanish forces, the relative proportions of European and native troops, the condition of the and native troops, the condition of the waiships, torpedo boats and armament, which cannot fail to be of immense value to Commodore Dewey when he proceeds to bombard the capital of the Philippines. Mr. Williams was received upon his arrival in Hongkong by Fleet Paymaster D. A. Smith of the Squadon, Eusign H. H. Galdwell, Flag Secretary to Commodore Dewey, and Mr. Consul Rounseville Wildman, and immediates and including a secretary to the control of the squadon of the Mr. Commi Rounseville Wildman, and immediately on his landing granted an interview to the representatives of the New York Herald, New York World, and the China Mail. The Herald's representative accompanies the Olympia; the World's reporter is berthed an board the Hugh McCulloch.

### AMERICANS SEEK REPUGE ON BRITISH VESSELS.

On Friday, the 15th of April, the American Consul at Manila received an intimation from his Government to prepare to leave the Philippines, and that, in accordance with arrangements made between the United States and British Governnents, he was to hand over his records and impediments to the care of the British Consul, Mr. E. A. Rawson-Walker, who, in Mr. Williams' absence, would look after American interests. Mr. Williams at once opened up communications with the Governor General, General Primo de Rivera, who professed to be ignorant of the strained re-ations between Spain and the United States, Without the consent of the Spanish authorities no transfer could be made officially from the United States to the British Consulate. The Governor General cabled to Madrid for instructions. Officially, Saturday was a holiday: Sanday, of course, was a holy day, and without the consent course, was a huly day, and without the consent of the Archbishop (after being properly feed) no official progress could be made; and General de Rivera continued to "made-time" until the arrival of his successor, General Don Basilio Augusti, by the Isla de Mindanao, from Spain, when the due transfer was made of all American interests to Mr. Rawson Walker.

As is generally known in Hongkong, there is quite a Buropean Colony in Marila, a congregation of foreigners, other than Spaniards, which has remained memolested throughout the whole of the mained monolested throughout the whole of the trouble with the Philippines since 1806 down to the present time. This Colony included sometwenty-five American subjects engaged in business in the Philippines. Immediately upon the receipt of this orders from Washington, the American Consulwaned his countrymen to winden p business and to leave Manila as soon as possible. One or two have left, but the majority have gone on hoard British sailing vessels in the Bay, where they should be safe from molestation whatever fare befalls the city of Manila. One American, Mr. Johnson (said to be an ex-officer of the United States army), who went across to Manila from Hongkong several weeks ago, is, we believe, the only citizen several weeks ago, is, we believe, the only Citizen of the United States now in Manila. His wife having presented him with an olive branch a few days prior to the departure of the Esmeralda, Mr.

Scotian skipper went to the Consulate, and offered an asylum to Mr. Williams during the few days he was to remain ashore before embarking on the Esmeralds. The kind offer was declined. Mr. Williams considered it his duty to remain at his own Consulate so long as he stayed in Manila. The Governor-General, fearing his own people, also offered to receive Mc. Williams in his palace, and, on this offer being declined with thanks, wished to send a large body-guard to defand the Consulate, This, happily, was not required. No indignity, no insult whatever was manifested towards Mr. Williams. He was allowed to haverse the streets, unguarded and alone, from the Consulate to the Palace or to his hotel, without the slightest interference from the Spanish populace; but he had no somer described the Consulate than the insignia of the United States on the shield above the doorway was obliterated, and replaced by the Spanish flag. while the name hourds were taken down and kicked into atoms. Timeous notice having been issued to the few American sailing ships in the Bay, they cleared at once, and sailed away for safer latitudes, with one exception—the Great Admiral—which had almost completed loading a cargo of hemp for New York. Captain Stirling is in command, and New York. Captain Stirling is in command, and the has his wife and three children on board. It is not certain that he had a full crew, which may have accounted partly for his delay in clearing out, but as his shipping papers were not quite in order, he was evidently straid of being treated severely by the Spaniards should he he captured by a Spanish warship. Before the departure of the Esmeralda, Captain Stirling was seen by Mr. Williams, and advised to recognise the expediency of getting away from Manila as speedily as possible, but it is expected the Great Admiral is now in hands of the Spaniards. Another American in hands of the Spaniards. Another American sailing vessel, which had gone to Cebn, is believed to have been captured by one of the smaller Spanish gunbeats.

# SPANISH PREPARATIONS FOR A

The hasty preparations that are being made for the defence of Manila reveal a state of rotten-ness probably unparalleled in the military and ness probably unparalleled in the military and naval history of any modern European Power. In the war between China and Japan the world got an insight into the lack of patriotism of avaricious officials. Where militions of dollars had been granted to purchase the most modern and most highly approved weapons and waiships and to keep them supplied with reserve ammunition and in a thorough state of efficiency, it was discovered that the officials and officers had enriched them that the officials and officers had enriched them selves at the expense of the State and had allowed the services, such as they were, to "go to the dogs," The present hostilities between Spain and the United States will similarly reveal the lack of patiotism and the desire for individual plunder which has corruded the Spanish services and sapped the vitality of the nation, leaving it helpless and at the mercy of the first Power to attack it. The mines and tupedoes defending the hay of Manifa are more to less mothing. ing the bay of Manila are more or less mythical.
Until a supply of wormout cable had been purchased from the Sherard Osborn some weeks ago, the wherewithal to render the mines effecago, the wherewithal to render the mines effective was non-existent; and even now it is asserted by those who ought III know that the approaches to Manila are not guarded so effectually as they might have been, and with care, the American squadron should experience little difficulty in getting within shelling distance of the city. Some topedness were in stock at the Government Assenal at Cavité, and these have been refin bished for the emergency, but important parts were discovered to be missing and will have parts were discovered to be missing and will have to be replaced—if that is possible—before they can form an element in the defence of the Bay.

At this point, it is well to describe the approach to Manila. We make the following extract from Mr. John Foreman's work on the Philippine Istands :-

"The entrance to the Bay is divided into two The entrance to the Bay is divided into two passages by the small Island of Corregidor, on which is a lighthouse showing a revelving bright light, visible 20 miles off. Here is also a signal station, communicating by a semaphore with a telegraph station on the opposite Luzon coast, and thence by wire with Manila.

(The entrance to the Paris Pines is better the paris Pines is better to the Paris Pines in the Paris Pines is better to the Paris Pines in the Paris Pines is better to the Paris Pines in the Paris Pines is better to the Paris Pines in the Paris Pines in the Paris Pines is the Paris Pines in the Paris Pin

"The entrance to the Pasig River is between two moles, which can out westward respectively from the Citadel on the S. bank and from the business subsit b of Binondo on the N. bank. At the outer extremity of line Nothern mole is a lighthouse, showing a fixed red light, visible 8 niles.

"Vessels drawing up to 13 feet can enter the River. In the middle of 1887, a few electric lights

River. In the middle of 1887, a lew electric rights were established along the quaya from the River month to the first bridge; and one light also on that bridge, so that steamers can enter the River after smeet if desirable. The what age is wholly Digitized by

occupied by steamers and sailing craft trading within the Archipelago. The tides are very irregular. The rise and fall at springs may be taken to be 5 feet."

Earthworks have been thrown up on the Island

of Corregidor, and some guns from the cruises Castilla have been placed in position. The Castilla is moored fore and aft off Manila City as a sert of guardship, prepared to receive the assault of the enemy. Appended is a list of the Spanish ships now in the Bay of Manila or in the River Pasig, where they are expected to await the arrival of and engage the American squadron:—

Reina Cristina, 1st class unprotected cruiser, gims 21, displacement 3,520.

Castilla, 1st class unprotected cruiser, guns 22,

displacement 3,260.

Don Antonio de Ulloa, 2nd cruiser, guns 13, displacement 1,160.
D. Juan de Austria, 2nd class cruiser, ques 13,

displacement 1,159. Valasco, 2nd class cruiser, guns 7, displacement

Isla de Cuba, 2nd class protected craiser, guns 10, displacement 1,045.
Isla de Luson, 2nd class protected craiser, guns 10,

Isla de Luson, 2nd class protected cruiser, guns 10, displacement 1,045.

There are several other small gumboats, little better than armed launches, scattered about among the islands, but for fighting purposes: against cruisers they need not be reckoned with, and if their commanders have a reasonable amount of discretion they will not attempt to get within range of Commodore Dewey's guns. Moored fore and aft, the Castilla cannot prove very effective as a "cruiser," and one of her officers had so little faith in her ability to ward off an attack that he pave it me his opinion that the officers had so little latti in her ability to ward off an attack that he gave it as his opinion that she would go down at her moorings. Along the Lunetta and on the walls of the city antique canons of wonderful types may be seen displayed osteniationsly but of no practical value for the defence of the shore. Some of these guns are over 150 years old, and will be as dangerous to the support as they can be to an energy. There are guinters as they can be to an enemy. There are no modern breech loading guns, and the arma-ment of most of the ships are of obsolete pattern. Scarcity of ammunition and projectiles is also re-ported, and it was hoped by the officers responsible for the defence of Luzon that the *Isla de Mindanao*, which arrived a few days ago, would bring out a fresh supply. Governo-General Augustin was evidently afraid of being captured, for the fish de Mindanao afrived at Manila flying the French ensign and disguised somewhat as a steamer of the Russian Volunteer fleet.

### A MASSACRE OF THE SPANIARDS FEARED.

The population of Manila and the suburbs is estimated at about a quarter of a million souls. estimated at about a quarter of a million souls. Of these about 20,000 are Chinese, 7,000 Spaniards engaged in trade, and 300 other Europeans and Americans. The available Spanish troops of European origin is estimated at less than 10,000 (possibly 7,000), but there is a large force of native auxiliaries whose loyalty is only measured by the opportunities to desert. A week or two ago, the authorities heart of disaffection in mue regiment. Unable to learn details the European officers picked out six corporals and shot them at sight, threatening to serve mue is the same fashiou on threatening to serve more in the same fashion on the morrow if the ringleaders were not handed up. During the night, the whole regiment deserted in a budy, going over to the rebels with their rifles and accountements. On the hills around Mauila, and accountements. On the tills around Manna, there is a force of 25,000 setleds ready to descend upon Manila as soon as the first shots are heard from the American ships. These men are hadly organised, and only about 5,000 are armed with rifles; and as they are likely to be joined by the natives in the city the outlook for the Spaniarda, military and civil, is far from encouraging. It is feared there will be a general massacre. Unless military and civil, is far from encouraging. It is feared there will be a general massacre. Unless the Spaniards submit at an early stage of the fighting and ask from the Americans the protection the Spanish forces are unable to provide, the city will be looted, probably fired, and many lives

Use in the indiscriminate slaughter.

When the Emeralda left, the Chinese, who invariably suffer from both sides, loyalists and rebels, were deserting from the city like rate from a sinking ship. For a cabin passage by the Esma-ralda as high as \$150 was offered to addition to the ordinary fare of \$50; and although the official number of deck passengers is returned at about 200, we are informed that the actual figures are much higher, and that \$25 was paid for the deck passage

It is not anticipated that the Europeaus (ather than Spaniards) will be in any danger, as the rebels have all along respected their lives and property. The priests and civil administrators need exact little mercy. As the American Consul Matsmersfrom

accompanies the squadron, his local knowledge will accompanies the squadron, his local knowledge will be useful to prevent inniccessary loss of life in the bombardment of Manila, a contingency that is reckoned on by our American consins. The Americans in the Philippines are anxious to see the establishment of British rule in the Archipelago. establishment of British that the Spanish domina-tion is last approaching its end in the Philippines as it is in Cuba, and that, as the natives are un-able to undertake the administration, the United States, if victorious, will invite the co-operation of Great Britain. Such a course would be accept-able to Britishers in the Far East, and we are voicing British opinion when we say that these rich islands, under intelligent rule, would speedily become a valuable asset to the countries administering the government. Any suggestion of confi-tion on the part # the United States should be welcomed by Great Britain so far as it applies to the Philippine Islands.

### A LETTER FROM MANILA.

SERIOUS DISLOCATION OF THE HEMP TRADE.

We have seen a private letter from Manila, in which the correspondent given his opinion of the probable effect of a descent of the United States probable effect of m descent of the United States squadron on the Philippines. "Six days after teaving Hongkong," he writes," they would be in possession of the Philippines." There are some forts on the island of Corregidor, which divides the entrance of the Bay of Mauila into two passages, and torpedoes are laid in the passages, but as soon as these are passed the Spanish fleet, he is of opinion, will be easily disposed of, and the Spaniards will give in. The Indians are massing round under leaders, and are expected to attack the towns any day. In the provinces the natives are rising at every point, and Euroed to attack the towns any day. In the provinces the natives are rising at every point, and Europeans and Chinese are retiring from the interior in the coast towns. Owing to no supplies being able to reach the provinces it looks as if the hemp production will entirely cease, and until the trouble is over no hope is held out for the renewal of production. Hemp in the United Kingdom had advanced £2 a ton, and was expected to rise £2 more next week. The writer expresses the belief that the war will be of short duration in the Philipopines. tion in the Philippines.

The following telegrams taken from the Shang-

The following telegrams taken from the Snang-hai Mercury contain meagre details of events preceding the battle of Manila:—

Hongkong, 28th April (1,35 p.m.).

The United States Squadron, accompanied by steam colliers, left Mirs Bay for Manila at 2 p.m., yesterday. Consul Williams, late U.S. Consul at Manila, is on board the Ballimore.

Alevadrini one of the Josuggent Chiefs. is an

Alexandrini, one of the Insurgent Chiefs, is on board the Zafiro. He in to be in command of the

beard the Zafro. He was to be in communic or the instrigents upon mixiwal, arrangements having already been planned; but he has very strict orders not to be barbarous.

The chief object of the United States squadron will be to capture the Spanish fleet, or destroy it. Upon reaching Manila, Commodore Dewey will demand capitulation within thirty minutes, if this demand is not complied with the U.S. fleet will bombard Manila.

### LATEST TELEGRAPHIC NEWS.

(FROM THE " JAPAN TIMES") THE WAR.

FRENCH AND ITALIAN NEUTRALITY. GRACE TO SPANISH VESSELS.

London, April 28. France and Italy have officially pro-claimed their neutrality. President Mc-Kinley has issued a proclamation granting Spanish vessels leaving or arriving in the States till May 21, to clear unmolested, but the Prize Courts are to adjudicate on the captures already made.

ENGLAND EXERCISES HER NEUTRALITY. In pursuance of her neutrality, Great Britain has prevented the sailing of American torpedo vessels from Falmouth.

AMERICANS MAKE RICH CAPTURE. The Americans have captured the Spanish Transatlantic Liner Panama while bound from New York to Havana, with Spanish refugees and valuable cargo.

BOMBARDMENT OF MATANZAS.

London, April 29.

THE "SHENANDOAH" SAFE AND SOUND.

The American steamer Shenandoah has arrived at Liverpool. The report of her capture by the Spaniards was untrue.

NAVAL SKIRMISH OFF MATANZAS.

An American torpedo destroyer has engaged a Spanish gun-boat off Matanzas. After eleven shots had been exchanged, the Americans retired, the vessel being apparently damaged.

SPANISH SQUADRON GOES TO MEET THE ENEMY.

The Spanish Squadron has left Manila to meet the American Fleet.

London, April 30. The Spanish Squadron which had been lying at St. Vincent, has sailed for a destination which is kept secret.

[The Spaniards themselves seem as much puzzled about this Squadron as we are. St. Vincent is a Portuguese possession, and it seems singular to hear of its serving as an anchorage for a Spanish Squadron at the present time.

ED. J.M.]

The United States Coast-defence Terror, after a long chase, succeeded in capturing the large and valuable Spanish steamer Guido.

The Terror is a vessel of 3,990 tons, built in 1883, carrying a fine modern armament, in which are included four 10 in gine, and steaming 10 knots an hour. We do not understand how she can have overhauled any Jarge, fast steamer .- En. F.M.1

According to Spanish reports, the bombardment of Matanzas by the United States Squadron resulted in the killing of one mule.

[Reuter is to be congratulated on forwarding this news,—En.  $\mathcal{F}$ , M.]

Portugal has declared neutrality in connexion with the Hispano-American

The United States Government has chartered eight large steamers as transports. It is supposed that they are intended to carry troops at once to Cuba.

The President of the Board of Trade, replying to a question in the British House of Commons, said that Her Majesty's Government was exchanging notes with the Great Powers for the purpose of submitting to Washington a joint protest against measure introduced in the United States' Congress for increasing the harbour dues eight-fold.

### KEY WEST THREATENED.

London, May 2. The Americans fear that Key West will be the first port of attack by the Spaniards.

THE U.S. FLYING SOUADRON.

The U.S. Government has despatched a flying squadron to intercept the Spanish squadrón which was reported to have left St. Vincent.

### INSURGENTS CO-OPERATING.

Simultaneously with the bombardment of Matanzas by the Americans, the in-surgents advanced towards the town, but the latter were repulsed with twenty kill-This indicates that the Americans and insurgents are co-operating.

WAR REVENUE AND TONNAGE DUES.

The House of Representatives at Washington has passed a bill creating war revenue, including tonnage dues.

### EUROPEAN PROTESTS.

The British, French, and German representatives are protesting against the increase of tonnage dues and threaten to transfer their trade to Canadian and Mexican ports, if the increase is insisted upon. Digitized by GOOGLE

EXCITEMENT AND LAMENTATION AT MADRID.

London, May 3

Great excitement prevails at Madrid Spain's unpreparedness.

"BEGINNING OF THE END."

The American victory at Manila has produced a state of buoyancy on the European bourses, it being considered the beginning of the end.

PROBABLE BOND ISSUE.

London, May 3.

The United States Treasury estimates that the war will increase the expenditure by \$50,000,000 for the next two months, completely exhausting the currency in the treasury. Hence Congress is asked immediately to authorize a bond issue.

Martial Law has been proclaimed at Madrid.

at Havana.

BRITISH WARSHIP AT HAVANA. The British cruiser Talbot has arrived

[The Talbot is a 2nd class coniser; 5,600 tons displacement, Indicated h.-p. 9,600; guns; 65-in. q.f. 64.7-in. 9 12-pr., 13-pr., 440., 11; speed, 19 5, complement 433; handebed in 1895 at Devouport.]

INCREASED TONNAGE DUES SUPPRESSED.

The Washington Senate Committee has decided to suppress the increased tounage dues.

THE BATTLE OF MANILA.

No details have been received in London about the battle of Manila beyond the actual fact of the Spanish defeat.

AMERICAN FLEET LEAVES HAVANA.

London, May 5.

There is still no news from Manila. The bulk of the American fleet which had been blockading Havana, suddenly went to Key West and, after coaling, sailed for the supposed purpose of encountering the Spaniards.

SEARCHING THE ATLANTIC.

The swiftest scouts are searching the Atlantic for Spanish vessels.

SPANISH SQUADRON DOOMED.

The Naval Board has decided that the Spanish Squadron must be destroyed before Havana is taken.

PHILIPPINES TO BE HELD AS SECURITY AND MAY BE SOLD TO ENGLAND.

The New York Times says that President McKinley is determined to retain the Philippines until the close of the war, Should Spain fail to pay the indemnity, the islands will be sold to a European Power, preferably Great Britain.

WILD SCENES IN MADRID.

Wild scenes are occurring in Madrid, In the Cortes, Senor Sagasta has been fiercely attacked on account of the Manila disaster, and for the Government's unpreparedness, despite the immense colonial

THE TWO THOUSAND GUINEAS.

London, April 29. The following is the result of the racing in the Two Thousand Guineas Stakes : Disraeli 1. Wantage 2. Hinus 3.

PLAGUE IN CALCUTTA. The Pest is spreading rapidly at Calcutta and the people are much alarmed, CONTAGIOUS DISEASE ORDI-

NANCE.

London, April 30.

berlain stated that the Government was not prepared to re-enact the Contagious Disease Ordinance for Straits Settlements, but that the former was in communication owing to the complete Spanish defeat at with the Governor of the Settlements as Manila, and people are openly lamenting to whether some other measures could be adopted as a possible check to the further spread of venereal disease.

THE CHINA ASSOCIATION.

"BRITAIN WILL REMAIN AT THE TOP OF THE TREE."

The China Association entertained the Hon. Edward Blake at a banquet. Sir W. des Vœux presided, and Sir C. Clementi Smith and 150 others were present. Sir Clementi Smith said Mr. Blake assumed office under the most favourable auspices. In reply Mr. Blake said that whatever betide he had the profoundest belief that Britain would remain at the top of the tree, and that British interests would ever be paramount.

(Received by the Fiji.)

FRENCH MISSIONARIES MURDERED.

Peking, April 28.

Two French missionaries have been murdered by Chinese at Yunanchao in the province of Kwansi,

EXPORT OF CHINESE RICE.

Peking, April 29. On further enquiries into the withdrawal of the prohibition of the exportation of Chinese rice, it is stated that, owing to the failure of crops in Southern China, no rice will be exported to Japan this year. The withdrawal of the prohibition, however, is to be notified in the event of a bad year in Japan.

RUSSO-CHINA BANK AND OTHER CON-CESSIONS.

Peking, April 30. The Chinese Government has granted the following privileges to the Russo-China Bank: (1) Construction of a railway extending from Kwohluh in Chili province to Taiyuen in Shansi province, and (2) the extraction of minerals in Taiynen and Fanchow.

AMERICAN SQUADRON SAILS INTO MANILA BAY.

Hongkong, May 3. Having cannonaded and taken possession of Corregidor Island, the American fleet proceeded into Manila Bay yesterday. OCCUPATION OF MANILA.

Hongkong, May 3. The Americans having sunk or destroyed the Spanish warships, and silenced the coast batteries, have occupied the city of Manila.

SUBMARINE CABLE DESTROYED.

Hongkong, May 3 The cable has been destroyed by the Americans.

> FROM THE "KOBE HORELD" THE MOVE ON MANILA.

Shanghai, 10 30 a.m. April 28.
Alejandrini, one of the leaders of the late rebellion in the Philippines, accompanies the United States Squadron to Manila, in order to exercise control over the tebel forces, known to be massed in the rear of the city, and w prevent the rebels from any acts of barbarism in the event of a successful attack on the city;

(FROM THE "N.- ", DATET NAME")

END OF THE REBELLION IN BRITISH NORTH BORNEO.

Sangapore, April 26.

Mat Salleh has submitted on terms astrafactory to the British North Borneo Company, and In the House of Commons Mr. Cham-libe rebelligh is ended.

(a) The usual play is P to K 3, or P to K 4. The xt-olav, however, is quite satisfactory. He will (a) The usual play is P to K 3, or P to K 4. The text-play, however, is quite satisfactory. He will be enabled to continue K to K 5 and K takes B or P to K 4, both leading to a good development.

(b) He could not play B to K 2 on account of K takes K 1 P, followed eventually by Q takes K t P (ch) and Q takes B.

(c) Much better was P to K K 14, which would have given White pretty good chances for a King identical. The text increasable Rivel to text the process of the K 1 in the state of the country of the count

side attack. The text move enables Black to equal

ize the game.

(d) An excellent move, which completely breaks the adverse attack. White now can not well play K:—K B4 on account of Kt x Kt and Kt x Q. Similar would be Black's answer, should White play B takes B. Perhaps the best play White has on hand is B to Kt 3, which, however, leaves him without any advantage.

without any advantage.

(e) Better, perhaps, was Kt takes Kt.

(i) Had White played II to R 6, then B to Q 3 might have been answered, and White lost time in retreating the Bishop. The text-play leads to an exchange of Kt against Bishop, after which there is bardly any winning chance for either side.

exchange of its against Bishop, after which there is hardly any winning chance for either side.

(g) This exchange leaves a Bishop and 6 Pawns on either side. The Bishops being of apposite colours the legitimate outcome would be a drawn game. The contestants, however, continued playing and some pretty combinations are made. By proper play, however, either side can easily hold his own.

(b) A pretty move. If Black plays R P tokes P, then White answers B takes P, and B ack can not capture the Bishop since P to R 6 would win. If, however, Black captures with B P, then B takes

(i) Now Black attempts to win. The sacrifice of the Kt P and B P gives him the passed Q R P, Digitized by Google Constitution of the sacrification of the sacrificati

(j) This virtually ends the battle. White can not win, since he can not gnard the Q Kt and Q B P, for if he moves B to B 6 or B to Q 2 Black would answer P to R 6. Nor has Black any winning White's Bishop easily stops the adverse Pawn.

#### AUSTRALIAN CHAMPIONSHIP.

AUSTRALIAN CHAMPIONSHIP.

The British Chess Monthly says that Mr. Jacobsen, the new Australian champion, has received another challenge besides that of Mr. Jonas, and one that comes from a rather mexpected quarter. The name of Mr. Wallace will be remembered as that of a former champion of Australia before Mr. Crane. It was thought that he had retired altogether from the practice of chess, but he has now written a letter to Mr. Jacobsen to say that "as a general feeling of regret appears to exist in Australian chess circles that he (Mr. Wallace) has never crossed swords with him, he has yielded to the wishes of a numthat be (Mr. Wallace) has never crossed swords with him, he has yielded to the wishes of a number of glayers and consented to resenter the chessworld." He then states his intention to challenge Mr. Jacobsen to play a match with him, either before or after his match with Mr. Jonas. Mr. Jacobsen, in his answer, congratulates him on his return to the chess arena, but states that he canod give a definite reply notil his match with Mr. Jonas is over, when he hopes that Mr. Wallace will challenge the wioner.

#### CHESS NOTES.

Maishall, another young player, is Champion of the Brooklyn Chess Club. He beat Napier, last year's Champion, in the tie match.

Janowski, the Freech Champion, and Amos Bonn, the Englishman, were going to play a match about the 1st of April.

The Netherland Chess Association proposes to

celebrate the 25th autiversary of its organization by a Tournament in Gravenbagen, Holland, Queen Emma and the Queen Regent offer three

Ajeeb, the famous automaton Chess-player, rak against Napier the other right, and the Turn found more than his match in the Binoklyn lad. The humiliation of defeat was averted, however, by turning out the lights. Literary Digest.

#### THE GREATEST WONDERS OF MODERN TIME

#### HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitatep Constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

purity can be maintained by the use of these Pills, Sin Sanual Barar, in his work entitled "The Nile Tribut taries in Abyasia," says—"I ordered the dragoman Mahoameto inform the Bakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis, in I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, an possessing unmistable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value,"

SIMPLE, SAFE, AND CERTAIN.

#### HOLLOWAY'S OINTMENT

Is a certain emedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, cuting skin diseases, and in arrenting and subduling all inflammations. Mr. J.T. Coorea, in his account of his extraordinary trayels in China, published in 1911, maye—"I had with me a quantity of Holloway's Olintment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk.fowlr, butter, and horse feed poured in upon us, until at last a braspoonful of Olintment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

#### SUM WARY OF NEWS.

GRAVE riots have occurred in many parts of Spain.

VERY little additional news is yet to hand regarding the operations at Manila.

TRE Kojime Bank, which suspended payment some weeks ago, has decided to give up business.

THE Athletic Sports of the Y.C. and A.C. took place on Saturday and passed off very anccessfully.

Ten Spanish squadron remains M Cadiz, leaving the U.S. fleet at liberty to attack Havana and Puertorico.

Some minor naval encounters Digitized by

On the 8th inst, a case of cholera was reported at Kakigara-cho, Nihonbashi, Tokyo. The victim died the next morning,

Russia has leased 800 square miles in the Liaotung Peninsula, and Great Britain has leased an extra 200 square miles at Kowloon.

THE French elections have resulted in the return of 211 Republicans, 136 Extreme Left, 36 Monarchists, and 180 who must be reballoted for.

It is reported that during last mouth the receipts of the Post, Telegraph and Telephone Offices through the country amounted to yen 1,152,235.

During the week, Carl Hertz the well-known English conjurer, has been filling the Public Hall, Yokohama, with thoroughly delighted audiences.

THE quarantine authorities on the 9th inst. received information that in Formosa 49 new cases of the plague appeared on the 5th and

THE plague at Hongkong and Bombay is subsiding. At the former place some half-dozen Europeans have fallen victims to the disease this spring.

On the 9th inst, all the bankers of the Eastern provinces held a meeting at the Selyoken restaurant, Uyeno Park, Tokyo. After business, they dined together,

ITALY has been placed under martial law in consequence of serious rioting in all the big The rioters, it is alleged, have been incited by political agitators.

GOVERNOR NAKANO, of Kanagawa, who has been slowly dying of consumption during the past two years, succumbed to the tavages of the disease on Thursday evening.

OPINION in favour of a foreign loan is strengthening day by day in Japan. The Cotton-Spinners of Japan are still seeking an exit from their present pecuniary embarrasament.

In the House of Commons, Mr. Chamberlain has stated that the reports of the rising in Sierra Leone were exaggerated. There was no intention to despatch European troops there.

THE balance of the China Indemnity having been paid to Japan at the proper date, steps are being taken to evacuate Wei hei wei. Two British regiments will occupy the place in the autumn.

The Inbilee Cup-a bandsome trophy-presented to the Reliance Wheelmen's Club by the Diamond Jubilee Committee, was finally won by E. H. Irwine on Wednesday evening after a very good race.

A FORCE of 6,000 men is assembling at San Francisco, whence they will embark for Manila. Congress has passed a vote of thanks to Com-modore Dewey, the Commander of the U.S. Asiatic Squadron. -

On the 2nd inst. the British gun-bunt Linnet was sent to Manila to watch operations there. A telegram dated the 6th inst. from Hongkong, states that another British warship, the Immortalite, of the Asiatic aquadron, has been despatched to the Philippines.

During April exports reached yen to 619,270 and imports yen 29,832,947. The exports of

reported during the week in which Spain has and bar gold to the value of yen 40.452, and always been worsted. 398,253 were imported.

> A CHINESE moß at Shashi, on the Yangize, has burned the Japanese Consulate, the Customs, the premises of Messrs. Jardine Matheson & Co., and the China M. N. Company and some churches. The Consuls have fled down river with the missionaries.

> The following warships are charged with the task of carrying into effect the Neutrality Decree in respect to the Hispano-American war :- The Hiyei and Kaimon at Kohe, the Oshima at Hakata, the Chinyen at Moji, the Amagi at Oginohama, the Soko Tameni, the Katturagi at the Percadores, and the Yamalo at Keelung.

> THE Tientsin concession treaty has been signed. Japan has acquired by virtue of the treaty a spacious concession on the upper course of the Pei-ho. Japan has also secured the right of constructing a break-water on the lower course of the river and of establishing a tramway thence inside the walls of Tientsin.

> THE Foreign Office on the 9th inst. received a telegram from Soul that the Russian military officials who have been released from the service of the Korean Government, but who have been staying in the capital, recently received an intimation from St. Petersburg to leave. They will therefore take the first mail for Vladivostock.

> THE French Government has proposed fresh claims to the Chinese Government. They are to the following effect:-That 30,000 taels be paid as compensation to the families of the murdered missionaries, that a church be established as a memorial of those murdered, and that the railway be extended from Nanking, Kwangsi, to the coast of Canton.

THE week's trade has been small in the extreme. so far as imports are concerned. A few feeble enquiries were made for certain low-figured yarns, but as there was no response in the rise in Manchester no business resulted. In fancy cottons and woollens no improvement is reported. The metal market is still very quiet. During the week several lots of damaged bar iron were sold at auction and realized satisfactory prices and some galvanized iron wire was also moved off in a similar fashion. Kerosene is quiet with no appreciable change. Regarding angars, business has been fairly steady, white refined being in most demand. Turning to exports, an in-creased activity is noted in raw silk, the decline in prices, together with an increase of public confidence in America, leading to better demand in New York. In consequence, prices tose again, and even at 40 yen per picul advance on lowest prices of last month, holders are reluctant to sell. Settlements to date amount to 53.665, against 46.300 bales at sume date last year. Waste silk is quiet, though the tendency is towards hardening. Owing to last fishery prospects being good this year, ordinary quality fish oil is quoted at ren 6 per picul for July-August delivery. Copper quotations, in sympathy with London, bave fallen a point or so, with a general tendency to further weakness. A large amount of business has been done in tea, the settlements for the week totalling 12,655 picula. Prices, on an average, are 15 per cent. higher than last year, but it is thought that they will soon begin to fall. The and imports yen 29.832.947. The exports of cup quality is fairly satisfactory now, the precions metals amounted in gold coins and particle of the leaf also showing a marked bar gold to yen 11,914.803, and in silver coin improvement since last week. Exchange is and bar silver to yen 6,197,557. Gold coins with the leaf also showing a marked improvement since last week. Exchange is the last week.

#### SPIRIT OF THE VERNACULAR PRESS.

According to the Nichi Nichi Shimbun Japan has no reason to be uneasy about the Hispano-American war. Whatever be its issue she will not suffer. That seemingly singular theory is based upon a profound belief in the resources and recuperative capacity of the United States. America's wealth is so great and her trade so enormous that any change in her condition would be felt by the whole world; but, on the other hand, she is so strong that, though victory might be expected to launch her upon a career of extraordinary enterprise and prosperity, defeat would rouse her to efforts scarcely less vigorous and far-reaching. In short, the Nichi Nichi evidently regards her as a magnificent steed which, if beaten in one race, would simply be spurred to draw upon its illimitable reserves of atrength and swiftness in the next. As for Spain, her defeat and the breakdown of her finances would close one of the sources from which Europe receives supplementary supplies of iron and copper. An appreciation of the market prices of those staples would follow, and though Japan might be slightly inconvenienced in the matter of iron, she would gain by the increased demand for her copper. She has therefore, no cause to be concerned. We extract that kernel of reflection from a very large shell of platitudes composing an article which is not distinguished by the terseness and force habitual to the Nichi Nichi Shimbun.

This is certainly a curious time to advocate the colonization of the Philippines from Japan; but the Jiji Shimpo, being convinced that the propinquity of the islands to Formosa forbids Japan to be indifferent to their fate, and being also convinced that she should not think of attempting to gain possession of them, as some people suggest, sees no course except to despatch Japanese colonists thither in the largest numbers possible. In tendering that advice our contemporary preaches from its familiar text, namely, that whereas the population of Japan is increasing with great rapidity, the area of the food-producing land is virtually in-Thus, while the population grew from 36 millions in 1880, approximately, to 424 millions in 1897—or an increase of 64 millions in 17 years—the area of rice land was 6.870,000 neren in 1891; 6,820,000 acres in 1894, and 6 870,000 acres in 1895; and during the past five or six years the annual yield of rice has varied between the narrow limits of 38 millions and 41 millions of koku. England, with a population of 48 millions, has an area of 120 000 square miles, or over 300 inhabitants to the aquare mile, and Japan, with 422 millions or persons, has 140,000 square miles, or 280 persons per square mile. She is thus nearly m densely populated as England, and certainly has no room for her abundant inhabi tants. In the Philippines the case is quite different. Seven millions of people are acattered over 114 000 square miles, being at the rate of 30 per square mile (sic). There is, consequently, room for many millions of immigrants, and the country produces an abundance of sugar, tobacco, bemp, and coffee. It lies at Japan's southern gate inviting her people to enter in and occupy it. The Frii does not indicate the steps to be taken for effecting colonization, but seems to think that Spain is the Power to be consulted, thought it admits that the islands have virtually passed into the possession of the United States.

\* \* \* The Yomiurs Shimbun, discussing the same topic, says that after much discussion two facts emerge plainly; one is that the public at large are convinced of the necessity of adopting some measure to relieve the present attingency of the money market; the other, that the various measures hitherto under consideration have been case a little more clearly.

reduced to two, the purchase of the private railways by the State, or the purchase of War Bonds with the Indemnity. Concerning the former device, it brings up the museral question whether State concerning the lailways is desirable, and it involves many problems which

should be solved independently of extraneous considerations. Hence, on the whole, the wisest plan seems to be the purchase of War Bonds. It is contended, however, that only some 21 million yen are available from the Indemnity for any such purpose. That appears to be a misconception, based on failure to observe that a still unspont sum of 128 millions, on account of armaments expansion, is in-cluded in the account. There is no apparent reason why a part of that aum should not be devoted to purchasing War Bonds immediately, the money required hereafter for the armaments' expansion programme being otherwise procured as the need for it arises. Very likely procured as the need for it arises. if the present crisis were relieved by a measure on such a scale, there would be no difficulty in selling the bonds by and-by in the home market, and thus recourse to foreign capital might be altogether avoided.

It is understood that the Government intends to devote a sum of about 20 million yen to subscribing for shares of the Industrial Bank and redeeming War Bands. The money for the purpose is to be taken from the Indemnity, and the Shopgo Shimpo gives figures showing how that aum and no more is available :-

Total of Indemnity and Lizotung Re- trocessien Fund, according to origi- nal calculation, principal and interest	Yen.
included	228,346,051

GGHC3(-F. 44 Mr. 42-1-41)
Sum devoted to purchase of Chinese
Loan Bonds
Sum required for Budget of 1897 8
Total

To state the facts in a simpler form, the Treasury, on receipt of the remainder of the Indemnity, will have in its possession 157.605.587 ren in specie and 35 million ren in bondsnamely, 15 million yen worth of domestic War Bonds and 20 million yen worth of Chinese loan bonds-but of that sum, 118,379,988 yen is required for the purposes of the armaments expansion programme and 18 million yes for the purposes of the current year's budget, so that only 21,315,599 ven is available for redeeming War Bonds. It is contended that to redeem 21 million yen worth of bonds is not sufficient, and that at least 100 millions should be devoted to the purpose. But where is the money to come from? The Government could of course draw upon the funds that have to be laid aside for the armaments' expansion programme, but if it did so, either the programme must be given up or funds must be raised elsewhere. It might also sell the bonds in its possession-–15 millions of domestic and 20 millions of Chinesebut the transaction could scarcely be effected at present without serious loss. It would be well if the persons who advocate the employment of 100 million yen from the Indemnity for redeeming bonds would examine the arithmetic of the case a little more clearly.

though it believes that the Americans are not a little apprehensive about the bravery and dash of the Spaniards, and would therefore be glad to reduce the contest to an affair of money. The Spainards can not accept a challenge of purses, but must bring the business to a speedy ter-mination, in which object they will be assisted by the sentiment of Europe, the continuance of the struggle being highly injurious to the material interests of Occidental Powers, that remarkable dictum is put forward by our contemporary in the purpose of re-assuring the teagrowers and sericulturists of Japan, who are said to be so much perturbed by the prospect of losing the American market that they are throwing away the young tea-leaves and allowing their silk worms to perish. The Caus alleges that such hastiness has always marked the conduct of the agricultural classes. If the price of rice rises, they convert the uplands into paddyfields, and if silk is high, they pull up their teashrubs and plant mulberry trees, never pausing to reflect whether the conditions to which they adapt themselves are likely to be permanent. According to all appearances, peace will be restored before the ten and silk seasons are inaugurated. People should keep up their hearts, and not aggravate ills by anticipating them.

#### KOBE WATER SUPPLY PROBLEM.

The difficulty of perfecting the water aupply of Kobe lies, the Mainichi remarks, in the overwhelming rapidity with which the population of that town is increasing. Mr. Burton's programme placed the limit of augmentation at 250,000, and the estimate of outlay was 11 million yen. Before work was commenced, however, the population had increased to about 190,000, and in a few years it will probably exceed 300,000. The programme has therefore had to be changed. It became necessary to take the two rivers-Minatogawa and Nunobiki-as the sources of supply, and to increase the total outlay to 6,290,000 yen. Meanwhile prices of commodities have risen considerably, and the subsidy of the Trensury does not exceed 300 000 yen, against 1,500,000 yen originally estimated. A project is on foot to introduce a petition in the special session of the Diet for obtaining a further subsidy. The Government, however, seems to have already intimated its inability to acquiesce, and the citizens of Kobe are now in a state of serious anxiety as to the future of the works. The aid granted by the Government in connexion with waterworks was 24 per cent, of the total outlay in the case of Hakodate, 18.8 per cent. for Nagasaki, and 30 per cent, for Tokyo, Osaka, and Yokohama.

#### SILK STATISTICS.

It is to be regretted, remarks the Zokyo Shimbun, that the silk industry does not keep pace with the development of the nation and the expansion of commerce. The following table shows the number of cocoons obtained during the five years ended 1895 :-Danie

#### FINANCIAL SITUATION.

The foreign public must be somewhat weary of listening to prescriptions for healing the disease of impecuniosity from which Japan is now suffering. On the whole, opinions may be said to be divided into two camps, one of which advocates the introduction of foreign capital for the State purchase of private railways; the other recommends that the Indemnity be employed for the redemption of Bonds. Which of the two views will gain the ascendancy it is difficult to foresee, but if we examine the grouping of politi-cians, we find that the Liberals, the National Unionists, and a number of the "business men" are in favour of the railway scheme, whereas the Progressists, headed by Count Okuma, and their allies, the party headed by Viscount Tani, are opposed to any measure of the kind. Hence it might be concluded that, as the greater strength numerically is with the Liberals and their associates, their programme must win the day. But the Government has the casting vote, and, so far as can be ascertained, the Government condemns all heroic measures, its plan being to devote some twenty million yen from the Indemnity to purchasing War Bonds and shares in the Industrial Bank, so that the latter will be in a position to meet, partially at any rate, the pressing need for floating capital that now makes itself felt. The weakness of the Progressists' position is that they have hitherto maintained a negative attitude. They oppose the Liberals' device of State railways, but they have not clearly declared their allegiance to the other plan, namely, a large purchase of War Bonds with the Indemnity. In the closing days of the Matsukata Cabinet's career, we heard a good deal about the Industrial and Agricultural Banks. The intention of these banks' official projectors was that, by introducing foreign capital comes in. If the State the element of a lottery and prize bearing bonds, the surplus money which, owing to war expenditures and outlays on account of armanents expansion, had flowed into the hands of the consuming classes, might be collected and converted into capital for the use of productive enterprises. As a matter of fact, however, the idea of founding such banks originated with the Ito Cabinet, in which Viscount Watanabe held the portfolio of Finance, and the Viscount, in a recent ing, with considerable insistence, that interview with a representative of the Jiji Shimpo, very justly recalled the circumstance. He also pointed out that the method adopted by the present Cabinet the redemption of War Bonds, seem to be in placing the Industrial Bank's shares now in a more moderate frame of mind. upon the market was defective, for, in effect, the Government had taken steps which virtually amounted to seeking subscribers among the very capitalists whose embarrassment, owing to lack of money, the Bank is organised to relieve. We can not clearly follow Viscount Watanabe's line of argument at this stage, but society for investigating economical sub-his contention appears to be that the jects. The Society assembled on the Code and, after having done so, to indulge Minister of Finance appealed to the capi-7th instant in the Imperial Hotel. To in the pleasure of attacking the Governtalists of Osaka and Kyoto, instead of looking for subscribers among the consuming classes only. Be that as it may, the interesting point is to recall that the Ito Cabinet, in constructing the post-bellum programme ichiro, Amenomiya Keijiro, and Ove Taku, twenty days will be appreciated. The of expenditures, foresaw that the transfer as among the most prominent. The bill embodying the remainder of the Code of large sums of money from the stocks of debate was opened by Mr. Inouye. His will have to be handed to a Special Com-

premium-bearing shares. Probably the scheme would have proved successful had it been carried out speedily by the Matsukata Cabinet, which succeeded the Ito Ministry. So, at least, Viscount Watanabe thinks, and we note his conclusion that, owing to the tardiness of the Matsukata financiers, the opportunity of consummating the purpose of the Bank was lost. The Ito Cabinet, in fact, had a sound grasp of the financial situation, but did not remain in office long enough to carry its plans to achievement, and Count Inouye, finding that the time has passed for utilizing one of the main features of those plans, is compelled to fall back on the device of placing a limited stock of capital at the disposal of the public by purchasing the Industrial Bank's shares and War Bonds with a portion of the Indemnity. Viscount Watanabe-whose comments are very interesting in view of the position he held in the former Ito Cabinetdoes not condemn Count Inouye's proceeding, but thinks that, if it were possible to sell the War Bonds in foreign markets, such would be the best plan at present. He believes, however, that it is not possible to do so, owing to the agreement made by the Matsukata Ministry with Messrs. Samuel Samuel and Company, pledging the former not to sell any honds abroad without giving the refusal of them to the latter at the rate fixed in the agreement. But he is mistaken, we think. The Government's contract with Messrs. Samuel Samuel & Co. merely engages the former to avail itself of the latter's agency if better terms and facilities can not be obtained elsewhere. However, the main point is that Viscount Watanabe recommends a foreign loan. In fact, all the non-official schemes before the public eventuate in the introduction of foreign capital. If War Bonds are sold abroad, purchases the private railways, foreign capital must be imported for the purpose. If the Indemnity be employed to redeem War Bonds, foreign capital must subsesequently be procured to meet the expenses that would otherwise have been capital is the goal of all the programmes.

The agitators, or at any rate one section of them, who have hitherto been urgsteps should be at once taken to relieve the pressure in the money market by devoting a large portion of the Indemnity to It will be remembered that a number of gentlemen, calling themselves the "busi-ness men" (Jitsugyo-ka) of Tokyo and Yokohama, met recently in the Tokyo Geographical Society's room, and organized an association to which they gave the name of Keinai Kenkiu Doshi-kai, or personnel, we may mention the names of

industrial and agricultural banks with that were a decision publicly adopt-premium-bearing shares. Probably the ed for the State purchase of private railways, the shares of the latter would inevitably go up so as to render the transaction very difficult; and were the re-demption of War Bonds undertaken on a large scale, a similar result must be anticipated. In short, he condemned heroic measures, and the sense of the meeting was evidently with him. A standing committee of twenty members was appointed, and three of its number were subsequently deputed to wait upon Count Inouye, who must find a large part of his time occupied with interviews. Minister is reported to have made the statement already familiar to the public, namely, that the Government sees its way to devoting 20 million yen of the Indemnity to relieve the dearth of floating capital, without inconveniencing the financial arrangements for the next two years, but that for the moment there is no official intention of going beyond that measure. At the same time Count Inouye spoke of a foreign loan in terms which showed that, while he was not prepared to discuss details immediately, he foresaw the pro-bable necessity of ultimate recourse to such a step.

#### COUNT OKUMA AND THE CODES:

Count Okuma, as our readers know, is a strong advocate of all movements tending to interest the people in politics. Next to a good administration, he considers that a strong opposition is the best thing a country can possess. It may well be supposed, therefore, that he does not condemn the conduct of political parties at the present juncture. But he thinks that there are times and seasons for everything, and that when the whole nation is interested in cooperation between the Administration and the Legislature for a special purpose, party questions should be relegated to the background. Such an occasion is the approaching session of the Diet. The remaining portion of the Civil Code will have to be passed in order that it may be put into operation soon enough to allow of the completion of the defrayed from the Indemnity. Foreign arrangements for the Revised Treaties. After more than twenty years of effort Japan has at length succeeded in obtaining treaties that place her on an equality with Occidental States, and it would be a hational calamity if, owing to disputes between political parties and the Diet, she sacrificed the results of her long labours. Count Okuma recommends, therefore, that a collision between the Cabinet and the Opposition should not be precipitated in the approaching session, and that both sides should exercise patience for the sake of passing the Code and consummating the work of Treaty Re-

To some of our readers it may appear help our readers to form an idea of its ment to its heart's content. But if the procedure adopted in the Japanese Houses Messrs. Watanabe Koki, Shibusawa Ki- be considered, the difficulty of achieving saku, Inouye Kakugoro, Tokoyama Mago-both objects during a short session of only floating capital to the hands of the conspectation that the mitter for examination, and the latter can suming classes would be attemed. The wisest plan to pursue was to leave the scarcely be expected to present its report inconvenient results, and, in order to Government to choose its own times and without at least a week's deliberation. Correct that evil, devised the scheme of seasons for action. He pointed out the latter that a week's deliberation.

Lower House debating and passing the Code, there remain only ten or eleven days for the Upper House to deal with the bill, and it is obvious that if the Lower House precipitates a collision with the Cabinet, and provokes a sentence of dissolution before the bill emerges from the hands of the Peers, the whole of the legislative steps thus far taken with regard to the Code will be abortive. Thus we arrive at the result that the political parties must behave with moderation and avoid a fatal collision from the Diet's opening day until the day when the President of the Upper House-we assume that the Code is laid before the Lower House first -transmits the duly sanctioned bill to the Government. That means an attitude of comparative placidity throughout the whole session, for it is improbable that the bill can find its way through both Houses in less than twenty days.

## A FOREIGN LOAN. The Nicki Nichi Shimbun contains an

article which gives some very important information, presumably trustworthy, namely, that the Government contemplates raising a foreign loan of 150 million yen. We have pointed out more than once that all the schemes propounded for relieving the present dearth of floating capital resolve themselves into the same issue, a foreign loan. In fact, Japan must have money. She has sunk large sums in railways, ships, manufactories, and other enterprises, and unless her material development is now to be arrested, she must obtain means to continue it. Count Inouye has been blamed by many observers because, according to their supposition, he had decided to adopt what they call a "negative" policy. Those that know Count Inouye could not but be amused by such an accusation. He is certainly the least likely of ail Japan's statesmen to adopt a timid or retrogressive course. On the other hand, he is not the man to take a step in the field of national finance without seeing clearly where his foot is to be planted. Consequently, his first procedure on coming into office was to collect full information on all points of economic importance. He set his subordinates to compile reports showing the State's continuing expenditures on account of public works; the corresponding outlays by local Governments; the amount of capital invested in State and private enterprises from 1804 to 1897, whether paid up or only pledged, together with various other details, the whole forming a bulky collection of 32 returns. This work was completed on March 15th, and the Minister, being now furnished with the necessary information, applied himself to elaborate a scheme of finance extending over a term of ten years. The deliberation of his procedure seems to have misled people into supposing that he had resolved to call a halt, and the impression was probably deepened by the fact that he re-distributed the annual expenditures on account of armament expansion so as to carry forward a sum of about 40 million yen, as well as by the action of the Bank of Japan in maising its rate of interest. But the truth is that idea of a foreign loan. Viscount Katsura, regard to foreign policy recently formulat-Baron Sayematsu Mr. Sone and Mr. by the standing committee and report- on that bolm. UNIVERSITY OF ILLINOIS AT

Kaneko favour it strongly, and imarquis ed in case contains the line line line in dications that he that no occasion exists for entering any lite himself has given indications that he that no occasion exists for entering any regards it with approval. But Count Inouye protest against the recent action of habitually refrains from disclosing his tern Powers in the Far East; that efforts plans until they assume perfectly definite should be made to preserve the balance proportions, and, of course, he is specially of power, and that all means should be reticent with regard to financial affairs, for in that field a premature official utterance may produce serious disturbance. Misinterpreting his silence, financiers, business men, and politicians have propounded all sorts of schemes, some advocating the State purchase of private railways, others the redemption of a large quantity of War Bonds with the Indemnity, and others, again, the raising of a foreign loan pure and simple. There are strong have no resource but to adopt a programme reasons for concluding that the Govern- of obstruction, pure and simple. It is out ment will resort to the last expedient. It of the question that they should introduce is known that Count Inouye has already either an Address to the Throne or a Redecided to apply 20 million yen from presentation to the Government calling the Indemnity to relieve the pressure for the establishment of the party principle. in the money market—5 million yen to the Constitution distinctly provides that be placed at the disposal of the In- the Ministers of the Crown receive their dustrial Bank for giving accommoda-tion to manufacturing enterprises, and 15 millions to be employed by the Bank device practised by the Liberals in former of Japan in buying up War Bonds. Something more radical is legislation, and even administration, imneeded, and it will doubtless take the possible. It was by adhering to that form of a foreign loan of 150 million yen. method in the early days of the Diet that The Minister is expected to make a statement in that sense when the Diet assembles, and to introduce a bill, which will (hakai-to), and tell into national discredit. probably pass without much opposition. The details of the programme are not revealed, of course. Whether the loan revealed, of course. Whether the loan however? The only logical line to take will be made this year or next, and to is that a Cabinet not obeying the partywhat purpose its proceeds will be immediately applied-these are points concerning which no information is yet forth-

#### THE CABINET AND THE LIBERALS.

Rumours were recently circulated that the relations between the Liberals and the Cabinet were about to be restored to their old footing. The report emanated from Progressist sources and was, consequently, regarded with great distrust. No thoughtful person could imagine that either the Liberals or the Cabinet would make such a pastime of politics as to solemnly sever their connexion with one another in April and renew it again in May. The general meeting of the Liberal Party held in the Party's office in the Shiba district of Tokyo on the 5th instant has finally dispelled all doubts. A resolution was adopted declaring that, inasmuch as the Ministry now in office is not based on the principle of party Cabinets, and can not, therefore, be regarded as conducing to the practical consummation of constitutional institutions, the Liberals must oppose it, the method of opposition to be left to the discretion of the parliamentary members. This resolution was not endorsed unanimously by those present-some 200 in number. A strong effort was made to eliminate the words "must oppose it," the ground taken by the objectors being that the mere fact of the Cabinet's not having a political party for its basis did not constitute a sufficient reason for opposing it. This objection

Kaneko favour it strongly, and Marquis ed in these columns at the time; namely, exhausted to lead China and Korea into the path of progress. A change was also made in the number of the general commissioners of the Party, so as to balance the representation of the various sections.

> The difficulty under which the Liberals labour is that, in order to give effect to their resolution of opposing the Cabinet because of its non-party foundation, they mandate from the Sovereign. Hence the sole plan to be pursued is the familiar old the Liberals obtained for themselves the soubriquet of the "destructive party" Their leaders are naturally unwilling to resume such tactics. What is to be done, mandate system is unworthy of the confidence of the Diet and must be opposed at every point. But the political views of the present Cabinet are identical with those of the Liberals in all matters of real importance. It was supposed that a difference existed with regard to finance, but the Liberals have now learned that their conception of Count Inouve's programme was mistaken. In what manner, then, they can give effect to the resolution adopted at the general meeting it is not easy to perceive.

#### THE PROGRESSISTS.

The Commissioners and Parliamentary members of the Progressists held a meeting on Saturday, 7th instant, to determine what resolutions should be submitted to the Party at its general meeting on the following day. Three resolutions were adopted. They certainly did not err on the side of explicitness. The first was to the effect that Japan should make common cause with states which aimed at preserving peace and the balance of power in the Far East, and at developing commerce. The second, that steps should be taken to remove the difficulties now embarrassing economical circles and promote industrial develop-ment. The third, that the Party's representatives in the Diet should pursue their long-cherished objects with regard to the reform of the Law of Elections and the Law of Public Meeting and Political Associations. It is plain that Great Britain and the United States of America was over-ruled, however, and the resolu- Britain and the United States of America tion received the assent of a large majority are referred to in the first resolution. As plans. As a matter of fact, there is no in its original form. Subsequently the to the second, the public would have member of the Cabinet opposed to the meeting endorsed the resolutions with liked to learn what step the Progressists dea of a foreign loan. Viscount Katsura, regard to foreign policy recently formulated advocate but no infant.

URBANA-CHAMPAIGN

#### COTTON APINNER'S DIFFICULTIES.

The progress of the cotton-spinning industry in Japan has been watched with great interest, as furnishing a valuable test of the manufacturing and organizing capa-city of the people. When the enterprise began to emerge from its babyhood, the possibility of its attaining any considerable size was strenuously denied by many foreign observers, their conviction being that the Japanese were not fitted for such work and could never make head against foreign competition. We ourselves entertained and expressed a very different view, and the event justified us. But the industry is now in a depressed condition; several mills have been obliged to cease work, and the shares of all have greatly depreciated. If such a state of affairs indicated any permanent decline, the Japanese might reasonably feel anxious. But it appears that the two causes responsible for the depression are either temporary or remediable. The first is overproduction. For several years the growth of the industry lagged behind the growth of domestic demand, and mill-owners, finding a ready market at their doors, went on increasing their spindles until the number reached a million and the output became greater than the immediate needs of the nation. Thus in 1897, of the total quantity of yarn produced some eighty thousand bales remained on the hands of the producers, and it is estimated that the surplus during the present year will be more than the double of that figure. Had not the industry been vigorously inaugurated in China, a great and growing market for Japanese imported yarns would have existed there. But since the Shimonoseki Treaty secured to foreigners the privilege of engaging in manufactures in the Middle Kingdom, Japanese yarns have been brought into competition with local products in that country. There can be no doubt that the demand for yarns in Japan will gradually assume larger dimensions, but in the meanwhile mill-owners have gone ahead of their opportunities, and embarrassment has been the inevitable result. The second cause of trouble is that the mills are without a sufficient supply of working capital, and can not obtain it in the present straitened condition of the money market. It is estimated that the working capital required is about 30 per cent. of the fixed capital, and since the capital sunk in the cotton mills is supposed to be 33 million yen, the working funds should aggregate about 10 millions. We do not know how far the funds actually available fall short of the latter figure, but it is evident that this part of the problem can be solved without much trouble if the Minister of Finance instructs the Industrial Bank to accommodate the mill-owners, as he is said to have decided upon doing. On the whole, then, it may be concluded that the condition of the industry is not such as to inspire serious apprehension.

Public attention has been attracted to the state of the cotton mills by an investigation which the President of the Industrial Bank recently undertook as a preliminary to placing capital at their disposal. Not the least interesting fact elicited by the inquiry is that many of the mills do not make proper allowance for depreciation of plant, and do not apply a subject. Their sense of hearing is far therefore, this crisis is likely to inure to any part of their earnings to reserves for more delicate than that of men.

Digitized by UNIVERSITY OF ILLINOIS AT

equalizing dividends or meeting losses The President of the Bank addressed various queries to the mill-owners, and the replies received from some twenty mills in and about Osaka have been published by the vernacular press. These replies show that out of about 330,000 yen required to start a mill of 10,000 spindles, 250,000 yen go to purchase machinery, 20,000 yen to buying land, and 60,000 yen to erecting buildings. The life of the machinery is estimated at 20 years, during which time it loses two-thirds of its original value. A mill of ten thousand spindles ought, therefore, to set aside from eight to nine thousand yen annually. As to the reserves for equalizing dividends and meeting losses, no estimate is given, but the long and short of the matter appears to be that many mills have been devoting the whole of their earnings to the payment of dividends instead of making proper provision for wear and tear and contingencies. Should the Treasury come to the assistance of the mills, an opportunity will be afforded for compelling the adoption of a proper system, so that, on the whole, the occurrence of this crisis may be attended with permanently healthy results. The Osaka mill-owners aver that a profit of 7 yen per bale is obtainable, and that there is consequently no reason why the industry should not prosper.

#### PRONUNCIATION OF JAPANESE WORDS.

We congratulate the writer in the Japan Gazette who has published his dictum about the accentuation of Japanese words. It is not often that men attain such confidence as he evidently possesses, and the feeling must be very comfortable. definitely decides that "Mr. Chamberlain, not Mr. Dening, is perfectly right," and he dismisses the views of the editor of the Japan Mail as "nousense." Rules of pronunciation are very difficult to compile: so much depends on the ear of the compiler. We recall a case in point. A certain well-known sinologue invited to dinner two friends who, like himself, had studied the Japanese language for several years. During dinner a discussion arose as to the proper pronunciation of a word, the two guests taking one view and the host the other. It was agreed that a learned Japanese should be called and asked to render the word in dispute. That being done, each party to the controversy remained more than ever convinced that he was right, and marvelled more than even at the other's obstinacy. We ourselves have studied Japanese for more than thirty years, but in the matter of pronunciation we do not venture to assert positively that such and such a method is right or such and such a method wrong. So far as our ear enables us to judge, we find that the rule which dictates absolute equality of accentuation for every syllable of a Japanese word is misleading. We find, on the contrary, that there is a distinct tonic accent in such words as hirosa, kuroshi, kakaru, tatami, suberu, atama, itasa, yoaki, hanashi, shikaru, tegami, shirosa, tsubushi, and hundreds of others that could be named. But it may be that we are entirely mistaken. Ladies, per-

#### THE " YOROZU CHOHO."

After a trial of extraordinarily protracted length the editor and printer of the Yorozu Choho have been found guilty of libelling Baron Ito, and sentenced to a month's imprisonment with hard labour and a fine of five yen. The public is to be congratulated on this result. We have never seen in the columns of any newspaper such a display of vindictive malevolence as that made by the Yorozu Choho. Throughout the whole time of the trial it published note after note and article after article abusing Baron Ito in the most unscrupulous manner. The lowest class of journalism would be disgraced by such a performance, and it was time that the law should interfere to send to their proper place, the convict's cell, men so indifferent to every moral principle as the conductors of the vile sheet. The Japanese are curiously long-suffering about newspaper libels. They seem to regard it as a petty proceeding that a man should invoke the aid of the law in vindication of his reputation, and low journalists are not slow to take advantage of the immunity thus secured. In the case of the Yorozu Choho just punishment has been inflicted on two malefactors, but we doubt whether the trial will not do more barm than good. Its length has been monstrous and the expenses incurred by the aggrieved party must have totalled many hundreds, if not thousands, of yen, yet the costs which the court ordered the Yorozu Choho to bear were only seventeen yen and some sen. Of course the newspaper had to fee barristers and pay the expenses of witnesses on its own behalf, so that, on the whole, its proprietors will be heavily out of pocket. Still Baron Ito is left to pay his own costs, and how many are there that could afford to face a libel suit with that result before them? A fitting penalty has been inflicted, but full justice has not been done.

#### THE COTTON SPINNERS.

Mr. Kawashima, President of the Industrial Bank, has explained at some length his views about the best method of assisting the cotton-spinners out of the difficulties into which they have fallen. The gist of what he says is that several of the companies are working on too small a scale, and that by judicious amalgamation, their organization might he greatly improved. In some cases, however, there are obstacles to the con-summation of that programme. He also asserts that, instead of endeavoring to place their business on a safe and permanent footing, many of the companies have thought only of paying big dividends and having their shares quoted at a high figure in the market. In times of special prosperity they did not lay aside sufficient reserve funds for depreciation of plant and buildings and equalization of dividends, but appropriated all their profits to dividend proposes. If they are to receive accommodation from the Industrial Bank, it will be necessary that they should enter into an explicit agreement to introduce certain reforms such as shall be satisfactory to the Director

#### THE FIGHT AT MANILA.

May 11th.

Later intelligence says that the Spanish ships sunk in Manila Bay on the 1st instant were 3 cruisers, 8 gun-hoats, and 2 torpedo-boats. The number of killed and wounded on the Spanish side is now put at a thousand, and there are said to have been no casualties in the American squadron. That is a most singular record. first thought which suggests itself is that the American ships managed to complete their work of destruction without coming within range of the Spaniards' fire, but, on closer examination, it will be found that the difference between the armaments of the two squadrons was scarcely sufficient to warrant such a supposition. The Castilla, the Reina Christina, the Isla de Luson and the Isla de Cuba all carried ordnance as heavy and capable of shooting at as long a range as that of the American cruisers Detroit and Raleigh. Whatever advantage existed in respect of range was with the Olympia and the Boston, which carry six 8-inch guns, four and two, respective ly,—whereas on the Spanish side the heaviest weapons were the six 6.2 inch Hontorias of the Reina Christina. The Olympia and the Boston might have undertaken the task of commanding the Spaniards with their big guns, keeping out of the enemy's effective range all the while. But it would have been | long and very arduous undertaking; for artillery practice at a distance greater than the effective range of the 6.2-inch and 5.9-inch guns carried by the Reina Christina and the Castilla can never be certain or rapidly destructive. That rule would hold even on shore, and is notably true when the gun platform is the deck of a ship. We are inclined to think, therefore, that the explanation of such a very strikingly unequal result is to be sought in the quick-firing guns. The Olympia, the Detroit, and the Raleigh carry total of no less than twenty-nine 5-inch quickfirers, and the only weapons that need be taken into account in this matter on the Spanish side were the Reina Christina's two 2.2 inch quick-firers. Without entering into minute calculations, it may be broadly stated that the striking energy of a shot-or, in every-day language, its destructive potentiality-varies as the cube of its calibre. Thus the comparative figures for 2.2 inch and a 5 inch shot are 10.648 and 125, and the potentiality of the United States' Squadron's quick-firing armanent is represented by 3625, whereas that of the Spanish Squadron was only 21.396. To bring the Spanish vessels within the effective zone of 5-inch quick-firers, the Olympia, range of the Reina Christina's 6.2 inch disseminated immediately. Hontorias and the Castilla's 5.9 inch thesis easiest to entertain is that the Com-Krupps. But the Americans need not have steamed within range—in fact, they might have kept far out of range-of the from their twenty-nine quick-firers, they has occupied the Philippines; a supposi-were only exposed to a cannonade from tion difficult to reconcile with the small

on the basis of these calculations. The extraordinary immunity enjoyed by one side compared with the terrible injury inflicted on the other. If things fell out as we imagine, the incident will furnish an interesting object lesson to naval experts. It will not be a conclusive lesson, however. On the contrary, its instructive-ness will fail exactly where the ex-perience of the battle of the Yalu failed. In the latter fight the Japanese quick-firers certainly displayed much destructive power. But the conditions were exceppower. But the conditions were excep-tional, for the Japanese were not themselves exposed to the fire that would generally be directed against weapons such as they used. So at Manila, the American quick-firers, using common shell, were pitted against slow-firing guns of nearly equal calibre doubtless discharging armour-piercing shot. Such conditions are too unequal to be regarded as a test.

The telegram further tells us that no bombardment of Manila has taken place, and that the American Commodore was negotiating for a peaceful surrender of the island at the date of the latest intelligence. No one ever supposed, we presume, that Commodore Dewey would have deliberately trained his guns on the town of Manila. When very positive statements arrived that the place had been set on fire by the cannonade and nearly burned to the ground, we could only conclude that in attacking some Spanish ships anchored in the river, a conflagration had been accidently caused. It is very satisfactory to learn that nothing of the kind has occurred, and also that the Commodore is adopting firm measures to hold the rebellion in check. Evidently the cutting of the telegraph wire was not done by the Americans.

May 12th.

It is certainly remarkable that no detailed accounts of the operations at the Philippines have been forwarded to Washington. The telegraph has been cut - that we know. But Manila is within m few hours from Hongkong by steam-er, and news might easily have been er, and news might easily have been transmitted by Commodore Dewey if he were disposed to be communicative. There is an apprehension that his silence may indicate disaster, but that view does not seem very credible. On the contrary, it the Detroit, and the Raleigh must, appears to us that had any serious disas-of course, have placed themselves within ter occurred, news of it would have been ter occurred, news of it would have been The hypomodore has need of all his ships-or rather of every man they can land-to preserve order in the islands, and that he can not Reina Christina's 2.2 inch quick-firers, spare a vessel for despatch-carrying Thus while the United States' three ships purposes. Of course, that hypothesis were discharging a perfect hail of sheils involves the further supposition that he the ten slow-firers of the Spanish vessels, force at his disposal and the strength of We speak of "shells," because it was the Spanish gerrison. Still, if he had left

less employed. It is difficult to find a Spanish Squadron and the Spanish forts simile capable of expressing the over-whelming nature of the American fire as He has probably found that the destruction compared with that of the Spaniards, or disabling of the enemy's men-of-war and batteries constitutes only a small part event may prove, of course, that our of his work, and that it has been necessary hypothesis of the conditions under which to organise a naval brigade so strong as to the battle took place are quite erroneous. absorb nearly all his men and officers. But we see no other explanation of the News can not be much longer delayed, however. Meanwhile it seems pretty certain that the United States Government has determined to send out troops to the Far East, for the City of Peking has been chartered, and no other use is conceivable for her. It would be a wise move on the part of America to take possession of the Philippines, for they are a very valuable property and doubtless their sale would go far to recoup the expense of the war.

With regard to the doings on the Cuban

side, Spain's delay about striking a blow is becoming very suggestive. It is true that her chief basis lies at a long distance from the scene of operations, but if the United States Government was able to despatch a blockading squadron to Cuba and a flying squadron to the adjacent seas with in twenty-four hours of the declaration of war, it is certainly a marked contrast that Spain has not yet completed her preparations to assert herself in any way. There is a possibility, of course, that she may have deliberately chosen a Fabian policy. In these days when naval squadrons move with such celerity and can deliver crippling blows in such a brief period, the despatch of a flotilla of transports before complete mastery has been obtained of the seas to be traversed by them, is a step from which any Power would shrink. Were America's naval strength incomparably superior to that of Spain, so superior that she could organize an invincible convoying fleet as well as an invincible flying squadron, she might despatch an army to Cuba at once. But her strength, so far as ships, armour, and armament are concerned, is not by any means superior to that of her enemy, and it would, consequently, be little short of recklessness did she attempt the transport of troops to Cuba before the Spanish fleet is crippled, Besides, there is the climatic question. Cuba is an unsupportable place for American soldiers at this season. The Spanish Government understands all these things very well, and, understanding them, may have concluded that it would be the wisest plan to make preparations leisurely, leaving the United States' blockading and flying squadrons to wear out their patience and perhaps suffer more or less injury by constantly keeping at sea. That would be a conceivable programme if Spain could afford to play a waiting game. But can she afford to do so? Already she is threatened by serious domestic dis-turbances, and, whatever be the risks connected with crossing swords, it has never been her habit to hang back from the combat. To us the more credible explanation is the simpler one, namely, that she is not ready. If the rumours persis-tently circulated during the past twelvemonths be trustworthy, her operations against Cuba betrayed, in some important respects, a shocking state of unreadiness. She showed wonderful tenacity of purpose and really admirable superiority to diffi-culties in her perpetual despatch of troops We speak of "shells," because it was the Spanish garrison. Still, it ne nad left doubtless a shell attack. Armour-piercing projectiles would not have been necessary known long ago; and if, on the other hand, against ships so lightly protected as the Spanish cruisers were, and cannon shells charged with high explosive were doubt-

Digitized by Google

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

bly the stories told about those matters were exaggerations, but one thing, at all events, is certain, namely, that the military efforts Spain has been making for the past two years might well have exhausted the strength of a richer and more resourceful Power. Is it a reasonable supposition that, simultaneously with such a terrible military strain, she was careful to keep her navy also in fighting trim, especially when the ships were not needed at all in connexion with her operations against Cuba? We do not think it is reason-Our conviction is that Spain is quite unprepared for a duel at sea, and that her delay in sending a fleet to raise the blockade of Cuba and restore communications with the island is simply attributable to the state of her ships, their armament, and their equipment. Will she have leisure to get ready? The American squadrons can not possibly take the risk of crossing the Atlantic, thus leaving the home waters and coasts entirely undefended. They will not go to Cadiz to look for the foe; or, at least, if they do, it will be an example of dash that defies the ordinary principles of warfare. But the Spanish nation will not be content to see the arena left entirely to the enemy. America can not well go to Spain, but it is Spain's business to go to America, and the former's people may became worse to her than her enemy if she hangs back long. Englishmen, of course, can have only one sentiment in this matter. They want their kinsmen to win, and they would not entertain the smallest doubt about the final issue though there were ten Spains to be fought instead of one. But the Spaniard is such a good fellow, such a brave, generous, high-spirited gentleman, that we do most heartily wish it had fallen to some other hand to strike at him in his hour of adversity.

### DEATH OF PRINCE KUNG.

Some time has passed since the name of Prince Kung used to rise to every one's lips whenever China's foreign affairs were discussed. Old age removed the great statesman from the scene of active business several years before his death, which has just been announced. Yet he was not an old man in the ordinary acceptation of the term. According to our calculation he had only completed his sixty-sixth year at the time of his decease, being thus ten years younger than Li Hung-chang, who is still capable of vigorous service, and who has been appointed Imperial Commissioner to delimit the boundaries of Russia's newly leased lands in Liaotung. Prince Kung, being the immediately younger brother of Hienfung, the last Emperor of China, was conse-quently senior uncle of the reigning sovereign. As far back as 1859, he was a member of a board of three officials charged with the duty of managing "bar-military expansion to the resources of the barian affairs," and when the French country, but seem to admit that the time and British forces moved against Peking in 1860, the task of conferring with Lord Elgin, discussing the terms of peace, and negotiating the treaty devolved upon him. negotiating the treaty devolved upon him. on the board of regents who, had they been suffered to remain at the head of affairs after the death of Hienfung, would probably have destroyed their country. At one moment of his career ruin nearly overtook the Prince. He attempted to pit himself against the two Regent-Empresses, and the result was the loss of all his appointments and his dismissal from official life. But in the short space of five weeks his friends brought about his re-instatement in power, and thenceforth he abandoned all schemes of undue ambition, if, indeed, he had ever entertained any. That was 33 years ago, and four years later (1869) he made his celebrated remark to Sir Rutherford Alcock when the latter was leaving Peking:-"If you could only relieve us of missionaries and opium there need not be any more trouble in China." When the present Emperor assumed the reins of sovereignty in 1874. his first act was to degrade Kung and his son from their hereditary rank as princes of the empire for using "language in many respects unbecoming," and on the very next day a decree of the two Empresses restored the Prince to his old place. These vicissitudes were scarcely thought of by the general public, and certainly did not detract from the high reputation enjoyed by the Prince as one of the greatest of China's modern states-men. The tongue of rumour never found any material to construct charges of dishonesty against him, and it will be universally felt that China loses in him an official whom she can ill spare.

#### TOKYO CHAMBER OF COMMERCE.

The Tokyo Chamber of Commerce, at a meeting held on the 7th instant, decided that, in view of the existing scarcity of floating capital, the State ought to purchase the private railways, raising money abroad for the purpose. The Chamber adopted a number of more or less detailed rules as to the method of effecting the purchase, but we refrain from translating them, as they have no special interest. The principal point to be noted is that twenty years' purchase is the Chamber's idea of a fair price; in other words, the net average earnings of a railway during the three years preceding the date of purchase should be multiplied by twenty to find the value of the line.

The Tokyo Chamber of Commerce has adopted two petitions for presentation to the Diet in the session now about to open. One is in favour of employing the Indemnity for redeeming War Bonds. The document is couched in general terms, and may be briefly summarized by saying that its compilers see pressing necessity for the addition of mlarge sum to the floating capital of the nation. They speak, also, of the desirability of adapting the programme of has passed for any effective modification of the scheme. It is very well understood, of course, that the purposes to which the

procure means of defraying the expendi-tures to meet which the Indemnity is now assigned will easily be found.

The second petition adopted by the Chamber is in favour of admitting foreigners to become shareholders in Japanese companies, with the exception of the Bank of Japan, the Specie Bank, the State-protected companies, and all mining enterprises. The petition does not discuss the question at any length, but merely insists that neither the laws of the land nor the treaties with foreign Powers contain any veto against foreigners enjoying the privilege in question.

#### THE "WINSLOW" AND THE GUN-BOATS.

The action reported to have taken place off Cardenas ou the 8th instant between the United States torpedo vessel Winslow and three gun-boats, must have been a notable affair. We do not know exactly what the Winslow is, but we believe that she is a first-class torpedo-boat-one of the group named after American Admirals, as the Cushing, the Ericsson, and so forth. If so, assuming her to be the finest of that class, her displacement is 185 tons; her speed 27.5 knots, and her armament, three torpedo tubes and four 3-pounder quick-firers. Neither do we know what were the three gun-boats against which the Winslow was pitted. But, omitting two small gun-vessels built in Hongkong, and not taking account of torpedo gunboats, which are larger and finer craft than the ordinary gun-boat, we know that among Spain's ten gun-vessels, four are ships built before 1890 and capable of steaming only It knots, and six are comparatively new with a speed of from 19 to 32.5 knots. Whether old or new, these gunboats are far more heavily armed than any torpedo vessel. They nearly all carry two or three 4.7-inch Hontorias, with a secondary armament of quick-firersgenerally 2.2-inch or 6-pounders. In an engagement with such vessels the Winslow's torpedoes can not have served her at all. She dare not venture within torpedo range of the gunboats, for their 4.7-inch guns or 2.2-inch quick-firers would sink her at once at such close quarters. Hence she must have relied solely on her 3-pr. quick-firers. So long as she was not crippled, she could always escape, of course. But escape does not appear to have been her pro-gramme. She is said to have fought a brilliant action with the gunboats, dis-abling one of them and sustaining no hurt herself. Presumably what she did was to run at great speed within such a short distance of the enemy that her comparatively feeble little 3-pr. quick-firers could be employed effectively. Of course, in order to get near enough to accomplish anything with 3-pounders, she must have been within point-blank range of 6 pounders and 2.2 inch guns-that is to say within pointblank range of the Spainards. How she managed to escape under such circumstances we can not understand. would seem to have been extremely bad gunnery on the Spanish side. As to the feat of disabling a six-hundred-ton gunboat with 3-pr. projectiles, it is very remarkable, Probably what is meant by "disabled" is that the gunboat's machi-

#### THE SHASHI AFFAIR.

It is a matter of some curiosity to observe the mood of the Japanese people with respect to the Shashi outrage. steps taken by Germany in connexion with the murder of two missionaries in Shangtung were ridiculed by the Tokyo press, journals of all shades of political opinion agreeing in the contention that the demands preferred by the Berlin Government were out of proportion to the incident on which they were based. "Pinch your own flesh if you want to appreciate your neighbour's pain" is an ancient saying in the East, and one naturally watches with interest the temper shown by the Japanese nation now that it has to suffer outrages itself at China's hands. It must be confessed that modern Japan has not shown an exacting temper in her dealings with her weaker neighbours. In 1881 and 1884 she exhibited remarkable forbearance towards Korea. Acts which she then agreed to condone without exacting any large reparation would have involved extensive losses of Korean territory had the more refined diplomacy of the present day been required to assess their consequences. But all the Powers were comparatively tolerant in their treatment of weaker brethren a dozen years ago. Japan had no heroic examples whereon to model her procedure in those days. She is better instructed now, and consequently the question, what will she do, becomes very interesting.

moderately. It observes that the people of Hupeh have long been noted for antiforeign prejudice and that the opening of Shashi was attended with great difficulties, the Peking Government having been obliged to exert all its influence in effecting the necessary arrangements. Hence the instance of mob violence now reported need not astonish anyone. If Japan adopted the precedents recently furnished by Western Powers in their manner of treating missionary outrages, she would have to assume an exceedingly stern attitude towards China at present. But it is not in the policy of the Japanese nation to take advantages of another State's weakness, neither do the Japanese entertain any feelings of distrust or of illwill towards the Chinese. On the other hand, the borning of a Consulate over which the Japanese flag floated, and the expulsion of the Consul, a duly accredited agent of the Japanese Government, are acts which belong to a category very different from the assassination or illtreatment of missionaries. They are acts which touch the national honour, and they can not possibly be lightly overlooked. If the deaths of two missionaries cost China a slice of territory, a harbour, an indemnity, the construction and Imperial life and property, but also to prevent the cessions as to railways and mining, the to have fatal effects upon her integrity against Japan, and that the burning of the destruction of the Japanese Consulate and independence. The last three de-British consulate and other buildings was the driving out of the Japanese Consul, mands may seem to bear a character of purely incidental. It is not to be were they measured by the same standard self-seeking on Japan's part; but in truth imagined, however, that the Peking the driving out of the Japanese Consul, of exaction, would warrant a long cata-logue of demands. The Japanese Govern-ment, however, will simply obey the dictates of strict justice. Compensation for the loss of the consultate and for any

authorities of Shashi were wanting in the adoption of proper precautions or in employing with due vigour the forces available at the time of the outrage, they should be dealt with accordingly. Beyond that Japan's demands need not go. At the same time, it will be well for the Chinese Government to remember that incidents like this Shashi outrage are not likely to be treated by other Powers with the same spirit of tolerance as Japan displays. If China hopes to maintain any part of her integrity, she had better exert all her strength to repress these anti-foreign demonstrations. Should she find her own strength indequate for the pur-pose, she would do well to avail herself of the assistance of some friendly Power.

The Yomiuri Shimbun expresses much sympathy with the Chinese Government. It regards this occurrence as another instance of the obstinate conservatism and anti-foreign feeling that pervade the masses in certain parts of China, especially in Hupeh, Honan, and some other provinces in the Valley of the Yangtsze. Japan appreciates her neighbour's diffi-culties. She will not follow the example of Germany, which made the murder of two missionaries by a band of robbers a pretext for territorial and commercial aggrandisement. Neither the laws of morality nor the laws of nations permit such procedure. China will be treated with due courtesy, consideration, and justice. Still, it is not to be denied that the destruction of a Consulate and the The Jili Shimpo writes quietly and driving out of a consulare outrages which can not be lightly passed over, for, though an ignorant mob be directly answerable, such events assume a national character, and the responsibility for them rests ultimately with the Chinese Government, mately with the Chinese Government, Japan ought, therefore, to prefer the following demands:—(1) That China must send an ambassador to offer an apology for the outrage. (2) That the ringleaders of the riot should be duly punished and the fact officially reported to Japan. (3) That proper compensation be paid for the destroyed consulate and other losses incurted. (4) That the Chinese Govern-ment take steps to post a force of guards in each of the foreign settlements. That the Chinese Government employ thirty Japanese to act as its advisers in civil and military affairs. (6) That Japanese instructors and advisers be engaged to there will be no such disposition. Japan assist the various provincial governments. recognized principles of intercourse between civilized states. As for the fourth, namely, the posting of guards in the various foreign settlements, it is a step that China should be pressed to take not merely for the better security of foreign

sires to treat China with all deference. friendship, and consideration, and is anxious to assist in preserving her neighbour's integrity. It can scarcely be doubted that the best assistants China can have for the purpose of shaping an enlightened career are Japanese who know and use her literature, who employ the same script as her people, who understand her customs, usages, and history, and who have had practical experience in dealing with the very difficulties that beset her. The employment of a few of its people is a small matter to this empire from a selfish point of view, but the introduction of such a leaven seems the best and least repellent way of turning China from her prejudices, and inducing her to embrace the civilization in which lies her only chance of national safety,

The Tokyo Asahi very sensibly remarks that the Shashi outrage was not directed specially against Japan. Great Britain suffered equally. We do not know yet even whether it took the character of an anti-foreign demonstration. Of course the prevalence of strong anti-foreign feeling in Hupeh and Honan has long been re-cognised. But there is a possibility that the recent riot owed its origin to the instigation of officials who had lost their posts as collectors of likin owing to the hypothecation of the latter as security for China's new foreign debt. There is also possibility that disaffected secret societies were at the bottom of the affair, their object being to embarrass the central Government by embroiling it with foreign States and exposing it to heavy demands. All hastiness of judgment must therefore be avoided. The true facts of the case must be ascertained before any action is taken, and it must not be forgotten that the incompetence of the Peking Authorities to police the provinces efficiently has often been demonstrated. Under any circumstances, an example like that set by Germany last year must not be followed. If England and Japan were disposed to make this incident a pretext for doing as Germany did, namely, achieving a longcherished ambition without any proper regard for the rights of the case, they might prefer sweeping demands, since the burning of consulates is an act of national import, which can not be said of the assassination of a missionary. But of course and England will adopt a similar line in (7) That a China-Japan bank be organized. seeking reparation, and will keep within With regard to the first three of the above the strict limits of justice. The Asahi demands, they are in accord with the thinks, however, that as Shashi was opened through Japan's exertions, the latter Power should take the lead in this matter, and should approach England for the purpose of arranging concerted action.

The Chugai Shogyo Shimpo writes in a similar strain, but is disposed to think dedication of a temple, and other con-repetition of ourrages which can not fail that the outrage was primarily directed other damage suffered must, as a matter of course, be exacted, and the punishment of the ringleaders in the riot will be ment of the ringleaders in the riot will be mot less essential. Further, should it appear after investigation that the local prefer extortionate demands. Japan de-day of the opening of Shashi, fears were

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Digitized by Google

entertained that the proverbial anti-foreign prejudices of the people would lead to outrages. It is the expected, therefore, that has happened on this occasion.

#### " NICHI-NICHI SHIMBUN" & THE RUSSO-JAPANESE PROTOCOL.

The Nichs-Nichs Shimbun compliments the Cabinet very highly on the success that has attended its efforts to come to a satisfactory understanding with Russia on the importance of preserving the independence of Korea. Our contemporary alleges that when Count Okuma held the portfolio of Foreign Affairs he allowed himself to be entirely engrossed with questions of party politics, the result being that the interests of the country were not safeguarded abroad nor its prestige vindicated. In the Korean Peninsula, especially, Russia's influence became paramount, the military and financial affairs of that empire falling almost completely under her control. The present Cabinet, on assuming office, lost no time in applying itself to correct the disorder in the country's foreign affairs, and the Protocol just published is one of the results of its labours. Formerly Japan, in her attempts to assert the independence of Korea, had to confront China only. But after the war of 1894-5, three European Powers stepped into China's place, and it was not possible for Japan to stand against them. Now, she has recovered her lost position, and, whereas formerly she could obtain only China's recognition of the peninsular Empire's independence, she has to-day succeeded in obtaining its recognition by one of the great Powers of Europe, a consummation that marks m new departure in the politics of the Far East. She has also secured Russia's promise to abstain from placing any impediment in the path of Japanese commercial and industrial relations with Korea. That pledge should have a reassuring effect. There is no doubt that a very unsatisfactory state of affairs existed in Korea from the point of view of the lapanese man of business. Obstructions and difficulties of all kinds were encountered by persons endeavouring to prosecute enterprises in the peninsula, and it was felt that nothing could be resolutely or confidently attempted. sense of insecurity is now removed, and the fact furnishes matter for congratulation when we remember the large commercial and industrial interests that Japan has in Korea. The Nichi Nichi further points out that, although the Government has now discharged its duty, its efforts can not be crowned with practical fruits unless the nation rise to the level of the situation thus created, and concludes by significantly observing that, Korea being the field where Japan's influence must be extended, her failure there would be tantamount to her effacement in the Far

There is a somewhat remarkable display of indifference on the part of the Japanese press towards the Russo-Japanese Protocol. The only journal of importance by which it has thus far been discussed is the Kokumin Shimbun, a paper which, as a matter of course, shows no disposition to give the Government any credit for the Protocol. It alleges that, in effect, the provisions of the document tine happened to be convenient.

Digitized by

equal footing towards Korea, and openly recognise the state of affairs now actually existing. In fact, according to the Kokumin, neither of the contracting parties has gained or granted anything; each is placed exactly in the position to which it is entitled. Rumour says, however, that the price paid by Japan for the Protocol was the recognition of Russia's new status in Manchuria. If that be true, the Govern-ment has made a stupendous blunder, for it has given away a great deal and obtained nothing at all in return. The Kokumin makes a very poor show of believing the story. Indeed, its whole article is transparently captious and prejudiced.

#### STILL THE PRISON QUESTION.

The Kobe Chronicle is still dissatisfied with the members of the Yokohama Chamber of Commerce who prepared and pub lished a report about the Sugamo Prison. Referring to our remarks on the subject, our contemporary says :-

The Mail says that it is in Sugamo Prison that foreigners suspected of crime are to undergo punishment. What foreigners? Are foreigners arrested in any part of the Empire to be brought to Sugamo? Are foreigners arrested in the provinces to be detained in a Tokyo-fu prison, and carried backwards and forwards for examination. and trial to the district where the alleged crime was committed? It is only reasonable to assume that a foreigner arrested in the interior will be detained in the nearest provincial prison during the process of his examination. If he is denied half, he may be detained for months in such a

That is a perplexing statement. The Mail did not say that foreigners "suspected of crime are to undergo punishment at Sugamo Prison." The Mail is ment at Sugamo Prison." The Mail is not aware that persons "suspected" of crime are subjected to punishment in any civilized country. We should conclude of course, that "suspected" was a misprint for convicted "-especially as the Kobe Chronicle quotes us correctly elsewhere in the same article-were it not that that hypothesis becomes untenable in the face of our contemporary's appended comments about "foreigners arrested in the provinces" being "detained in a Tokyo prison and carried backwards and forwards for examination and trial to the district where the alleged crime was committed,' It is not surprising that the effect of newspaper discussions in this part of the world is to confuse and bewilder the public. The Kobe Chronscle has made itself conspicuous for its crusade in this matter of prisons, yet we now find it talking about a prison for the "punishment of foreigners suspected of crime," and then proceeding to ask a number of questions which are comically irrelevant. The simple fact is that Sugamo Prison is understood to be the place where foreigners convicted of crime will undergo punishment. We do not know whether it is to be the only prison used for that purpose in Japan, but it certainly will be the principal prison. It is a convict prison. Persons awaiting trial are not incarcerated there. kind of building in which foreign convicts will undergo punishment, and the nature of the treatment they will receive there, are not the least important points to be investigated in connexion with this subject. They are points to which the Yokohama Chamber of Commerce first directed its attention, not, indeed, of deliberate choice, but simply because that rou-

where suspects will be detained than to learn the kind of places where convicts will undergo punishment, and blames the members of the Yokohama Chamber for publishing any report until they could supply information on the former point as well as the latter. That is amusingly hypercritical. The compilers of the report may be pardoned for imagining that two entirely independent branches of their subject might be independently discussed. We shall presently hear what they have to say about the places where persons awaiting trial are detained, and we venture to predict that, with the exception of the editor of our Kobe contemporary, no one will be so curiously exacting as to assert that they should not have said anything about the treatment of convicts until they knew all about the treatment of suspects,

#### THE FORMOSA RAILWAY.

It is alleged by the Yorozu Choho that Messrs. Peacock and Company, of Lohdon, have now definitely agreed to lend to the projectors of the Formosa Railway a sum of £1,500,000,the conditions being, five per cent. interest; 95 yen per 100 yen bond; 15 years without redemption, and redemption thereafter within a period of three years: and, finally, the purchase of all the railway's locomotives from Messrs. Peacock and Company at approximately the same prices as those paid for the locomotives on State and private lines in Japan. The Yorozu expresses much surprise at this arrangement, and observes that, according to the charter of the Formosan Railway Company, it is not allowed to contract debts exceeding one half of its paid-up capital. At present the Company's subscribed capital is only to million yen, and nothing has yet been paid up. How, then, can it be justified in borrowing 15 million ven?

#### TORYO I ITERARY AND MUSICAL SOCIETY.

Owing to the theatrical performance of the Tokyo Dramatic and Musical Society having been fixed for Tuesday, the 17th instant, so that the full dress rehearsal takes place on Monday, the 16th, it has been found necessary to postpone the usual fortnightly meeting of the Tokyo Literary and Musical Society until Monday, the 23rd instant. We have been asked to make this intimation to our readers, but it seems well to add a word of explanation, as the similarity of the two societies' names may create some confusion. The Tokyo Literary and Musical Society has its head-quarters in Tsukiji and holds its meetings twice a month in the Parish Buildings. Tokyo Musical and Dramatic Society can not be said to have its headquarters in any particular place, and does not give performances at set intervals, but when it does organize an entertainment, the place is usually the Shoreikai Hall. According to the original plan, the Dramatic and Musical Society was to give its second performance for this year on Monday, the 10th instant. There would then have been no clashing with the regular bi-monthly performance of the sister Society on Monday, 16th. But, The owing to the sudden illness of Madame la amount to nothing worth speaking of. They Kabe Chronicle apparently thinks it more Baronne d'Anethan, who was to have merely place Japan and Bussia on an important to know the kind of places playing the principal rôle in the theatricals of the Dramatic Society, the latter had to put off its full dress rehearsal and performance until the 16th and 17th respectively, and a corresponding postponement of the Literary Society's meeting until the 23rd became necessary. The dates as now fixed are, therefore, these :--

Monday, 15th, 8.30 p.m.—Full Dress Rehearsal in the Shoreikai, Tora-no-mon; Tokyo Dra-matic and Musical Society.

matic and Minical Society.
Tuesday, 17th, 8.30 p.m.—Amateur Theatrical
Performance, in the Shoreikai, Tora-nomon; Tokyo D amatic and Musical Society.
Monday, 23td, 8.30 n.m.—Regular bi-monthly
meeting of the Tokyo Literary and Musical
Society, in the Parish Building, Tsukiji.

We may add that, in the case of both societies, these performances will conclude the programmes for the first half of 1898.

#### A DELIRIOUS PERFORMANCE.

We have had occasion to refer once or twice to a publication of which few of our readers are likely to have any direct knowledge-the Shepherd's Voice. It is a semi-missionary periodical, edited by Mr. Eugenese Snodgrass with Biblical interpretation by the Rev. J. M. McCaleb. In its last number it contains an article headed "Tokyo Dramatic and Musical Society," the writer of which expresses great indignation because "a farcical comedy called 'Naval Engagements' was exhibited in the Episcopal Building in Tokyo." That, of course, is quite incorrect. The performance of the Tokyo Dramatic and Musical Society did not take place in the Episcopal Building, wherever that may be. It took place in the hall of the Shoreikai, an edifice without any religious affinities whatever. Mistakes, however, may be made by the most careful writers, and if only a mistake were in question, there would be little to say. But the writer of the article takes upon himself to assert that "the personal (sic) of the actors were Christians, skeptics, infidels, and what not;" that "the devil and sectarianism went hand in hand when these buildings were thrown open for theatricals;" that "the performance was worldly, yea! absolutely immoral and indecent;" that the actors "exhibited their diabolical wares within the very holy of holies," and that "the organizations under the name of churches of Christ which set up such Satanic performances have no more claim to be called a church than a variety theatrical troop would have." The only conclusion to be drawn from such raving is that the writer is insane. He evidently a species of irresponsible fanatic for whom charitable folks must feel profound pity.

#### PRIVATE PROPERTY IN WAR.

What we have written on the subject of private property in war seems to have conveyed to Mr. Tyler--whose letter we publish elsewhere—an impression not contemplated by us. It was not our intention to reflect on the action of the United States in particular. America is acting in this matter as all other nations But we do unhesitatingly affirm that the principles of civilization are outraged when war-ships pursue and capture merchant vessels upon the high sea simply because the latter are flying the colours of an enemy. The extremely remote contingency that such vessels, if not captured, may be used by the enemy for

Digitized by GOOSIC

transporting troops and munitions of war is scarcely relevant, in our opinion. If that were the real motive of capture, the vessels should be restored to their owners on the re-establishment of peace, whereas they are sold for the benefit of their captors. All private property ought to be secure alike in peace and in war. That the civilized nations of the world war. It is appointed at Sension Bureau.

January, 1874, resigned all his official posts. Applicately agree upon that point we are ultimately agree upon that point, we are entirely persuaded.

#### A SINGULAR STORY.

Under the heading "Foreign Employés in Japan," Mr. Basil Hall Chamberlain makes the assertion that "a Frenchman codified Japanese law and abolished torture." In support of that statement he tells the following tale:

This forward step was entirely due to the personal initiative of Monsieur Boissonnade de Fon-tarable. Soon after his arrival in the country in tarable. Such after insarrival in the country in 1873, when seated one day busy with the preliminates for the work of codification, he heard grouns in an adjoining apartment, and asked what they meant. An evasive answer was returned; but he persisted, and finally burst into the room whence the growns issued, to find a man stretched on the tortor-boards with layers of beavy stones piled on his legs. Returning to his Japanese colleagues, he plainly hold them that such horrors and civilised law could not coexist, that torture must cease instantly, or that he must resign. This firm stand brought about the instruction. This firm stand brought about the immediate disuse of a practice so shocking to humanity. The sufferer—a young man accused of a political offence—afterwards cone to entinence as Count Mutsu, sometime Minister of Foreign

This appears to us to be a most extraordinary narrative. Why M. Boissonnade should have carried on the work of codification in a jail, as must have been the case if the chamber adjoining the scene of his study was a torture room, we can not pretend to guess. But details of that kind are of secondary importance. The chief difficulty about the story is that in 1874, when Mr. Chamberlain represents Mr. Mutsu as undergoing torture, the latter was Chief of a Bureau in the Home Department, and had recently been appointed to that post after serving as Governor of Kanagawa. It certainly will not be very pleasant for the late Count Mutsu's family and numerous admirers to read this extraordinary canard about him, and to be told that, at a time when he held high office, he was receiving the treatment of a common criminal.

in the above article which refers to a strange story which appears in "Things Japanese" on the subject of the abolition of torture in Japan, we made some statements from memory as to the official position held by Mr. Mutsu—the late Count Mutsu—at the time when the author of "Things Japanese" represents him as having been subjected to torture. We have now examined the record of Count Mutsu's services and are in a position to show conclusively that the story contained in "Things Japanese" must be a pure canard. The story is that, in 1873, M. Boissonnade, being engaged with preliminaries for the work of codi-fying the laws of Japan, heard groans in an apartment adjoining that where be was at work; forced his way into the room; found Mr. Mutsu undergoing torture; declared that he must resign at once if such practises were not abandoned immediately, and was successful in his protest. Now the official record of Mr. Mutsu's services runs:-

August, 1871, appointed Governor of Kanagawa, January, 1872, received the additional appointment of Datjo in the Foreign Office for a special

February, 1872, received Fureign Office appoint-

the Finance Department, as well as the post

of controller of Customs at Kanagawa. March; 1872, resigned his additional appointment at the Customs.

June, 1872, appointed President of the Taxation Bureau.

It is obviously a mistake-and a very extraordinary mistake too-to suppose that the late Csunt, Mutsu can have been subjected to torture at any time between 1871 and 1875. In fact, he was in high repute and held an important official post at the very time when M. Boissonnade is said to have found him "stretched on the torture-boards with layers of heavy stones piled on his legs."

It is further to be noted that the abolition of torture is said to have taken place in 1873, in consequence of "the firm stand" made by M. Boissonnade. But on referring to the archives, we find that the Notification partially abolishing torture was issued on August 25th, 1874. It ran

NOTIFICATION No. 19 OF THE DEPARTMENT OF JUSTICE.

From ancient times it has been the practice to is testing in investigating criminal cases. But it would be an outrage if an intocent person should be made to appear guilty owing to the use of undue severity. Therefore recourse to torture of undue severity. Therefore i shall in future be discontinued.

shall to future be discontinued.

Provided that, in cases where the process of examination might otherwise present difficulties, torture may be employed for the occasion, but should such necessity occur, the circumstances must be noted, and a report of all instances of the kind must be made to the Department of Justice at the end of each month.

(Dated) August 25th, 1874. It is plain from this document that torture was not abolished in 1873, and that, so was not about no 1073, and that, so far from its "immediate disuse" having been brought about by M. Boissonnade's "firm stand," it was only partially abolished in Appret 1871. lished in August, 1874.

In our correspondence columns will be found an extraordinary letter signed "Amicus." We deliberatelly call at an extraordinary letter, not so much because of its discourteous tone-courtesy s too often at a discount in the Far East-as because the writer, basing his assertions on two perfectly plain arti-cles in this journal, gravely attributes to us statements which cannot possibly be deduced from those articles. He says that we have "denied to Mr. Boissonade the chief share in the complete and final abolition of torture in Japan," and that we have "seen fit to endeavour to deprive him of a glory which he prized above all others." We have done nothing of the kind. If "Amicus" read the articles which appear to have roused his indignation on behalf of his absent friend-a man whose friendship we also enjoyed and for whose noble character we entertain the highest admiration-he must have brought to their perusal some prejudice which strangely blinded him to their true import and object. We know nothing of M. Boissonade's share in procuring the abolition of torture. The main question, the question to which we applied ourselves almost uniquely, was whether the late Mr. (afterwards Count) Mutsu suffered torture at the hands of the judicial authorities in 1873 or 1874. We have shown absolutely, shown beyond all per-adventure or possibility of doubt, that Mr. of Vice-President of the Taxation Bureau in original from Original from

declares that he "had from Monsieur Boissonade's own lips the assertion to which you take exception." "Amicus" venture to affirm, then, that, according to the direct testimony of M. Boissonade, Mr. Mutsu was subjected to torture in 1873 or 1874, and that M. Boissonnade was "an ocular witness of the case?" It is wholly impossible that M. Boissonade can have made any such statement, for the thing never happened. To show that it never happened, and to repudiate a falsehood so injurious to Count Mutsu's memory and so painful to his relatives and friends, was our main object in writing. As to M. Boissonade's share in procuring the abolition of torture, we repeat that we know nothing. But when by way of evidence that "the step was entirely due to his initiative," a story is put forward which can not by any possibility be reconciled with historical facts, we simply decline to accept the tale. We do so, however, without the smallest prejudice to M. Boissonade's claim. A second point also was noted by us; namely, that, according to the writer of "Things Japanese," the "firm stand" made by M. Boissonade in 1873 "brought about the immediate disuse of a practice so shocking " (i.e. torture). Now Notification No. 19, issued by the Department of Justice on August 25th, 1874, interdicted the general use of torture in criminal investigations, but ex-plicitly reserved to judges discretionary power to resort to it "in cases where the process of examination might otherwise present difficulties." There was consequently no immediate disuse of "a practice so shocking" either in 1873 or in 1874. Thus the story related in "Things Japanis again shown to be unworthy of credit. Does it follow that the honour of being mainly instrumental in bring-ing about the abolition of torture in Japan must be denied to M. Boissonade? Of course not. The only thing proved is that an erroneous version of the facts has been published. It is very possible that M. Boissonade did become a fortuitous witness of the application of torture to some unfortunate Japanese subject, and it is very possible that the pity and indignation aroused in him by. pity and indignation aroused in him by, the spectacle proinpted him to enter a protest of such vehemence as to greatly influence the Japanese authorities. The story in "Things Japanese" may contain that much truth. But for the rest it is a false story and "Amicus" only weakens M. Boissonade's claim by levelling singularly indiscriminating and unjust accusations at our heads. M. Boissonade, were he now in Japan, would certainly "enter a protest against such a manner of writing listory." But not against our manner: against the manner of the author of "Things Japanese" and of "Amicus." We have adduced extracts from official archives in support of every statement made by us, and we invite "Amicus" to descend from the cloudland of friendship's romance, and, instead of indulging in sentimental generalities, to demonstrate plainly that we have erred in any degree, however trivial. We do not dispute M. Boissonade's claim. We dispute simply the evidence adduced in support of it by the author of "Things Japanese."

#### RELIANCE WHEELMEN.

#### THE JUBILER CUP RACE.

The third and final race among members of the Reliance Wheelmen for the handsome lubilee Cup, took place on Wednesday evening at the Cricket Ground before a large assemblage. A fairly stiff breeze was blowing but it did not interfere very seriously with the riders. Out of the eight entries, six came to the post, the absentees being J. B. Gibbs, jun., and C. Thwaites, who were prevented by business engagements.

The course was five miles, necessitating 17 laps. The only one to drop out was McChesney, who retired at the eighth lap, all the others finishing. It was not till the rath lap that matters began to be interesting. By this time Itwine had passed Bohlke and began to draw up on Kay Smith. In the next lap he passed to the front and kept there to the end. Meanwhile Bain and Dewette began to draw up and first one and then the other passed, but eventually Bain drew clear and the pair passed Bohlke in that order. From the 15th lap all was over save the shouting, Irwine having the race well in hand, and he passed the post an easy winner by several lengths. Upon the times being worked out the following results were obtained, the men being placed as figured below:—

*	Mia.	Sec.
E. H. Irwine(1)	15	21
K. Smith(2)	15	44
C. H. Baio(3)	15	4
A. L. J. Dewelle	15	10
R. Bulilke(5)	15	371

The officers of the day were:—Referes, E. Adet; Starter, T. Abbey; Judges, F. M. Gowey, B. J. Jackson, H. F. Arthur; Time-keepers, E. Mendelson, G. S. Nelson, A. M. Wolf; Scorers, H. Gunn, E. Barfoot, and C.V. Schmidt. After the race Mrs. E. Champneys Irwine presented the prizes. E. H. Irwine, 1st, obtained the Jubilee cup and a medal for his win in the second race; Smith took second prize and medal for win in the first race; Bain took third prize, and Dewette fourth prize.

#### " KABUKIZA" THEATRE.

Globe-trotters have now an opportunity of obtaining an interesting glimpse of the high dramatic art of Japan and the ways of native theatre-goess. Mr. Danjuro, the greatest of Japanese modern actors, is running an attractive hill at the Kabukiza theatre, Kobikicho, and no better chance of seeing Japanese acting at its highest can be had.

The Kabukiza programme is one of the best ever placed before the Tokyo public. The performances, which last from 11 a, m. to 8 p m., consist of the repetition of three plays. The first represents a quariel between two Courtladies and the loyalty of a devoted maidservant, who kills the enemy of her mistress. Daujuro, Shucho, and Kikugoro, the former as the ladies, and the latter as the servant, are the actors, and the manner in which they imitate the walk, actions, and manners of Japanese women is a revelation. The second play is in the most mournful vein of tragedy. It illustrates the gailantry and loyalty of the old fendal times, and there is a brave young noble (with all the perfections of the Adelphi hero on his head) and a fascinating lady whose hard adventures enchain the sympathy of a Japanese audience as much as the woes of Romeo and Juliet would move a Western theatre. The period is that of 1000 years back, and the dresses are all of archaic pattern. The last play is probably the most interesting to foreign sight-seers. It illustrates the heroism of a young gentleman of Vedo in the olden time, and the gotgenous

panoramic representation of the famous Kanda festival is a spectacle well worth seeing. So, too, is the Okaru Kampei dance, with 50 sctors on the stage. Indeed, the whole is as good as can be seen in Japan. Foreigners visiting the theatre are invariably received with the utmost politeness.

#### KOBE'S CELEBRATION.

The celebration of Kobe's thirtieth anniversary passed off most successfully on Saturday. M. de Lucy-Fossarieu, doyen of the Consular body, made an excellent reply to the Governor's addiess. Having aliaded to the wonderful growth of the town, whose trade during the thirty years of its existence had grown from 50 to 160 millions a year, making Kobe rank as the third port in the Far East, the speaker continued, says the Chronicle:—

"As I am speaking now on behalf of your foreign guests, I may be allowed, without wishing in any way to belittle the merits of your country-men, to claim for the foreign merchants the portion that belongs to them in the wonderful expansion of the trade of this port (and of the general trade of Japan), and share of legitimate pride which they also are entitled to derive from it. Their experience, their capital, their intelligence, their credit, and their connections all over the world were the first elements out of which came the birth, the creat, and their connections an over the work were the first elements out of which came the birth, the growth, and at last, with your direct participation, the expansion of a trade which now entrobes or supports many militons of Japanese—merchants, peasants, working men, sailors, or labourers—and which has so powerfully contributed to the present expansion and granulated from titles. peasants, working men, suitors, or labourers—and which has so powerfully contributed to the present prosperity and greatness of Japan. These are titles to consideration which perhaps there is too much inclination in certain quarters to forget. In the eyes of some of your nationals, the pioneers of former times, having become competitors, are no longer even civals, but intruders, if not enemies. The amount of business which passes through their hands is jealously calculated as so much that ought of eight to belong to Japanese, and of which the Japanese are maintify defrauded. This—need I say it—is to indulge a prejudice as baneful as: it is unjust;—haneful because it tends to excite a spirit of antagonism moverthy of our times, and the effects of which, especially in Kobe, are felt even elsewhere than in the field of commerce; unjust, because Japan offers to commercial enterprises a field wide enough for all, and without any necessity existing for driving out those who were first to till it. It is an acknowledged convention that sentiment must be kept apart from business, and that in such matters interest is the only criterion. It would therefore be a mistake, even from that in such matters interest is the only criterion. It would therefore be a mistake, even from that in such matters interest is the only criterion. It would therefore that it is precisely the interest of foreigners just as much as of Japanese to develop Japan's trade in the widest degree of which it is capable, to open constantly new onlets for it, and to extend its resources, so that, while it is true they are working for themselves, their efforts in the end make for the general good of your country. It is therefore with a much sincerity as the Japanese that foreigners general good of your country. It is therefore with as much sincerity as the Japanese that foreigness as much sincerity as the Japanese that foreigness settled in Kobe congratulate themselves upon the tesuits obtained so far;—with as much energy will they endeavour not only to maintain those tesuits, but to improve on them in the future. Japanese and foreigners have been the joint builders of a commercial prosperity such as few cities could boast of in the like space of time; and in the new era of which we are now on the eve—for, by a curious coincidence, to-day's ceremony is destined to mark almost precisely in the history of Kobe the point of separation between the old and the new régimes of Treaties—we may hope that the continuation of these joint we may hope that the continuation of these joint we may hope that the continuation of these joint efforts will bring forth results none the less satisfactory."

Mr. Arthur W. A'Beckett speaks of the fare at the weekly dinner of the Punch staff. It is thus described: "The simplest thing in the world. A few oysters, a little clear soup, a bit of salmon, a couple of enti-fees—one white one brown—a vegetable salad, a saddle of mutton, a bird, a sweet or two, an ice, a savoury, and a cup of coffee. Then, if we have that, we shall want nothing better. For, after all, we only require an excuse for the wines—and they are always excellent."

### RUSSO-JAFANESE PROTOCOL.

T has been understood for some little time that the Governments of Russia the sequel of the YAMAGATA-LOBANOW Convention, and the text of the document is now published.

PRUTOGOL.

Baron Nissi, Minister for Foreign Affairs of His Majesty the Emperor of Japan, and Baron Rosen, le Conseiller d'Etat actuel et Chambellan, Rosen, le Conseiller d'Etat actuel et Chambellan, Envoy Extraordinary and Minister Plenipolen-tiary of His Majesty the Emperor of All the Russias, duly authorized to that effect, have agreed upon the following articles in pussuance of Articli 4 of the Protocol signed at Moscow on the 9th June, 1896, btween Marshal Marquis Yamagata and Prince Lobanney, Secretary of State:—

Art. I — The Imperial Governments of Japan and Russia definitively recognize the sovereignty and entire independence of Korea, and mutually engage to reliain from all direct interference in the internal affairs of that country.

the internal artains of that country.

Art. II.—Desiring to avoid every possible cause of misunderstanding in the future, the Imperial Governments of Japan and Russia mutually engage, in case Korea should apply to Japan or Russia for advice and assistance, not to take any measure in the nomination of military instructors and financial advisers, without having previously come to a mutual agreement on the subject.

Art. III.—In view of the large development of Japanese commercial and industrial enterprise in Koren, as well as the considerable number of Japanese subjects resident in that country, the Imperial Russia Government will not impede the development of the commercial and industrial relations between Japan and Korea.

Done at Tokyo, in duplicate, this 25th day of April, 1898.

[L.S.J] Nissi. [L.S.] Rosen.

It will be seen that the first article contains a very explicit declaration of the high contracting parties' recognition of Korea's sovereignty and independence. As to the worth of such a declaration, it is useless to say anything. The validity of every pledge depends, to a large extent, upon the good faith of those concerned in observing it. At this particular moment Russia appears to have no designs upon Korean integrity, but if she succeeds in eliminating such designs from the future history of her procedure in the Far East, she will have to shape the course of events in a manner inconsistent with present indications. Assuming that her programme about Liaotung and the Manchurian railway is carried out, there is no closing our eyes to the fact that the whole section of Eastern Asia, extending from the Sea of Japan on the east to the Khingan range on the west, and bounded on the south by the Liaotung Gulf, the Korean Bay, and the Yalu River, will, one day, be added to her empire. Can she afford, when that day comes, to leave Korea independent? Not unless she resigns herself to abandon, or virtually abandon, Vladivostock; for the Power seated in the Korean peninsula would command the line of communications from Peter the Great Bay to Liaotung. That the promise contained in this new protocol has been made in good faith, no one has any right to doubt. That it can be faithfully observed in the face of the conditions created by other covenants, appears to us altogether problematical.

furnishing military and financial advisers to Korea, is unexpectedly clear. We should not have looked for more than an engagement that either side must notify and Japan had negotiated a protocol in the other before furnishing such advisers; whereas we have an engagement that "mutual agreement" must be an essential preliminary. "Mutual agreement" means, of course, that an absolute veto can be imposed by one of the two Powers on the acts of the other in this matter. Russia certainly did not interpret the YAMAGATA-LOBANOW Convention in that sense. When she was asked by the Emperor of KOREA to furnish military and financial advisers, she complied at once with the request, taking no steps whatever to inform Japan and ignoring the latter's subsequent protests. She has now, however, assumed a very different attitude, and doubtless the Japanese nation will derive much satisfaction from the change.

between the lines. It speaks of "the large development of Japanese commercial and industrial enterprises in Korea" and engages the Russian Government, in view of those facts, not to impede the growth of Japan's tradal and manufacturing relations with Korea. Such language amounts to an admission that Japan's material interests in the Korean peninsula are dominant. Of course, there can be no question that they do predominate, but a conventional declaration of the fact on Russia's part is significant. For the rest, this article will have the effect of dispelling scheme, by such men as Counts Okuma and a feeling of uneasiness which has greatly Inouye and their friends. The supporters of impeded Japan's enterprise in Korea of late, especially in the matter of railways.

It is curious to note how completety Japan has stepped into the place hitherto occupied by China vis-à-vis Korea. This ROSEN-NISHI Protocol bears a remarkably close resemblance to the ITO-LI convention of 1885. It was predicted by good judges at the latter date that if unhappily China and Japan should ever quarrel over Korea, the onlooker, Russia, would principally profit by the fracas. The forecast was sound. It is with Russia that Japan has now to parley about Koreau independence, as she parleyed with China thirteen years ago. Let us hope that the analogy will never be pushed to completion.

#### DEPARTURE OF MR. & MRS. HEROD.

Mr. & Mrs. J. R. Herod left Tokyo by the 9 a.m. train on the morning of the 11th, to take the steamer which sailed at noon for San Francisco. A large number of Tokyo residents, Foreign and Japanese, assembled at Shimbashi to bid them farewell, and to wish them the good-fortune and happiness which ought certainly to fall to their lot wherever they find themselves. Mr. Herod is still a very young man, but has already given convincing ars to us altogether problematical.

The second article, with reference to them most delightful memories.

#### MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

The Döshisha affair, on which so much has been written in these columns, not only forms the subject of numerous articles in the religious magazines, but has been taken up by secular newspapers and discussed from varied points of view. Among what has been written points of view. Among what has been written it is hard to find anything like a strong desence of the Trustees. So much criticism of their action has already been published in the Jayan Mail that we now confine ourselves to a reproduction of the gist of what has been said in their favour. In the Kirisuto Krō Shimbun, one of the Döshisha teachers, Mr. Abe Isawo, as a private individual, writes in the following terms .- It can not be maintained that the members of an Association have no right to change its rules. It is not forms but ussentials that are important. The idea of establishing Döshisha Ordinary Middle Schools resembling in every respect those under the direct control of the Mombusho and qualified to claim all the privileges granted to such schools, was carried into practice during the Presidency of Mr. Kosaki Hiromichi. The original principle of these schools was thorough conformity with the Mombusho regulations. The third article invites some reading That the carrying out of this principle would involve a certain amount of change in the con-stitution of the Doshisha should have been foreseen by the Members of the Association. If there were any objections to the course folof "the considerable number of Japanese lowed they should have been brought forward subjects resident in that country," and it I the time of the establishment of the achools. The whole movement of which the action complained of is the culmination should have been denounced II the outset. amount of compromise is involved in establishment of such schools was evident from the very first.

> In an address delivered to the students of the Döshisha and others, President Yokoi alludes to the action of the Trustees. To the objection that this action is contrary to the wishes of the founders of the Institution he replies that the American Board was not the sole founder of the Doshisha, that no less than 50,000 yen was subthe institution being partly foreign and partly apanese, it is unreasonable to demand that the Japanese element should be made subservient to the foreign. There are those who advocate, continues Mr. Yokoi, the dissolution of the company and the return of the money realised by the sale of the property to the original aub-scribers. This plan might suit the subscribers, scribers. but would such a proceeding be fair to the men by whose exertions the institution was founded? Would it be fair to such men m Nijima, Yemamoto, and Yamazaki? That after an existence of 20 years the Doshisha should attain independence and assert its own individuality, is quite natural. The attack on the action of the Trustees now going on is only to be regarded as the display of antipathy to the thorough independence of the Institution.

> Writing in the Kirisutokyo Shimbun, Mr. Tamura Nao-omi contends that the Doshisha, being a self-governing body, has a perfect right to alter its own rules. The article that in the old rules declared that certain rules were unalterable from every point of view was re-garded as most inconvenient. With the progress of events and of thought the rules of every existing body need readjustment, and surely every Society has the power to alter its own rules. Few people realise what restriction in this respect implies. To give an example:—One of the Articles of Association (Art, IV.) says that Kyoto shall be the head-quarters of the Doshisha. Now supposing a very rich man were to offer to subscribe a large sum of money on the condition that another place be made head-quarters, could Art. IV. not be altered? There are in America and elsewhere numbers of Societies which have altered even their fundamental rules. Hence undue fuss has been made over this Döshisha affair.

Original from

The general public in Japan, continues Mr. Tamura, has been entirely mininformed in re-ference to the Doshisha. It has never been a Christian Institution, as people in America are well aware. When I was in America I constantly read paragraphs in the newspapers calling attention to the lack of Christianity in the Döshisha. The American Board, the principal American subscribers, and many of the Missionaries have known for years that the Doshisha was not Christian. On this we give Mr. Tamurat ipsissima verba:---American Board wa mochiron, senkyőshi deme, ippan no kifusha (subscribers) demo, Doshisha wo Kirisutokyo shugi no gakko to wa hitolsu mo shinfite wa oranu nari. The rules of the Deshisha as far as Christianity is concerned have for a long time been a dead letter. Rules are of no use without the men to carry them out, and it is so open secret that for many years past the Kumini churches, which were intimately connected with the founding of the Doshisha, have been permeated with Unitarianism. To attack the present trustees of the Doshisha and represent them as the sole cause of the change in the Rules of the Insti-tution shows great ignorance. The trend of thought in the Congregational Churches has for years past all been in the direction of rationalism. The action of the trusteen in the result of general feeling and sentiment, and it would be more beneficial for those who undertake to discuss this question in pay more attention to the remote cause of that action rather than represent it as entirely isolated. To argue as if the Kumini Churches were Christian and orthodox and as if the lack of Christianity were confined to the Döshisha, reveals profound ignorance of the real state of affairs.

It is not the Doshisha and the Kumini Churches at its back alone that have in recent charches at its back above that have in recent years forfeiged the confidence of the American Christian public. The Nihon Krisuto Kyō kai is in the same boat. It comes to this, that as soon m Japanese churches reject dogman and formulae considered reject dogman and formulae considered essential by Occidental churches they lose the support and sympathy of foreign mission boards. The rejection of the Westminster Catechism by the Nihon Kirisuto Kyōkai (Presbyterian) was the signal for the withdrawal of a large amount of pecuniary support. Undue fuss has been made over the revision of the Doshisha rules. What is wanted is an earnest and able set of men to work the Insti-What is wanted is an tution. Rules of themselves are of little use and there is no object in preserving forms that represent no living influence of any kind.

Writing in the Rikugo Zasshi, Mr. Kishimoto Nobuta asserts that the Doshisha has not sacrificed Christianity to convenience, that the school is Christian in all essential respects. Article III, of the Rules declares that Christianity is the basis of the moral education imparted by Doshisha schools and that article still remains intact. If the object of the Mombusho was me get rid of every Christian element in the Insti-tution, why did it allow Art. III. to remain an a part of the Rules? The whole thing is a mystery.

The Shahai Zasshi is surprised that Mr. Kosaki renounces all responsibility in connecwhereas it was under his Presidency that the Trustees cut off their connection with the American Board on the acore of doctrinal differences of opinion. Mr. Kosaki attacks the present Trustees in the Shin Seiki. The fact is. says the Shakai Zasshi, this Doshisha episode reveals to how great an extent the Chris-tian church is split up into rival factions. The part the Mombusho has played in the whole affair is condemned by the Shakai Zasshi. As long as the standard of the Department as regards secular subjects is reached, says this organ, exemption from conscription should be granted as well as other privileges claimed by middle schools. President Yokoi is doubtShakai Zasshi, iliat changes have of late been made in the rules of a number of mission schools, in order to bring them into conformity with the Mombusho regulations or the requirements of local School Boards? Have not such institutions as the Aoyama Gaku-in, the Azabu Eiwagakko, the Rikkyo gakko, the Nihou Chugaku-in, the Meiji-gakuin, and the Nara Chū gakko all recently stated that they are prepared to give up teaching the Bible as a part of the school curriculum in return for official recognition as Ordinary Middle Schools? This being the case is not the outery against the Doshisha alone somewhat unreasonable?

We now add a brief summary of the part taken by the newspapers in this controversy. The Nippon condemns the course followed by the Mombusho in unmeasured terms, asserting that its action in this case in of a piece with numerous other decisions. It has no fixed policy, and blunders and temporises from month to month. The Fomiuri adds that in the present instance in addition to a desire to temporise the Department stood in fear of opposition from the "Nihon Shugi " party, which has been making no small stir against Christianity. It behoves the Minister of Education, says the Font-ari, to give the world his reasons for abolishing religion from the schools. The Fift Shimps asks, what there is to object to in religion if a school in other respects reaches the required standard? If a school fulfile all the regulations of the Department as regards instruction imparted, to refuse to give it official license and status on account of some objection to its principles is altogether indefensible. The Höchi Shimbun and other papers adopt the same line of argument. A correspondent in the Yorozu Choho writes approvingly of the action of the Department and thinks that it indicates a new departure in the right direction. Thus we see that there is the widest difference of opinion as regards the nature of the action taken by the Mombusho and also of that taken by the Doshisha, and as regards the causes of those lines of action and their probable consequences.

\*\* \*
According to the Selkyō Shimpō (Greek Church), there are signs that the Protestant Episcopalians and Greek Church Christians in Japan are favourably disposed to each other, the writer says that hitherto the various merits of the Eastern Church as an embodiment of the teaching of the Apostles of Christ have not been fully acknowledged by Protestant Episcopalians, but that since the Lambeth Conference held last year the feeling of Protestants has to a large extent changed, and that this is very manifest in Japan. We imagine that the change referred to, if it has taken place, is confined to the sentiments of what are known an high Church Episcopalians and that it would be incorrect to suppose that the evangelical section of the Episcopal Protestant Church shares this feeling. The writer in the Seikyō Shimpō seems in regard the change with supreme satisfaction. His representation of what has taken place conveys the impression that Protestant Episcopalians are the benefited and the Greek Church the benefactor in the altered situation.

The scheme of smalgamating the Rikugo Zasshi and the Shukyo has been carried into practice. The first number of the new Magazine contains an article in English from the pen of Dr. Clay MacCauley, stating the object of the new magazine and the reasons for the union of the two old ones, which we append:

In this magazine the Rikugo sasshi, one of In this magazine the Assay and the Shukyō, a younger periodical, have been united. The older name Rikugō sasshi has been tetained for the new publication and the Shukyo's editor and publisher have taken it under then care, assisted by the editors and contributors of the older magazine.

For the information of those who are not fami

because each of them, separately for a long time, having been doing practically the same work, under the same notives, in essentially the same ways, their friends have concluded that, should their separate energies be brought together, their service to their common cause could be greatly increased and their cause much faither advanced. In union lies strength.

In the united unagazines no new aim is pro-posed. The present Rikugo-sasshi is still, like the past Rikugo-sasshi and the Shukyo, devoted to nosed. the furtherance in thought and practice of Religion, Ethics, and Social Science in accordance with the estitics, and Social Science in accordance with the best knowledge that may be gained concerning these vital human interests. The magazine represents no sect in religion or faction in pulitics, its pages are offered to all free eachest, severent minds for an open, independent parliament upon the great objects for whose success it has been established. Its directors have no stronger wish than that it may belp in "furthering the progress of the Industries regards." as the presented than that it may help in "furthering the pro-gress of the Japanese people," as the present writer said at the founding of the Shakyō," by making known to them the best and most practical results of Social Science in the largest comprehension of the term, as far as it applies to personal, domestic, charitable, educational, industrial, commercial, and art life;" that it may emphasize the conclusions of the restandar emphasize the conclusions of the profoundest Ethical Research; and that it may help too in opening up larger vistas for religious laith and aspiration, without which the human soul is barren and bound, and a nation is deprived of its greatest source of dignity and true power.

The fact that the magazine is published by the Japan Unitarian Association does not in any measure limit the large purpose just set forth. This same purpose is in harmony with the sims of all agencies bearing the Unitarian name. Unitarians are in no manner a religious sect, nor do then form a sengrate denomination exceed as do they form a separate denomination, except as other religionists and moral reformers refuse to accept their freedom, and set up barriers against them. In fact, at the present time the moral and religious movement in Christendom known as Unitarianism is aynonymous with perfectly free intellectual research, accompanying a supreme desire to know only the full truth concerning all questions of Ethics and Religion. Unitarianism is a \*movement;" its advocates have never been gathered into a fixed ecclesiastical organization, nor their present balleful formula. cal organization, nor their personal beliefs formula-ted into an established, authoritative creed. Like every other human interest that is dependent upon man's advancing knowledge and va-environment, Unitarianism, except in its environment, Unitarianism, except he its free thought and constant aim at the truth, is always changing and will go ferward. Of course, all the world knows that four years ago the Unitarian Churches of the United States, assembled in a National Conference, adopted unanimously the declaration;—"These churches accept the religion of Jesus, holding, in accordance with his teaching, that practical religion is summed up in love to God and love to man." That declaration unquestionably states what is tose of the dominant faith of the men and women who made it. But it does not tell also of a very important faither belief they hold. At the same time that they summed up the Christian religion as "Love to God and love to man," and confessed this religion as their own, they also declared unanimously that, their constituency being "Congrereligion as their own, they also declared insant-mously that, their constituency being "Congre-gational in tradition and polity," their faith may not be "constitued as an authoritative test;" and "we cordially invite to our working fellowship," they added, "any who, while differing from us in belief, are in general sympathy with our spirit and our practical aims." In such attitude the They can think of no truer or grander interpretation for Christianity, their successful religion, than Christianity, their successful religion, than Christ's own declaration that they are to God and love to man" are the religion, lian Curist's own deciration that "flove to God and love to man" are the sum of the divine law for the human soul, but, true to their sense of mental and spiritual freedom, they invite to their fellowship, and are willing to cooperate with, any one who is in practical sympathy with themselves, let him be in practical sympathy with themselves, let him be in denominational or religious association whatever olse he may be. It is for this reason that Unitarians are all the time doing things, supporting agencies, cooperating with persons who are not professed Unitarians and who may indeed prefer some other name. The thing, not a name, is that which Unitarians prize most to the great work of advancing man's moral and spiritual welface.

There is nothing strange then in the fact that a

There is nothing strange, then, in the fact that a Unitarian Association has undertaken the present middle schools. President Yokoi is doubtless to blame for not pointing this out. Forthermore, it devolved on the President to give
to the foreign supporters of the Institution a
full account of the reasons for changing the
Articles of Association. Is it not true, sake the

lies in our freedom, rationalism, and large sympathies in Morals and Religion. We are associated and we work together here, as is indicated in the name of our magazine, as members of the Universal Church.

With this statement, which no one should misunderstand, we now after the Rikugō-sasski to the Japanese people as a helper to them in these critical times in their career. My own conviction is, that what is most of all needed in this land, as indeed it is needed throughout the world, is a profunder and more real sense with every human being of personal spiritual character and dignity. In particular, I mean, a personal consciousness of essential relationship with the infinite and eternal Power and Life we name God, and recognition of a divine brotherhood among mankind. Only out of such consciousness, I believe, can come a satisfying solution of the great problems that individual-, families, communities, and states must try to solve. Men need food, clothing, manufactures, commerce, art, and science, of course. I would not say one word to check mechanical industry or physical and intellectual progress. But, along with these things, and needed even more than they for the attainment of the best human welfare, are apicitual aspiration, faith, hope, and love. It is the undeniable testimony of history that though greatness for men and nations is found in physical power and gain, their true grandeur appears only when, above all, they are moved by the sical power and gain, their time grandeur appears only when, above all, they are moved by the inspirations and ideals of the sout. To the fulfilment of the high missionthal serks these ends, I would here dedicate the Rikugo-zasshi which we to day begin anew.

The New Rikugo-Zasshi covers about 90 pages and contains a number of high class articles on religion, education, philosophy and history. Among them an editorial on the tendeacy of religious thought in Japan at the present time is of considerable interest. The following is the gist of the writer's remarks:— The prevailing tendency at the present time in the religious world is neither towards orthodoxy nor towards Unitarianism as such. higher criticism and the evolution of religious thought have worked great changes in earnest minds. Hitherto the Christian's God has been regarded too exclusively as a transcendental being. It is now felt that he is before all else an immanent God. Thanks to the efforts of German rationalists, arbitrariness, conjecture, dogma and ceremonialism have given place to rationalism. Instead of only following the lead of the early disciples of Christ and accepting an final their decisions, we are able to study Christ for ourselves. Doctrinal Christianity has been succeeded by historical Christianity. there has been a great change as regards the importance attached to the present life compared with the life that is to come. In former times both Christianity and Buddhism laid far too much stress on future bliss and future punishment. But such men are beginning to realise that the Kingdom of Heaven is within them. The influence of religious thought on everyday life in recognized to be of great moment. Social reform is attracting increased attention among Christians. Forces increased attention among Christians. Forces which have hitherto been working separately are combining. Science and religion are joining hands. Orthodoxy and heterodoxy are fraternising with each other in order to further a cause in which they are equally interested. The spirit of union is abroad in the religious world. The amalgamation of the Rikugō Zarshi and the Shūkyō has no sectarian object. Its chief design is to furnish to the world a more full and adequate exponent of the world a more full and adequate exponent of high class Christian thought than has hitherto been possible with the limited resources at the disposal of the two old organs.

An article in the new Rikugo Zasshi, entitled

"The Present Religious Stagnancy and the Coming Century," traverses the views of Mr. Kosaki as expressed in the Shinseiki. Mr. Kosaki thinks that Christians have entered on a new era because an evangelistic society called the Fukuin domei-kat has of late been making m great flourish of trumpets. The writer in the Rikugo Zasshi whom we are quoting can discover no elements of comfort in the work of this society, because its members are mostly of

only be compared to Chinese who should confront enemies armed with modern rifles, clad in old armour and relying on the spear, the sword, and the bow. The members of this society are believers in the infallibility of the Bible, in a world called into existence by the fiat of God, lu the eternal punishment of herelica and unbelievers, in the resurrection of the body and a final day of judgment. There are missionaries who come to this country and spend years in battering down Buddhist and Shinto superstitions only to replace them with Christian superstitions. What cause for rejoicing is there in this? The present stagnancy in the religious world is solely owing to the fact that the majority of religious teachers are behind the age, are engaged in expounding exploded theories. long as they do this they will make no headway.

In the portion of the Taiyo devoted to the discussion of religious topics, attention is called to the wide prevalence of the sectarian spirit in Japan. Petry jealousy, narrow mindedness, and self-glorification are very conspicuous in Buddhist, Christian, and Shinto ranks alike; and this it is more than anything else that hinders progress.

There is also in the same number of the Taiyo a note entitled "A word to the Advocates of a State-religion," in which the writer marshals the usual arguments against State Churches, with which our readers are doubiless familiar. Neither England nor Russia has benefited by the amalgamation of Government and religion, says this writer, as is admitted by those who are thoroughly versed in the subject. In Japan neither Buddhism nor Shinto have derived permanent aid from their connection with the State. Those Shintoists who are now agitating in favour of State patronage do not realise that public opinion is dead against the adoption of any such measure, says the ? asyō.

In the pages of the Nihon Shugi Dr. Inonye Tetsujiro labours hard in establish a raison d'elre for the party whose cause he has es poused. He endeavours to prove that the Japanese are being or have been denationalised. What is this principle called cosmopolitanism about which so much is said? asks Dr. Inouye. I know of no principle or principles that are unconnected with the different nations that constitute what we call the world. What is most plain is that all the powerful nations are each developing their own nationality, are each studying their own special interests. They borrow from other countries, but they assimilate what they borrow, so that it becomes part of their individuality as nations This is what we Japanese need to do. It is quite true that we have derived great benefit from our intercourse with foreigners, and I entertain the highest regard for Europeans, but must confess that there are times when I feel it necessary for us to fall back on our nationality Specially is this the case when we are conscious of being slighted in any way by foreign countries.

In the Teisugaku Zasshi, Mr. Hattori Unokichi discusses the various senses attached to the term  $\mathcal{F}$  (Heaven) in the Chinese Classics. The gist of the article is that different writers used the word in different senses and that to most minds the word was vague and indefinite. The power represented by this term was appealed to as a rule by those whose political baro-meter stood low and was neglected by those who held the reins of state. The ideas of the Northern Chinese on the subject of Heaven differed

Considerably from those of the Southerners.
No. 133 of the Tetsugaku Zasshi has a note on the absence of Text-books on Buddhiat Ethics. Though Buddhism has a name in the world for the excellence of its ethical system. there exists no treatise in Japanese which sets forth the distinctive features of Buddhist ethics. It ought to be easy to trace the effects of Buddhist teaching on the moral notions entertained by the inhabitants of those conutries where the creed has most prospered. Then the separa-

Baron Takasaki Seitu has lounded a Society called the 掌字警會 Shōzenkai, whose object is the promotion of virtue of a practical kind, The members deprecate selecting any thing like a theoretical ethical basis. They welcome all who are agreed as to the desirability of raising the standard of moral life among the masses and who are anxious to contribute something towards that end, whether Confucianists, Buddhists, Shintoists or Christians. The Society purposes collecting money for benevolent objects and publishing biographies of men of exceptional virtue, living and dead.

The Jogaku-sasshi furnishes some interesting statistics on Protestant Female Schools, which show in what proportion they are managed ex-clusively by Japanese.

The Seikökai (Episcopalian), 16. Two of

these only are solely controlled by Japanese. TheNihon Kirisatokyō kai (Presbyterian), r

One of these only is independent of foreign aid, The Kumisi-Kyōkai (Congregational), 10. No less than 8 of these are wholly under Japanese control.
The following schools all receive foreign

support :-Methodist Episcopal, 8. Baptists, 4. Japaness Methodist 3. Universalists, 2. Gospel Methodists, 1. Friends, 1. Southern Methodist, 2. Unconnected with any sect, 2, making a total of 64, out of which only II schools are entirely independent.

The Shinri, the organ of the German Church, is a well-sustained periodical, Dr. Christlieb, Mr. Schiller, and Mr. Minami being very regular contributors. In Nos. 97 and 98, which lie before us, there are articles on "the Apotie before us, there are attices on the applicatic Character of Sermons in the Mission Field; "" Marriage According to the New Civil Law;" "The Past and Future of the Christian Church" "Observation on the Theological World of Germany" and other subjects.

In the Shinsei Ki (the New Century) Mr. Kosaki Hiromichi publishes statistics bearing on the work of the Kumiai Churches. Some of these were given by us last month. As regards the number of baptisms, the year 1887 was the most prosperous one the mission has ever known, the figures being 1,976. After 1890, with the exception of two years, the figures gradually drop. The table reads as follows:— 1890, 1,670; 1891, 823; 1892, 949; 1893, 970; 1894, 461; 1895, 266; 1896, 420

Mr. Kosaki, after commenting on these figures, expresses the opinion that the Church is about to enter on a period of prosperity. The principal reason given for taking this view is the activity of the Evangelistic Association known as the Fukuin Dômei Kai, as indicated in the comments of the Rikugo Zasshi on the Fukuin Domei Kai given above. Messrs. Kosaki and Uemura disapprove of the course followed by the Rikugo Zasshi in uniting its forces with the Unitarian and rationalistic organ the Shukyo, and have nevered heir connection with the magazine and started the new periodical noticed by us last month, the Shinseiki, which may be regarded as a semiorthodox rival to the Rikugo.

In the last number of the old Rikugo Zasshi appears a very long ar icle by Mr. Yebina Danjo on "Our Attitude to the Spirit of the Times," to which we cannot pretend to do justice. Mr. Yebina recommends his countrymen to adopt a liberal form of Protestant Christianity and to make it thoroughly Japanese in character. He says there is something quite peculiar and distinctive about the Christianity of each Western country and that in Japan the moulding process that in ancient times was applied to Buddhism and Confucian-ism with such success should be applied to Christianity now. The leading Christian Christianity now. The leading Christian churches are the Presbyterian and Congregational bedies, and they should combine their forces and devise a system of doctrine that shall include all the essentials of Christianity and exclude all the orthodox school and hence rely on weapons of war that are entirely out of date. They can desirable regarded from various points of view. that criticism and science have now found to be desirable regarded from various points of view.

this type would be fur more solid and reliable than the national ideal championed by the leaders of the "Nippon Shugi" movement, whose views are characterised by bigotty, narrow-minded-ness, anti-foreign spirit and fusty conservatism.

Writing in the Bukkyō, Professor Murakam Sensei maintains that as charity is the central doctrine of Christianity so compassion is the central doctrine of Buddhism. Christianity the central doctrine of Buddhism. Christianity finds the world full of hatred and tries to instil into men's minds a spirit of forbearance with each other, to change enmity into friendship. Buddhism is struck with the amount of misery to be found in the world. It regards human beings as pitiable to the last degree and preaches universal compassion. When Professor Muzakami attempts to show that the two principles are antagonistic III each other, that there is a selfishness in the charity of the Christian not found in the compassion of the Buddhist, we confess we are unable to follow him see no logic in his facts. He holds that Buddhism and Japanese morality founded thereon are superior to Christianity, because less selfish. To Professor Murakami Buddhism is pure altruism, while Christianity is one of the many forms of egoism.

The state of the Chief Hongwan temples appears to be growing worse and worse. not refer to the buildings, but to the granizations known as the Higsshi and Nishi Hongwanji. The friction between the Chiet Abbots of these temples, the Otani brothers, and the priests that erve under them still continues, and not a few Buddhists predict the speedy downfall of the sect. From the Chief Abbot down to the humblest acolyte the morals of the sect are said to be bad. But notwithstanding this, statistics to hand show that the Otani-ha still wields immense power. The following table shows the number of families in various provinces that belong to this sect. The list, however, does not

Section to no substitute trace evanteractors				
No. of	Province. Esmilies.			
	Province. Enmilies.			
Echigo109,920	Mikawa 42,000			
Omi 96,120	Echisen 31,680			
Mina 79,680	Kawachi 20,040			
Rick 68,640	Settsu 28,080			
Owari 53,520	1se 24,660			
Noto 51,720	Musashi 20,400			
Maura 44.400				

It is said that one-ninth of the total population of Japan belongs to the Otani-ha. It is un-doubtedly true that the majority of their ad herents are extremely ignorant and superstitious, but of their devotion there can be no question. A somewhat extraordinary proof of this was given in the year 1880, says a magazine which lies before us. There is nothing more precious to a woman than her hair. In order to show what sacrifices the female devotees of the sect were prepared to make for their religion, it was given out that in building the Hongwanji ropes made of women's hair would be used and that all women who valued their religion highly should cut off their hair and send it to Kyōto. No less than 53 huge ropes were made with the hair thus collected. Twenty-nine were wern out by constant use and destroyed, but 24 still remain. The total length of these hair ropes was 4,528 shaku,the thickness of each rope 16 shaku 5 sun, and the total weight 1,511 kwan 650 memme Reckoning the hair of each woman to weigh about 50 memme, no less than 30,213 persons must have sent contributions. The following shows the proportion in which each of the eight provinces named contributed to the 53 ropes, Etchü, 16; Echigo, 15; Ugo, 10; Sanuki, 4; Echizen, 3; Harima, 3; Iwaki, 1; Bungo, 1.

The Pu-iten, the Shinto organ, condemns in a very decided manner the fuss that is being made by certain Buddhist and Shintoists over the near approach of mixed residence and the strong anti-foreign sentiments to which so many writers give utterance, as calculated to hinder the progress of the nation. This magazine also opposes the establishment of Buddhism as a state religion in an article entitled Bukkyō wa Kokkyō ni arasu, "Buddhism is not a State Religion.

#### FAREWELL DINNER TO MR. J. R. HEROD

On Tuesday, the 3rd inst., a farewell dinner was given by the members of the Tokyo Club to Mr. J. R. Herod, Secretary of the United States Legation, who is about to visit America on leave. Mr. Herod has been for several years in Tokyo, and has won remarkable popuis return to Tokyo, but wherever the routine of the service to which he devotes his exceptional abilities may take him, he will carry with him the hearty good wishes of his numerous friends in Japan, and if his career be crowned by success in proportion to their hopes and his own merits, he will certainly reach a distinguished place. About seventy members of the Club assembled to drink his health, the Chair and Vice-chair being occupied by the Belgian Minister, Baron d'Anethan, and the Vice-Minister of Foreign Affairs, Mr. Komura, respectively. The following speeches were delivered :-

Baron D'ANSTHAN said:—GENTLEMEN,—The Club's dinners are a very nice institution and I am always very glad to join in them; no one takes with more pleasure than I these opportunities to show, on the eve of friends' departure, our friendiness and regard for those of our companious with whom we have had such pleasant intercourse. There is, however, a feature of these banquels to which I fear I must object. We ought to after the custom that it is always on the vice president, and on the foreign vice position, that falls the task to express the sentiments of the Club to the guest of the evening. At these parties we have suppressed Baron D'ANETHAN said :- GENTLEMEN,-The the evening. At these parties we have suppressed all formality; there is no precedence; each and all are on the same footing, in one word we are on these occasions good and true republicans. Well, under these circumstances, I am of opinion that the vice-president is entitled to the privileges that the vice-president is entitled to the privileges you all enjoy and ought not to be reminded of the exalted situation your kindness has raised him to. It would be a real kindness, Gentlemen, II you would listen to the good advice I take the liberty of giving you. A concert where we hear too many solos—when the artist has no particular merit—is apt to be tedious and we applaud the moment when a full orchestra plays off! I have many opportunities of judging—no oratorical facility or talent, and the difficulty I find in varying my tunes on the same theme is most trying and painful. So in the future we shall change the actual rule and it will be the duty, not of the vice-president but of the most eluquent of us to charm the andience and to cover with flowers the victim we are preparing for with flowers the victim we are preparing for the sacrifice. I feel happy, however, that this last opportunity I have to speak at a Club diener falls on the occasion when it is given me to speak to and about Mr. Herod. Herod is the friend in the corps diplomatique whom we have known for the topoget time; in his occasion. is the friend in the corps diplomatague whom we have known for the longest time; in his presence I am no more dayen; I bow to his longer experience of the country and I feel towards him the respect and the veneration that are due to our ancient. That homage must be gratifying to him, for if he is an ancient diplomat in Tokyo he has not yet the sad privilege to use the grand phrase—and that phrase I suppose carries with it ideas of experience and wisdom—"I have lived half a century!" Ah! Gentlemen, with what joy most of us would we not go back to the age of our old though so young friend, and feel how he must have felt when his Government appointed him, notwithyoung titend, and leet how he must have left when his Government appointed him, notwith-standing his youth but taking only into consideration his merits, to the important post of first secretary of the United States Legation. In countries

ments I might pay him I keep here in my heart. Now, Gentlemen, before going back to the golden silence that I ought not to have broken I will ask you a favour. In the sacred precincts of the Tokyo Club, austere and serious Club when we the Tokyo Club, anstere and serious Club when we only meet to speak on the important political questions of the day and collect only in the reading room, in this Club so strictly and exclusively reserved to us men (I am afraid it is a bold proposition) I propose—but it will only his for once—to break the rules and to beg leave to introduce a Lady. Grant my wish, Gentlemen, the lady will appear only in her astral shape and will listen—in silence—to the toast we are proposing—Gentlemen, fill up your bumpers, drinking to our friend Mr. Herod and his fair and charming wife.

Mr. Heron replied in the following terms:—
It is with a feeling of some disconfiture that I lise to reply to the flattering remarks of Baron d'Angitan. In my five years' membership of the Cub I have so often applauded the panegyric pronounced upon the chosen one who is being fattened as an offering to the sea, that there is a fattened as an offering to the sea, that there is a disagreeable strangeness in being called from the reviewing stand to join the procession of the departing. There — something indescribably pathetic in the position. To have looked for years with langing eyes at the place of honaur at our President's light, to gain it for two short hours and then depart to reflect upon one's triumph; and, lest even the memory of it should be lost in the qualins of mal de mér—somehow it doesn't sound so leaful in French—to inflict the body with bad beef tea and biscuit. I'm sure you will agree that I deeply regret leaving the Club which I have known so long. Not that I mean to vie with the sages of the orgret leaving the Club which I have known so long. Not that I mean to vie with the sages of the organization, but I was here in its palmy days, when like fallen princes we enjoyed an increasing deficit amid the luxuries of the old imposing Rokumei-kan, "Hall of the Stag's Voice." If that stag might only have been translated into a telephone with its unheeded cries to the Electric Light Comwith its unheeded cries to the Electric Light Company for light for the darkening billiard room! What satisfaction to have tred the gloomy corridor and reached the cosy room far in the rear in the times when a Cotaishman held the chair in English Literature and a Dutchman discoursed on the condition of his "peoples" when not engaged in philosophic argument with Mr. Hike. The atmosphere of the place was academic. I have heard a certain gentleman mustering his statistics, to prove that twenty feet of snow fell in a single night in the Hokkaido, and the certainty of millions under the law for the encouragement of navigation by saling a sampan in a circle about the Shimangawa torts. A hundred times I have seen two mentand for ten minutes in deep reflection debating gama forts. A hundred times I have seen two mens stand for ten minutes in deep reflection debating mentally on what was to be the coming drink—like the Maine farmer, who in sorting polators said it was not such hard work but a terrible strain on the judgment. O tempora, O mores. Never mind about the mores; we will continue with tempora mutantur. The shock of 1894 has changed the tenor of our ways. We have advanced with the brazen times and become like them. We are his injectility and making are showy now, we are businesslike and making money, and the cool effrontery required to walk into our marble-countered refreshment room and proclaim our vices to the world has had its effect upon the younger elements of our society. They are becaming fast, while the venerables, like Reuter's telegrams, come seldom and when they do come have little to say. This disposition towards silence comes from experience with they do come have little to say. This disposition towards silence comes from experience with the Japanese. They have learned that for a foreigner the less said in that language the batter for all concerned. I myself in a spirit of confidence once tried to expess in Japanese my appreciation of a servant's conduct by offering him my congratulations and two yen, and found to my dismay that I had discharged two domestics and lamed a horse. Even inanimate objects are affected by the perversity of heredity. I have even heard a German horn give excruciating tones for no other reason than that it was blown by Japanese wind. Simply the contrariety of the medium, So I fear it is with the mutual misunderstandings that infortunately often embitter one's life in Japan. It is not that there is a fault. It cannot be laid to the fault of gue nor of the other—it is the wind instrument's obstinate disposition. Such dispositions and such unfainness are to be corrected and it is the clubs that most of all do the work. Foremost that of Tokyo. They are our places of meetings, the centre of our social life; a character with all its perjudice of race and rearings disposed into this cosmoplitan stream soon has its roughness subbed away and emerges—not perfect pelbaps in all—but perfect in good fellowship and mutual undestanding. Other organizations may boast a larger membership and more commodious quarters, but none can rival us in our surique position of a cosmopolitan tay of the United States Legation. In countries where rules and traditions are more strict and binding than in the American diplomatic service such rapid promotion would have been difficult. The way Mr. Herod justified the confidence of his Government shows that it was as well deserved as well canned, and proves the truth of this saying of I forget what diplomat: It is the young women and not the dowagers who should wend diamonds and the young men who night to occupy the most important posts." But, Gentledian of the centre of our should wend official services of Mr. Herod; what I wish to praise, and you all do it with me, are the personal qualities that have made Mr. Herod most popular amongst us. I could go on long an that subject. I have much to say, but I refrain. I am afraid of intoxicating his young head with too much incense, and the nice complifamily with but one object-mutual entertainment

MR. MACCAULBY said :- " Mr. President and MR. MACCAULEY said:—"Mr. President and fellow members of the Tokyo Club: I hope you will pardon me as I rise in obedience to the call of my name. I do not know exactly why I am aummoned. I mean, that some distractions at this part of the table have prevented me from hearing what our Vice-President has just been saying, and that I am not at all prepared for his sudden demand, and do not know what the lead is that I am to follow. Of course, I know that we are here to give a "good by "greeting to one of our club comrades. But, if you will pardon the levity, let me help myself along by telling you that feel myself at this moment much in the situation of a young women of whom I have heard in the back-country of North Carolina in America,

feel myself at this moment much in the situation of a young women of whom I have heard in the back-country of North Carolina in America, who at one time met with a very great surprise. I have repeated the story once before in Tokyo but not to any here present, I think. Telling it now may make clear the reason for my present embarrassment and also give me time to think of something befuting the object of our coming together. Once upon a time, so it is said, a wedding was about to take place in a village among the North Carolina mountains. Life in that part of the world is a little ruder and cheaper, and ways of living there are somewhat more reckless and impulsive than in some other localities. Well—the bridal party had assembled in the Church and the ceremony went forward smoothly enough until it became the clergyman's duty to pronounce the happy pair husband and wife. But, starting in with his official declaration to this effect, be cominned, "And themans as God has jined together"—"These uns, "spoke up the hidegroom, correcting. "Jim," replied the minister, "I leasued ye all ye know and I tell ye. Them nors in right." "These uns," spoke up the hidegroom, correcting. "Jim," replied the minister, "I leasued ye all ye know and I tell ye. Them nors in right." "These uns," said the man. "I tell ye, No!" retorted the parson," Them uns' is right." "These uns!" asserted the man reaching at the same time for his hip-pocket. But the minister was too quick him and fired through bis gown. The shot was the signal for a general moles. In a few minutes the chapel was emptied and quiet, These, one of the party,—so the story val moles. In a few minutes the chapel was emptied and quiet. Then, one of the party,—so the story rai meses. In a tew minutes the chapter, so the story goes,—peeped into the building through a window. All that his eyes discovered need not now be reconsted, but, as he looked, he saw the would-be hide creeping out from behind the pulpit and, rising, look disconsolately over the desolate scene; then he heard her say with a sight;—"These yes self-cockin pistols is playin' the dence with my prospects." The moral of which story, gentleman, is, that the quick fining demands of our Vice-President have made rather doubtful my prospects as a speech-maker this evening. But seriously, now that I am on my feet, I certainly ought to be ready under any circumstance to say some appreciative word at a "good bye" danner given to so good a club man, so good a friend, and so good a legation officer a. Hendd. I have known Mr. Herod ever since he came to Japan. One of my first impressions on sering him was that the United States Government had tisked a great deal in sending so young a man to so ed a great deal in sending so young a man to so important a station. But years and experience do not always measure a man's ability and wisdom. Some men are immature and incapable however long their lives may be. And there are oftens who can grasp and command though their lives are convergingly for their lives may be. however long their lives may be. And there are others who can grasp and command though their years are comparatively few. There are others than Pitt who must, though able like him, he guilty for a time of the crime of being young. Mr. Herod, I am glad to know, soon proved himself equal to the work to which he had been appointed, and his going from the United States legation now, brings a loss to my country's service that I am sorry to see made. Just at present I believe that Mr. Herod's work is of special value. I admire, I respect the personnel of which the diplomatic representation of the United States in Japan is composed, but such is the fatuity of the method by which the United States has ne continuous diplomatic system, that during the last year gractically all our legation officers have come to us new to their work. Mr. Herod is the only member of the legation who is comparatively old in it, and who binds the past to the present. He knows America's diplomatic bistory in Japan, having studied it for many years bark. He is familiar now with the difficult efficience and involved ceremonial of diplomatic cucles. He knows by long true learning, the ways of the Japanese Government's various bureaux and how to secure easy entrance and hearing in them. He has become a fluent despatch write is at capable and successful officer, and a good connection in his public relations, and you and I know that as non-

However, since he is going let our best wishes go with him and our confidence that success will attend him in whatever he may begin anew else. where in the world. But let us hope also that be going may have a more agreeable sequel than his prospecity elsewhere. Tomight we say "good bye," but at some not distant future may we also be able to say—"Why, how d'ye do I ferod! Glad to see you back! Hope you have come to stay a long time!"

#### JAPANESE FACTS AND COMMENTS.

The Tipi discusses the question of increased taxation. It says with regard to the new taxation schemes hitherto adopted it may be noticed that the receipts, except those from the sake tax, are in most cases far less than the original estimate. The Budget for the 31st fiscal year shows the reduction in the Trade Tax and Registration Duties to be no less than 1,700 000 ven, while the Leaf Tobacco Monopoly will fail to secure the estimated revenue unless radical reforms be made in the system. In view of the expansion of armaments and necessary schemes of reform, the adoption of a scheme for increased taxation is absolutely indispensable. It may evoke opposition on all sides, and the Government hesitates to introduce it in the forthcoming session of the Diet because of the ikelihood of its being rejected by the whole Parliament. But the Government, asserts the Jiji, ought to carry such a scheme into practice, Should Parliament prove refractory steps for dissolution might be resorted to.

The conflict between Spain and America seems to have considerably affected the silk trade in China. Information from Shanghai, dated the 23rd April and published in the Koku-min, contains the following paragraphs:— Owing to the extravagant depreciation of silk consequent upon the Hispano-American war. the owners of filatures are inclined to offer their stock for sale. The whole stock in Shanghai amounts at present to 1,000 bales. As for Chinese filatures, the common brand alone is in demand, and even that in a very insignificant degree. Prices are speedily falling. With regard to sericultural enterprise it may be noted that the growth of worms is unusually excellent owing to the abundance of mulberry leaves. Intelligence from Canton under date 16th April states that sales of silk to Europe goods. The districts on the western frontiers are gradually being undertaken, but that no of Szechuan are also in a miserable condition, business is done for America.

The Kokumin discusses the position of the Liberals in a long article. If the formation of a party Ministry is really the Liberals' prime object, they are even now not without opportu-It is not necessary for them either to shake hands with Marquis Ito or to sever their connection with him. They have only to co-operate with the Progressists. Should strict amalgamation prove impracticable, an alliance will answer the purpose. This scheme would secure to them the support of over two thirds of the Representatives of the Diet, and with these the inanguration of a party Cabinet would be an inevitable result. Count Itagaki, however, is opposed to these views. We are in no way, adds the Kokumin, hoatile to a party Ministry if parties qualified for the responsibility exist. But it is to be regretted that the political parties now in existence are utterly disqualified for the work which they seek to undertake. They Liberals are yet far from a state of mature wisdom; so are the Progressists Even the Liberals and Progressists combined are unfit for party Government. Not only are they numeri cally insignificant, but they are wanting in po-

Dr. Inouye Yenryo, who acquired some re-putation by the publication of a series of essays on ghosts and hobgoblins, now writes a lengthy article on the necessity of reforming Buddhism in Japan. He says the believers in Buddhism throughout the world now number 500 millious, worker generally. Altogether he is a capable and successful officer, and a good coinsellor in his public relations, and you and I know that as not a with its here he is a pleasant companion and a with its here he is a pleasant companion and a true friend. I am sorry he is going away.

garded as a glorious fact. India, which claims to be the original seat of Buddhism, was over-powered by Brahminism and Mohammedanism. Korea and China still retain the semblance of Buddhist doctrines, but they have already lost the spirit of the creed. Japan alone may claim the reputation of preserving Buddhism in its ori-ginal spirit. But it is necessary that Buddhism should be reconciled in the general current of civilisation. Most of the enlightened personages of Japan have grievously fallen into the errors of materialism, ignoring the existence of both God and Buddha. They insist upon the nonexistence of the future and the soul; religion is a plaything for the ignorant, while morality is a creation of society. There is no more heavenly doctrine than the survival of the fittest, no other human principles than striving for material profit or advantage. To all this the pricate have given no answer; they have proved themselves destitute of energy and spirit. They have sacrificed their knowledge and character for money; and instead of being called priests they deserve the name of mere temple keepers or beggare.

The freight for coat from Moji to Hongkong continues to increase. The rates stand & 2.40 yen for Hongkong and 2.20 yen for Shanghai. In spite of this abnormal enhancement, the import of foreign cereals is steadily undertaken at the rate of 60 sen per picul from Saigon to Yokohama. Still there is con-Saigon to Yokohama. Still there is con-siderable difficulty in chartering steamers on this route, and the scarcity of ships is not only felt for foreign service, butaline for consting voyages. The coal at Moji has begun to accummulate beyond ordinary limits, the atock at present being 140,000 tons. The amount exported during last month is suid to have aggregated 23.561 tons, valued at 654 416 yes, a decrease of 18,794 tons in quantity and 814,196 yen in value.

Information from the Japanese Consul in Shanghai, dated April 15th and published in the Mainichi, announces that the extreme appreciation of rice in the various provinces of Chiua has led to much disturbance. The inhabitants of Szechuan in particular are almost on the point of statuation, and a mob about 300 strong recently broke into the Governor's house, and carried away furniture and other household the famine being such as was never experienced during the past fifty years. Paupers in a single province total 130,000. Function, too, is suffering from scarcity, in spite of the export of rice being prohibited in all the producing districts. Originally the supply of rice for that province was secured from Formosa, but since the transfer of the island to Japanese jurisdiction the amount of import has decreased.

The Osaka Asahi ridicules the Cabinet's claim that China's recent stipulation not to lease Fuhkien to any Power is a guarantee for preserving the permanent tranquillity of the Far East. The journal also thinks that, in spite of the concessions alleged to be made by Russia in the convention recently signed, Russia has still designs on Korea; and it urges that more substantial schemes than the guarantee against the concession of Funkien or protests against foreign powers ought to be contemplated in the interests of the country.

The General Assembly of the United Spinning Companies was held on the 7th instant at the Saka-n Restaurant, Osaka. With a view to the establishment of rules for the appraisement of Indian cotton, seven commissioners representing buyers and sellers were appointed. A representation concerning the enforcement of punctuality in the delivery of yarna for expert was unanimously approved. A draft of the provisions for the encouragement of the export of yarns was considered, but

month totalled 1,690, with an aggregate capital of 356,180,924 year. These figures indicate an increase of 23 banks and 6,760,000 year in capital over the previous month. Classified according to old and new banks, the figures stand thus t-

The prices of stricles of daily consumption still continue to sise. The average value of commodities in April this year was, according to the Nippon Ginko's investigation, 179, an increase of 3 over the previous month and of 19 over the corresponding period of last year. Rice, however, which is the standard of all prices, is expected to depreciate before long. The following comparative table shows the ex-traordinary fluctuations in the domestic as well as foreign staples for the past two years :-

The Department for Agriculture and Commerce recently issued a notification over the alguature of the new Minister, embodying regulations for the accommodation of students to be trained or instructed in the art of deep-sea fishing. Students are in be chosen from among graduates of the Marine Products Training Schools, new and old, and their number is limited to twenty, The term of instruction is three years, subject to alteration at the discre-tion of the Minister for Agriculture and Commerce. The expenses allowed for each student are 15 yen per mensem, but this amount may be demanded from the student if he leaves the school on his own account or violates the directions issued by the Minister from time to

Taking advantage of the agitation raised by Count Itagaki on the subject of the state ownership of private railways, bankers, stock-holders, and others are reported by the Chue to have recently formed a combination to be designated the Economic Investigation Society, fifty members having already been enlisted. On the night of the 7th instant a general meeting was held at which various important resolutions were passed. Some of them insisted upon the necessity of the state purchase of railways, but this was vehemently opposed by the majority, who stated, that although the questions regard-

loans, were questions that might be debated for immediate adoption, yet, as the same could in no way be carried into effect without money, the introduction of foreign capital should at any rate be made the prime object of the Society. It was therefore resolved to agitate for steps to relieve the economic market of its present embarrassment by recourse to a foreign loan. A committee of 20 were sppninted, Messra. Okura, Hara, Morimura, Yasuda, and Shibusawa being among the number.

According to the Foresu, the principal points proposed by the Tosa clique to the Premier in regard to the revision of the Law of Election are as follow :-- Voters' qualificational taxation. The whole city or prefecture to constitute an electoral district. Suspension of civic rights in the case of bribery being detected and elections so effected to be invalidated. The proceedings of special election agents to be considered as the proceedings of the candidates themselves. Any candidate known to have resorted to bribery to be sendered ineligible as a candidate at the next election. Bribed electors, making a voluntary confession, to be entirely absolved from punishment. No money under whatever pretext to be presented to electors as expenses for carriages, lodgings, refreshments, &c. In addition to these provisions it is anggested that the regulations for the control of elections promulgated by the urgent Imperial Ordinance are to be adopted, and elaborate rules enforced against outrages or menaces of political bullies (soshi). The Yorosu adda that it is doubtful whether the Premier has entertained these proposals.

The recent rise in the wages of artisans is remarkable. The Nippon publishes the result of investigations on the subject by the Osaka Chamber of Commerce. The following table shows the difference between wages paid on the 25th year of Medi and the current rates :-

The Osaka Asaki remarks that the Liberala are reported to have relinquished all opposition to the Government with regard to its financial policy; and some are expressing the opinion that after the close of the forthcoming extra-ordinary session of the Diet, Baron Ito is to secure the portfolio of Minister for Foreign Affairs, and Count Itagaki is to be nominated Home Minister. These statements all tend to show that the Liberals are disposed to renew their alliance with the Cabinet. In this movement, adds the Osaka Asahi, the Tosa clique

who have also assumed an attitude of hostility. The Liberals appear to entertain serious anxiety in regard to the deficiency of able men which may present itself in the event of a party Cabinet being organised. Steps are being taken, it is said, to enlist outside the party such personages as Messis. Miyoshi Taizo, Wakamiya Seiin, Ozaki Saburo, and Ando Tero. It is not to be wondered at, therefore, that Viscount Aoki looks on himself as the future Premier.

The trade returns of the Finance Department for the past four months are as follow:

	Merchandise.
Exports	10,619 470
Excess (Imports)	29,832,947 19,215,477 Bullion,
Imports	
Exports	447.705
Excess (Exports)	17,664.655

Such an excess of imports, remarks the Mainicht, is probably without precedent. In short, the inequality of commerce has reached its Below are the comparative figures for the past four months :-

	Exports.	Imports.	Excess of Impacts, Year.
January	10,916 330	18,871,153	7.954 825
February	11 445 247	20 538,227	9.092 980
March	10,947 502	25,809,751	14,862,249
April	10,619 470	29,832,974	19,215,477

Total ..... 43,928,549 95,052,082 51,123,533 The export trade, it will be seen, does not display any great difference since January, but in the case of the import trade a really extraordinary increase—an increase utterly beyond anticipa-tion—is noticeable. The excess of imports has reached 52,220,000 yes, and, should affairs continue in the present condition, the a amount will probably exceed 100 millions by the end of the year. The export of specie during the four months aggregated 47,173,125 ven, and imports 3 091,426 ven, the excess in favour of the former being 44,081,699 ven. It may be inferred that the excess by the end of the year will not be less than 80 millions. These anomalies ought to be seriously con-sidered, especially when the domestic market is so considerably depressed and all industries are no lamentably neglected as m present on account of the want of capital.

At the Kwanto Bankers' Assembly held at the Seiyoken Restaurant on the 9th instant, Baron I wasaki is reported by the Mainichi to have spoken in opposition to the introduction of foreign capital. He said the late war with China has been the direct cause of the embarrassment into which the market has fallen. A sum of 170 million yen out of the total Indemnity being distributed among the people at large, capitalists were tempted into speculation and the labouring classes found their consuming power auddenly and considerably augmented. Since this importation of expital was responsible for the present situation, it was matter for wonder that the introduction of more foreign capital should be looked to for readjusting the finances.

The full payment by China of the remainder of the Indomnity necessitates the speedy with-drawal of Japanese troops from Wei-hai-wei. According to the Shimonoseki treaty, the evacuation must take place within four weeks from the date of the receipt of the Indemnity. Cabinet having held a special conference on the 9th instaut, a telegram was immediately despatched to Major General Miyoshi, Commandant of the Wei-hai-wei gatrison, with instructions to evacuate the place at once. over, Colonel Nakaoka and Lieutenaut-Colonel Hongo, together with four other officers, were ordered on the 10th to proceed to Wei-hai-wei to make various arrangements in regard to the evacuation. Six steamers of over 2,000 tons are to be despatched as transports, two of them, who stated, that although the questions regenting the purchase of railways, the redemption of loans, the lowering of the Nippon Ginko's achedule of interest, the expansion of the limits of goods for exceptively at the realized process. The Kiushu The steamer Hino Maru, hitherto employed and Hokushiu sections are positively in opporting a regular service to Wei-hai-wei, will also of goods for exceptively at the realized process. The Kiushu The steamer Hino Maru, hitherto employed and Hokushiu sections are positively in opporting a regular service to Wei-hai-wei, will also of goods for exceptively at the realized process. have been vested with plenary authority for the delivery of the territory, the ceremony being only to hoist the Chinese flag, to fire salutes, and to exchange certificates duly signed by com-missioners of the two countries. Coloned Okazaki, who recently came to Tokyo to be present at the special councils of the General Staff, returned to Wei-hal-wei on the 10th inst. to assist in the withdrawal of the troops.

#### KOREAN NOZES.

The Japanese War Department, saya the Independent, has presented to His Majesty the Emperor of Korea ten new Murata magazine rifles through Captain Nodzu, the military attacké of the Japanese Legation in this city. Captain Nodzu attended the War Department with the gifts asking the Minister to forward them to His Majesty.

The Korean Council of State recently passed an appropriation of \$70,000, to be expended on new buildings for the Kyengwon Palace, and then sanctioned \$9.60 for official seals to be used in Legations abroad.

Under the heading, "The worm turns again," our Soul contemporary prints the following interesting narrative:---

The record which appears in another column of this paper concerning the late magistrate of Jingsan is worthy of special remark by those who are anxiously watching the signs of better times in Korea, and this little event must come with delightful refreshment. According to our version of the account there seems to be a magistratic part of the property of the proper version of the account there seems to be a mag-strate in Korea who wishes to be honest and up-right. He was implored by the people of a district through which be was passing to give his opinion concerning the legality of certain mutual taxes. This he refused to do, but, like a man, went to the offending magistrate and about its a manner which did not provide empire. asked, in a manner which did not provoke comity, concerning the tax to which the people referred. concerning the tax to which the people referred. The magnitude admitted that the tax was extramediumly and was not authorized by the Finance Department. The ex magnitude, of Jingsan then upbraided the offending magnitude upon which he was seized and cruelly punished. Then occurred an event as rare of occurrence as it is delightful when it happens. The people who had legged the examagistrate to plead their case broke min the compound of the magnitude and rescued the lacerated man and took him to the hospital of Pyengyang.

With all the bare-faced (we can't think of anything but bare-faced that's bad enough) (ascality of a scounded the magistrate telegraphed to the governor that he had punished the offending exmagistrate because the latter had stracked the magistrate at the head of an anned force. The governor, on advice from Söul, ordered the offender to be sent to the capital. Our version as a pointed to expert is not complete at this point. offender to be sent to the capital. Our version as printed elewhere is not complete at this point. When the exemagistrate prepared to leave the hospital on his litter the people who had swarmed in from the country tendered him an ovation almost impacialleled in record years. They surged about the litter and laid upon it tokens of their esteem for the man who had befriended them as signally. Women took from they shoulders their silken cloaks, and tore coins from the ends of claims and cast them at the hero of the hom. A Ruman triumpth was enacted in the the hour. A Ruman triumph was enacted in the one-time Hermit nation and tendered to a man who had faced an inscriptions representative of the wickedness which reigns in high places and laid bare the crime which he was committing.

Such a demonstration as this, together with the build conduct of the ex-magistrate, is, as we have said, a sign of the times. It has almost seemed that "you can't fool all the people all the time" in Korea. But could the people only teatize that they had some rights after all and, better, could they only act always as on the present occasion with the courage of their convictions, officials would take good care not to abuse their rights.

We are of the opinion that this Pyeng-yang incident will not be forgotten. We do not successage popular uprisings as such, but when the peuple are burdened by a tax which is admitted by those who collect it to be illegal, we cannot but praise the deed. "The worm turns." Thus a paper of the Far East scatteningsly headed an editorial on the deed. "The worm turns." Thus a paper of the Far East scatteriously headed an editorial on the distress. In return for this magnanisty, the Rorean employed a most hat grant the Isance of the Rorean people a most had altogether inappropriate, though effect might have suggested a panese the privilege of establishing the Soul-Fusan rulway and working coal mines in Soul,

Digitized by TOSE UNIVERSITY OF ILLINOIS AT

more nonrable fille for a sovereign, independent people. The incident recorded by us in this issue may be called another twist of the worm's tail. Still pechaps at each turn the muscles are growing harder and a self-consciousness is coming into existence. Perhaps the worm will find that it can turn when it chooses to do so. Perhaps it is finding out that the observer it was Pethaps it is finding out that the oftener it turns the easier it is to do so. Perhaps it is coming to the conclusion that it will turn oftener in the future.

The Imperial Household Department Korea has sent the following despatch to the Department of Agriculture, Commerce and In-

dustry:-"The power of controlling the mines in the "The power of controlling the mines in the country unist be invested in the Imperial Household Department. The Department has appointed a chief director to whom the management of all the mines has been entrusted. The Department tearns that the Department of Agriculture, Commerce and Industry has been interfering with the work of the chief director by sending departmental agents to the mines whose actions clash against the interest of the inspectors sent by the chief director. Hereafter the Department of Agriculture, Commerce and Industry must not send any inspector or in any the Department of Agriculture, Commerce and Industry must not send any inspector our in any way interfere with the mines in the country. It is the wish of His Imperial Majesty that mining interests must be under the countral of the Imperial Household Department," The Department of Agriculture Commerce and Industry replied as follows:—"The Department has been sending inspectors and attempted to collect revenues from the mines in accordance wish the statute law which authorizes this Department to perform the duties above mentioned. However, if it is the with of His Majesty to transfer the work to the Household Department the Department will interfere with the management of the mines.

This is the Independent's comment :-

Then the statute law ought to be repealed and the Bureau of Mines and Mining in the Agricultural Department ought to be abilished, so that at least the salaries of the officials of the Bureau can be saved by the Government.

An enterprising spirit is slowly but surely permeating the hearts of Koreans. One of the latest indications is that a Korean company has been formed to manufacture eigars in Songdo and Soul with Koksan tobacco. Koksan is a mountainess distance. Koksan is a mountainous district tobacco. Koksan is a mountainous district in Whanghai and produces a consideable quantity of tobacco. The quality is not as good as that raised in the Shungchou district of Pyengan Do, but it is cheaper and also darker in colour. The company ships, on an average, to 000 cigars daily to various cities in the country and the demand is said to be increasing. They burn fairly well, and considering the price (which is thirty-four cents per 100) it is a reasonably good smoke. We hope, concludes the Independent, thal tobacco. We hope, concludes the Independent, that many enterprises may spring up in this land.

Rumour is current in Soul that a number of Korean fugitives now in Japan, including Mr. Pak Yonghao, are to return by May or June in order to reform the Cabinet with the aid of the Japanese Government.

A notification was recently issued by the Agricultural, Commercial, and Industrial Department to the effect that a special postal ser vice is to be opened from May 15th in Hwanghai, Kauwon, and Chhugchhong, and from June 1st in Cholla, Kyongsaug, Hamgyong, and Phyongan, under the supervision of the Headman of the district.

The Koreans have begun to assert that they have a right to a share in the Indemnity receiv ed by Japan from China, m they entered into an alliance with Japan for defensive and offensive purposes at the time of the late war. Nothing, remarks the Yomiuri, can be more absurd. Korea received immeasurable assistance from Japan, and the gratitude she owes to the Japanese people ought not to be forgotten in long as she exists as a nation. However, as a matter of favour it might be well for Japan to grant to Korea some three million yen out of the Indemnity so as to relieve the latter of her present

more honorable title for a sovereign, independent Fusan, Inchhon, and Mokpho, Wonsan and This would be to the advantage of Chianam.

> The Hachi has a long and highly eulogistic article on America's loreign policy. To carry out the principles of justice in her diplomacy seems to be America's aim. In her policy towards Korea she reproved Japan as to the affair of the Queen but combined with the latter and England in opposing the aggressive measures of Russia with regard to the deten-tion of the Korean King, the engagement of Russian military instructors, and many other permicious proceedings. Americans have no political relations with other parts of the world, and this enables them to justly decide Oriental questions affecting other nations. They are in close contact with the American Indians, and their racial prejudices are therefore much more insignificant than those entertained by most of the European nations. Owing to these and other circumstances, their attitude in the Far East differs entirely from that of other Powers, whose policy is one of aggression and plunder. America, adds the Hochi, is but too willing to display her sympathy towards China and other Oriental countries which are new in a grievous condition. Japan on this point should entirely coincide with America both in policy and general feeling.

#### NEWS OF THE WEER.

A swordfish, measuring fourteen feet two inches from head to tail, was caught at Penang recently. The aword was five feet long.

The German Chirorgical Society have denounced the Dum-Dum bullet, and suggest that the provisions of the St. Petersburg Convention should be extended in order to prohibit its use.

Mr. Thos. H. Reid, of the China Mail staff, went to Manila in the Esmeralda to represent the Landon Times during the bombardment of Corregidor Island and Caviré, but owing to the cable being out was unable to get his report through by wire.

On the water being pumped out of the May Flint on Saturday, it was seen, says the Kobe Chronicle, that the ship narrowly escaped destruction, for the tops had been burnt off the cases in which the time of kerosene oil were nacked.

We are glad to be able to say that Madame la Baronne d'Auethan has almost completely recovered from her recent illness. The Baroness and His Excellency the Belgian Minister ielt Tokyo on the 11th for Nikko, where they will remain until the 16th instant.

It is reported in the China Mail that H.M.S. Powerful is to go home in about five or six months, and she will be relieved by her sister ship H.M.S. Zerrible, which has gone into commission. This arrangement has possibly been made in consequence of the many enquiries in the House of Commons regarding the Powerful's machinery.

"Words fail me," said Mr. Healy in the House of Commons a few weeks ago; and by a happy coincidence, Punch next morning came out with a picture of wordy waifare in the Eastend, in which one of the combatants finds himself in exactly the same and plight. "Why don't yer answer im back?" asks a hystander. "'Ow can I?" queries the combatant; "'E's used all the best words."

Our Tientsin contemporary reports that a lamentable accident occurred recently at the Fang-shan colliery, by which some forty men lost their lives, the mine being suddenly flooded by the bursting of the river's bank, and forty miners being drowned before any rescue could be effected. Three men who had only a few minutes before gone to the surface to relight

URBANA-CHAMPAIGN

raise funds for the purchase of a war vessel. It is stated that fabulous prices were paid for seats. The Queen Regent paid 2,000% for her box; the Bank of Spain 20,000%; the Countess Bartons, 4,000%; the Larios Bank, 6,000%; the Tobacco Company, 4,000%; and the Marquis Torrelaguna, 12,000%. Large prices were also paid by other distinguished personages, while clubs and regiments, civil and military corporations, doctors, and all classes of society handsomely contributed towards the 140,000% which have already been collected towards the object in view.

At Singapore on the 25th April a private of the West Yorkshire Regiment, named William Yates, of B. Company, was fatally wounded while acting as musketry marker at the butts. It appears that the deceased, who had been employed as a musketry marker for the last twelve months and who had seen five years' service, left the butts before "cease firing" was sounded. He was shot from the firing point, the huller entering his right breast and coming out at the top of his shoulder. The accident occurred about six o'clock, and, half-an-hour later, the man had bled to death internally.—Straits

The Imperial Marine Insurance Company (Teikoku Kaijo Hoken Kabushiki Kwaisha), is making a large extension in the scope of its operations. The Company has established agencies in nearly all the principal foreign ports, and its standing and credit are high, the names of Mr. Yasuda Zenjiro, the promoter, and Mr. Takei Morimasa, the President, being some assurance of the stability of the concern. The bankers are the Hongkong and Shanghai Banking Corporation and the Yokohama Specie Bank, and claims will be paid through them. The Yokohama agents are Mr. Kohei Otani, Motohama-cho, and Messrs. Bowden Brothers & Co., No. 164, Settlement, who are prepared to accept all marine risks.

In the China Mail we find some details of the death of Sister Frances (Miss Elizabeth Frances Higgen), who has failen a martyr to duty at Hongkong. The cause of her death was the most severe type of plague, designated plague pneumonia. She was only taken ill on Tuesday, April 26th, with slight fever, when she was attended by Dr. Atkinson, and by that evening she was slightly better. On Wednesday, anapicious symptoms intervened, and she was transferred to an isolation ward at the Government Civil Hospital. Early on Thursday morning it was evident that she was suffering from plague pneumonia, which is almost in-She contracted the disease from variably fatal. one of the ward boys who was taken ill with the same disease on the 20th ult. The deceased sister was nursing the boy, who, in his delirium, spat on her clothes and face. Shortly after midnight, Sister Frances became much worse, and died in the presence of the matron, three sisters and Dr. Atkinson. Drs. Atkinson, Lowson and Bell, were in constant attendance, The deceased was one of the six sisters who arrived in Hongkong in 1890; and was engaged in plagne work in 1894, 1896 and 1898.

The death of Colonel Dyer, the Employers' Champion in the great engineers' strike, was probably due in a large measure to the mental strain of the struggle. From the age of 18 Colonel Dyer had an exceptionally active career. His military service included the Crimean and Indian Mutiny campaigus, and in the fighting he had his horse shot under him on two occasions. He retired from the Army with the rank of lieutenant-colonel, and entered the Government Small Arms Factory at Enfield as assistant-superintendent, and subsequently became associated with the large works of Sir Joseph Whitworth at Manchester. Here he proved himself a captain of industry, and his reputation in a shrewd manufacturer was enhanced when he identified himself with the control of the vast manufacturing concerns of Sir W. G. Armstrong, Mitchell, and Co. at Elswick. To Colonel Dyer belongs the credit of having brought about the amalgamation mot know of any. Digitized by GOOS

of the Armstrong and Whitworth firms. One of the most striking things about the late Colonel Dyer, says a home paper, was the distinction of his manner, and his unvarying courtesy to all with whom he came in contact—friends and opponents alike. In the sharpest fight he never forgot that he was a gentleman himself or that his opponent was entitled to a patient hearing; yet it would be laid to find an adversary more determined or harder to beat. He was neither violent nor bland, but he knew exactly what he wanted and how to get it. In other words, he was a real leader of men, and his death has cut short a career which must have been distinguished and might have been great.

We have already announced the death from plague of Mr. L. S. L. Crawford, eldest son of Mr. David Crawford (of Messrs. Lane, Crawford, & Co., Hougkong). In the Daily Press we read that as a member of the Volunteer Corps the deceased was buried with military honours. The procession was headed by the firing party with seversed arms and the Band of the King's Own Regiment playing a funeral march. The came the coffin on a gun carriage with the flag as a pall and the deceased's belinet and sword bayonet, followed by the chief mourners, Mr. G. A. Caldwell and Mr. Duncan Clark, brothersin-law of the deceased, the members of the firm, and intimate friends of the family. The Volunteers came next, almost every man carrying a wreath or cross; and S.r John Carrington, the Commandant, and all the officers were present. At the Monument the procession was joined by a large assemblage of friends. The funeral ser vice was conducted by the Rev. G. J. Williams of Union Church. At the close of the service three volleys were fired over the grave by the firing party, the "last post" was sounded, and the sad assembly slowly dispersed. The deceased was only twenty years of age. He was a member of the Cricket Club and frequently played in Club matches, and was also an active member of the Philharmonic Society.

The following notice to Mariners, No. 320, refers to the Foochow District, of the China Sea and is issued by Mr. A. M. Bisbee, Coast Inspector, of the I. M. C .: - Sunken rock in Cow's Horn Pass, near the northern entrance to Haitan Strait: Notice is hereby given of the existence, to the westward of Brown Rock, Tessara Group of Islands, of a rocky patch, shout half a cable long in a north and south direction by about three quarters of a cable wide, and having two pinuacles, about 30 yards apart, near im middle, on which there is a depth of not more than 4 feet at low water of spring tides. To this rocky patch the name "Namoa Rock" has been given From the two pinnacles of the patch the highes part of Brown Rock bears E. \(\frac{1}{2}\) S., the highest part of Fairway Island S. \(\frac{1}{2}\) E., and the Cow's Horn S.W. \(\frac{1}{4}\) W. Vessels coming through Haitan Straits from the southward, if wishing to use the channel to the westward of the Texsara Group, should, after passing Slut Island, steer so as to bring Brown Rock open to the eastward of Fairway Island, N. ‡ E. Keep this mark on nutil Cow's Horn bears W.N.W., which will lead clear of the rocks lying 21 miles S. by E. of Cow's Horn Point, and steer so as to pass about 2 cables to the westward of Fairway Island. Then gradually bring the west point of Shingan Island in line with the west end of Fairway Island, S. # W., which will lead about a cables west of Brown Rock. Keep this mark on, being careful not to open Shingen Island west of Fairway Island when nearing the Namoa Rock, until the southernmost point of Great Dragon Island (the north-easternmost island of the Tessara Group) is open to the northward of Brown Rock, when a N.E. by N. course may be steered. Brown Rock may be passed safely at a distance of a cable to the westward of it. The steamer Namoa struck on the patch of rocks described in the foregoing on the 3rd October, 1897, and became a intel month. became a iotal wreck. The local fishermen,

#### YOROHAMA GENERAL CHAMBER OF COMMERCE.

SUGGESTED DIGEST OF THE CODES.

The International Committee appointed to study the position of foreigners under the new Treaties, and to take what steps may appear right in their interests, have decided as a first step to obtain from the best legal authority a complete Digest of the Codes.

As this will necessitate an outlay of yes 3,000, and to cover other necessary expenses, a subscription list is circulated as a guarantee for such outlay.

The Committee think that the amount guaranteed will not necessarily be all called up, but that the work may be done efficiently they call upon their fellow residents in Japan to support them liberally.

#### DEATH OF THE GOVERNOR OF KANAGAWA.

We deeply tegret to announce the death of Mr. Nakano, Governor of Kanagawa Prefecture, which took place on the 12th inst. at 7.30 p.m. at his official residence. Mr. Nakano had been Governor of Kanagawa for several years, and during his tenure of office gained the high respect and esteem of both foreigners and Japanese. He has been ill for some time, and a groundless report of his death was circulated two or three days ago. On Wednesday, however, he seemed to have taken a turn for the better, and it was hoped that he would recover. His death will be a loss to the public, and a source of grief to a large circle of private triends.

Deceased, who was 55 years of age, had the following orders:—2nd class of the Rising Sun; Grand Cross of the Russian Order of St. Stanislans; Grand Cross of the Austrian Order of Francis Joseph; Grand Cross of the Order of the Italian Crown; Grand Officer of the Desgon of Annam; Officer of the Legion of Honour of France; Officer of the Belgian Order of Leopold; and Knight of the Netherlands Lion.

#### CORRESPONDENCE.

#### MINO-OWARI ORPHANAGE.

To the Roitor of the "Japan Mall."

Sir,—The enclosed account of the Mino-Owari
Orphanage was written two months ago by
me and published in the Robe Herald. Since
then Mr. Igarashi has received subscriptions in
Kobe and Osaka amounting to more than
(100.00) yen one hundred. In May, he wishes to
visit Yokotama and Tokyo in the interests of his
institution. So at his request I send this paper,
hoping that you may see your way clear to publish
in whally or in part as an introduction for him to
the residents up that way.

## HOW A WORTHY JAPANESE STARTED AN ORPHANAGE IN GIFU.

The province of Huda in Gifu. Ken in one of the most rugged and broken in Japan; in fact, it seems nearly all hills at first. But there are towns in it too, made up mostly of sude one-storted houses over whose roofs are usually scattered large stones which serve instead of nails to hold down the tiles.

point of Shingan Island in line with the weat and of Fairway Island, S. & W., which will lead about a cables west of Brown Rock. Keep this mark on, being careful not to open Shingen Island weat of Fairway Island when nearing the Namoa Rock, until the southernmost point of Great Dragon Island (the morth-easternmost island of the Tessara Group) is open to the northward of Brown Rock, when a N.E. by N. course may be attered. Brown Rock when a N.E. by N. course may be attered. Brown Rock when a N.E. to the westward of it. The steamer Namoa struck on the patch of rocks described in the foregoing on the 3rd October, 1897, and became a iotal wreck. The local fishermen, though they were offered a liberal reward to point out any other sinken dangers in the passage west of Brown Rock, stated that they did not know of any.

volved grave responsibility, but, trusting in God, resolved to take the step.

him in good stead, helping to get him a hearing. As he and the children journeyed afoot and stoped at "shichi-in yadoya" (seven rin inns), their expenses were not very heavy. But sometimes at first the funds did not suffice to meet even these more the funds did not suffice to meet even these triffing bills, so the party would bluckly spend the night sleeping in the open. For one whole week they had to go with almost nothing to eat. Some times, too, although they had money, lodging would be refused them from lack of confidence. "You mean those stilldren no good," people "You mean those shillien no good," people would say. "You are going to draw their blood for magic medicine": "You are going to steaf them and sell them to foreigners," etc. etc. But happily they had large experience of kindlier treatment, receiving help from people of every faith and of an faith. After two months of tramprating through the prefectures of Griu and Miye they returned with fifty yen in packet and no debt, while the number of children had increased to twelve.

twelve.

By the advice of a Christian preacher in Gifusthey removed to that city, rented a building, and with their fifty yen capital began the business of fan making. This was in the summer of 1895. Soon after, a young man, Serta by name, who had become a Christian through Igarashi's teaching, came to help and cast in his lot with them, For a year after this they went steadily forward, taking in more children from time to time but always finding their daily food supplied.

taking in more amount aways finding their daily food supplied.

In Oct., 1896, came the great flood in G-fn Ken which wrought such wide have and destruction. The building in which they were housed was unharmed, but the source of supplies for them was almost dried up. Instead of being able to help others, most of the people of the region were themselves compelled to receive aid. The gravity belp others, most of the people of the region were themselves compelled to receive aid. The gravity of this situation recalled the hard times of the beginning and also the methods of that time. Finally it was determined to make use of these same methods again, only this time the tramp was to be much more extended. And now a second time Igacashi and this hard set out with their faces. tended. And now a second time Igacasii and his have little band set out with their faces toward the west and never changed their course till they had gone over the island of Kinshin. This tramp was beneficial in many ways beside financially, being a good education to all concerned. This time they returned with more than two hundred yen and to delts, as "seven in health" ground searchitest. This manner was in holels? are not exorbitant. This money was almost entirely given by Japanese. In fact from the very inception of this work the support has mainly come from native sources. All the gifts vet received from loreigners would hardly sum up to filty year.

From January of last year (1897) a monthly newspaper was started as the organ of the institu-tion and also as an agency for Christian teaching. this paper, distributed among factory girls and others, has already been largely useful as an evangelizing agency. The sale of it also brings in a small profic. At present the number of children in this No Hi Ikojin (Mino Hida O phanage) is facty. Of these, twelve work at fan-making, which is the chief business carried on; three work in a gela factory; the rest are all too small yet to work at a trade. But all do something to help, work at a trade. But all do something to neip, and all are daily instructed in the Scripture-, in common school branches, and in household work, sewing, etc. Two are blind, but lave learned to sewing, etc. Two are blind, but have learned to read and do many things, being sent to m school for the blind in the city.

In order to work toward self-support a great need now is the sum of five hundred yen as a capital for the fan business. With that capital this department of the work could be made thoroughly self-supporting for all the children engaged in it. They make very pretty laws of all grades, selling at retail for from two or three sen up to twelve sen each. In order to work toward self-support a great

R. E. MCALPINE. Yours truly, Kobe, April 26th 1898.

#### PRIVATE PROPERTY IN WAR.

To the Editor of the " Japan Mail,"

would be have us de, let the Spanish steamships go back to Spain, so that they could return filled with soldiers and munitions of war to be used against us?

against usr
Also, does the editor recall any instance of a
European Power ever allowing, in time of war, the
possible transports of an enemy to escape,
whether such Power was a member of the Paris agreement or not?

Obliging yours respectfully,

WILLIAM C. TYLER,

Tokyo, May 4th, 1898.

#### ETHICS OF WAR.

TO THE EDITOR OF THE "JAPAN MAIL." Sin,-In the issue of the 4th inst., an editorial ote contains the following remarks,

" It is a disgrace to civilization that armed out-"It is a disprace to civilization that armed our rages against private property should be perpetrated, as they are now perpetrated by warships of the United States and Spain," &c. to the end.

This subject may perhaps be set in a clearer

light by the following remarks:-

No doubt "War is bad enough without the addition of such barbarous features," and no one would care to excuse them except as war measures. The question is therefore whether they have been and still are justified by international principles of war, and if so, who is responsible for such justi-

fication.

Reference is made to the Declaration of Paris of 1854. Its principles failed to become a part of international law mainly as a result of the refusal of the U.S. to subscribe to the clause on privateering. Thus, as Sir H. Maine says, this "Declaration has not become part of the keneral law of other civilizations, for the assent of a State which is perhaps destined to be the most powerful in the world, and certainly the most powerful neutral world, and certainly the most powerful neutral State, has been withheld from it." "The reason given for the refusal of the United States, by Mr. Maccy, the Sec. of State, was plausible enough," This

"The United States consider powerful navies and large standing armier as permanent establishments to be detrimental to national prosperity and ments to be detrimental to national prospecity and dangerous to hiberry. . . . They can never be brought to acquiesce in any International law which may render it necessary to maintain a powerful navy or large standing armies in times of peace. If forced to windicate their rights by arms, they are content. . . to tely. . . for the protection of their commerce in no considerable degree upon their emercantile marine. If their contry were deprived of these resources it would be abilized to change its policy and assume a military obliged to change its policy and assume a military ounged to change its pairty and assume a military attitude. In resisting an attempt to change the existing maritime law that may produce such a result, it looks beyond its own interest, and embraces in its view the interest of such nations as are not likely to be dominant naval Powers

. To such nations the surrender of the right to resort to privateers would be attended with con-sequences most adverse to their commercial pro-

sequences most anverse to meir commercial pro-sperity without any compensating advantages.

It certainly ought not to excire the least sur-prise that strong naval Powers should be willing to forgo the practice comparatively useless to them, of employing privateers, upon condition that weak or Powers agree to past with their most effective means of defending their maritime rights. It is, in the opinion of this Government, to be seriously apprehended that if the use of privateers be abandoned the demandary of the demandary of the demandary of the demandary of the demandary of the content of the seriously apprehended that if the use of privateers be abandoned the demandary of the content of the seriously apprehended that if the use of privateers be abandoned the seriously of the content of the seriously of the seriou of the dominion over the seas will be surrendered to those Powers which adopt the policy and have the means of keeping up large navies. The one which has a decided naval superiority would be potentially the mistress of the ocean, and by the abolition of privateering that domination would be firmly secured. Nor would the injurious effect of a vast naval superiority to weaker states be much diminished if that superorthy were shared among three or four great Powers. It is unquestionably the interest of such weaker states to discountenance and resist a measure which fasters the growth of regular naval establishments."

Thus much to show that the clause sholishing privateeting was in reality from the United States' point of view not what it claims to be-a dis-interested advance in the principles of enlightened

As a matter of fact however, the privilege thus

able against the best of Europe's claims to civili-

zation.

It appeared subsequently to the U.S. expression on the Paris Declaration, that Spain reserved the right of resorting to privateering. The logical conclusion would therefore be that Spain's merchantmen may not only be seized in pursuance of the laws of war but over and above this also in order to prevent them from being used in privaleering,—justified therefore as a measure of national defence, and not as a mere war or retaliatory measure.

We have seen that there were cogent reasons be lave seen that there were cogen resonts for the U.S.'s refusal to subscribe to the Paris Declaration. However, it ought to be remembered, Secretary of State Marcy declared also that the U.S. would readly agree to an arrangement whereby private merchantmen and other effects of citizens of a belligerent Power should be

effects of citizens of a belligenent Power should be exempt from seizure by putilic armed vessels of the enemy except it be contraband of war and that "with this we will consent to the placing of privateering under the ban of the law of nations." (Cf. also Wookey's Intem, Law. Sec. 128.)

Nothing therefore could be plainer than that the policy of the United States so far from being unwilling to reluquish privateening (even though in the interest of the selfish military policy of the European concert it refused to bind itself to do so to the serious disadvantage of itself and smaller or namilitary Powers), put itself on recent already minilitary Powers), put itself on second already half a century ago, as favouring an enlightened policy such as unfortunately no European concert

pancy such as unibitumately no European concert as yet aspired to.

It will appear therefore that this so-called "barbacous feature" is.

1. One for which the United States is not re-

spansible. 2. That it has put itself on record before the

world as in favour of its abeliting. 3. That it has abjured privateering in the pre-

sent war, and is in practice in accord with the Paris Declaration. 4. That its present course in capturing Spanish merchantmen is justifiable not merely as a war

merchantmen is justifiable not merely as a war measure, but also since Spain has not renounced privateering, as a measure of self-defence.

5. That in any case this feature is still justified by the principles of warfare, and that every probability is that every European power would result to the same practice. In fact, in the Franco-German war even a modified form of privateering was put on the programme by Germany, though the brevity and decisive nature of the struggle gave no opportunity for putting this scheme into gave no opportunity for putting this scheme into

6. Still was is cruelty,—"hell" as some one O. Still was its criticity.—Then as some one says—and so contains many "bacharous features" besides the one mentioned. But evidently the responsibility for forcing this batharity must not be laid at the door of one who is forced to take up the gauntlet in response to an appeal higher than which none is conceivable.

which none is conceivable.

Merchant ships moving freely into spheres outside of their countries jurisdiction, and all the possibilities latent in this fact, contain an element from the point of view of beligererits which makes their exclusion from war-spoits peculiarly difficult and puts them into a somewhat different category from the "destruction of private houses, or the robbery of private werehouses." This however, forms part of a larger subject. subject.

Very respectfully, H. M. LANDIS. Meiji Gakuin, May 6. 1898.

We have already explained that our comments on this matter had no reference to the United States in particular, but were addressed to the general question of the destruction of private property in time of war.—Eb. J.M.)

#### A QUERY.

To the Editor of the "JAPAN MAIL."

SIR, Our greatest authority on Things Japanese having taken up the question of treaty revision, ese having taken up the question of treaty revision, this hackneyed subject becomes again of interest, though, I fear to say, of academic interest only to the general mass of us. And this interest becomes intensified when we see you, also an authority, and on this subject seemingly so well posted, inclined to cross swords with the learned professor. As a humble, but I hope careful investigator of this big question in our little world, I should deem it a Sir,—In your issue of to-day you say concerning the Hispano-American was:—"It is a disgrace to civilization that aimed outrages against private property should be perpetrated in allow-ing the war-ships of the United States to seize unclaimt ships of the Spanish on the high seas, &c." Through the columns of your valuable people the writer would be pleased to read the people the writer would be pleased to read the editor's reply to these two questions, \$2.7. What a life international principles as yet agreed property to these two questions, \$2.7. What a life international principles as yet agreed property to these two questions, \$2.7. What a life international principles as yet agreed property to these two questions, \$2.7. What a life international principles as yet agreed property to these two questions, \$2.7. What a life is charge does not go beyond that charges the life is advice lustifie to Japanese claim of private in the present context. Thus it is in full accord with all the international principles as yet agreed with a life in the property and the barbarity being concluded that would manch,—they would secure knows; while if their advice lustifie to Japanese claim of private in the capacity of experts in its dealings with the private inguity of experts in its dealings with the internation of the United States against the Patis against the Pa lavour if I could have your opinion on one point bearing on the same, to wil :- Two gentlemen attached to the British Legation assisted the Foreign

and possible subsequent unpleasantness, they would fall in the good graces of the Foreign Office? Awaiting with interest your views on the

Yours faithfully,

ASHIBIKI.

#### THE DOSHISHA

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,-If any of your readers care to know what School think of the recent action of its trustees, they may be interested in the following extract from a letter just received from Dr. J. L. Barton, one of the secretaries of the American Board.

I am, sir, etc.,

D. W. LEARNED.

"There is no doubt, if this action has been "There is no doubt, if this action has been taken, that the religious press of this country will discuss the question very fully, and it is easy to forsee what conclusions will be drawn." In will also be the duty of the Presidential Committee to ask the trustees of the Doshisha to return to the American Board all monies given by the Board for the procluser of land for the creation of build-American Board all monies given by the Board for the purchase of land, for the erection of buildings, and for endowment for the institution. As trustees also of the Harris fund we shall have to ask for the return of the seventy five trunsand dollars which they hold. There is no doubt that the American Board and Mr. Harris would never have given a dollar for the institution were it not the three stricks in the constitution were it not the three stricks in the constitution or come. nave given a court for the institution were it not fur those two articles in the constitution or some-thing quite equivalent. The trustees repeatedly informed the deputation in Japan that Article III. would stand forever as the basis upon which adu-cation is given in the Doshisha."

TO THE EDITOR OF THE " JAPAN MAIL."

for the Editor of the "jaran mail."

SIR,—I beg the privilege of making a very few comments on the Doshisha Trustees' Explanation published in the Far East and well summarized by you in a recent number of the Fapan Mail.

I, "Two elements were in the Doshisha" with a "conflict of views," I wish to testify that no

a "conflict of views," I wish to testify that no such conflict existed between Dr. Neesina and his fureign co-workers. We worked together with the utmost harmony; it was truly Dō-shi (of like mind); the "parents" of the school were fully "agreed as to its final career." It was only when the father died and a step-father came in that

the father died and a step-father came in that discord arose.

2. "The American patrons wanted a special type of Christianity," Only if belief in a personal, living God, in a divine Saviour, and a future life is to be regarded as a "special type," Whether "special" or out, this was certainly the type of Christianity which Neesima preached and lived.

3. "The constitution was not imposed on the Doshisha as a condition for any gift." But it was adopted as a part of an arrangement by which

adopted as a part of an arrangement by which the financial control of the school was turned over

the huancial control of the school was furned over
to the trustees, and was the basis on which large
gifts were made to the school.

4. "The elimination of an unpractical clause
which prohibited all change." No change was
prohibited except in the few fundamental principles of the school.

5. "It must be assumed that Mr. Yokoi intends

S. "It must be assumed that Mr. Yokoi intends the public to understand that the middle school of the Doshisha is supported entirely with Japanese money." It certainly does seem so, but what are the facts about that school? The funds for its land and buildings were almost entirely, certainly at least 95 per cent. of them, given by American Christians to build up a Christian school. In Christians to build up a Christian school, in order to obtain the exemption from the conscription it needed to have an endowment fund of 50,000 year or thereabouts, and where was that money obtained? By appropriating to this school the money which Mr. Harris gave to found a Christian science school.

D. W. LEARNED.

Kyote, May 9th, 1898.

Yours, etc.,

#### THE LIMITS OF JAPANESE ART.

To THE EDITOR OF THE " JAPAN MAIL."

SIR,—Professor Chamberlain in the third and revised edition of his very valuable "Things Japanese" has made the statement (see Fapan Mail April 28th) that "Japanese Art has limitations, and is decorative and not representative." The mad is according and not representative. The statement appears to me superlatively dogmatic. However, a war-beaten veteran has more right to make "superlatively dogmatic" statements than a youthful amateur. Notwithstanding the present writer's unbounded admination and respect

ese Art is limited, and is decorative and not representative." In a theoretical sense this criticism is true in relation to the art-productions of every other country and nation. Art belonging to that category of objective sciences which are reached by an inductive procedure of ratiocination, it will always remain confined within those circumscribed limits to which our finite understanding is subject. It was in this sense, I am inclined to think, that Aristotle understood the limited realins of art when he said:—" Art constitutes a first principle which subsists in another subject. Whereas nature constitutes a first principle which rubing itself." Indeed, it is in this very limitation alone that our faith in the future of its steady growth is assued. Although literature has far greater facilities than art to express the ideas conceived by the thinking art to express the ideas conceived by the finishing agent, still often times it is greatly hampered on account of the insufficiency of the instruments necessary for bringing to life and objectifying those thoughts. Poet Coleridge knew what he was talking about when he said he could write just as good dramas as those of Shakespeare if he only knew how to do it! It is far easier to persiften idea in read a relative as activated the sonify an idea in words written or articulated than in a work of art. If the Japanese artist is constrained to battle with such limitations, his Western brother also has to combat the same disadvantages.

However, there are several points, it has to be However, there are several points, it has to be conlessed, which greatly encumber the Japanese artist and considerably curtail the freedom of his movements and flights. The absence of a good model is one of them. As long as the white Circassian is considered as the ideal type of human form in preference to the Mongolian, so long Japanese set, in its relation to the manifold activities manifested by man, will be exposed to criticism and even censure.

criticism and even censure.

Then, again, the hitherto exclusive insularity of the nation has deprived the Japanese artist from acquiring that broadness of conception and uni-versality of taste in our æsthetic faculties which are evolved gradually by the juxtaposition of art objects of divers aim and accomplishment. Western Art has a consecutive history of more than thirty centuries standing behind it. It has been integrating with untrammelled freedom and improving itself during all this period of time through an immense expanse of territory and gradually gravitating to itself with irresis-tible magnetism everything that is highest, noblest, and elevating in the most civilized nations of mankind. In the veins of a Sargeant can be easily seen flowing the blood of a Michael Angelo; and in those of Angelo the blood of a Phidias. Likewise the Greek artists also derived their high inspiration and florescent life from those unknown Masters of Egypt and Assyria who had passed into the world of oblivion continues before. These stadia of the progress of art from one country to another in the ancient world, and its ultimate consummation in the transcendent heights of Greek art are distinctly visible, just as modern and medizeval art. The complicated civilization of the western world, whether in art civilization of the western world, whether in at as in literature, is not the mature child of a single oation and born in a single generation, but from India to Africa and from Assyria to England each one has liberally contributed its own quota. If the association of ideas in the strictly psychological world leads to the formation of thought-centres in the individual mind; how much more then the association of ideas and intercommunity of tastes between nations should lead to the formation of more extensive conceptive to embosom every elevating form of knowledge and imagination.

If we turn now to the Japanese Artist we shall find him quable to claim for himself that noble fo-reign and diversified ancestry which has contribut-ed so extensively towards purifying and exalting the taste of his Western brother artist. Centuries the taste of his Western brother artist. Centuries ago a few wandering pilgrun artists visited China, and perhaps India also, and got a few archaic and simple art-germs from the countries visited, but on coming back they had to resuscitate, without the aid of a foreign tutor, the dormant life of the beclouded and fainting ideas. Even this narrow channel of intercommunication between Japan and the cuttide would make them. comment of intercommunication between Japan and the outside world more than three centuries ago was closed by the arbitrary action of a despoic government and henceforth the artist was left to grope his way in the intense intellectual darkness with which he was surrounded. Such being the conditions through which Japanese Art has passed. a youthful amateur. Notwithstanding the present writer's nubounded admiration and respect for this English Morowori, he frankly avows his insulity to understand what the learned Professor insulity to understand what the learned Professor means, or intends to mean, by saying that "Japan."

Digitized by COSE

No one who reads Pausanius can fail to see the decorative aspect of Greek art. Even the high-decorative aspect of Greek art. Ev

not many civilized countries when sequestrated from the rest of mankind relapsed into ignorance

and semi-savagery?

If by the "limits" of Japanese Art Mr. Cham If by the "limits" of Japanese Art Mr. Chamberlain means those natural short-comings and disadvantages with which every artist has to contend, and none is able to remove totally, the criticism is justifiable. But if by these "limits" the professor means the install inability of the Japanese Artist contents the restrict the professor means the install inability of the Japanese. ese Artist to grasp the reality of the universal world of Art, because his intellect and imagination were not capable of soaring into those subline regions within which his more cultured western brother has been dwelling, then I will dispute the justice and accuracy of such a judgment. There is no object in the vast universe which arrests the interest and moves an inquiring soul to deliberate activity, that has not interested and moved the over-sensitive soul of the Japanese actist. Religion and morality, life and death, heaven and ligion and morality, lite and death, neaven and earth, sea and land, visible and invisible all have passed in a panoramic order before his keen abservation. The scope of the Japanese artist, in the writers' opinion, is just as wide as that of Greece or of Italy; and to prove this is simply more than a milbas occupied from its birthday, more than a milbasium and to the present day. lenium ago, to the present day.

Neither, I confess, can I understand clearly, to charge made against Japanese Art as being decorative and not representative." The origin of art is decorative before being anything else, and whenever an object loses its distinctive decoand whenever an object toses his distinctive decorative features immediately it ceases to be, properly speaking, art, although it may still temain a representative object. The Central American totemes have ceased to be considered any longer totemes have ceased to be considered any longer as objects of art, simply because the canon of decorative beauty in the civilized man has advanced, yet these totemes still remain as representatives of the crude mind which recated them. It will be readily observed that I am using the word = decorative" in a broad sense, meaning the attractive aspect and quality of anything beautiful, a quality which never completely disappears in all the different stages of the evolution of the ascent of art. of the ascent of ait.

In the gradual advancement of human thought, as far as we can observe at present, the idea of utility has preceded that of beauty. Man in a state of nature, before taking any cognizance of an inner feeling craving after the ideally beautiful, first must have attended to his own pressing immediate physical needs. The crude poltery bereft of all on amentation, unearthed from the bereft of all ornamentation, unearthed from the ruins of remote antiquity, corroborates this, However, as necessity is the father of utility, likewise luxury in the father of beauty. From the only terra-cotta pieces which the savage has left to the posterity to the best and most delicate of the Satsuma ware the impulse moving the progress of the aut to perfection in purely decorative. The idea of decorative heavity can never for a moment abandon the thinking head of the author, nor the aesthetic eve of the user. It is this nor the aesthetic eye of the user. It is this absence of harmony, and friction concerning the conception of the idea of the beautiful, between the artist and foreign public which between the artist and foreign public which courses every species of Japaneses ert to look so unualited and bizarie to us. If we thoroughly analyze any object of representative art we shall find that each component element attracting out observation first, to be purely decoratracting out observation first, to be purely decorative; and if any residuum is left to serve as the background for all the decorative accessions, it will be found to be that of utility. When the dacorative beauty through some process of analyzation vanishes away from an object of art, the idea of utility immediately steps in to claim the vacant throne. Take for example, the Parthenon, that glory of Greek art. Taken as a unique whole it was an object of the highest glyptic and architectural Art. However, even here every object constituting that sublime edifice had a decorative import: the stansary, the friezes, the nedic object constituting that sublime edifice had a deconative import: the statuary, the friezes, the pediments, the facade, &c., and in their combined totality generated that force which enabled every Greek worshipper to comprehend the transcendent truths of his creed in a facile manner. Take again a first-class Japanese sword: the blade by Masamune, the hilt by the Kajikamas, and the metal work by the Gotos. Here each separate object, although of decorative significance, several as a component element to complete the final idea of the sword as a useful weapon for cutting. Here also hearty and utility are inseparably united together. together.

though in a different sause, is true in relation to Japanese art, both in its extensiveness and arrangement. More than literature or anything else it has beneficially affected the mantal faculerse it has been related attended the manner facti-ties and developed the religious instinct of the race. It has polished the manners of every individual, and brightened the ghorn of his daily toil, and more than all, with a convincing reality it has depicted to him the terror of sin and reward of virtue in the eternal realms of the great future. If this is not a representative art, I confess I do not know what meaning that expression conveys.

Finally, in regard to the distinctive value of Japanese art as compared with that of Greece or Italy, it is extremely difficult to come to any conltaly, it is extremely difficult to come to any con-clusion, because of the impossibility of making any satisfactory comparison. Their ideas of things beautiful, especially of the movements and posture of the human body and its diversified actions, are diametrically opposed to those of the Western nations. Frequently the writer has heard very severe criticism made of the unnatural attitude and deportment of the Japanese women as paint-ed by the Ukiyo School; while to a native the costure will apporar the acme of grace and refineed by the Ukiya School; while to a native the posture will appear the acme of grace and refinement. Hence to study Japanese art thoroughly we must study the Japanese socially and psychologically with deep sympathy. The close relationship between the actist and his productions necessitates their study together. These and a large multitude of other causes compel us to judge Japanese art by itself and not in comparison with the act of Europe. However, if a Japanese is forced to make such a comparison he has a right to demand that the contrast of every object should be made separately. The Japanese scolutor should be made separately. The Japanese sculptor has never tried his skill in marble, where the has never tried his skill in matble, where the Greek has stood at the head of all, but in wood and bronze he has produced statuse worthy the best period of Greek Art. In painted boxes the Japanese has surpassed and quite distanced his Greek brother, just as much as the painting of an Etruscan vase excels that of an Egyptian coffin. The Japanese painter has done nothing in oil to compare with the divine productions of the youth of Urbino or of Titian: but in water-colours he has expressed his thoughts with a charm and grace that a Japanese has no reason to be ashamed of. In ivory, pethaps in wood caving also, Japan is not only far ahead of Italy, but of all the Western world. In miniature art, if a few things produced in China are excluded, if a few things produced in China are excluded, Japan leads the world.

Very truly, yours, May 8th, 1898.

#### ABOLITION OF TORTURE IN JAPAN.

TO THE EDITOR OF THE " JAPAN MAIL."

SIR,—In your issues of the 7th and 9th instant you deay to Monsiem Boissonade de Fontarable the chief share in the complete and final abolition of torture in Japan. As a friend of this eminent jurisconsult who acquired so many tides to Japanese gratitude, I cannot let pass without protest the words in which you have seen fit to endeavour to deprive him of a glory which he prized above all others. For Monsiem Boissonade was an ocular witness of the last case of official tratue in Japanestiness of the last case of official tratue in Japanes. witness of the last case of official torture in Japan,—and he employed the opportunity to insist on —and he employed the opportunity to insist on the abolition of so barbarous a practice. So spe-cially proud was he of this service of humanity that (should his failing strength still permit of his exerting bimself so far) I make fittle doubt that this truly "grand old man" will humself meter a protest against your manner of writing the history of an epoch in which he played so important and so humanitarian a rôle. Meantime, and in order to obviate an error course impression being made on the mind of sow of your traders. I can affiou that the mind of may of your traders, I can affirm that I have had from Monsieur Boissonade's own lips the many other persons who had the honour of being admitted to his intimacy have heard it from him as well as I Leaving to those whose experience may render them competent witnesses or judges to discuss the other historical points touched on in your two articles, I enclose my card, and am

Sir, your obedient vervant, Tokyo, 11th May.

AMICUS.

#### SPRING SPORTS AT YOKOHAMA.

Saturday afternoon saw a large and fashiomable gathering at the Cricket Ground, Yokohama, to witness the Spring Athletic Meeting of the Yokohama Cricket and Athletic Club The weather, though not bright, was fine and warm, and pleasant enough to attract almost the whole of the foreign community to the ground, so that from the social point of view, as from all Digitized by

others, the affair was a great success. Ladies were present in great force, and the many hand some dresses to be noticed added hightness and colour to the scene. Yokohama ladies, however, are to some extent an exception to ladies elsewhere. They appear to take a real interest in athletics. Everyone has had the experience, probably, of trying to explain at a Lord's match the noble game of cricketto some fair young creature, and of being fluored at the end of an elaborate and lucid exposition by some such remark as "When in the umpire's turn to bat?" The Yokohama ladies, on the other hand, seem to take a personal interest in the events: they have their others, the affair was a great success. Ladies As when in the uniple's thin to bat. The Yokohama ladies, on the other hand, seem to take a personal interest in the events; they have their favourites, and watch keenly the progress of each race. As a nule the sport was excellent, the entries being fairly numerous in most of the events, while the races were generally well contested. The arrangements were under the supervision of the following committee: Mr. J. P. Mollison (President), Mr. F. C. Jackson (Sectary), and Mr. H. C. Litchfield, Judgers Mr. James Dodds, Starter; Mr. L. H. Abel and Mr. J. F. Hall, Timekeepers; Mr. C. M. Duff (Vice-President and Captain): Mr. F. E. White, Hon, Treasurer; Mesas, C. H. Bain, D. H. Blake, G. J. Libeaud, E. Ffirt Kilby, G. Philip, F. J. Lias, B. S. Edwards, and A. B. Walford. Details:

100 VARDS FLAT RACE HANDICAP.—(First and second prizes, "Insurance" Cups.)—First heat:

1, R. Van R. Smith 4 yards; 2, H. Goddard to yards; G. Walt 5 yards, 0; time 11\(\frac{1}{2}\) secs. Won by several yards. Second heat: 1, G. C. Allcock, scratch; 2, E. G. Libeaud 2 yards; H. K. A. Onderdonk 4 yards, 0; time, 11\(\frac{1}{2}\) secs. Won by about a vaid.

Final 1, Allcock; 2. Smith; 3, H. Goddard. Time, 11# secs.; won by a foot; two yards between second and third.

Long Jump.—First prize, Brokers' Cup.—1. B.
J. Dyer, scratch, actual distance 19 feet 2\(\frac{1}{2}\) feet,
2, W. B. Mason I ft. 9 in., distance 17 5\(\frac{1}{2}\) feet;
3, R. C. K. Johnson, scratch, actual distance, 17.5;
H. S. Goddard, I foot, and L. E. McChesney 5 inches, O.

POITING THE SHOT (15lbs). First prize Silkmen's Cop.—1, H.K.A. Onderdonk, sciatch, actual distance 36 feet 2 inclus; L. E. McChesney, I foot, actual distance 31 ft. \(\frac{1}{2}\) in; A. L. F. Dewette, 1 foot 6 in. o.

HALF-MILE FLAT RACE.—First prize Bankers'
Cup. 1, E. J. Libeaud, scratch; 2, H. E. Hayward, 15 yards; 3, H. W. Kilby, 30 yards; W. Goddard, 15 yards, 0; G. Watt, 20 yards 0. Time, 2mi . 14\frac{2}{3}\cdot \text{ecs}, Libeaud by the end of the first lap had worked his way through the field, and won with the greatest case by 15 yards. Kilby was a good third.

Boys' 220 VARDS RAOB.—(Boys to to 15; first prize presented by Mr. D. H. Blake), I. K. Peacock; 2, G. Liwine; 3, C. Watson. Time 294 ecs.

HIGH JUMP,—First prize, the Steamship Cup.

1, J. F. Denminond, allowed 3 inches, actual height 5t. 2 inches; 2 H. K. A. Onderdonk, scratch, 5t. 4 inches; W. B. Mason, 3 inches, o; L. B. McChest ey, 5 inches, o.

QUARTER MILE FLAT RACK.—1st Prize Ladies'
Price; 2nd, Teanen's Cup. 1, K. V.o. R. Smith,
15 yards; 2, W. B. Mason, 10 yards, 3; H. W.
Kilby, 25 yards; E. W. Kilby, 20 yards, 0; E.
Adel, 20 yards, 0; H. Goddard 7 yards, 0; R.
C. K. Johnson, 5 yards, 0. Time, 55 seconds,
Smith wan by about six yards; 1 on or five between second and third. Miss Poole presented the prize to the winner.

the prize to the winner.

GIRL'S RACE.—I. Hilda Salabelle; 2. Clara Woodruff; 3. Hilda Woodruff.

SACK RACE 50 yards.—I. A. Kingdon; E. H. Liwine 0; W. Goddiard 0; W. B. Mason 0.

HURDLE RACE, 120 yards, 10 flights. Prist prize Consular Cup.—I. E. J. Dyer, scratch; 2. H. K. Onderdonk, 5 yards; 3. W. B. Mason, 5 yards. Time, 19 seconds. Dyer won rasily.

POLE JUMP. Frist prize "Prefessional" Cup—1, H. S. Goddard, 1 foot, actual height, Il feet yin; 2, Il. Powys, 9in., 8 feet 6in; 3, H. K. A. Onderdonk, 9 inches, 8 feet 9 ii. This event was extremely well contested, and buth the winner and Ontletdook deserve congratulation on their feats.

Onderdook deserve congratulation on their feats, Orderdook deserve congratulation on their rears, Milb RACK —First prize, Mr. Dare's Challeoge Cup. 1, E. W. Kilby, 80 yards; 2, E. J. Libeaud, scratch; 3, O. M. Puole, 50 yards; G. C. Allcock, scratch; 0, K. C. Davis, 15 yards; O; W. Goddard, 20, yards, 0; H. E. Hayward, 40 yards, 0, H. hwine, 60 yards, 0; E. H. Morse, 70 yards, 0; C. S. Moss, 80 yards, 0; G. Watt, 60 yards, 0. Time, 4 mm, 57½ yecs. Libeaud made a game struggle to make up the start allowed the limit man, but was mable to overhaut him, and Kilby won with ease.

#### THE WRECK OF THE P. & O. " CHINA."

GRAPHIC ACCOUNTS BY EYE, WITNESSES OF THE DISASTER.

Full details have been received at Bombay from Full details have been received at Bombay from Aden correspondents stating how the China came to grief on Azalea Point, Perim, on March 24th, and the story is interesting as showing once more how bravely the crew and passengers of a British liner can face danger, when it falls across their path. Steaming at 13 knots the ship had Perim fairly close at dinner time. The weather, as evening closed in, was neither clear nor thick. The upper atmosphere was clear, but a slight haze bung over the surface of the water, while the wind was fresh from S.E. At 8.15 p.m., dinner in the saloni was nearly over, and many had already left to enjoy the evening on deck, when at that moment the signal belt to the engine room was rang. Land was seen looming ahead, and a harsh grinding and crushing sound was heard above the wind, and the ship had struck. To reverse the helm hard over was the work of an instant; but the ship remained firm from that moment. It was a dark night with a rising sea, which had already begun to break over as the ship canted slightly to starboard.

#### PERFECT DISCIPLING.

There were over 400 passengers on board, many of them women and children, but there was no panic. Even before many had time to realise what had happened, the ship's band struck up in the music room, and a succession of lively airs, coupled with the assurance of officers that there was no danger, brought calm comage where fear and dismay might well have been present. Rockets and bine lights were now burnt, and a boat manned by stewards was sent round to Perim Harbour to obtain assistance. At 17 30 p.m. the pilot arrived and, after examining the position of the ship, advised the removal of the passengers m the ship, advised the removal of the passengers me the shore.

#### REMOVED WITHOUT A CASUALTY.

REMOVED WITHOUT A CASUALTY.

The stern of the ship had swing round to the West, and the wind was right on her stacboard side, thus enabling boat operations to be conducted in somewhat calmer water. Without this protection the landing would have been well night impossible. Mr. Beever, Chief Officer, and Mr. Pullen, the Second Officer, then successfully established communication with the shore by means of cables. By a bridle attached to these cables the boats were fertied across from ship to shore. The Purser (Mr. J. Watt) and the ship's stewards worked, in the words of a passenger, "like Britons." Fust the women and cluddeen were saved, though some ladies elected to stand back till their has band," turn arrived. It was a strange scene as witnessed in the strong glace of the electric light, which all night long, thanks to the excellent work of the Engineers, who, under the shle guidance of the Chief Engineer (Mr. Smith), never left their posts, bit up sea and shore alike by its bright gleam, and showed the absence of those dangers which darkness might have suggested. The ladies vied with the men in calm courage and absence of complaint. The whole work was personally suger-intended by Captain de Home, and by 3 a.m. on the 25th March the landing of the passengers was competed without a single casualty of any kind, completed without a single casualty of any kind,

#### THE MISERIES OF SHIP WRECK! A WILD RESTING PLACE.

Perim Island, inhabited as it is by some 150 souls, does not offer very bospitable shelter to over sonly, does not offer very hospitable shelter to over 400 people auddenly stranded on its abores, but everything possible under the circumstances was done to mitigate the lot of those who had to spend the long night on the island until assistance could be rendered. Invalids among the passengers were sheltered under canvas erected for their comfort, and all endeavoured to make best of their surroundings. Nothing more could be done save wait on the sandy beach till break of day. The sun at length shone out on a mothey crowd varying in garb from conventional black and white evening diess to the conventional black and white evening diess to the more primitive costumes of night dress and pyiamas. And there lay the China with her great decks towering out of waters "strong in death." There, by a strange irony of fate, within a few yards of the, the hollers of the Hongkong still held out against the pitiless break of the waves. The sandy beach was bounded on the Wost by cliffs, which rose gradually to a height of 250 feet, soon to be scaled by all. The stewards of the ship were early at work, and stores galore were sent on shore.

A TRAMP TO THE RARBOWR. -- TIMELY ARRIVAL OF THE "CARTHAGE."

It was quite obvious when the rescue was attempted, that embarkation at this point of the fs-land would be attended with some risk and much promain from

discomfort, and that by far the more suitable spot ras Perim Harbour, which lies to the South of was Perim Harbom, which her to the South of the Island. So a pilgrimage was organised to that place, and the whole company reached Perim Harbour and were cheered by the good news that the P. and O. Carthage had already actived from Aden, having made a very quick rom. She had only received the news early on Friday morning, but steam was got up at one, and she reached Perim at 1.15 p.m. the same day. It was a most foctunate curromstance that a ship belonging to the Company was so accessible, as Perim would to the Company was so accessible, as Perini would have been a dreary and desolate spot for a pro-longed stay, and right glad were the pessengers to once more find themselves on board ship.

#### THE VOYAGE RESUMED

All Saturday and Sinday were required to transfer the baggage, mails, parcels post, and specie, a very heavy task. The mail was a very large one, and the China had now 14 feet of water in the forehold. The Third Officer, Mr. Brooks, rendered yeoman service in his efforts to recover passengers' haggage. Penint was left at 7 p.m. on the 27th Maich, Snez reached at 5 a.m. on the 31st, all the passengers being in good health, save that some were suffering from the strain of excitement through which they had passed. It may also be mentioned that as soon information of the disaster was received in Ader, H. M. S. Orlando, II. M. S. Racoon and the R. I. M. S. Mayo, in addition to the P. and O. Carthage, started for the scene of the wreck to sender what help they could. On arrival at Perim, the Orlando, which was proceeding homewards from Australia, volunteered to take the mails to Brindisi; but it was, as a heady mentioned, decided to use the Carthage or the purpose. Although the accommodation on the Carthage was limited, all the passengers preferred All Saturday and Sunday were required to purpose. Although the accommodation on the Carthage was limited, all the passengers preferred to put up with the inconvenience instead of returning to Aden and waiting for other homeword-bound steamers. It was expected that some would elect to do so, and both hotels at Aden had been engaged for them.

FUTILE ATTEMPTS TO GET THE " CHINA" OFF

Salvage operations were quickly started. Tugs and divers' lighters, pumps, and all necessary appliances for saving the ship and cargo were soon sent up by the Agent of the P. and O. Company, but very little success attended their efforts. It was found most difficult to keep the water down, the vessel's fore bulk heads having been stove in. the vessel's fore bulk heads having been stove in. She is lying in a very dangerous position, just below the signal station light. Alt she is affiour in five fathoms of water, while forward her danglit shows sixteen feet. The tugs cannot get at her forward, as only lighters can be got round her bows. This retards all progress, and adds to the possibility of her becoming a total wieck. Little of the cargo has been salved up till now, but hopes are entertained that with the advent of hetter weather, a good deal may yet be done in this tespect. Much anxiety is left concerning the ultimate fate of the vessel. "As the until closes," wites an Aden correspondent. "I have the after the wittes an Aden correspondent, "I hear that the weather has abated considerably within the last day or two, and every effort is being put faith to get the China off. If this much to be desired end is attained, the task will be a long and tedious one on account of the position in which the ship is at present lying. A quantity of cargo has been brought back to Adeo, including 1,800 tons of Australian fmil. and is now awaiting shipment."

—Times of Ceylon.

#### THE SEIZURE OF FORGED BANK NOTES.

CLEVER REPRODUCTIONS OF THE ISSUE OF A HONGKONG BANK.

Referring to the extensive seizore at Singapore of forged bank notes, the Singapore Free Press of April 28.h says:—

The existence of m Continental "long" firm which appears to have been doing a very extensive business in forged Hongkong and Shanghai bankbanata was houghly to light vestriday. tensive business in forged Hongkong and Shang. In his bank-notes was brought to light yesterday, two arrests being made on board the steamer, because of the police, when they were given into custody. On two arrests being made on board the steamer, lospector sine of counterfeit notes. One of the passengers, named Henri Grosse, who it is said made himself particularly pleasant to all the ladies on board on the steamer found to get notes purporting to be of sine of counterfeit notes. One of the passengers, named Henri Grosse, who it is said made himself particularly pleasant to all the ladies on board on the steamer found to get notes purporting to be of the value of \$200,000. H. Grosse also handed the value of \$200,000. H. Grosse value handed handed handed handed handed handed handed handed handed handed handed handed han

with a request for change. After some haggling the price was agreed upon, and the Kling handed over 236 sovereigns. Shortly afterwards he became turmented with doubts as to the genuineness came tormented with doubts as to the genuineness of the notes and took some of them to the Hongkong and Shanghai Bank, who declated them to be forgeties. Grosse was sent for, and detained antil Inspector Bourne arrived. The only account he gave as to how the notes came into his possession was that he had bought them of a money changer in Colombo. Permission was then obtained from the Consul to search the ship, and it was there found that Grosse had travelled from Germany in company with a man named Schultz, and that they had stayed three weeks in Colombo, Schultz and Grosse sharing the same cabin. Search was made of all the baggage belonging to Grosse, but nothing was found, until Inspector Bourne asked for a small tunk with a patent spring lock to be opened. Grosse immediately protested, stoutly decided that it belonged to him, and challenged the right of the detectives to interand challenged the right of the detectives to inter-fere with it, as it belonged to his cabin mate Schultz. The latter was immediately sent for, and Octualiz. The latter was unmediately sent to, and on being shown the box at ouce denied all knowledge of it. Grosse was accordingly asked to produce his teys, and eventually the box was opened, when it was seen to contain assorted bundles of notes laid flat in the box in piles of shout \$1,000 each. A suspicious movement on the part of Schuliz led the detectives to search him part of Schultz led the detectives to search him for arms, and a loaded revolver was found in his possession, a revolver not loaded being taken from Grosse. The two men were then arrested, and taken ashure, this being about 5-30 last evening. A further search was made, and in addition to the bogss notes two stamping machines for numbering notes consecutively and other counterfeiting implements were discovered, together with a large sum in gold and Bank of England notes. All the supposed Hongkong and Shanghai notes are clever reproductions of the issue of the Hongkong branch, every detail, down to the signatures, theing reproduced; and it is contons to speculate what might have happened had the gang succeeded in reaching Armoy, Swatow, or Woosing, where the sham notes would have found a ready currency. In all the total face value of the notes discovered must reach about \$252,000, the value given by the prisoner Grosse. As already stated the prisoners are believed to have spent three weeks the prisoners are believed to have spentiffice weeks for Colombe, where they purchased large quantities of jewellery, lace, etc., and in this connection it may be noted that an unfortunate chetry is in custody in Penang for having counterfeit motes in his possession, which it is supposed he may have come by honestly amongh, but which led to his arrest when he tried to exchange them. It is further stated that a number of the notes in question were in circulation on board the steamer Preussen, and yesterday one on board the steamer Pretisen, and yesterday one of the passengers, apparently inwittingly, effected some small purchases in Messis. Katz Bios, with a note which the Bank has since confiscated as a furgery. This morning it was also rumonized that over \$6,000, had been discovered hidden in one of the beds of the cabin occupied by Grosse and Schultz, but as a careful search was made of the room yesterday this may point to the fact that there are still people on board belonging to the gang who were anxious to get rid of their notes.

THE ACCUSED REFORE THE MAGISTRATE. The Straits Times at April 28th says :-

Heimich Grosse and George Schultz were charged before Mr. Wolferstan this morning with having tried yesterday to exchange with a Kling moneychanger, forged Hongkong and Shanghai Bank notes to the value of \$2,550. Inspector Bourne explained that the prisoners had come from Colonia. explained that the prisoners had come from Colombo on board the Preussen. When she arrived yesterday, they at once commenced operations, and obtained £236 in gold, in exchange for the \$2.530 worth of notes. The money-changer then became suspicious and sent the notes to the bank, where they were pronounced forgeries. The defendants were sent for, and detained at the bank until the arrival of the LATEST TELEGRAPHIC NEWS.

(FROM 180 " JAPAN TIMBS") THE WAR.

THE TWO FLEETS DRAW NEAR. BATTLE IMMINENT.

London, May 10.

Reports brought by French steamers state that the American cruiser Montgomery was being chased by a powerful Spanish cruiser off Hayti. It is believed that the fleets are approaching one another and that a battle is imminent.

#### THE PHILIPPINES.

"THE TIMES" ADVOCATES AMERICAN OCCUPATION.

ACQUISITION BY OTHER POWERS DISFAVOURED.

The Times, in a leading article, remarks that the occupation by the United States will be the best temporary solution of the Philippines question. Éngland, it declares, however, is unable to regard with indifference their acquisition by France, Russia or Germany.

FIVE THOUSAND MEN FOR MANILA. CONGRESS THANKS COMMODORE DEWEY. London, May 11.

A force of 6,000 men is assembling at San Francisco, whence they will embark for Manila. Congress has passed a vote of thanks to Commodore Dewey, the Commander of the Asiatic Squadron.

#### BRILLIANT ENGAGEMENT.

The American torpedo vessel Wisslow fought a brilliant minor engagement on Sunday off Cardenas, tackling three gunboats, and disabling one, while coming out herself unscathed.

#### RIOTS IN SPAIN.

Grave riots have occurred in many parts of Spain.

SPANISH SQUADRON STILL AT CADIZ. FIELD LEFT FREE TO AMERICA.

London, May 12. Spanish Squadron remains at The Spanish Squadron remains at Cadiz. This changes the situation, as it leaves America free to attack Porto Rico and Cuba without delay.

Hongkong, 11.37 p.m., May 8.

According to intelligence brought from Manila yesterday by the Hugh McCulloch, an engagement took place off Cavité on the 4th instant between the American and Spanish squadrons. The Spanish squadron was completely destroyed, its loss in killed being 200, and in wounded, 600. American ships are said not to have suffered at all.

[Another telegram received in official quarters says that the number of Spanish ships destroyed was twelve. If that he the case, the loss of life is disproportionately small.—ED. J.M.]

Cavité harbour has been taken possession of by the United States squadron, and Manila is now blockaded.

ed with loss of life have occurred between .

MILAN UNDER MARTIAL LAW: TERRIBLE LOSS OF LIFE.

London May 10.

A force of 800 men is now in occupation of the streets at Milan. Fugitives from the city say that 300 rioters have been killed and 1,000 wounded. The city is now quiet.

THE RISING IN SIERRA LEONE. COLONIAL SECRETARY SAYS REPORTS ARE EXAGGERATED.

London, May 11.

In the House of Commons, Mr. Chamberlain stated that the reports of the rising in Sierra Leone were exaggerated. There was no intention to despatch European troops.

THE FRENCH ELECTIONS. REPUBLICAN MAJORITY.

Loudon, May 12. The French elections have resulted in the return of 211 Republicans, 136 Extreme Left, 36 Monarchists, and 180 Ballotages (?)

THE LEASE OF WEI-HAI-WEI. TO BE CARRISONED BY BRITISH TROOPS.

Two British regiments from India will proceed to Wei-hai-wei at the end of the year.

GRAVE SITUATION IN ITALY. THE COUNTRY UNDER MARTIAL LAW, RAILWAYS SEIZED BY THE MILITARY.

Martial law prevails over the greater All railways have been part of Italy. placed under military control, and a rigid censorship prevents the interchange of news. It is evident that the country is passing through the gravest crisis since it attained its unity.

London, 3 p.m., May 7. The Chinese Plenipotentiary this day paid over to the Japanese the sum of £11,008,857.16.9 in English gold coins. With regard to the sum to be received in Berlin, namely, one million pounds sterling, no intelligence of its having been paid over had been received up to 6 p.m. yesterday.

(The above is taken from the Chuo Shimbun.)

#### (Received by the Fiji.) FRESH CLAIMS BY FRANCE.

Peking, May 10. The French Government has proposed fresh claims to the following effect; that 30,000 taels be paid as compensation to the families of the murdered missionaries, that a church be established as a memorial of those murdered, and that the railway be extended from Nanking, of

Kwangsi province to the coast of Canton. CHINA'S CONCESSIONS. MINING AND RAILWAY ENTERPRISE.

Peking, May 5 A railway line reaching to Hwang Ho will be constructed in order to transport the mining products which are being excavated in the province of Shangshi by a joint firm of British and Italian merchants.

THE TIENTSIN CONCESSION TREATY.

Peking, May 11. The Tientsin concession treaty has been signed. Japan has acquired by virtue of the treaty a spacious concession on the upper course of the Pei-ho. Japan has also secured the right of constructing a inside the walls of Tientsin.

RUSSIA'S SLICE.

Peking, May 8. The extension of land leased to Russia in the Liaotung Peninsula covers 800 square miles, from Pi-tsz-wo in the East to Adams Bay in the west inclusive. The Russian Government will despatch at least 15,000 soldiers to act as garrison there.

EXPANSION OF BRITISH POSSESSIONS.

The area of land which has been added to the British possessions extends for 200 square miles in Kowloon, opposite Hong-

#### THE RIOT AT SHASHI.

Peking, May 10.

At 7 p.m. on the 9th instant, a mob of Chinese rioters burned the Japanese consulate, the offices of the steam-ship company, and the custom house in Sha-(the new settlement in Szechnen established by the Shimonoseki Treaty).

Another telegram of same date adds that the officials of the Japanese Consulate barely escaped with their lives and took refuge on board ship.

Shanghai, May 11. On the night of the 9th inst, a riot arose at Shashi, and the British Consulate, the premises of Jardine, Matheson & Co., the China Merchants' Steam Navigation Company, and the residence of the Commissioner of Customs were reduced to ashes by the rioters. All the foreign residents here are safe. The disturbance has now subsided (10.45 a.m.)

THE DISTURBANCE AT SHASHI. (Official Telegrams from the Japanese Consul.)

Shashi, May II.

I meant to-day to go down the river as far as Hankow, but the Taotai strongly urged me to give it up, representing to me the dangers attending such a journey. He requested me either to continue my stay at his Yamên, or if I must go under any circumstances, to get on board a steamer from a safe spot in the neighbourhood. I am, consequently, making inquires about steamers. The Customs business being stopped, there is no means of despatching postal communications.

The premises of Messrs. Jardine, Matheson & Co., and of the Chinese Merchants Navigation Company have been completely burnt, but those of Messrs. Butterfield & Swire are safe. The British Consul was absent, but the ship on board which he used to live was able to cut her mooring, and float down the river, thus escaping from any harm. Three Customs officials, with their families, were able to escape, but all their property has been destroyed by fire. Two churches, being removed from the seat of disturbance, escaped being burnt down. The missionaries, five in number, left for Hankow in company with the Customs officials.

MR. EITAKI ESCAPES TO KING-CHOW.

Shashi, May 12. Consul Eitaki, is now in King-chow intending to proceed to Han-kow. mob continues very turbulent.

### (SROM THE "LEINA GAZETTE,")

BEACK FLAGS ON THE WAR PATH.

Hongkong, May 6 Three thousand Black Flags have assembled at Wuchow owing to a dispute between soldiers also secured the right of constructing a break-water on the lower course of the river and of establishing a tramway thence to consult and the Custom House is guarded

#### HONGKONG.

At the annual general meeting of the Hongkong Chess Club last week the question was to be de-cided whether the Club, in accordance with its tow established habir, is to keep its doors open throughout the summer. At the end of April matches and tourneys were still in full swing.

#### Norms.

We take the following report of the international cable match from The Times :-

This international contest for the trophy provided by Sir George Newnes took place on Priday and Saturday, March 18th and 19th last, and resulted in a win for England, as last year, by \$\frac{1}{2}\$ to \$\frac{1}{2}\$. Play was carried on by means of the Atlantic cables, the telegraphic arrangements being in the hands of the Commercial Cable Company. For the English side the grand hall of the Hatel Cecil had been secured, the Prince's hall having proved in the Academy of Music. Special wires are carried (e) To bring up the king among White's pawns in the Academy of Music. Special wires are carried in the Acade

former matches of the kind, the two centres, albeit some 3,500 miles apart, are brought into close touch. So much is this the case that in obviously touch. So much is this the case that in obviously easy positions the moves are exchanged—i.e., move and reply—often in something under a minute. In other cases, and when a player needs time for consideration in a difficult position, there are long waits, just as in ordinary tournament and march play. As the time consumed by the individual player is, however, carefully kept by the aid of the patent cless clocks, he is bound to make at least 20 moves in every hour of his time.

The openings adopted were mostly of a close nature. Boards t and 2 bore a very near resemblance. Boards t and 2 bore a very near resemblance. Boards t and 2 bore a very near resemblance. Boards t, and Mr. Young tried a Queen's Franchetto Defroce (x-P) to K 4, P to K 3; 2, P to Q 4, P to Q Kt 3; 3-B to Q 3, B to Kt 2) at

to Q 4, P to Q Kt 3; 3-B to Q 3, B to Kt 2) at board 8. At board 5 there was a Ruy Lopez, and at board 1 another trench. Board 7 was a Two Knights Defence.

Although this was the fifth match of the kind, we include that which remained unfinished in 1805 and the match between the House of Comnons and the House of Representatives last year, the marvel of the telegraphic communication is in no degree lessened, and perhaps, even more than the play itself, this will strike the imagination. The wires run, starting from this side, to the Royal Exchange, then to Weston-uper-Mare and round the South of Ireland to Cape Canso, Nova Scotia, which again is 850 miles from Brooklyn.

Inside the actual rooms of play no great excite-Inside the actual rooms of play to great excitement is apparent. Here in England, the players were seated at their boards, attended by their tellers. These are mostly gentlemen of the British Chess Chib, who keep the scores, carry the messages to and fro, attend to the clocks, and to the players' personal requirements, &c., and their self-secticing work is worthy of note. Around the grand half large boards were displayed on the walls—a new feature. There were other boards to enable the public to follow the play: including a walls—a new feature. There were ofter boards to enable the public to follow the play, including a gigantic one with pieces a foot high, in the centre of the room.

In his " Grand Tactics of Chess," just published by Roberts Brothers, Boston, Franklyn K. Young lays down the principle that the occupation of that lays down the principle that the accupation of that great central diagonal of the Chess-board which extends toward that side on which the opposing King has castled or must ultimately castle, is the chief essential for the winning of a game. To establish his Pawns upon this diagonal, and particularly to occupy this diagonal by Pawns which extend by one and two squares into the hostile lines, should be the primary object of each player.

Oxford and Cambridge have received a challenge from the American Universities to play a match by cable. The challenge having been cepted the match was to take place on April 20th.

#### EXPORTS.

EXPORTS.

The decline in prices, together with an increase in public confidence in the issue of the war, inspired by recent American successes, has operated in bringing about an increased demand from New York; and prices are accordingly again on the rise. The stock mosold in Yokohama amounts to 59 565 piculs, and settlements from April 28th to May 9th, amount to only 405 piculs.

#### HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitatep constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills

purity can be manutained by the use of these Pills
Sta Sanusa Bares, in his work entitled "The Nile Tribut
taries in Abyssinia," says—"I ordered the dragoman Mahometo inform the Fakir that I was a Bottor, and i had the best
medicines at the certice of the sick, with advice gratis. In I
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an explorer, as, pussessing unmistabable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

#### HOLLOWAY'S OINTMENT

In a certain exactly for had legs, bad breasts, and alcerations of all kinds. It acts miraculously in healing ulcerations, caring skind diseases, and in arresting and subduing all inflammation. Mr. J. T. Gooran, in his account of his extraordinary travels in China, published in 1871, 1881—"I had with me a quantity of Hollowey's Olinament. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tem-spoonful of Olinament was worth a fowl and any quantity of peas, and the demand become ao great that I was obliged to lock the substantial of the mail remaining "stock."

ing to starve the Spaniards into surrender; he will not bombard it until the arrival of troops.

THE bicycle races of the Y. C. and A. C., held on Saturday last, were very successfully carried

THE Commander of the U. S. torpedo-boat Winslow is said to have been killed while leading an attack on Cardenas,

THE French Minister has addressed a demand to the Korean Government for sanction to engage in coal mining in Phyong-yang.

REUTER alleges that the Americans have had a repulse at Cuba while attempting to land troops at Cenfuegos, and also at Cardenas.

SENOR SAGASTA has declared in the Cortes that the present or any future government will proseemte the Hispano-American war to the bitter

Mr. NAKAWO, late Governor of Kanagawa, was buried in Tokyo with the honours due to his rank, on Tuesday. There was a large attendance at the funeral.

THE Japanese Consul, who went to Hankow after the disturbance at Shashi, will return to Japan to make a report to the authorities personally of the facts.

MR. BRODRICK, Parliamentary Secretary to the War Office, denies that either the Highland Infantry or the Yorkshire Regiment are to be despatched to Wei-hai-wei.

THE Russian Minister has applied to the Korsan Government for the purchase of land to the ex-tent of 10 miles in the vicinity of the Russian settlement at Mokpho.

LORD SALISBURY has declined to give an explanation of Mr. Chamberlain's speech, but declares that Great Britain is determined to keep open the markets of China.

THE Tokyo Dramatic and Musical Society brought their season to a close on Tuesday evening with a capital performance of the com-edy "Offerings to Folly."

THE Queen's Birthday will be celebrated in Tokyo by a garden party given by the British Minister at the Legation; in Yokohama, by a cricket match and yacht races.

A cook on the warship lwall, staying at Yoko-suka, committed sucide on the 17th by throwing himself into the sea. He is said to have been embarrassed with debt.

unpreparedness of the fleet and the wretched marksmanship of the Spanish gun-ners account in great measure for the easy victory of the American aquadron at Manila.

A REPORT comes to hand from Shanghai that the crop of silk in North China is expected to be very large, while in Central China there is likely to be a large reduction in the output,

Two Chinamen, Chan-bosho, 47, living at No. 121 Settlement, Yokohama, and Chin-kosen, 44, of No. 147 were arrested by the police on the 14th inst, on a charge of opium smuggling.

MESSER, LARDINE, MATRESON & Co. nee soid to have secured the contract to construct, with a capital of 21 million pounds sterling, the trunk railway between Ningpo, Hangkow, and Shanghai.

Nine houses were burnt down and 5 half destroved. Five firemen received injuries. The fire was caused by the breakage of a lamp.

SIR ERNEST SATOW, the British Minister, Sir Charles Mitchell, Governor-General of the Straits Settlements, and Lady Mitchell, who have been at Nikko for some weeks, returned to Tokyo on the 16th instant.

THE United States Senate has passed a vote of thanks III Commodore Dewey for his services at Manila, promoted him to the rank of Rear Admiral, conferred on him a gold medal, and extended his term of service ten years.

THE warship Inkasage, which was under con-struction by Armstrong and Company, New-castle, has been completed, and on the 13th inst. was delivered to the Japanese authorities. It will leave England on the 19th or 20th inst.

THE Yokohama Water-work Loan has been almost twice covered. The sum of 400,000 year was required but when the tenders were opened on May 15th, it was found that 338 applications had been sent in, their total subscriptions amounting to yes 733,300.

On the morning of the 6th instant, the warship Saiyen was steaming off the coast of Bingo Province, on her way from Kobe, when, in the dense fog, she collided with the junk, Peiloku Maru, laden with 135 tons of coal. The latter sank but the crew were saved by the Saiyen.

THE American press generally warmly approves Mr. Chamberlain's speech and welcomes the prospective alliance. In Spain the speech has aroused indignation. The Berlin and Paris papers deplore the language as being calculatto irritate instead of allay the present difficulties.

THERE is a wearisome monotony about the market reports this week, every merchant con-sulted returning the same cry, "no change to report: no business doing." But things are not quite so bad an that, a few straggling sales of grey shirtings have been effected and some packages of fancy cottons have left godown, while woollens have been enquired after in a casual kind of way. In metals, however, all kinds suffered neglect and quotations are therefore nominally unchanged. A slow, flag-ging business is said in have characterised the week in regard to kerosene and the market remains unchanged. A further advance of 25 to 50 sen per picul has taken place in brown sugara and business continues brisk, supply being about equal to demand. A fair business has been done in white refined at previous rates and the market closes steady. An increased demand for raw silk has come from America and Europe but holders are spoiling their chances by raising prices. The stock on hand and visible supply is much larger than at this time last year, so a reduction in rates must come about sooner or later. The weather has been unfavourable for the new crop the last few days, and of course the darennial apring telegrams telling of frost devastations are now arriving, being due almost to a day. Holders of waste silk continue very firm and no business was done during the week. Ten people have been very busy, the settlements for the week totalling 31,090 picula, though the total for the season to date is below that for last year. Stocks are large and the market closes weak. So far the new fishery Expected in Japan on a two months' cruise.

## SPIRIT OF THE VERNACULAR PRESS.

We have already laid before our readers an accurate statement of the views entertained by the vernacular press with regard to the Shashi ourage. There is a unanimous moderation of tone and a marked disposition to refrain from any step calculated to embarrass China. The Nichi Nichi Shimbun, to whose utterances on this subject we have not yet alluded, speaks in a similarly sympathetic strain, but adds that the problem of wearing the Chinese from their hingled concerns to grow to grow the strain. their bigoted conservatism seems to grow more and more hopeless. It is with the object of familiarizing her with foreigners, making her acquainted with the advantages of foreign trade and developing her resources that foreign Powers prefer demands for the opening of ports, the building of rail ways, and so on; but if open ports are simply to serve as places for the perpetration of outrages against the persons and property of foreigners, it will become a question whether the latter should not adopt measures for their own protection, measures more or less hurtful to China's sovereignty. As to the partition of the Chinese empire among Western States, the Nichi Nichi appears to entertain no uneasiness. With the solitary exception of England all the European Powers, it says, have shown themselves unable to make colonization prosperous. England has succeded in bringing the people of India under her sway and governing them peacefully and prosperously, but the Chinese are very different from the people of India, and the task of imposing a foreign yoke upon them is beyond the strength of the States that seem disposed at present to make the essay.

Writing on the subject of Japan's relations with Koren, the Jiji Shimpo repeats its familiar proposition that the only sound and certainly successful course is for Japanese to proceed in numbers to the peninsula and engage in all kinds of profitable enterprises, agriculture, trade, manufacturing, mining, railway building and so on. The racial affinities between the Japanese and the Koreans are sufficiently close to render the success of such enterprises tolerably certain. An important preliminary step is the establishment of a strong bank to assist financially. Capital would have to be obtained in Japan for the purpose at the outset, but it might reasonably be hoped that, in the course of time, the Koreans themselves would become depositors on a large scale. The profits accruing can scarcely be doubted, and in connexion with the organization of such a financial agency steps might be taken to secure the circulation of Japanese silver ren coins in the peninsula, to the mutual advantage of both countries. We have greatly abbreviated the Jifi Shimpo'r article, but it contains nothing else that would interest our readers.

The Yorozu Choho, as might have been expecied, calls the recently concluded Russo-Japanese Protocol mere "nonsense." In the first place. Russia will not pay any attention to its provisious when it suits her convenience to disregard them. She anapped her fingers at the Yamagata-Lohanow Convention the moment that she saw her account in doing so. In the second place, it is not Russia but Japan that the Protocol hampers. Russia finds it irksome at present to meddle with Korean affairs. The Mancharian problem occupies her entire atten-tion. Had she been persuaded to sign this protocol at the time when it suited her policy to fix her grasp upon Korea-last spring, for example—the document might have been regarded with some satisfaction. But now that she has voluntarily stepped out and left the field clear for Japan, the result of such a protocol is to prevent the latter from utilizing the attuation as she might otherwise have done, Russia having already determined to stand aloof in the interests of her own convenience, concedes nothing when she embodies her abstencedes nothing when she emboutes her mount to in a document. But Japan concedes a great deal when she agrees that her hands shall templates the introduction of a bill for increased Digitized by

he fattered which would otherwise have been free. That, stated briefly, is the gist of the Yerosu Choho's comments on the first two articles of the Protocol. With respect to the third, it inquires what possible right Russia would have had under any circumstances to oppose the development of Japanese trade and industry in the peninsula. She could have had no such right, and it is consequently absurd to pledge her not to exercise it. On the whole, our contemporary concludes that the profits conferred by the Protocol belong solely to Russia. Japan has been thoroughly befooled.

The country finds itself confronted by circumstances which render it most desirable that a strong Government should be organized, possessing the confidence of the nation. But the Meiji statesmen can not retain their grasp of administrative power because of the obstruction of political parties; the political parties, while they cry not for parliamentary cabinets, are not able to organize such cabinets, and experience has now amply proved that a coalition between the Meiji statesmen and a political party will not work. What, then, is to be done, asks the Kokumin Shimbun. There is only one course, to form a new party which shall include, first, the Meifi statesmen, since they possess administraweigh statesmen, since they possess administrative experience; secondly, representatives of the wealthy classes, since it is essential that the claims of property shall be fully recognised and its interests guarded; thirdly, men of talent and learning, for reasons that need not be enumerated, and fourthly, man of the rights of controls. ted, and fourthly, men of the rising generation who are entirely free from old-time prejudices and who bring to their work all the spirit of modern learning. Not until a party including the above four elements is organized and a Cabinet formed from its members with its support, can there be such a thing as a really strong government in Japan.

The Jifi Shimps has a remarkable article on the subject of the relations between Japan and It will be remembered that the Jim strongly advocates the settlement of Japanese in Korea, being persuaded that no better plan offers for the development of the latter country and the spread of Japanese influence there. Our con temporary now urges the importance of inducing Buddhist priests also to cross to the peniusula and take part in the movement of colonization. This advice is not tendered on religious grounds so much as on account of the humanizing and tranquillizing effect of missionary teaching and example. Very great differences exist between the customs, traditions, language and methods of the Koreans and the Japanese. It is inevitable that these differences should become causes of friction and that all kinds of mis-The inflaence understandings should arise. of Buddhist missionaries would be invaluable under such circumstances. There is considerable similarity between the conditions that may be anticipated in Korea and the conditions that existed in Japan thirty-five years ago. Japanese visiting Kores will be chiefly bent upon the pursuit of gain, and will not be disposed to pay much attention to the sentiments and customs of the Koreaus, or to allow their spirit of enterprise to be controlled by any consideration for the country or the people. That was the case with foreigners in the early days of Japan's intercourse with them, and there can be no doubt that many serious troubles would have occurred had not the Christian missionary acted as a counterbalancing influence. The Christian missionary not only showed to the Japanese the altruistic side of the Occidental character, but also by his teaching and his preaching imparted a new and attractive aspect to intercourse which would otherwise have seemed masterful and repellant. The Japanese can not thank the Christian missionary too much for the admirable leaven that he introduced into their relations with foreigners, nor can they do better than follow the example that he has set in their own intercourse with the Koreaus.

taxation in the session of the Diet which has just opened. The Tokyo Shimpo briefly discusses the project and declates that it must be The Liberal organ admits that inopposed. creased taxation can acarculy be avoided, since the progress of the country and the necessity of carrying out various public works call for larger expenditures. But before the people's burdens are angmented it must be shown that the organization of the government has been thoroughly reformed, that all superfluous outlays have been checked and that no part of the money taken from the labouring classes shall be wasted owing to official incompetence or corruption. It is also essential that the incidence of taxation should be equalized, so that the disproportionately heavy buildens now borne by some sections of the people shall not be accentuated by the new scale. In short, the Tokyo Shimpo applies itself, with some adroiness, m prepare a catalogue of vague and general reasons against a measure which it nevertheless admits to be inevitable,

## FUNERAL OF MR. NAKANO.

The funeral of the late Governor of Kanagawa took place on Tuesday at r p.m. at the Shinto Temple, Aoyama, Tokyo, Pra-viously an Imperial Messenger visited the widow, and conveyed in her an expression of His Majesty's truest sympathy. The coffin was escorted by a Company of Household Troops, and in the procession were Count 1 roops, and in the procession were County Soyejima, the members of the Privy Council, Viscount Yoshikawa, the Minister of State for Home Affairs, many high officials in Tokyo and Kanagawa Kencho, Police Inspectors from Yokohama, and great numbers of private friends from the capital and Yokohama. Among the foreign gentlemen were Count E. Orûni, the Italian Minister, Mr. M. Kirkwood, Marquis Nembrini Gonzaga, and the recresen-tatives of Mr. J. Colomb and Mr. E. Rogers.

#### NEW GOVERNOR OF KANAGAWA PREFECTURE.

Mr. Asada Tokusaku, hitherto Governor of Hiroshima Prefecture, has been appointed Go-vernur of Kanagawa Prefecture, in successing to the late Mr. Nakano Takeakira. Mr. Asada is well known to the people of Yokohams. He filled the same post of Governor from Decemher, 1889, to April, 1891, in succession to Mr. Oki Monkata. Most, if not all, of his previous service had been in the Foreign Office, where, at the time of his first appointment as Governor of Kanagawa, he held the post of Chief of the Bureau of Commerce. Mr. Iwamura Takatoshi, Governor of Fuknoka, succeeds Mr. Asada in Hiroshima, and Mr. Sakabe Michio is gazetted Governor of Fukuoka.

#### THE WEATHER.

The extraordinary cold snap that has visited us during the past few days has been felt with great severity to the north of Tokyo. On the 15th instant, all the hills surrounding Nikko were covered with a white mantle, and twelve inches of snow were measured in the village Tourists visiting the celebrated resort inelf. must have been surprised m find snow and trost instead of axalea blossoms. The proverbial 'oldest resident" also is said m have been surprised, for nothing of the kind had been witnessed during seventy or eighty years,

#### DEATH OF A FAMOUS FRENCHMAN.

Messrs C. and J. Favre-Brandt received a cable yesterday announcing the death on May 19th, of Monsieur Henri Schneider, Regent of the Bank of France, and founder of the well-known ship-building and engineering firm at Creusol.

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

# NUDE IN ART.

Apparently the Japanese Government -or, to speak more accurately, the present Japanese Department of State for Home Affairs-, has decided to oppose the introduction of the nude into the pictorial art of this country. Foreign critics of Japanese art have often classed its neglect of "the human form divine" among the facts that establish its inferiority to the art of Europe. There is undoubtedly an exquisite beauty in the curves of the human body, and their skilful representation on canvas gives much pleasure to the eye. But when and how was that beauty discovered and publicly acknowledged? It has been decided by historians that the nude originally found its way into art in connexion with the Grecian games, where athletes appeared often without any clothing whatever; and it has also been decided that, out of those exhibitions, and contemporaneously with the adoption of the nude as a pictorial subject, there grew up a gross form of immorality, typified in the story of Harmo-dius and Aristogeiton. These times in which we live are certainly marked by great liberty of speech, of pen, of brush, and of other things. A ballet, as it is danced now-a-days, would have shocked the good folks of the last generation, and of the Diet. People are accustomed to many a picture now hung in fashionable salons would have been regarded as a gross solecism thirty or forty years ago. We have far outdone the Grecians in their own special line, and since many of our ladies are proud to display as much of their persons as is possible without emerging completely from their frocks, it seems prudish to raise any objection to the nude in pictures, or to the nude with a pretence of drapery on the stage. Yet there is one thing certain, namely, that ladies themselves have not become reconciled to the nude in art. There is not one lady in a thousand that views, without a certain sense of shame, the pictures of unrobed females and males—nearly always females—exhibited in the various salons of Europe and America. Ladies do not look at such pictures with pleasure; they prefer not to look at them at all if they can consult their unbiassed taste. Men constitute the admiring audience, and for one minute that a man gives to contemplating the muscles of a Hercules or the lines of a Mercury, he will devote twenty to gazing at the contours and curves of a Psyche or an Ariadne. These are significant facts. That they are facts, few conscientious persons will be found to deny. The inevitable inference is that the pleasure of looking at a picture of the nude includes a sexual element in ninety-nine cases out of a hundred, and it will not be claimed, we presume, by the most "liberal" critic that art has any proper concern with sexual affairs. None the less there have been artists sufficiently great, sufficiently skilful, to idealize the human body so that its beauties alone appear in their representations, every suggestion of the gross or the carnal being eliminated. If

pictures painted by such masters make any appeal to immoral instincts, the fault is purely subjective. To the impure, is purely subjective. To the impure, nothing can be pure. Who then, will undertake to cast an accurate balance between what the world has gained by admitting the mudertake in the world has lost by not excluding it? We, regarding her led to the tragedy.

A Portuguese clerk samed J. M. Ozorio be more prudent in employing it than if it came from the Indemnity. That is a curious between what the world has gained by marderer was shortly to have married his view at the proof. There is contenting very uneconomous world has lost by not excluding it? We, regarding her led to the tragedy.

JAPANESE GOVERNMENT AND THE at all events, are not so presumptious as to attempt the task. But we think, and frankly say, that the attempts of modern Japanese painters to deal with the nude have been shocking and repellant. Such pictures are absolutely without a redeeming feature. If it is on the nude as represented in the Kyoto exhibition of 1895 and in the Uyeno gallery in the spring of 1897 that the present Minister of Home Affairs has based his hostile decision, there is not a word of protest to be uttered. Japanese painters of the modern school are not yet able to treat this difficult subject in such a manner as to avoid offences against decency. They can not offences against decency. even make pretty pictures of the nude, and though to interdict their essays is not the way to promote the development of their talent in this special line, we certainly think that the public may congratulate itself on being protected against their immodest eyesores.

#### A FOREIGN LOAN.

The Nichi Nichi Shimbun surprised and interested the public in no small degree, some days ago, by publishing something like an official statement that the Government had decided to raise a foreign loan of 150 million yen, and that a bill in that sense would be introduced in this session regard all news published by either the Nichi Nichi Shimbun or the Jiji Shimpo as perfectly trustworthy, and considerable astonishment has been caused by the discovery that, in this instance, a misleading assertion was made by the former journal. The Nichi Nichi now enters at great length into an explanation of the facts on The gist which its assertion was based. of what it has to say may be briefly summed up thus:—Some time ago, the "business men" formed an association called the "Finance-Investigation Society" (Keisai Kenkin Doshi kai), and appointed a committee which waited upon the Minister of Finance and obtained an explanation of His Excellency's views. This committee subsequently reported verbally to a meeting of the society the result of the interview with Count Inouye, and the report included intelli-gence that a foreign loan of about 150 millions would be speedily negotiated, the Diet's consent being sought in the session about to open. It would appear that the Minister's statement of that intention was made under the seal of favour of a foreign loan, but its project is confidence, but, of course, so soon as the Committee communicated the news to the meeting, secrecy was at an end, and the Nichi Nichi considered itself justified in publishing the news. Our contemporary now gives the full stenographic record of what took place at the meeting when the Committee's report is said to have been presented in the above sense. There can be no question, we think, that our contemporary has successfully defended itself redeem Bonds. It thinks that the Indemagainst any charge of irresponsible care-nity should not be diverted, even tempo-

A Portuguese clerk named J. M. Ozorio

TOKYO AND OSAKA CHAMBERS OF COMMERCE AND A FOREIGN LOAN.

The Tokyo Chamber of Commerce was formerly disposed to advocate the policy of redeeming a large quantity of War Bonds with the Indemnity. It has now, however, changed its attitude, chiefly at the instance of Mr. Inouve Kakugoro, and has adopted, for presentation to the Go-vernment through the medium of the Diet, a Representation insisting on the necessity of having recourse to a foreign loan of 200 million yen. This decision was come to at a special meeting held on the 14th instant. The Representation has been published, but it will be sufficient if we state its gist. The Government, it says, is embarrassed financially; and the people are in such need of floating capital that many promising enterprises already inaugurated can not be carried to consummation, and many other inviting in-auguration must be indefinitely deferred, the general result being that the material progress of the country is checked. Earnest endeavours are being made by the Govern ment to obviate any considerable want of equilibrium in the national accounts, and the Chamber recognises the prudence of such procedure, but can not regard it as in any sense a permanent means of correcting the situation. It is absolutely indispensable that the deficiency of floating capital which now prevents even such an essential enterprise as the building of railways should be remedied, and the only course that can be taken is to obtain cheap capital abroad. Therefore a foreign loan of 200 million yen is recommended. The Chamber does not suggest, however, that the loan must be immediately floated. Its recommendation is that the Indemnity should be used at once for redeeming War Bonds, and that expenditures to meet which the Indemnity is already destined, should be defrayed by means of money obtained from abroad. After this Representation had been adopted by a large majority, the Chamber endorsed the resolution recently referred to in these columns—namely, that foreigners are competent to hold shares in Japanese commercial and industrial companies, with certain exceptions— and then ap-pointed a committee to examine and report upon a proposal for the State purchase of private railways.

The Osaka Chamber of Commerce has also memorialized the Government in of smaller dimensions than that of the Tokyo Chamber, the amount of the loan being put at only 60 or 70 million yen. With that sum the Chamber recommends that War Bonds should be redeemed. Thus far the two Chambers take virtually identical views, the difference being one of degree only. But a divergence now The Osaka Chamber does not OCCUES. advise that the Indemnity be employed to Bonds had come from abroad, they would be more prudent in employing it than if it

URBANA-CHAMPAIGN

burrow money on which interest would have to be paid while funds were lying idle in the Treasury. It is true that there are uses hereafter for the Indemnity, but, until they actually arise, there is no reason why the money intended to meet them should not be otherwise utilized.

A more interesting point in the memorial of the Osaka Chamber is that it strongly recommends an increase of the Land Tax. The grounds of the recommendation are identical in part with those frequently expressed in these columns, namely, that the price of rice has more than doubled since the assessment of 1873, whereas the rate of taxation has remained unaltered. In short, the Chamber is of opinion that the agricultural class are now taxed so lightly as to be at a great and unfair advantage compared with other sections of the nation.

From time to time rumours have been circulated that a feeling has begun to show itself among Japanese business men in favour of allowing foreigners to become shareholders in all industrial and commercial enterprises from which they are not explicitly excluded by law. That principle is very clearly advocated in the memorial which has just been passed by the Tokyo Chamber of Commerce. Reference has already been made to the memorial in these columns, but only in general terms. The document is now published in its entirety, and our readers will doubtless be interested to hear the line taken by the memorialists. Their broad contention is that wherever the ownership of shares by a foreigner is not specifically interdicted by law, it must be held to be permitted. In support of that argument they adduce the fact that in the charters of the National Banks, the Bank charters of the National Banks, the Bank whatever to Mr. Chamberlain in this of Japan, the Specie Bank, the Mining matter nor penned the smallest sugges. Bank and the Exchanges, it is definited the smallest suggestion of a "disparaging expression" with by laid down that only Japanese subjects reference to him. He must be labouring ly laid down that only Japanese subjects may own shares. The plain inference is that the drafters of those charters did not believe in the general illegality of foreign ownership of shares, otherwise they would not have considered it necessary to insert a special interdict in their particular cases. The same consideration paused to inquire. The facts alone Encouragement of Shipbuilding and has now come forward and publicly Chamberlain's attention to the following Navigation, and the direct export of silk. There, also, the bounties granted by the laws are definitively limited to Japanese subjects, which precaution would never have been taken had not the Government judged that without it the eligibility of foreigners would be a matter of course. The memorialists further point out that no treaty or convention to which Japan is a party forbids foreigners to become shareholders in Japanese companies, and then address themselves to the oftenurged contention that, since the ownership of land by aliens is not permitted, a railway company or other association owing land must not have foreign shareholders. The view taken by the Chamber of Commerce is that to be a shareholder in a railway company does not carry with diate all concern with M. Boissonade's it any right of property in the land or other belongings of the company. Such goes on to suggest that "the matter is things are possessed by the company in its corporate capacity, not by the indivible, "writing for the general European allegation. If now appears, from his own dual members. It is scarcely necessary public, whose interest in such humani-to add that the chief reason assigned for tarian progress is always intense—doubly Mr. Mutsu's name with the torture story,

#### THE COLONIAL SECRETARYS SPEECH.

It seems scarcely necessary to say that some of the language attributed by the telegrams of the 11th instant to the British Colonial Secretary can not possibly have been used by him. Mr. Chamberlain certainly never said that "Britain was unable to declare war against Russia without an ally." We venture to affirm that he did not even allude to the subject of war with Russia. Responsible members of a Cabinet do not publicly talk of war with a friendly State if they have any desire to retain its friendship. What the Colonial Secretary did really say has, of course, been officially telegraphed to Tokyo. It was nothing more than that in view of the combinations now existing among foreign Powers, Great Britain would have to abandon her policy of isolation. further made it clear that the ally he had chiefly in view was the United States of America.

#### M. BOISSONADE AND TORTURE.

We publish in our correspondence columns a letter from Mr. B. H. Chamberlain on the above subject. It calls for a few remarks. The last paragraph especially astounds us. Mr. Chamberlain accuses us of "animus" of "a strangely acrid and discourteous tone" towards himself and of "showing heat and scatter-ing disparaging expressions" as freely as if we had been "made the object of some violent personal diatribe." Such an accusation scarcely deserves serious treat? ment. We have never said one single word that justifies it. We have given no thought under some inexplicable hallucination. We have devoted ourselves simply to examining the historical accuracy of a story related in "Things Japanese." Whether the story rested on his evidence or on the Hall Chamberlain, with discourtesy; of showing animus and heat, and of scattering disparaging expressions. We invite him to quote from our writing-not to summarise but to quote verbatim-one single sentence, even one sentence, that justi-fies his charges of "animus," of an "acrid and discourteous tone" towards himself, of "showing beat" and of "scattering disparaging expressions." If he can quote such a sentence, we shall withdraw it and frankly apologise. If he can not quote such a sentence, we call upon him to withdraw his injurious accusations and to apologise for them.

He speaks elsewhere of "the terms in which we so strongly and repeatedly repu-

part of the subject." It seems presumptuous for us to remind a scholar of Mr. Chamberlain's calibre that the thing to be most avoided in writing history is sentiment, and the thing to be most cultivated, accuracy. We admire the rhetorical art of his appeal to the "general European public," to their "intense interest in humanitarian progress," and to their proud consciousness of the progress due to a philanthropist of their own race," but we trust that he will acquit us of animus, or of scattering disparaging expressions, or of any other offence against good manners, if say that this pretty flourish only makes us smile. With his permission, we will pass it by, since we are not debating sentiment but history. When he says, however, that we have "strongly and repeatedly repudiated all concern with M. Boissonade's share in the abolition of torture," he betrays strange inaccuracy, to use no stronger term. We have twice disavowed any knowledge of—not "concern with" but knowledge of—M. Boissonade's share in the abolition of torture, and we made the disavowal, as Mr. Chamberlain well knows, in answer to an erroneous charge advanced by a correspondent "Amicus" to the effect that we "had endeavoured to deprive M. Boissonade of a glory which he prized above all others." We answered that we had done nothing of the kind; that, not knowing anything about M. Boisson-ade's connexion with the matter, it was impossible that we could have attempted to deny his "chief share" in it, and we were careful to add that, although the story told in "Things Japanese" was now proved to be erroneous, it did not by any means "follow that the honour of being mainly instrumental in bringing about the abolition of torture in Japan must be denied to M. Boissonade." Nay, we went further, for we emphatically declared that "we did not dispute M. Boissonade's claim." Yet, in the face of all this, Mr. Chamberlain alleges that we "strongly and repeatedly repudiated all concern with M. Boisson-ade's share in the abolition of torture," and endeavours to depict us as persons testimony of some one else, we never not belonging to the general European public who take an intense interest in engaged our attention. Mr. Chamberlain humanitarian progress. We invite Mr. paragraph written by us on this subject :-

It is very possible that M. Boissonade did become a fortuitous witness of the application of torture to some infortunite Japanese subject, and it is very possible that the pity and indipartion aroused in him by the speciacle prompted him to enter a protest of such vehicules. The story in "Thires Japanese authorities. The story in "Thires Japanese" may contain that much touch influence the Japanese authorities. The story in "Things Japanese" may contain that much truth, We do not dispute M. Boissonade's claim. We dispute simply the evidence adduced in support of it by the author of "Things Japanese,"

With this quotation before him, will Mr. Chamberlain venture to maintain the accuracy of his assertion that we have 'strongly and repeatedly repudiated all concern with M. Boissonade's share in the abolition of torture?" We again invite him to adduce one sentence, even one giving practical recognition to the so when they have the proud consciousprinciple advocated in the memorial is ness of the progress being due to a
the desirability of introducing ordinary principle advocated in the memorial is ness of the progress being due to a

matter will authority he had since capital.

permitted to point out that his story has now been reduced exactly to the dimensions assigned to it by us in the above quotation, and to remind him that in reducing it to those dimensions, we took care to add "we do so without the smallest prejudice to M. Boissonade's claim." As to his plea that the false part of the story was a quantité négligeable, and that the gist of it alone need have been considered, we again beg him to acquit us of heat, or animus, or discourtesy, if we say that such method of appraising evidence seems to find a very apt place in the letter we are

now discussing. Since Mr. Chamberlain deems this subject of such "intense interest" we will now devote a very few words to his main proposition. Mr. Chamberlain's storythe irreducible minimum of his story-is that, "soon after M. Boissonade's arrival in this country in 1873," he witnessed a Japanese prisoner undergoing torture; that he thereupon "plainly told his Japan-ese colleagues that such horrors must crase immediately or he must resign," and that "his firm stand brought about the immediate disuse of a practice so shocking to humanity." That is very plain—a harrowing spectacle; a firm protest; im-mediate success. Now when did these things happen? When was the "immediate disuse" of torture brought about? Was it before August 25th, 1874, or was it after August 25th, 1874? If it was before August 25th, 1874, then there was no "immediate disuse" of torture, for, as we have already shown, the Notification published on that date, while declaring that "it would be an outrage if an innocent person should be made to appear guilty owing to the use of undue severity," and while ordering that "torture should in future be discontinued," nevertheless reserved to the examining judge discretionary power to employ torture. If this Notification was the result of M. Boissonade's representations, then we must still further reduce Mr. Chamberlain's story, and say that M. Boissonade brought about the partial disuse of "a practice so shocking to humanity." If on the other hand, the incident in question occurred subsequently to August 25th, 1874, then M. Boissonade can not receive the credit of having suggested the necessity of abolishing torture, since the Japanese Government had already recognized it in principle. We again invite Mr. Chamberlain to elucidate this point.

In a letter addressed to this journal and published on the 17th instant, Mr. B. H. Chamberlain brought against us a very sweeping accusation of "animus," "discourtesy," and other violations of literary canons and good manners. We invited him to substantiate his accusation by quoting the language upon which he based it. He has done so, as will be seen by a letter published in our correspondence columns. His contention is that we used the expressions "canard", "falsehood" and false story (not to mention others)." Now with regard to the "others" that Mr. Chamberlain refrains from mentioning, we must be permitted to assume that they do not exist. His actual quotations alone concern Relying on those quotations, he leaves the nothing better, and in order that the public may be in a position to judge accurately, we proceed to place, side by It was decided, as in former ye side, the senting accurate of the senting of the sent public to judge between us. We desire

of which Mr. Chamberlain complains and his complaint :-

Mr. Chamberlain's Charge.

In conclusion permit me, Sir, to express some astonishment at the animus, the strangely acrid and discourteous tone with which you have seen fit to treat me on this occasion, be told that, at a time i stracked no one,—not when he held high effice. Count Mutau, least of all he was receiving the treatyourself. Yet had I made ment of a common criviolent personal distribe,

The sentences upon which Mr. Chamberlain bases his charge. It certainly will not be very pleasant for the late Count Mutsu's family and authorises. Its analysis of the late Count Mutsu's family and countered to the counter of the late numerous admirers to read this extraordinary canard about him, and to be told that, at a time when he held high effice, he was receiving the treat-

you the object or some violent personal diatribe, you could hardly have shown more heat and have issue to a strange story scattered disparaging expressions more freely than you have done on the present occasion. Courtesy, in Japan, we made some however, in not a thing statements from memory one can demand. The as to the official position wisest plan doubtless is held by Mr. Mutsu—the not even to expect it. I late Count Mutsu—the not even to expect it. I late Count Mutsu—at can in any case thank you for the continued advertisement which has been supplied gratis to my books by your repeated the record of Count Mutsu's services and are in a position to show conin a position to show con-clusively that the story contained in "Things Japanese must be a mure canatd.

> Does " Amicus " ven-Does "Amicus " ven-ture to affirm, then, that according to the direct testimony of M. Boisson-ade, Mr. Mulsu was sub-jected to torture in 1873 or 1874, and that M. Boissonade was "an ocu-lar witness of the case?" It is wholly impossible that M. Boissonade cab have made any such statehave made any such statement, for the thing never happened. To show that it never happened, and to repudiate a falsehood so injurious to Count Mutsu's was our main object in writing.

It is very possible that M. Boissonade did become a fortuitous witness of the application of torture to application of torture to some unfortunate Japan-ese subject, and it II very possible that the pity and indignation aroused in him by the spectucle prompted him to enter a protest of such vehenence protest of such vehenence is to greatly influence the lapanese authorities. The story in things Japanese may centain that much tuth. But for the rest it is a false story, and "Amicus" only weakens M. Boissonade's claim by levelling singularly influentiniating and unjust criminating and unjus accusations at our beads,

Our readers will now be able to form an exact estimate of what Mr. Chamberlain regards as "a strangely actid and dis-courteous tone"; "astonishing animus"; a display of "heat" and a "free scatter-ing of disparaging expressions" such as might have been expected from a writer who had been "the object of some violent personal diatribe." The disproportion between the accusation and the evidence is quite grotesque.

At the spottal general meeting of the members of the Kobe St. Andrew's Society, Mr. J. C. Abell and Mr. R. Hame Cook were re-elected President and Vice-President respectively, and Messia Crowe. Marshall, Ralston, Cameron, Maidand, and Paton a Committee.

#### IMPERIAL DIET.

The voting for the President and Vice-President of the House of Representatives on the 14th instant resulted in a signal victory for the candidates of the Liberal and National Unionist Parties. It had been understood for some time that an agreement existed between the two parties, in virtue of which the National Unionists pledged themselves to vote for the Liberal candidate, Mr. Kataoka Kenkichi, as President, provided that the Liberals, in turn, voted for the National Unionist candidate, Mr. Motoda Hajime, as Vice-President. This coalition secured 127 votes for each candidate, the strength of the Liberals in the House being too and that of the National Unionists 27. number would be insufficient, of course, to bring about the desired result. The issue depended on the action of the so-called "Independents," who recently organized themselves into an association named the Yamash'ta Club, consisting of some 50 members, and, in minor degree, on the attitude of the Doshi-kai, or "fellow-thinkers," who muster about 15. Among the last is included a clique of nine men, known as the Sasshu ha. They are led by Mr. Kono Hironaka, formerly the Parliamentary chief of the Liberal Party. This Satsuma clique is bitterly Party. opposed to the present Cabinet. It would have gladly voted for the candidates put forward by the Progressists had the latter agreed to introduce a motion of want of confidence at the commencement of the session. But the Progressists have apparently decided not to carry their opposition beyond the process of preferring awkward questions. They consequently forfeited the co-operation of the Satsuma section. The Yamash'ta Club injurious to Count Mutsu's also seems to have disappointed the his relatives and friends hopes of the Progressists. They had They had counted on receiving 30 votes from the club and they obtained only 24. Had the forecast of the Progressists been fully justified by the event, their candidate for the Presidency, Dr. Hatoyama Kazuo, who served as President in the last Home, would have polled 150 votes against 152 cast for the Liberal candidate. The latter's election would, therefore, have been assured under any circumstances, but not by such a signal majority as was actually the case. The voting and analyses stand

thus :—	
VOTING FOR THE PRESIDENCY.	
- Mr. Kataoka Keoluchi (Liberal Candi	
Liberal Votes	100
National Unions! Votes	27
Yamash'ta Club Votes	31
Doshi Club	9
Jotal	167
Dr. Hatoyama Kazuo (Pregressist Cans	lulate).
Progressist Votes	95
Pos-Progressist Votes	10
Yamash'la Club Votes	24
Yamash'ia Club Votes	6

Our readers will perceive that 302 votes were cast for these two candidates ,alone, whereas the number of members present and voting was only 297. As a matter of fact, 332 votes were cast in all, for Mr. Kojima Iken obtained 15, Mr. Abei Iwane 9, and Mr. Kono Bironaka 7. The explanation, of course, is that each member votes, not for one candidate, but for three, the latter being the number of names that must be submitted to the Emperor for His It was decided, as in former years, to celebrate Majestyj tommake a nomination. Gene-UNIVERSITY OF ILLINOIS All the independent members

show their indifference to party claims by including the names of both the Liberal and the Progressist candidates on the same ticket, but, in the present instance, that seems to have been done by five members only. With regard to the Vice-Presidency, Mr. Motoda Hajime, the Presidency, Mr. Motoda Hajime, the National Unionist candidate, obtained 170 votes, and Mr. Taguchi Ukichi, the Progressist candidate, 117. At every point, therefore, the Liberal-Unionist combination was successful.

This voting would have much interest were the Liberals supporters of the Government, but it proves absolutely nothing as things stand at present. We do obtain from it, however, a fairly accurate idea of the composition of the House which seems to be as follows :-

Liberals	102
Progressists	
Pro-Progressists	10
Yamash'ta Club	
Doshi Club	15
National Unionists	27
144101141 Distriction Million Hills	-/
Total	300

The Liberals and National Unionists number, between them, 129 votes, so that if, on any occasion, they can secure 22 votes out of the 66 possessed by the Yamash'ta and Dashs Clubs, they will have a plurality of the Whole House.

The Yomiuri Shimbun (Progressist organ) writes in terms of frank regret about the failure of its Party's candidates. It does not attempt to minimize the fact, but explains almost in the terms used by us above. There is something decidedly refreshing about the ingenuousness of the

Yommuri's tone.

Mr. Kataoka Kenkichi, whose nomina-tion by the Emperor to the post of President may be taken for granted, is a member of the former Tosa clan. In 1868, he associated himself with Mr. (now Count) Itagaki in a crusade against the Tokugawa Regency, and joined the celebrated band of Samuras numbering some six hundred and known as the Seigi-tai. Subsequently he fought in the northern expedition against the remnant of the Tokugawa supporters, and attained the rank of Lieut.-Colonel in the Army. He then travelled to France to make a study of military affars, and on his return to Japan identified himself with the party of statesmen who advocated an expedition against Korea. This led to the resignation of Mr. Itagaki, then a member of the Cabinet, and his retirement to Tosa, whither he was followed by Mr. Kataoka. latter, soon afterwards, organized a political party, the Risshi-sha, and, in 1877, attracted public attention by agitating for Parlia-mentary institutions. Suspicion fell upon him in connection with the Satsuma rebellion, and he was thrown into prison. On recovering his liberty, he renewed his agitation for Parliamentary institutions, and succeeded in attracting so much attention that something like two hundred thousand fellows-thinkers assembled in Osaka in 1880, and organized the celebrated Kokkaigammo Yusht-kai (society for advocating a national assembly), Mr. Kataoka being appointed chairman. In consequence of a resolution adopted by the meeting, Messrs. Kataoka and Kono Hironaka—for several years leader of the Liberal Party in the Lower House, but now a seceder from its ranks—proceeded to Tokyo, presented petition after petition to the Government, but the latter held firmly to its a.m., and performed the opening ceremony own programme, and finally Mr. Kataoka in accordance with the regular routine retired to Tosa, which province council on such occasions. The Speech UNIVERSITY OF ILLINOIS AT

him for the Diet in 1891 and has voted for him steadily ever since.

Mr. Motoda Hajime, the new Vice-President, is a native of Oita. He graduated from the Imperial University in 1880, obtaining high honours in the course of law. In 1888, he was elected chairman of the Tokyo Barristers' Association, and subsequently distinguished himself by heading the agitation of the Jurists' Association for a revision of the Civil Code. He is a strong debater and has been a prominent figure in the House of Representatives since the opening of the first session.

Although the session of the Diet which has just opened is to last for twenty days only, it seems likely to be a record session in the matter of important measures. Three Government bills of great moment will doubtless be submitted—a bill embodying the remaining portion of the Civil Code; a bill providing for increased taxation; and a bill for amending the Law of Elections. On the passing of the first depends the possibility of giving the notice necessary for the operation of the Revised Treaties. There does not appear to be any probability that this bill will encounter opposition of a serious nature, but it is impossible to be sure that some collision may not occur between the Cabinet and the Lower House such as to lead to the latter's dissolution. Whether the Government would then take the responsibility of bringing the Code into force by means of an urgency ordinance, we do not know, but no other course seems to offer. As to the bill for increased taxation, the Progressists appear inclined to advocate its postponement until the regular session of the Diet at the close of the year; but inasmuch as the necessity for raising a larger revenue will become imperative from April, 1900, by which time the whole of the Indemnity will have been spent, not a day should be lost in obtaining the Diet's consent to the principle of increase, so as to commence the required preparations at once. The bill for amending the Law of Election is, in the main, designed to extend the franchise and change the electoral districts so as to correct abuses connected with the present system. shall not be surprised if it is overtaken by a fate similar to that which attended the new Press Law during several sessionsthat is to say, the Lower House, by refusing to accept any moderate measure of reform, came into hopeless collision with the Peers, and so, by rejecting half a loaf, got no bread at all for a long while.

Apart from the above measures, it appears pretty certain that a vote of want of confidence in the Government's foreign policy will be introduced, as well as a bill for the State purchase of private railways by means of money borrowed abroad. The former will emanate from the Progressists, and be rejected; the latter will be introduced by the Liberals, and will probably pass. But by whatever majority the House of Representatives declares in favour of State purchase in the proposed form, we do not believe that the Government will endorse the idea, even-and this is most unlikely-though the House of Peers should do so.

His Majesty the Emperor proceeded to

delivered by His Majesty from the Throne was as follows :-

We hereby perform the ceremony of opening the Imperial Diet and intimate the fact to the House of Peers and the House of Representatives.

The consummation of Treaty Revision, and work based on the national policy adopted since the opening of the country at the Restoration, is now within sight. It is Our expectation that Our loyal subjects of all classes will unite their efforts to achieve this object, to the enhancement of the national prestige. The operation of the Code was postponed and its careful revision undertaken. A portion of it has already been promulgated, and the remainder, which was subsequently revised, will now be submitted for the Diet's approval.

In accordance with the progress of the times and in order to strengthen the basis of Constitutional Government, We have directed that a Bill for amending the Law of Election of the House of Representatives be submitted to the

The Estimate of Revenue and Expenditure for the 31st year of Meifi (1898-9) had been compiled on the lines of that for the preceding year, but in order to place the national finances on a sound basis, we have directed our Ministers of State to prepare a scheme of increased taxation, which, together with an urgent supplementary budget and other projects of law, will be submitted to the Diet.

We expect that you will exercise the fullest care and examination in discharging your functions of deliberation and consent.

[IMPERIAL SIGN MANUAL] [Great Seal.]

The following officials were nominated on the 12th instant as Government Delegates in the approaching session of the Diet :-

With reference to the Civil Code-Dr. Ume Kenjira, President of the Legislative Bureau; Dr. Hozumi Chinju, Professor of Law College of the Imperial University: Mr. Tabe Hu, conscitlor of the Judicial Department; Mr. Okano Kenjira, Professor of the Law College.

For the Department of:
Fureign Affairs.—Mr. Komma Jutare, Vice-Minister for Foreign Affairs; Mr. Mitsubashi Nobukata, Secretary.

Nobukata, Secretary.

Home Affaira.—Mr. Matsuoka Koki, Vice-Minister; Mr. Vasuba Hokwa, Governor of Hok-kaido; Mr. Maki Bokushin, President of the Police Bureau; Mr. Arai Kuniza, President of the Prefectural Bureau; Mr. Nomma Scincei, Director of the Formosa Bureau; Mr. Kume Kinya, Superintendent of the Shrines and Templas Bureau; Mr. Gamo Sen, Director of the H.k. kaido Bureau; Mr. Hasegawa Tai, President of the Sanitary Bureau. the Sanitary Bineau.

Finance.—Mr. Tajiri Inajiro, Vice-Minister; Mr. Megata Tanetaro, President of the Taxation Bureau; Mr. Matson Shinzen, President of the Finance Bureau; Mr. Sakatoni Yushiro, Director of the Accountants' Bureau; Mr. Soyeda Juichi, President of the Superintendence Bureau; Messes. Wakatotki Reijiro and Arai Kentaro, Revenue Lungertone. Revenue Inspectors.

War .- Mr. Nakamura Yujiro, Vice Minister; Baron Noda Katsu, Paymaster General of the

Navy.-Baron Ito Shunkichi, Vice-Minister; dr. Murakami Keijiro, Accountant Guneral of Mr. the Navy.

Justice. - Mr. Yokota Kautomi, Vice Minister; Mr. Takagi Toyozo, President of the Civil and Criminal Bureau.

Education.—Mr. Oyama Kenzo, Vice-Minister; Mr. Terada Yakichi, Secretary.

Agriculture and Commerce.—Mr. Fujira Shire, Vice Minister; Mr. Ashibata Seifu, President of the Marine Products Bureau; Mr. Watanabe Yu, Director of the Forestry Bureau; Mr. Watanabe Walaru, Director of the Mining Bureau.

Communications. - Mr. Den Kenjiro, Vice-Minister; Mr. Okoshi Narinori, President of the Inspection Bureau.

#### FINANCE.

Collating the information furnished by vernacular journals—especially the Shogyo Shimpo, which, as might have been expected, is notably accurate on the subject of finance—we gather a pretty clear idea of the Cabinet's economical programme. In the first place, there will be no such illconsidered procedure as the raising of foreign or domestic loans so long as a large sum, the proceeds of the Indemnity, is lying in the Treasury's vaults. money in hand will be employed for present requirements, and when the pur-poses for which it was originally destined call for additional expenditures, special means of procuring funds will be adopted. To make this clearer, we may add that the outlays in connection with the post-belium programme were to have been defrayed partly with the Indemnity and partly by means of a domestic loan. state of the market does not permit of the latter's being floated at present, whereas, on the other hand, the proceeds of the Indemnity have become available at an earlier period than that anticipated originally. Hence recourse to a loan will be deferred until the Indemnity has been entirely spent. When that time comesapparently it will be in 1900- the question between a foreign loan and a dome-stic will have to be again considered. Meanwhile, the Government will seek to alleviate the dearth of floating capital by appropriating a sum of twenty million yen, five millions being placed with the Industrial Bank for the accommodation of manufacturers, and fifteen millions with the Bank of Japan for the redemption of of War Bonds.

Turning now to the ordinary expenditures, it has to be noted, at the outset, that the annual outlays for the maintenance of the Army and Navy will be 51 million yen, instead of 29 millions, the sum expended on the two services before the consummation of the expansion programme. would be very interesting to know how this estimate of 51 millions is reached. The original estimate, at the time of drafting the post-bellum scheme, was 41 millions, which, however, did not include any allowance for maintaining the fleet at its new standard or keeping the ships in repair. We have hitherto supposedbasing our calculations on the co-efficients adopted in England-that 91 millions would be needed for keeping the Navy up to its standard and 4 millions for repairs. Hence the total outlay on account of the Army and Navy would have been 531 millions, whereas the figure now quoted by vernacular newspapers is 51 millions. Moreover, we do not know whether the increase from 41 to 51 millions is on account of the appreciation of commodities, or whether it includes the allowances here spoken of. We pass on, therefore, without attempting to elucidate the point. The next addition to the ordinary expenditures is 16 millions, on account of the national debt, official salaries, and pensions, &c. It is now recognised that the salaries of all officials belonging to the lower classes will have to be raised. Their pay is not only insufficient to support them, but compares also so unfavourably with the emoluments offering in other employments that the Government can not procure the services

inferior capacities. Thus the sums required for the Army and Navy, the service of the public debt, and increased salaries will aggregate 38 million yen more than the total under the ante-bellum system.

Now, as to the means of providing for this extra outlay, it has to be observed, in the first place, that the sources of additional revenue set forth in the Ito Cabinet's scheme of 1896, have not proved as prolific as was expected. The Registration Tax, owing to changes made in the system by the Diet, has had its yield reduced by 2 millions less than the estimate, and the same is true of the Tobacco Monopoly. The Saké Tax alone fulfils the expectations formed of it. Adding the total deficit under these headings-namely 51 millions-to the 38 millions shown above, we have an aggregate sum of 431 millions to be provided, whereas the provision con-templated by the post-bellum programme was only 25 millions. It would appear from this calculation that 18 million yen represents the total addition, allowance for which will have to be made in the accounts, but the Cabinet, owing to various other considerations which are not set forth, is of the opinion that an increase of from 30 to 40 millions of ordinary revenue must be provided. Heavier taxation is, of course, the only way to meet the situation.

The taxes suggesting themselves for alteration are the Land Tax, the Sake Tax, and the Income Tax. As to the Land Tax we need not reproduce the arguments given for its increase. They have been repeatedly urged in these columns. method alone has to be noted, namely, re-assessment, with a view to equalizing the incidence of the tax, and putting an enhanced value on the price of the koku of rice. The following are the estimated increments :-

	Yen.
Wet fields	9,772,465
D y fields	2,027,885
Budding Lands	1,798,347
Total	13,598,697

Turning, now, to the Sake Tax, the idea is to raise the rate to 10 yen per koku, thereby obtaining an additional revenue of 12 millions, proper steps being taken, at the same time, to control the sale of alcohol. Domestic brewing will have to be interdicted, however, and there will be a reduction of 660,000 yen on that account, so that the net increase from the Saké Tax may be put at II millions. Finally, by changing the sliding scale (riushin-ritsn) of the Income Tax and by certain other modifications of minor sources of income, a further increase of from 6 to 7 millions can be obtained. Thus, finally, an additional revenue of over 30 millions is in sight without difficulty.

We fancy that our readers have acquired by this time a pretty clear idea of Japanese finance at present. Our own analysis of the situation, published in the spring of last year, has been exactly confirmed by We showed that when the grants facts. in aid of Formosa and of navigation encouragement were included in the accounts, it would probably be necessary to resort to increased taxation, even on the hitherto proved impossible to raise any hypothesis that the new sources of revenue devised by the Government-namely, tion then arises, must the enterprises be of intelligent men and is obliged to the Registration Tax, the Business Tax (signes) ded on account of which the money entrust importained the County and the Tobacco Monopoly—way of the Registration Tax, the Business Tax (signes) account of which the money entrust importained the County and the Tobacco Monopoly—way of the Registration Tax, the Business Tax (signes) account of which the money entrust important the county and the Tobacco Monopoly—way of the Registration Tax, the Business Tax (signes) account of which the money entrust important the county of the Registration Tax, the Business Tax (signes) account of which the money entrust important the county of the Registration Tax, the Business Tax (signes) account of which the money entrust important the county of the Registration Tax, the Business Tax (signes) account of which the money entrust important the county of the Registration Tax, the Business Tax (signes) account of which the money entrust important the county of the Registration Tax (signes) account of the Registration Tax (signes)

prolific as was anticipated. We also insisted that an increase of the Land Tax and of the Sake Tax would be the best means of obtaining the desired revenue. The above three new taxes have not, however, proved as prolific as the estimate. Their proceeds are nearly five million yen less than the figures originally set down. Moreover, the compulsory contributions from official salaries on account of shipbuilding expenses have been discontinued, resulting in a loss of 21 millions of income, while, on the other hand, the grants for encouraging navigation will have to be increased by 41 million yen at least, and the contribution on account of Formosa will reach 134 millions. Here, then, we have practically an addition of 244 million and for which it becomes necessary to make provision. The service of the national debt is also becoming more onerous, and will be still more so a few years hence, when 220 millions have been spent on railways and other productive public works. Another point to be remembered is that prudent financiers do not content themselves with providing a revenue which leaves no margin above expenditures. The State ought to have a reserve to meet a sudden emergency. The Shogyo Shimpo believes that all these considerations will induce the Government to introduce a bill providing for increased taxation in the present session of the Diet, but there are reasons which make us doubt whether so much celerity will be possible.

#### COUNT INOUTE ON THE FINAN-CIAL OUESTION.

A member of the Shogyo Shimpo's staff has waited on Count Inouge and solicited some statement of the Minister's inten-Count Inouye answered with some semblance of frankness, but a careful perusal of the language attributed to him by the Shogyo leads us to conclude that his object was to avoid giving any definite information. What he said, in effect, was that people were putting their own con-structions on his acts. They watched every movement made by him. If he inclined his head to the left, they cried out that he was going to arrange for the State purchase of private railways; if he bent it to the right, they concluded at once that he had made up his mind to raise a foreign loan. But, in point of fact, he The finances of was simply pondering. a State were not things to be lightly handled. The most profound reflection, the most minute investigation, must precede every step. It did not follow that the completion of inquiries must be at once followed by the inception of a policy. He was determined that nothing should be imperilled by precipitancy. That, in effect, is the gist of what his Excellency said.

The Juji Shimpo also publishes an utterance of the Minister of Finance. It refers to the Public Undertakings Loan. Our readers are aware that of the total expenditures contemplated in the postbellum programme, 135 million yen were to be defrayed out of the proceeds of a domestic loan called the Public Undertakings Loan (Jigyo Kasai). They are also aware that, owing to the unfavour-able state of the money market, it has

the Jiji, replies in the negative. payment of the remaining portion of the Indemnity in a lump sum obviates any inconvenience of that kind. Appropriations can be made from it to meet immediate demands. But the destination of the Indemnity was also settled by the postbellum programme, and if it is temporarily diverted to some other purpose, recourse must ultimately be had to the foreign market for funds. Hence a foreign loan sooner or later seems inevitable. But neither the exact amount, the time loss yet been fixed. nor the time, has yet been fixed. Count Inouve thinks that after the introduction of a certain quantity of foreign money, the domestic market will recover its tone sufficiently to permit the floating of the final portion of the Public Undertakings

#### AMERICA AND SPAIN.

Events point to the correctness of the suggestion made some days ago in these columns, namely, that Spain's strength having been almost exhausted during the past two years by efforts to subdue the rebellions in Cuba and the Philippines, she is quite unprepared to enter upon a naval conflict with a first-class Power like the United States. Twenty days have now elapsed since an American squadron sailed from Key West to blockade Havana, and the Spanish fleet still remains in Cadiz. Such delay on Spain's part can be attributed to one of two reasons only; namely, that she is not ready to fight, or that she has deliberately adopted the policy of leaving to the United States a free hand for the time being. Some ob-servers would see a considerable measure of astuteness in the latter plan. The Americans, they say, do not want Cuba. All that they want is to secure the independence of the Cubans and put an end to Spanish interference in Cuban affairs. But neither of those objects can be fully achieved without Spain's acquiescence. For even supposing that the Spanish troops were driven out of Cuba and that the island was hauded over to the insurgents who have been so long fighting for freedom, it is evident that unless the United States undertook the duty of guardianship, the Cubans would be perpetually exposed to the danger of attack from Spain. That would be a situation very harassing to America. She could not consent to be saddled with the responsibility of protecting Cuba for the Cubans; she would not annex the island herself, and it is more than doubtful whether she could get any State to take it off her hands until Spain's consent was secured. Besides, it is easier to talk of taking Cuba than to take it. American soldiers sent there at the present season would suffer terribly, and America has no forces immediately available for the purpose. From all those points of view Spain may deem it wise to play a waiting game, keeping America in constant alarm of war and leaving her with a difficult problem on her hands. Such a programme, we say, is attributed to Spain by some observers, but for our part we can not believe that she seriously contemplates it In the first place, it is entirely contrary to Spanish character to take buffets from any enemy without returning them. In the second place, if Cuba and

The to retain them while they are still garrisoned by Spanish troops. In fact, the latter consideration seems conclusive. For if the Spanish garrisons are driven out, Spain would either have to abandon the islands altogether or to reconquer them by an effort of which she is hardly capable. She has proved herself unable to hold them against a section of the inhabitants. What possible hope could she have of recovering them from the whole of the inhabitants with America's opposition thrown into the scale? Moreover, to let Cuba pass into America's grasp would be to surrender the prize of the combat. It is about that the United States and Spain have gone to war, and to surrender the island at once on the chance of reconquering it hereafter would be a line of procedure with which the Spanish nation could not be expected to sympathise. We come back, therefore, to the conclusion that unreadiness is the cause of the delay. If the Spanish fleet were pre-pared to go sea, it would have sailed long ago to seek the foe and save Cuba.

It appears that we were mistaken in supposing that the Spanish ships were not ready to put to sea. They seem to have left St. Vincent almost immediately after the declaration of war, and to have crossed the Atlantic slowly, probably saving their coal as much as possible. At Martinique the ships were within from three hundred to four hundred miles of Puertorico, where Admiral Sampson was said to have been bombarding San Juan, on the 13th instant. A collision between the two fleets must very soon occur, if, indeed, it has not occurred already. Meanwhile the telegraph tells us strange The first is that the Americans attempted to land troops at Cienfuegos, on the southern coast of Cuba. We do not for moment believe that any such attempt was made. The United States Government would not think of landing troops until the Spanish fleet is disposed We are also told of a most extraordinary essay made by a torpedo vessel and three gunboats to enter the port of Cardenas. The story is related in such detail that we must not doubt it, but what earth three craft of the kind can have had in view when they exposed themselves to the fire of fortifications at close range, we are unable to conceive. There can not have been intention of bombarding the forts. Gunboats and torpedo vessels do not carry artillery suitable for such a purpose. Still less can there have been any intention of effecting a landing. Possibly there were some merchantmen to be captured, but that, too, is scarcely credible. If the tale be true, the Ameri can officers seem to have engaged in a desperate and useless enterprise. Had there been anything to accomplish, the nature of the risks incurred would have received little consideration from American seamen, but gunboats and a torpedo vessel pitting themselves against forts at point-blank range-it is not war but mere reckless bravado. Some explanation is much to be desired.

A statement which seems to us quite incredible is that Commodore Dewey, when about to take his ships into action at Cavite, ran up the signal, "Remember the *Maine*!" It is not a bit like Com-

#### COUNT OKUMA,

Count Okuma has been talking with his usual frankness to a representative of the Hochi Shimbun on the subject of finance. He believes that the story about a foreign loan of 150 million yen is erroneous. Recourse must ultimately be had to foreign capital to procure the funds which were to have been obtained by the two domestic loans for Public Undertakings and Rail-ways, but that is a thing of the future. The plan attributed to the Government might produce temporary alleviation of the present distress, but would aggravate it ultimately, and there is little probability that any such scheme is contemplated. Concerning the redemption of War Bonds, said to be contemplated to a limited extent, Count Okuma does not, as a general rule, approve of official meddling in the finances of the people; but there are occasions on which the rule should be departed from, and he thinks that the present is such a case. He spoke also of increased taxation, with special reference to the Land Tax, and said that, while appreciating the necessity, he considered that the Government should make every effort to improve its organization and to place things upon a thoroughly economical basis before appealing to the country for more money.

#### THE INDUSTRIAL BANK AND THE COTTON-SPINNING COMPANIES.

Events are justifying the anticipation formed in these columns some time ago, namely, that the difficulties now experienced by the cotton-spinning companies would be productive of benefit by compelling them to introduce greater order into their affairs. Their applications to the Industrial Bank for monetary accommodation have induced the Bank to announce that it can not make loans unless the borrowing company pledges itself, by a resolution adopted at a general meeting, to lay aside 3 per cent. of its profits annually as a reserve to meet the wear and tear of the plant, and  $\frac{2}{11}$  of the profits—after deducting the above sum—as a reserve to meet losses. Apparently many of the companies have hitherto been disregarding these essential precautions.

#### SÖUL-CHEMULPO RAILWAY.

It has already been stated, on the authority of vernacular journals, that the Söul-Chemulpo Railway, for which Mr. J. R. Morse, of the American Trading Company, obtained a fifteen-years concession in the autumn of 1896, had practically passed into the possession of a Japanese syndicate. The facts are again related by the Shogyo Shimpo, but do not differ in any essential respect from those previously published. We do not gather from what our contemporary says that any forward movement has yet been made with regard to the Söul-Fusan line. According to a protocol signed by the Korean Government in 1894, the concessions for the Söul-Chemulpo and the Söul-Fusan roads -the Kyon-in and Kyom-pu as the Japanese call them-should have been given to Japanese subjects, but the Korean Aumodore Dewey to do anything of the kind, thorities thereafter showed considerable Puertorico pass into American possession and neither the officers nor the men reductance to implement their engagement; by force of arms, it will be incomparably under his command would have approved more difficult to recover them. The property displayed by a foreign Power, it is generally supposed.

UNIVERSITY OF ILLINOIS AT

#### TOKYO DRAMATIC AND MUSICAL SOCIETY.

The Tokyo Dramatic and Musical Society gave its second performance for the season on the evening of the 17th instant in the usual building. The piece chosen for the occasion was a farcical comedy in three acts, adapted from the German of Franz von Schönthan, and entitled "Offerings to Folly." Its basis is the eccentric action of a Prince who, seeing in an art gallery an anonymous portrait of a young lady with a magnificent dog by her side, despatches his secretary (Signor Pescatore) to search for the original. The Prince's object is to obtain the dog, but the secretary imagines that his employer's desire points to the lady, and the latter, as well as her mother, fall into the same error. The young lady's father (Mr. Frederick Salmon) a pompous, vain and weak-minded person, who has written verses in the spring of his life, and who, while professing to hate publicity, longs at beart to see his name in print Dr. Pollock, a literary adventurer who makes a livelihood by preying upon the vanity of "unrecognised genius"; Mr. and Mrs. Turbot, son-in-law and daughter of the Salmons; Mr. Herbert Grayling, lover of Miss Rosa Salmon, the original of the portrait; Crab, a postman, and Minna, a maid-servant, complete the cast. The characters were distributed thus :-

The play was very well mounted, the scenery being suitable and the decorations pretty. All this part of the business, in fact virtually the whole of the work connected with the stage and the arrangements behind it, devolved upon Mr. J. Conder, the Honorary Secretary of the Society, whose artistic qualifications are of incalculable value, and whose unflagging energy and remarkable talents contrivance and design cannot be suffici-culty praised. Mr. E. Beart undertook the duties of stage manager, coming all the way from Yokohama for each re-hearsal. It cannot be necessary for us to speak of Mr. Beart in this capacity. His very exceptional qualifications are household word among all the foreign communities of China and Japan. We may, however, add a fact which can be fully attested only by those fortunate enough to have received his instruction, namely, that his good-humour and patience are as inexhaustible as his competence is exceptional. The Tokyo amateurs had never previously enjoyed the benefit of his aid, and they are never likely to be satisfied without it hereafter. Before the rising of the curtain and between the second and third acts the audience had the great pleasure of hearing concerted pieces for piane and violins, the piano being taken by Mrs. Page and Miss Gertrude Page, and the violins being in the hands of Miss K. Page, Miss A. Page, Miss H. Page, and Master N. Page. Miss von Fallot also played solo on the piano, between the first and second acts, with all har worted by linanovard of the

ness, and the musical part of the programme concluded with a vocal duet by Mrs. Page and Miss A. Page, the latter's fresh, limpid voice blending beautifully with her mother's rich contralto notes.

In speaking of the acting we have to record at the outset the great disappointment the Society experienced owing to Madame le Baronne d'Anethan's illness, and her consequent inability to appear as Mrs. Salmon, a rôle which she would certainly have played with signal success. Miss Fanny von Fallot kindly consented, at the eleventh hour, to take the part, and her manner of acting it left nothing to be desired. This young lady possesses his-trionic abilities of which it has been our privilege to speak on previous occasions, and we need only say that as Mrs. Salmon she added another triumph to her list, scarcely less important part was that of Rosa Salmon. It brought upon the stage a débutante (Miss Scherechefsky) who showed much power and versatility, and whose exquisite enunciation greatly enbanced the charm of her acting, Aoki, as Minna, the servant-maid, achieved one of the hits of the evening. Her sweet winsome ways and graceful exceptionally well rendered. Miss Terry, as Mrs. Turbot, and Mr. Conder, as Mr. Turbot, managed to invest insignificant rôles with much character and interest. We expect such successes from Mr. Conder, of course, for he has made his mark more than once in leading parts; but Miss Terry, who had not previously appeared upon the Tokyo stage, deserves special congratulation. Probably the most difficult task of all fell to Mr. Patterson. As Herbert Grayling, he had to undertake the terrible corvee of making love in public. He did it ex-cellently, preserving from first to last m repose of manner and an absence of gesticulation that thoroughly suited the character but are seldom within the range of an amateur's capacity. Signor Pescatore (Mr. Paul May) "captured" the audience from the moment of his appearance before the foot-lights, and went on from success to success. His rendering of the dandified, addle-brained old Italian ballet-master was irresistibly funny, and brought down the house again and again. Dr. Clay MacCauley made an ideal Dr. Pollock. His "get up" and acting as a wily adventurer were truly admirable, and his final exit under the clouds of exposure and disgrace showed dramatic power of a high order. insignificant character-that of Crab, the postman, was kindly undertaken and most capitally represented by Mr. W. F. Page, who also discharged the duties of prompter. Frederick Salmon's rôle is well conceived by the German author and might be made very effective, but it is beyond the capabilities of the gentleman who undertook it on Tuesday evening. After the performance, refreshments were served on the stage to the actresses, the actors, and their friends, and the healths of Messrs. Beart & Conder, Madame la Baronne d'Anethan, Miss von Fallot, and the Page family were enthusiastically drunk.

#### "TSUZURE-NISHIKI"

We observe in the Japan Times an editorial note on the subject of the fabric known as tsuzure-nishiki. Our contemporary says that the textile department of the Mitsui firm, having instituted a search for weavers trained in the art, has found an expert called Soemon Kyowara, and has placed an extensive factory under his charge. This enterprise is further spoken of as a "revival," and altogether the note in the Japan Times conveys the impression that the weaving process called tsusure ori had virtually ceased to be practised, and would have fallen completely into disuse had not the Mitsui firm taken steps to resuscitate it. That is not the case, unless some special variety of tsu-sure-nishiki be alluded to. Probably many of our readers are unfamiliar with the term isusure-ori. We may, therefore, explain that in this kind of fabric the out lines of the decorative design are pierced throughout in tiny holes, so that the pattern seems to be detached at innumerable points from the body of the fabric. A rough illustration of the principle is seen movements won repealed and well in the perforated frame surrounding a deserved rounds of applause. Indeed, it postage stamp. The effect produced by must be said that all the minor parts were this process is delicate and beautiful, though whether there is full compensation for the extra labour involved may be considered doubtful. At all events, the point we wish to make is that the art of tsusureori has never fallen into disuse. Numerous fine specimens have been produced from time to time during the past twenty years, and no exhibition that we can recall during the Meiji era has been without examples.

#### CAPITAL FOR RAILWAYS.

The success achieved by the promoters of the Formosa Railway in borrowing fifteen million yen from Messrs. Peacock and Company, of London, seems to have suggested to several railway companies that the best way of importing cheap money is to have direct recourse to the loreign market without any agitation in favour of the State purchase of private railways, the redemption of War Bonds, or such projects. The Formosa Company was bound by the terms of its original charter to commence work by the 15th of the present month, but it has obtained an extension of sixty days. Its intention is to lodge the 15 million yen in the Bank of Japan at 5 per cent. interest, and to draw it out by degrees as required for construction purposes. Considering that the interest paid to the English capitalists is only 5 per cent., the very favourable nature of the arrangement effected by the Company becomes at once apparent, and other cor porations, which find themselves obliged to abandon contemplated enterprises or suspend works already commenced, since they can not afford to procure money in the domestic market at to per cent. interest, are now planning to follow the Formosa Company's example. We read in vernacular journals that nine companies are planning a combination for the purpose of obtaining 20 million yes abroad. The names of the companies are the Kiwa (Kishiu-Yamato), the Toyokawa (Owari), the Zuso (Izu-Sagami), the Kyoto, the Chiugoku, the Boso (Awa-Boshiu), the Ota (Shimosa), the Hokuyetsu (Echigo) and the Hankaku (Osaka). UNIVERSITY OF ILLINOIS AT

#### COUNT ORUMA ON SHASHI.

Count Okuma has been interviewed with regard to the Shashi outrage and the Hochi Shimbun publishes his opinions. He says that the incident is most unfortunate for China and that she deserves commiseration. It is not impossible that some Japanese may welcome the event as constituting a pretext for preferring demands, according to the precedent es-blished by Germany. But the heart of the nation would oppose anything of that kind. Japan never forgets that she is the pioneer of civilized progress in the East, and that it is her duty to set an example of moderation and justice in her dealings with foreign Powers. She ought to be able to appreciate China's difficulties. The anti-foreign spirit pervading the population of Hupeh finds its parallel in the spirit that animated a considerable section of the Japanese nation thirty years ago, and, just as the Tokyo Government was then unable to prevent the burning of legations, the assassination of foreigners, and other disgraceful outrages, so the Peking authorities are now unable to provide full security for the lives and properties of foreigners in the provinces. The states-men now in office in Japan, Marquis Ito and Count Inouye, were themselves Soshi in pre-Restoration days, and will have no difficulty in understanding the difficulties against which China has now to contend. All those that have access to the public ear should endeavour, at this juncture, to inculcate the duty of showing moderation and tolerance towards the neighbouring empire. It will doubtless be found that Great Britain's action in the matter is just and forbearing, but, even should such not be the case, Japan must show herself fair-minded and sympathetic.

#### THE FORMOSA RAILWAY COMPANY AND ITS FOREIGN LOAN.

It has been affirmed confidently in several quarters that the Formosa Railway Company have concluded an agreement with Messrs. Peacock and Company, of London, to borrow a sum of fifteen million yen, in round numbers, at 6 per cent. in-terest. Doubts were suggested, however, as to the feasibility of such a transaction. in view of the facts that the Company's charter does not sanction the borrowing of a sum of money greater than fifty per cent. of the paid up capital, and that, as yet, there is no paid-up capital, for, though ten million yen have been subscribed, no call has been made. We now learn, however, from vernacular journals that this restrictive clause has been removed from the Company's charter, and that permission has been given for borrowing the whole the district where the alleged crime was capital, if necessary. On the other hand, committed can not possibly have been the Government will exercise closer superpenned with reference to the Tokyo vision than ever of the Company's affairs, district alone. However, the matter is and will insist, among other things, that of trifling importance except as showing the money borrowed in England shall be deposited with the Bank of Japan. It is report compiled by the President and evident that the Company will not need other members of the Yokohama Chamber more than a small part of the money at the of Commerce, the Kobe journal might at outset, and if the directors are tempted, by least have endeavoured to master the an offer of high interest, to lodge the money salient facts of the question. Not the in some less careful bank, it may find smallest inconvenience would be involved its way into the hands of speculators, and in making the Kajibashi prison a place contribute to still further dislocate the share market. The Bank of Japan will therefore receive it on deposit at 5 brought up for trial in Tokyo under any per cent.

#### THE RUSSO-JAPANESE PROTOCOL.

Since our last reference to Japanese journalistic opinion about the Russo-Japanese Protocol, some further com-ments have appeared in the Tokyo press. The Shoggo Shimpo, for example, regards the Protocol as an emphatic success, and thinks that, taken in conjunction with the promise obtained from China about Fulkien, it may well be considered creditable to Japanese diplomacy. Russia has been induced to declare in the most emphatic terms her recognition of Korea's complete independence. It was to secure that independence that Japan fought China, and no one can deny that, six months ago, Russia's action in the peninsula constituted a serious menace to Korea's sovereignty and permanent integrity. Similarly Russia has been persuaded to give a pledge that she will not supply financial or military advisers to Korea, even though the latter ask for them, without Japan's acquiescence. Such an engagement is a radical departure from the course recently pursued by her. Then, finally, there is her promise not to place any obstacle in the path of Japanese commercial and industrial development in the peninsula. Altogether, if the prospect of concluding such an agreement had presented itself last year, it would have been regarded with incredulity by one half of the public and welcomed heartily, by the other. Party politicians alone will view it with disfavour.

#### THE "KOBE CHRONICLE'S" CORRECTION.

It is now explained by the Kobe Chronicle that when it wrote "foreigners suspected of crime are to undergo punishment in Sugamo Prison," it intended to say "convicted of crime," but that its "subsequent remarks as to foreigners under detention had reference to the Kajibashi prison, which, the Mail states, is to be used for foreigners arrested in the Tokyo district and detained awaiting trial." Now the "subsequent remarks" were these:-

Are foreigners accested in the provinces to be detained in a Tokyo fit prison, and carried back wards and forwards for examination and trial to wards and interaction examination and trial to the district where the alleged crime was commit-ted? It is only reasonable to assume that a fo-reigner arrested in the interior will be detained in the nearest provincial prison during the process of his examination.

We fail altogether to see how these remarks could have been intended to apply to the case of suspects "arrested in the Tokyo district." In fact, the Kobe Chronicle's observations about "foreigners arrested in the provinces being carried backwards and forwards for examination and trial to

proper place for their detention. It follows that the Kobe Chronicle's comments about "carrying backwards and forwards for examination and trial" and about "the provinces" are laughably irrelevant. But, in pointing out these misconceptions, we do not wish to be interpreted as seeking to minimize the importance of the general question. The case of foreigners who may be arrested in the provinces at a distance from any jail suitable for their detention, calls for consideration, and has received full consideration, we understand, at the hands of the Committee charged with the duty of making investigations for the operation of the Revised Treaties.

#### SECRET SERVICE MONEY.

The Nippon writes in very strong terms, urging the necessity of increasing the appropriation of secret-service money for the Foreign Office. Our contemporary quotes the old Chinese proverb, "Long sleeves are good for dancing; many cash make a good buyer," and caps it with Prince Bismarck's saying that, of the three essentials to successful diplomacy, the first is money, the second money, and the third money. The secret-service fund the third money. now allowed for the uses of the Foreign Office is only sixty thousand yen, and when that sum is divided up among the various Legations, the share of amounts to no more than two or three thousand yen, which is about enough to defray the expenses of m single social entertainment. Evidently the most capable official can not possibly discharge his functions satisfactorily under such straitened circumstances, especially when his own salary is so small as to leave no margin whatever after the cost of his living is defrayed. It has therefore been considered necessary in the past to give diplomatic posts to noblemen or persons possessing large private means, and, of course, such a system is not consistent with the employment of the most com-petent men. The Nippon thinks that petent men. The Nippon thinks that the secret-service fund for the Foreign Office should be increased by two or three hundred thousand yen.

#### THE NATIONAL UNIONISTS.

On the 12th instant, the Parliamentary members of the National Unionists held a meeting to determine the Party's policy in the approaching session of the Diet. Over forty persons attended, and, the chair having been taken by Viscount Shinagawa, the following resolutions were adopted:---

- (1) In order to preserve the peace of the East, the present programme of naval and military ex-pansion must be maintained and carried ... completion.
- (2) In accordance with a policy of progress, the development of commerce and industry must be encouraged, especially with regard to East-Asian mackets
- (3) The policy pursued by the present Cabinet in loreign affairs is regarded by the Party as appropriate to the circumstances of the time.

  (4) In order to place the national finances on a sound fonting, and, promote economical development, it is unavoidable that rates of taxation should be changed and that foreign capital should be introduced,

#### PRISON EXPENDITURES.

MONG the many progressive measures whose consummation has been impeded by the Diet, not the least prominent is the transfer of prison expenditures from the localities to the Central Government. Japan's experience with regard to prisons is identical with the experience of other countries; so long as the outlays incurred in connexion with the punishment of criminals are defrayed by communes which have to tax themselves for the purpose really enlightened treatment of persons undergoing sentence-to say nothing of uniformity of system-can notice hoped for The fact is very strikingly illustrated in Japan's case. Before prison reform became a burning question in Great Britain, there were no object lessons to teach the public what a jail ought to be. Pretty nearly the same dead level of neglect and abuse prevailed everywhere, and it was not until other nations-notably the Americans-built prisons in accordance with n really civilized plan and organized a humane system of administration, that Englishmen's eyes began to be seriously opened to the imperative necessity of progress in this field. In Japan, however, the Government has long appreciated what prisons ought to be, and built at Sugamo, Senju, Miike, and elsewhere jails which, with trifling exceptions, are models of excellence. Side by side with these excellent institutions may be seen provincial and city prisons which present a most striking contrast. Even in the capital, Tokyo, a visit to the Keishicho at Kaji-bashi-the place where suspects are detained awaiting trial-or to the Ichigaya prison, discloses a state of affairs calling urgently for reforms : old wooden buildings with cells of inadequate dimensions, constructed in a manner that must entail great suffering in cold weather, and often very defective as to sanitary arrangements. Nothing could have been more unfortunate than the financial pressure-the necessity of amassing a hard-money reserve for resuming specie payments-which induced the Government, 17 years ago, to transfer the prison expenditures to the charges of the communes, thus abandoning this important branch of administrative responsibilies to men that were certain to neglect it. So soon as the Cabinet found itself in a position to resume control of the prisons, a bill in that sense was submitted to the Diel, but the latter, being obstinately bent upon effecting its pet project, the reduction of the Land Tax, refused again and again to endorse the Cabinet's proposal, since the burden thus imposed upon the Treasury would have constituted a reason for not diminishing the income derived from taxation. Wiser counsels now sway the national assembly, and no doubt is entertained in official quarters that the House of Representatives in its din**o** 

control and management of the prisons to the Central Government. The total expenditure now incurred by the communes on account of prisons is 4,993,909 yen sources is 1,438,500 yen. Hence the net addition to the Treasury's burdens when the proposed transfer is effected will be are kept at their present figure. But it is to be assumed, of course, that great improvements will be effected, involving correspondingly increased expenditures. Assuredly edifices radically different from these now in use will have to be erected. The bill providing for the transfer, if passed by the Diet in its thirteenth session, will become operative from April 1st, 1899, and the Government will then have to consider the advisability of immediately making some special arrangements for the accommodation of foreigners awaiting trial. The present old-fashioned jails and policestations, as maintained by the communes, are, in many cases if not in all, quite unfit for persons not accustomed to the Japanese mode of life. To incarcerate foreigners in such places would be entirely inconsistent with the just and liberal intentions entertained by the Japanese nation towards western people. No one thinks of claiming for an instant that the punishment inflicted on a foreign malefactor in Japan should be lighter than the punishment inflicted on a Japanese. We only ask that each should suffer equally, and that the foreigner should not be condemned to a penalty far in excess of that contemplated by his judges, the penalty of living under circumstances that would be a constant torture to him. Were the abolition of Consular Jurisdiction still two or three of his artistic observation and perseverance years distant, there would be no occasion to are of high merit. His English scenes are mostly in the Lake district or in Surrey—the refer to this question; the Government, having ample time to effect the necessary arrangements, might be confidently trusted to make them. But from April to July the interval is only four months, and in that brief time it will be impossible to accomplish any substantial reforms general character. It seems Ιo us, however, that no segious difficulty stands in the way. The number hills, rising superbly above the misty blue-shot ravines that intervene between it and of foreigners apprehended by the Japanese police-if we except the cases of delinquents summarily disposed ofis quite insignificant: probably not halfa-dozen in the course of myear, if so many. Nothing could be simpler than to erect at the open ports and in three or four of the chief towns a small annexe to the ordinary jails so that suitable accommodation would be available for the incarceration of foreigners. The expense would be quite trifling-twenty thousand yen would probably suffice- and the gain would be Diction and trouble.

#### session, will pass the bill for restoring the THE LAND TAX AND THE REVENUE,

It has been stated in several quarters that the method adopted by the Government to obtain a large revenue from the Land Tax would be to raise the price of annually, and the income derived from the koku of rice for the purposes of the would be that the desired increase of income would be obtained without directly suggesting to the tax-payers that their burdens had been made heavier. Rumour 3,555,409 yen, supposing that the outlays now alleges, however, that the more straightforward plan of augmenthe rate will be resorted to. of augmenting present figure is 21 per cent. of the taxable value of the land. To what point it will be raised we have, as yet, no information, but as the intention is to obtain an additional revenue of some 17 million yen from this source, we presume that the new figure will be 31 per cent. There can not be any doubt, we think, that the Government acts wisely in not basing its method on the price of the koku of rice. Such a course would be, in some sense, a reversion to the old system. One of these days it will certainly become necessary to undertake reassessment of the taxable value of the land so as to equalize the incidence of the impost, but that is a large measure demanding several years' work.

> According to the Jift Shampo, the Government's intention is to seek the Diet's consent to the following augmentations of revenue:--

Land To	X X 6	17	million yen,	
Income	Tax	12	11 24 11 mm	
Total	*	30}	william yen.	

#### PICTURE EXHIBITION IN YOKOHAMA.

Mr. Roberton's picture exhibition on Thursday afternoon proved a very delightful auccess. Nearly a hundred works, ranging from completed pictures in oils to tiny studies in water coloms, displayed the artist's versatility and capabilities in a most striking manner. Mr. Roberton has travelled widely and the fruits two leveliest portions of the old country that an artist could ever wish to deliniate upon canvas, Some particularly rich effects are to be found in the series of oils that deal with the Lakes; thought the quiet, ineffable charm that hange over the Surrey hills and rivers-which Mr. Roberton has so successfully transferred to his canvas—may be found even more attractive to the eye that loves to gaze on Nature in her tenderer moods. A striking picture is that of Kinchinjungs, the monarch of the Indian Darjeeling. The artist has also studies of Ita-han and Sicilian scenery; dainty "bits" from Penang, Singapore and Hongkong in watercolours and also some finished oils of well-known scenes in these colonies that appeal to the Far Eastern hand who has once passed through them. Altogether the exhibition is above the ordinary run and should be visited on Friday by all who failed to see it on Thursday.

Information has reached London that Mr. Allbert Holbrook Hurst, cousin of Mrs. Maybrick, has died at Wellington, New Zealand, and left his fortune of \$22,000 to the convict, very great, for unless some such step be taken, foreigners will have a legitimate be not used to improve her present position or grievance which can not fail to cause makes the stipulation, however, that the trustees are to allow the sum to accumulate, and that it UNIVERSITY OF THE OINDIE ME Apprehension.

#### DEATH OF MR. GLADSTONE.

#### HIS LIFE'S CARRER.

Mr. Gladstone, who was born on December 29th, 1809, was the son of the late Sir John Gladstone, Baronel, of Fasque, Kinc-rdineshire, a well-known Liverpool merchant. He was educated at Eton, and graduated at Christ Church, Oxford. His Patliamantary experience dates from 1832, when he was returned in the Conservative interest for Newark. In the House of Commons he soon attracted the notice of Sit Robert Peel, who, in 1834, made him a junior Lord of the Tieasmy. By 1835 he was Under-Secretary for Colonial Affairs. Peel's retirement from office for a moment checked his official advance, but in 1841, with Peel's return to power, he was sworn in as Vice-Pie sident of the Board of Trade and a member of the Privy Conneil. Since then natil his retire ment in 1894, Mr. Gladstone's life was spent almost entirely in politics. Breaking with his early allies, the Conservatives, to whom his High Church sympathies unturally bound him at the opening of his career, he became a mem-ber of the Coalition Ministry of the Earl of Aberdeen in 1852 as Chancellor of the Exchequer, but separated himself from the Ministry Palmerston in 1855 on account of differences of opinion on questions relating to the Crimeun War. In 1859, however, he resumed the postof Chancellor of the Exchequer under Lord Palmersion, and in this expacity was mainly instrumental in repealing the paper duty, and giving England the benefit, as most people consider it, of a cheap press. After the death of Palmetston he became leader of the House of Commons, but was shortly after thrown into opposition by the victory of Disraelt and the Conservatives. On the resignation of Mr. Disraelt's Ministry in 1868, Gladstone succeeded him as First Lord of the Treasury, and during the next few years he made history fast. The passing of the Irish Church Disestablishment Act (1869), the Irish Land Act (1870), the Elementary Education Act (1870), abolition of Purchase in the Army (1871), and the Bailot Act (1872) were all measures of prime importance. which have had most wide spreading effects on the subsequent history of the nation. On an appeal to the country in 1874, the Liberals sustained a most disastrous deleat, and Disraeli again became Prime Minister. For a time Gladstone almost retired from public life, devoting himself chiefly to pamphleteering on Church questions and commentary and criticism on the poetry of Homer. The Bulgarian atrocities, however, once more stirred him up to vigorous action, and he commenced his famous crusade against the infam ea of Turkish misrule, opposing strenuously in Parliament and out the policy of Disraeli, which ended in the signing of the Anglo-Turkish Convention. Gladstone came back to power on the great Liberal wave of 1880, and had to face the Irish problem which confronted him for the test of his official life. Everyone remembers the dreary events of those days, the dynamite plots, the Caven-dish and Burke murders, the battle over the Coercion Bill, the exasperating obstruction of Parnell and his party. Trouble in Egypt, too, claimed much public attention. The bombardment of Alexandria, General Wolseley's victory at Tel el Kebir, the Sondan revolt, the failure to save Gordon at Khartonm are chief points which present themselves in taking a review of this troubled time. The fate of Gordon in particular exposed Mr. Gladstone to most acrid criticism, much of it quite unjust. The other great work of this ministry was the Franchise and Redistribution Acts, greatly ex-tending the Franchise and giving political power to the agricultural and other labouring classes. At the general election in 1885 the Liberals were returned in numbers almost equal to those of the Conservatives and Parnellites combined. The Parnellites thus held the balance of power, and their leader was a man clever enough to make full use of the opportunity the situation afforded. Whatever the secret history of the matter may have been one thing was plain, and
Digitized by

that was that Gladstone adopted a volte face policy. His announcement of a Home Rule Bill for Ireland shattered the Liberal party. Marquis of Hartington, and with him most of the great Whig nobles to whom moderate Liberalism was a tradition of centuries, broke away from an alliance with the Irish members; Mr. Chamberiain revolted; the second reading of the Bill was rejected; Gladatone appealed to the country; and as a result the Conservatives and Liberal Unionists were returned in over-whelming majority, and Lord Salisbury became Prime Minister. From that time till his retirement in 1894 Home Rule was the fixed dea with the Liberal leader; but he was sunjected to hitter disappointment. Parnell, having escaped the Scylla of the Times charges investigated by the famous Commission, wrecked his reputation on the Charybdis of the O'Shes divorce snit; and Gladstone's demand for his retirement from the leadership of the Itish party caused a split in the Home Rule faction, and rendered the realisation of the "Union of Hearts" still more problematical, Parnell's death did not remove the cause of division, and ever since the Parnellites and Anti-Pamellites have hated each other rather more than the Saxon oppressor! The election of 1892 brought Mr. Gladstone back to the Premiership for the fourth time, but it was a futile and beartbreaking task to which he was committed. After scenes of obstruction culminating in a free fight in the House of Commons, the Home Rule Bill was passed, but only to be rejected by the Upper House. This was the supreme effort. In 1894, owing to a failure in hearing and eyesight, the veteran statesman passed into private life. His extraordinary energy did not allow him, in spite of his infirmities, to remain entirely quiescent, and during the Armenian horrors two he made a vigorous and powerful speech directed against the horrors of Abdul Hamil's policy of extermination. He also actively showed bia sympathy with the Greeks in their ill-advised war last spring. Mr. Gladstone was one of the few great orators of the latter end of the nineteenth century; his speeches always had the magnetism of genius; and no one could hear him without being moved by the power of his language, if not by the force of his arguments. As a writer his style was ornate, polished, and vigorous and his varied mental gifts, immense energy and solendid character stamp him as undoubtedly one of the most remarkable men of the age,

#### THE SHASHI OUIRAGE.

The Japan Times publishes the following official account of the Shashi affair, as telegraphically furnished by the Japanese Consul, Mr. Eitaki:—

In the evening of 8th inst., a Chinaman, a resident of Human province, committed a muisance in front of the premises of the China Traders Steam Navigation Company. An employe of the Company reprimanded him, struck him, and slightly wounded him. Next moroing the Chinama called at the company's premises with a number of villagers and demanded a large sum of money as compensation for his injunies. The request, however, heing declined by the office, the dispute grew very fierce and attracted a large mob. The local officials despatched some 60 or 70 soldiers to the spot to provide against emergency. At about 7 o'clock in the evening of that day, the 9th inst, a gang of rioters (Human people) suddenly made their appearance in front of the company's premises publied down the gate and walls, and set fice to the premises. The soldiers stationed on the spot informately not only did not do their duty in dispersing the rioters but even aided and abetted them. When the news reached the Tao-tai at abour 9 o'clock, he basiened to the scene and made every effort to pacify the mob, ordering another party of Kingchaw soldiers to protect the Christian Churches. The Governor General of the Hu and Kwang provinces sent a Chief Commissioner of police and two inspectors, and a troop of soldiers is expected to a river hom lebrang. The number of rioters arrested up to the present is only about ten, the remainder are still wandering about to an excited and turbulent state. Grave apprehensions are entertained for the foreigness.

# MONTHLY SUMMARY OF JAPANES & CURRENT LITERATURE.

A recent number of the Shakai Zasshi has an article on "The Causes of the Immorality of Students," by Yamagata Tokon, which enters minutely into the characteristics of the mass of modern students and describes the kind of life they lead. The following is a short epitome of the article:-In an address on this subject delivered by Mr. Watanabe Hiromoto a short time ago, the following facts were stated. The munber of students attending Government and other schools in Tokyo alone is about 37,680. Allowing that each of these students spends 12 yen per month, the sum would teach 452,160 ren per mouth, or 5,425,920 yen per year. proportion of these students who actually graduate is 20 per cent. Gambling and other vices are most common among them. In Hongo and Kanda alone during October last no less than 80 students were arrested for gambling. The causes of the general degeneration of students given by Mr. Yamagata are ten in number. (1) A change in the subjects of study. In ancient times the minds of students were centred on morality, and the development of the intellect was a very secondary consideration; now intellectual sharpness is at a premium and ethical studies are at a discount. (2) A change in the class of youths attending school. In ancient times students consisted of high class samural and young men of still higher rank. From about 1877 all classes of shizoku entered the ranks of students. From about 1887 the number of heimin or plebeians attending school reached half the total number of scholars. Ten years later the shisoku element had become a very insignificant and uninfluentisl element, so much so that the students of the present day may, speaking generally, be said to be plebeians. (3) All the faults and defects of the age, all the fashions of society, affect the studeut. The general levity, artificiality, and want of seriousness of purpose reflected in the lives of older men exercise a powerful influence over the mind of youth. (4) A change in the relation of teacher and pupil, which in former days was like that of a parent to his child, but now is more like that of a buyer to a seller.

(5) Laxity of discipline in schools and the means of enforcing it. (6) General prevalence of sordidness. The subservience of all things to pecuniary considerations. (7) Students of the present day have in a large number of cases ceased to expect that their studies will yield satisfactory results in future life. Twenty years ago to be versed to a fair extent in modern learning meant immediate incrative employ-ment. But in recent times comperition has become keener and for the most part only high class students are sure of receiving appointments, and employers show a marked preference for the graduates of Government schools. There exists at the present moment a kind of learn-ed clauniam which pronounces against the student trained at a private institution. Things go more by name than by merit in Government and even in business circles. This produces indifference and carelessness in the minds of numerous students; despairing of final success, they give way to the inclinations of the moment and live dissolute lives. Outside of a favoured circle of students, the battle is not to the strong nor the race to the swift. Hence what is the use of labouring to be strong or swift? So argues the class of students referred to. (8) The numerous enticements and snares of the metropolis are responsible for much of the laxity of morals that exists. Many are the students who go astray mawares when exposed to temptations that are quite new and of a most insidious type. (9) The lack of principle and virtue in the leaders of modern society, and bence the want of good examples for students to follow, (10) There would seem to be something in the principal branches of knowledge to which a student gives special attention that exercises au influence over his morals. It is a known fact that in immorality medical students rank first and law lokkents hours; the former going wrong

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN with women and the latter lapsing into various the office of the magazine; and three monthlies: forms of dishonesty and falsehood.

After giving abundant proofs of the universa lity of existing degeneration among students in the provinces as well as in the metropolis, Mr. Yamagata discusses possible remedies for the state of things described, among which a new class of lodging-houses and boarding establishments occupies a prominent place.

The Shakai Zasshi publishes an interesting account of the history of the study of Social Science in Japan during the year 1897, from which we call the following items :- The chief event of the year was the increased attention given to Vincent's Sociology, which now has quite a number of learned exponents in this country. The subject of mental science treated from a sociological standpoint has attracted little notice in this country, Dr. Motora being almost the only writer who has paid any attention to it. The number of schools where regular lectures are given on social science is comparatively few. The following are the chief with the names of the lecturers:—At the Imperial University, Professors Takagi Masayoshi and Tatebe Tongo. At the Waseds Semmon Gakkō, Professor Tatebe. At the Keiögijuku, Professor Droppers. At the Senshingaku-in (Unitarian), Professor Kishimoto Nobuta, At the Rikkyō-gakkō (Episcopalian), Professor Motoda Sakunoshin. Among the Japanese lecturers Professor Takagi has had special training for his tack, having studied Political Economy and Sociology in both Germany and America. As a study the subject of Sociology cannot be said to have passed the initiatory stage in this country. present what is known in the Chicago School, of which Mr. Vincent is the chief representative, may be pronounced the most popular, Mr. Spencer's teaching having lost favour with the Japanese leaders of thought on this topic,

. . The deficiencies and immorality of the modern student from month to month furnish topics to numerous magazine writers. There is considerable vagueness about the charges brought against the student class. One cannot help feeling that the standards of the writers as far as students are concerned are impossible standards. With not a few old-fashioned folks who ventilate their opinions on this subject transgression of what they consider the raise of propriety is regarded as an unpardonable fault. The action of the Niigata Normal School Studente and teachers in performing the Taikoki jū-damme, for instance, has been almost universally condemned by newspapers and magazines and quoted as an instance of the degeneration of school teachers. The Nihom Shugi and the Taiyo are, we think, the only The Wilton magazines which have pointed out that the playchosen is very high class and that there is no harm whatever in school teachers' taking part in private theatricals. The Kjöiku-firon, the Hansei Zasshi, and other organs throw the whole bame of existing looseness of morals among the students on school systems and school leachers, but Dr. Kaio Hiroyuki in No. 68 of his "Hundred Essays" points out that diaregard of old moral standards and the rejection of the authority of the three creeds is incident to the adoption of Western civilization. School teachers cannot alter the spirit of the age, which places more value on the development of the intellect and the acquirement of knowledge than on moral recti-Some of the political gentlemen, says Dr. Kato, who are so fond of denouncing school systems and school teachers are living lives that The students are a will not bear scrutiny, reflection of the general state of modern society, which is suffering from all the imperfections and inconveniences characteristic of a transitional stage.

The Taivo, in an instructive note, discusses Women's Magazines, of which there are six that are fairly well-known: three fortnightlies,

the Nihon-no-Katei (宋 庭), published by the office bearing this name; the Katei Zazehi (The Home), published by the Min-yūsha, and the Uranishiki, issued by the Shokeisha. The Jokan. a conservative organ, opposed to foreign ways and to Christianity, strongly objects to such schemes as the establishment of a Women's University. (2) The Joshi-no-Tomo is also conservative. Miss Shimoda Utako writes a good deal for this organ. Women have always been more conservative than men in Japan, says the Taiye. Back in the time when Japanese books were neglected in favour of works imported from Chins, it was by women that such works as the Makura no-Soshi and the Genji monogatari were written. This love of native institutions and customs permeates the pages of the Joshi-no-Tomo. The subjects discussed by this organ include female deportment, food, household life, and the like. The biographies of noble women in Japanese history are also constantly given.

(3) The Yogaku Zasshi advocates Christian ucation. Mr. Iwamoto Zenji is the editor. education. The line taken by the magazine in the nude female controversy was unconventional. It saw no objection whatever to such paintings if done for art purposes. There is nothing im-moral in the exhibition of such figures as that painted by Honda, says the *Fogaku Zasshi*. As a literary organ it is well supplied with reading matter, but its tone is decidedly pessimistic and as such can hardly be considered

the scient can hardy be considered beneficial to society generally.

(4) The Nihon no Katei has no religious flavour of any kind and no pet theories. It is quiet and unobtrusive in tone.

(5) The Katei Zasshi is an organ of the Min-yû sha and is a kind of Kokumin-no-Tomo adapted to the capacity of femule readers.

(6) The Uranishiki is a Greek Church organ. and as such an advocate of everything Occidental and Christian. It publishes the lives of Old Testament women and emphasises the orthodox view of the sinfulness of human nature and the consequent troubles to which human beings are heirs.

The Teikeka Bungaku has two long articles on the subject of "Hymna." The first is by Mr. Shima Kwasui and the second by Mr. Ouchi Seirau. After giving an account of the history I hymnology in England, Mr. Shima observes that Buddhist sacred poetry is very poor when compared with Western Christian hymns and recommends modern Buddhists to abandon the stilted 7.5 verses and invent a style of their own. Mr. Ouchi's article covers 37 pages of the Magazine. It speaks favourably of the japanese Christian hymns now in use and says that Buddhists have much to learn

from Christians on this subject.

Commenting on the above, the Taiyo says that for some time past there has been a marked alling off in the amount of attention given to foreign literature. This no doubt partly arises foreign intrature. This no doubt party arises from the nationalistic spirit that has been making itself felt in all quarters, but is also attributable to the fact that there are very few Japanese writers who are thoroughly competent to treat questions connected with foreign literature. Among young men only those who have graduated at the Literary College connected with the Imperial University or have made a specialty of foreign literature at the Semmon-gakkō, the Keiögijuku, the Doshisha, or the Aoyama Gakuin possess the necessary knowledge for this class of study. The total number of literary graduates every year is very small, and most of these accept posts m teachers of languages in provincial schools where their time is very much occupied.

Writing on what is called Shakai no Shō zetsu (Novels on Social Topics), the Waseda Bungaku says that books of this class are as a rule nothing more than a reflection of the lives

describing the work of the benefactors of man-kind in Japan would be of extreme interest. But such works are not forthcoming. Such topics as the extent to which society affects the individual and the individual affects society; the influences being brought to bear on modern society; the thought-moulding that is going on; and the effects of commerce, industry, and the like, on the masses are full of interest and might be taken up with profit by the modern novelist.

Under the heading, " New Magazines," the Waseda Bungahu gives the following :- Poetry : -(1) Kokoro-no-hana; (2) Imbun(龍文) Geku; (3) 花香月影 Kwakô getsuei. (1) This publication is devoted to Yamato-uta and other forms of Pamate-ketoba. It is the organ of the Imperial Household party. (2) The Imbungaku publishes various classes of verse: Yamato uta, haikai, Chinese verses, and New Style poems. (3) This magazine is edited by Mr. Oc Keikō, a writer of Chinese verses. As the title indicates, the chief topics touched on are flowers and the

Under other headings various new magazines are alluded to, but they have all been noticed by us in previous summaries. Ongaku (Music), we observe, is to be enlarged. There seems to be a growing demand for this periodical.

A subject on which it is desirable to collect full information is provincial customs, says the Waseda Bungain. The Füsoku-gwaho only aims at giving an account of peculiar customs, likely to create antonishment among readers. The Fogaku Zasshi last September appealed to the public for information on female provincial customs and habits, under 20 heads. Nihon-no-katei asked its readers for information on household affairs under 6 heads.

In reference to the above, it is important to observe that hitherto all attempts to collect information and statistics by addressing letters of inquiry to persons residing in provincial towns have signally failed. The Nihon Shukyo, the Taiyo, and other periodicals have attempted this but to no purpose. It is plain that to trust to unpaid correspondents to furnish full information on any given topic shows ignorance of the world and of the difficulty of obtaining reliable intelligence from persons who are oblivious to the necessity of classifying and testing facts.

Another number of the Hakubun-kan Series of Miscellaneous Works, called Hyakka Zensho, has appeared, the title being Toro, Seiyo, Rineigaku thi, a History of Eastern and Western Ethics, Mr. Kimura Takataso, who has made a special study of Ethics, being the author. The work covers 320 pages and sella m 35 sen per copy. An account of all the principal Schools of Ethics, Eastern and Western, is given, with the views of the author as to the merits and demerits of each system. A work of this kind is very much needed as a text-book in High Class Schools. Mr. Kimura's volume may serve this ригрозе.

A history of the early relations between Europeans and Japaness entitled Nichiō Kötsü Kigen Shi (日歐交通起源史) has been published. The author is Mr. Kun Kikutarō. The work is for sale III Maruya's at 1 yen 50 ses per copy. The Shigaku Zasshi reviews the book at some length. From this notice we extract the following account of the views of the author, observing the headings given by the Shigake Zasshi—(1) The Japanese are an Aryan race. Nothing like conclusive proof of this assertion is given, however. (2) The comparative slowness of Japan's progress in civilisation is to be attributed to three circumstances. (a) She was a fishing and not a hunting nation. She had no good harbours on her Western Coast. (c) Asiatic civilisation as known on the continent had no life in it in the early days of Japanese history. (3) On the early inter-course of the Chinese and Koreans with the that are fairly well-known: three fortnightlies, of students and the authors are ignorant of Japanese the author has nothing new to say. (4) the Fokan (大星) published by the Kokio the real state of society. Tales giving accounted Militan pages that the Japanese were skilled sha; the Ribing crossed to America, but no proof of this stateTojosha; and the Fogata Lasthi, published at women of purpose in their upward paid of crossed to America, but no proof of this state-

ment is given. (5) The replies of the author to those writers who deny that Marco Polo re-ferred to Japan is very full. (6) Chap. VI. gives a detailed account of the first arrival of Europeans in this country. Chaps. VII.-X. are the most valuable part of the book, entering as they do into the whole history of Japan's intercourse with Western nations and the results

upon her national life and policy.

A review published in the Rikugo Zasshi says that the conclusions arrived at by the author are not warranted by the facts given, but that the work is valuable as an account of a period of history that lias never been fully writ-

ten up in the same way before.

. . A lexicon of considerable value which for nome time has been out of print, the 经訓菜 Wahun Shiori, originally compiled by Mr. Tankawa Shisei, is now being revised by Mr. Ban Nobutono and is to be issued in a new form some time this year. The Köten Kökyü jö, Iidamachi, 5 chome, Tokyo, are the publishers, the subscription price being 5 ven 50 sen.

Another edition of the same work is being published in Gifu at the Seibido by Miura Gensuke. The subscription list for this edition is now open at the Tökyō Seibido, Tori, 3 choine, the subscription price for the whole work being 8 yen. The 82 volumes of which the Wakun Shiori consists are to be bound together in 2 volumes. The original Compiler, Tanikawa Shisei, did not live to see the work completed. Divided into three parts, only the first and second appeared during the author's life-time. The materials for the third part were collected by Tanikawa, however, and are now given to the public for the first time. The Seibido, having purchased the copyright of Part III, and having the right in publish Parts I. and II., they alone, it is said, can supply copies of the complete Wakun Shiori. It is serted that Mr. Ban's edition will only include Parts I. and II.

The Teitoku Bungaku calls attention to the literary earnestness of L'Abbé François Ligneul. Another work of his has recently appeared, which is a translation from the French, bearing the Japanese title *Keisei jiron* (A Word of Awa-kening Suited to the Times). The translator is Mr. Maeda Chōtaiō. The style and contents of M. Ligneul's little volumes are highly praised by the Teikoku Bungaku. It is just these kind of works that are needed, says this organ, to defend Christianity against rationalists and to convey to the minds of poorly educated readers a correct impression of the many good qualities of the Christian faith.

An account of Mr. Tamai Kisaku's travels and investigations in Siberia, it will be remembered, was read at the Oriental Congress last year, and awakened so much interest that Mr. Tamai was induced to embody the results of his researches in a small volume published in Berlin, the title of which is Karawanen Reise Von Kisaku Lamai: Mit auhaug; Weltreise Mehreres Japaner über Sibirien vor 100 Jahren.

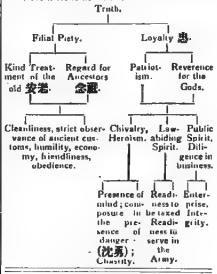

The following items are published by the Ryōiku Kōhō, being culled from various sources: -Marquis Ito is credited with the following Statement: There are two things which as a nation we must seek to avoid. (1) We must beware of trying to establish a form of government for which our history has not fitted us and hence which may be pronounced unnatural. (2) We must see to it that we are not content ith anything short of first-class civilisation. We must take our position among the most eulightened nations of the world. To these prolightened nations of the world. To these pro-positions as theories few reople object, but in practice they are constantly departed from. Neither in legislation, education, nor in the general intercourse of men with each other is

Kinoshita, calls attention to the neglect of ethics as a subject of study in Government schools. In middle schools as a rule not more than one hour a week is devoted to the subject, and the study is regarded with aversion by many school authorities. Asian excuse for this state of things it is often said that ethical theories do little good and that the teachers can do more towards reforming wicked students by leading exemplary lives than by preaching morality in the class room. This is true enough, observes Mr. Kinoshita, nevertheless the banishment of ethics as a subject from the curriculum of a school is calculated to have a bad effect on the minds of students, in that it leads them in think it is unimportant.

The money at the disposal of the Mombusho for the maintenance of young men carrying on study in Europe or America is said to be quite inadequate. Other Departments are better off in this respect. In the case of the Rikugunshō, the Kaigunshō, and the Gwaimusho those who are sent abroad for study are allowed to retain their rank and draw pay as officials while receiving special allowances as students. In the Mombusho this practice is not followed. It will be remembered by some of our readers that a short time ago the Fifi Shimpo called attention to the disproportion between the number of inventors pro-duced by high-class education in Japan and the time and money spent in imparting high-class knowledge. The Imperial University was shown not to be suitable soil for the growth of the class of men known as inventors. The reason of this is now said to be that, unlike English students, Japanese University graduates go out into the world with no practical knowledge of the subjects attidied. A gentleman's son in England, in order to master the details of a trade or industry, will work as a common mechanic for a while. there is no such spirit here. The inventions of University students have often been very costly affairs and have lacked that applicability to special everyday purposes which distinguishes the invention of a man versed in practical details.

A writer in the Fogaku Zasshi compares Japan with China in regard to conservatism, and comes to the conclusion that, though in appearance Japan seems to be the more forward of the two nations, in reality China is the most advanced. It is maintained that the mass of the people in China are more industrious and more business-like than the majority of Japanese. Despite the fact that this country has new laws, new modes of locomotion, and new systems of education, the conservative spirit is very strong thoughout the country. Methods of business are still old methods. In no country does there exist so many mushroom companies. In few countries have so many enterprises failed from want of business insight on the part of their chief promoters or from want of perseverance under the stress of difficulties. What is started in the business line in China is for the most part carried through. And although they are supposed to be very anti-foreign, the Chinese habitually use foreign capital and, as for trade with foreigners, they are far keener to engage in it than the Japanese. Though they have made no fuss about Treaty Revision and have even quietly submitted to foreign occupation of their soil, yet in the material profits to be derived from international trade, the Chinese undoubtedly get the lion's share. Though seemingly used by the Occidental resident, they are in reality employing him for their own ends. In all things the Chinese are utilitarians and their traders possess the knack of turning to their own advantage the blandering or weak policies of their Government. In Japan the Government is progressive, but the mass of the people are conservative. In China the Government is con-servative, but the mass of the people are progressive.

fucianism as shown in the history of Education in Japan"; the other for the best essay on "The Methods of teaching Morality in Primary Mesers Miyake Yonekichi and Hat-Schools." tori Unokichi were the awarders in the case of the first subject, and Messrs, Tanimoto Tomi and Shimoda Toshihide in that of the second. Prize No. 2 was won by Mr. Ozaki Sei, of Aichi Ken. The essay is too long for reproduction here. The theory which he elaborates is that in the Japanese system of ethics there are certain cardinal virtues from which other virtues are derived. He has drawn up an elaborate genealogical table showing the origin of the lines of conduct men have agreed to call virtuous. Parts of this table seem to us highly fanciful, but it is nevertheless interesting as a Japanese conception of the relation borne by the virtues to each other. It will be seen that the progenitor of the whole race of Japanese virtues is what the Japanese call Matoto many omissions the table is as follows:—

#### REVIEW.

Professor Chamberlain's "Handbook Colloquial Japanese" has reached its third edition. There can never be a very rapid sale for such works, and the profits attached to them cannot be large. The number of foreigners who aim at a scholarly acquaimance with Japanese are very limited. As we have often pointed out to our Japanese friends, though designed to teach foreigners how mapeak Japanese, the "Colloquial Handbook" serves the purpose of teaching [apanese how to render Japanese phrases into English in an accurate and graceful manner—an art that is acquired by very few Japanese. But its price is prohibitive to the mass of Japanese students, Fifty sen per volume is about the limit that a student expects in have to pay for a phrasebook; and to the Japanese student Mr. Cham-berlain's work would only seem to be valuable as a phrase-book. All things considered, the fact that the Handbook has taken ten years to reach its third edition is no cause for surprise,

As is stated in the Preface, the third edition of the Collequial Handbook differs little from its forerunners. Mr. Chamberlain has very wisely made the numbering of the paragraphs uniform with former editions. Thus in each edition ¶ 27 treats of Accent. This is a great convenience to classes where the members are neing different editions. As far as we have compared the second and third editions, the principal difference between them is at the end of the Practical Part, where an extract from the proceedings of the Imperial Diet (March 3rd,

\* " A Handbook of Collequial Japanese, by general intercourse of men with each other is progressive.

our ultimate object kept sufficiently in view.

In education especially is it important never to lose sight of the ideal which we hope to reach the composition prizes:—One for the best Vokohama. Sampson Low, Maiston & Co., Lon-The President of the Kyolo Dalgara, Mr. cassy of the "Merits and Demerits of Condition of Condi

1897) takes the place of "A Warning against Fashionable Mania.

Professor Chamberlain's Handbook is undoubtedly the best work on Colloquial Japanese that exists, and to us it seems that its chief excellence lies in the way in which every rule of grammar is exemplified. To the careful marking of the long vowels and the use of the certain short vowels we attach great importance. Much of the incorrect pronunciation of Japanese beard from the lips of missionaries and others, resulting in the most ridiculous mistakes, such me describing a Higher School as a harp school, a strange school, a language school, or some other kind of school by saying Koto-Gakko, instead of Koto Gakko. a mistake we have ourselves heard made scores of times, would be avoided by reading carefully marked Romanised Japanese only.

There are a few points on which we find ourselves unable to agree with Mr. Chamber-The paragraph on Accent we think to laio. be misleading. Mr. Chamberlain does not seem to be quite sure of his ground when treating this subject. After asserting that "there is little or no tonic accent, and only a very alight rhetorical accent," and that "all the syllables of a word and all the words of a sentence are pronounced equally, or nearly so," Mr. Chamberlain says in a note, "the statement made in the above paragraph concerning the absence of accent in Japanese is intended rather for purposes of practical instruction than of scientific accuracy. There is a slight tonic accent in Japanese. But so extremely alight is it that it has never been marked in any dictionary, whether native or foreign, it has no influence on prosody, it varies from province to province, and in habitants of the same province contradict, not only each other, but themselves in their usage and in the explanations which they give con-cerning it." Thus we see that Mr. Chamberlain admits that there is a tonic accent, but finds it necessary to qualify the admission. In one opinion there is a most distinct accent in Japanese. This accent struck we so forcibly when we commenced the study of the language some twenty-five years ago that we invariably marked the accentuated syllable in every new word dotted down in our note-book. The fact that this accent has not been marked in native dictionaries goes for nothing, as they are compiled for lapanese who in most cases do not need such aids. As for the works prepared by foreigners, this absence of accent marks has often been deplored by scholars making use of these lexicons. The accent does not vary from province to province my far as educated Japanese are concerned. That Japanese residing in the provinces should, when consulted, differ on the matter of accent is easily accounted for on the ground of prevailgeneral slipshodness inaccuracy and in articulation prevalent among semi-edu-cated people whose attention has never been seriously called to the importance of distinct pronunciation. Whether the accent in Japanese is important or not can easily be tested by dropping it or changing it. Pronounce Watakushi as Watakuslif, Otatu, - Otniu, at we have heard done, and Japanese ears will at once be tortured. Whether the accent heard should be called a tonic or a thetorical accent it is not important to discuss. That in the case of all three or more syllable words there is at any rate one accent and there are sometimes two distinct accents is to our mind indisputable. To instruct a student of Japanese to pronounce each syllable of Hakone, Miyanoshita, and Ashinoyu alike is, it seems to us, to tell him to do what no Japanese ever does. In all such words the voice rests in a most distinct manner on one syllable. To our ears the Japanese always say Hakons, Miyanoshita and Ashinoya, us they any masureta, Kokoro, Bliydko. That it is possible for foreigners to make this accent too heavy we readily admit. The weight to be given to an accent can be perfectly learnt only by persons whose ears are exceptionally keen, and when least included by any archite manner the fift says

But no amount of difficulty attaching to the acquirement of the exact degree of emphasis laid on certain syllables in the pronunciation of Japanese warrants the assertion that every syllable is pronounced alike or nearly alike. venture to think that Mr. Chamberlain's attention has not been called to this subject in a special manner, or he would certainly have modified the statements in former editions in the one we are now reviewing.

Another subject on which we differ from Mr. Chamberlain is the alleged absence of personification in Japanese. It will be membered by some of our readers that Mr. Ehmann, in his introduction to a collection of proverbs published by him, goes into this subject in a very thorough manner. We entirely agree with the conclusion Mr. Ehmann has reached on this subject. He asserts that personification is quite as frequent in Japanese as in any European language. He affirms that the Japanese objects of worship are personifications of nature. He points out that sex is attributed to a number of inanimate objects, and that legendary tales and folk lore abound with personification. He correctly, as it seems to us, alleges that instances of personification occur by the hundred in the Japanese longuage. The following are a few examples quoted at random from Mr. Ehmann's list. Akire ga rel nt kuru. Akuit sen ri wo hathiru; Köji mon wo idenu. Ari no Kwannon mairi. Ari no omoi mo ten made todoku. Ashila no koto wo iu to tenjo de nesumi ga warau. Daikai wa chiri wo yerabasu. Demono, haremono tokoro kirawasu. We might add a number of similar sayings from our own collection of proverbs and wise sayings, but these suffice to show that Professor Chamberlain's assertion in \$\, 440 that "Inanimate objects are rarely, il ever, personified " needs considerable modification,

In treating of tentwoha Mr. Chamberlain does not, It seems to us, bring out fully the use of wa in such sentences as waruku wa yoshimasho, "If it is bad we will give it up"; and the difference between this form and yoroshikereba voshi-As we understand these expressions the difference between the two forms is that of certainty and uncertainty, or that of condition-ality and unconditionality. For instance kashikokereba wakaru means, since he is clever he (certainly) understands, or, being'clever be understands. But k shikoku wa wakarimasho means:--If, or in the event of his being clever, he will understand Tras touches on the aubject, but the explanation is not sufficiently full and explicit.

"Colloquial Handbook" being on the whole such a perfect book, with which a scholar of the most fastidious taste even could find little fault, we think the author would do well before bringing out another edition to reconsider the points to which we have drawn attention.

One word more. In reading through the volume there are places where it has struck us that the translation is a little too free, as, for instance, " But, do please, Sir, give me the chance of recouping this alarming sacrifice by buying of me again" as the equivalent of sehi o umeaware wo. But such examples are very rare. W.D.

#### JAPANESE FACIS AND COMMENTS.

There is, says the Yomiuri, a split in the sanks of the Opposition. A vote of want of confidence in the Cabinet was originally agreed upon by the Satsuma clique, with the support of the Doshi Club; but the Club is now divided into two parties, who differ as to the plan of attack, and reconciliation is not yet effected. Even supposing that they may ultimately come 17. which, together with the "strong foreign policy" clique—in which are included to a compromise, their number does not exceed policy" clique—in which are included Messrs. Komuchi and Abei—constitutes a total of 25 only. Unless either the Liberals or Progresaists approve the resolution, it will produce no

carried on by the Government the wheat crop this year is estimated to be larger by 20 per cent. than that of ordinary years, but tea and silk are expected to decrease by 30 per cent. This reduction, however, does not imply a failure in tea and mulberry crops; it will be the result of the augmentation of expenses and the want of capital. The appreciation of commodities and wages is everywhere the same, and the exorbitant interest on loans reduces profits to vanishing point. Even Shinshin and Joshin, the two most renowned provinces for sericulture, are reported to have reduced their rearing this year by 30 per cent. In the tea-producing districts of Shizuoka and Miye raw leaves are offered for sale. The Jiji mournfully adds that these two important branches of industry can hardly escape the tendency to decline.

The demand for fine qualities of tea remains firm, and competition among two or three firms in Yokohama has enhanced the value by one or two yes. Owing, however, to the purchasing spirit having slackened large stocks are rapidly accumulating. The Nitto Trading Company has, in view of orders for 300,000 cattles from New York and 20,000 cattles from San Fran-New York and 20,000 cattles at prices ranging cisco, hought 51,500 cattles at prices ranging from 26 wen to 41.50 yen. The following comparative figures show the sales, &c., for the last two years :---

Sales from beginning	May 9, 1898. Catties,	May 9, 1897. Catties.
of season,	1,485 000 405,300 347,100	1,372,000 280,000 66,500
Maximum quotation	73 yen	70 yen

The Porosu reports that a draft of the revised law of election recently presented to the Premier by the Chief Secretary of the Lower House was submitted on the 9th instant to the Cabinet. Though vehemently opposed by Count Incuye, it was passed by the majority and subsequently transmitted to the Legislative Bureau, some verbal alterations were made. The principal points appear to be as follows:—Each Fu or Ken is to form an electoral district, cities, however, to constitute in themselves separate districts for election. (2) The basis of representation is to be one member per 80,000 of population, exception being made for cities possessing a population below this limit. (3) Payment of at least five yen in land tax or three yen in income tax, and residence in the electoral district for a certain number of years, are necessary qualifications for voting. (4) The aggregate number of members will be 517. We (Japan Mail) do not attach the least credit to the Yorozu Choho's account of what passes at Cabinet meetings.

It is highly satisfactory, says the Chuo, that a special office has lately been established to carry out the new plan for street reform in The Manicipal Council has recently decided to set apart 20 million yen for ten years, and in order to meet this a special tax is to be collected every year to the amount of one and half a million yen, instead of from 300,000 to 500,000 yen as heretofore. The schenie, however, is so gigantic in to warrant application to the Government for a subsidy of a million yes a year and communications have been made on the subject to the Home and Finance Department. Never has Tokyo displayed more enthusiastic forvour in the cause of reform.

A number of newspaper and magazine writers, strong in their views m to the necessity of pre-serving the balance of power in the Far East, assembled some time ago at the Manyasu Restaurant, at Shimbashi, Tokyo, and passed resolutions in favour of maintaining the national prestige of Japan. They have since been pur-aning their object, and a second conference in which over 100 writers from all parts of the Empire took part was held on the 9th instant at the Saba Maple Club. They were all in-The Jiji says that according in investigations Powers and the cowardice of the Japanese URBANA-CHAMPAIGN

After much deliberation it was un-Cahinet. animously resolved, on the motion of Mr. Takata Sanaye, that steps should be taken in censure of the Government's diplomacy, and with a view to restoring the balance of power in the Orient. Three points were also determined as the mesns of carrying out these objects. The first is to maintain an Allied Writers' Club in Tokyo; the second, to effect a combination with provincial institutions; the third relates in the appointment of a committee. Mr. Ozaki Yukio spoke m follows:—"There are three ways for restoring the balance of power in The first is to cause the Powers the East. to resign all the territorial privileges exacted from China. The second consists in forcing them to change the avowed object of the leases should they refuse to surrender their reases should they refuse to surrender their pivileges,—in other words, to open the territory to the world's commerce it it has been leased for military purposes. The third is to obtain from China such places of military importance as may enable Japan to cope with other Powers if they will not listen to either of these propositions." positions."

In Shizuoka a loss on the tea crop is anticipated on account of the appreciation of commo-dities and rise in wages. The output for last dities and rise in wages. The output for last year amounted to 2.547,640 kwamme; and that of this year is estimated at 2.541,271 kwamme. Shiga is geographically unfavourably situated with regard to the tea industry. The leaf a rule commands the highest price in the beninning of the second by ginning of the season, but suffers serious depreciation towards the close. Although Shizuoka and Miye may count upon more or less profit from their manufactures, Shiga, with the tea season much later than in other districts, can scarcely hope to be free from losses. A of tea land there yields from 116 to 145 kwan of the leaf, valued at 13.34 yes on the average, whereas expenses for fertilizers, cultivation, and plucking are no less than 16.70 yen.

The Shashi affair is sincerely to be regret-ted, for the sake of China, remarks the Nevertheless it must be observed Yomiuri. that the incident is the result of the procrastination and conservatism characterising the Middle Kingdom in its intercourse with western nations. In addition to claims which ought to be advanced against China in strict conformity with the principles of justice, Japan must urge that some thirty councillors, civil and military, be engaged from her by the Chinese Government to effect radical reforms in the internal administration of the Empire. China's permanent amelioration can only be effected by devoting her entire energies to the reform of her administrative machinery. Her obstinacy is the root of the evil; she will not keep pace with the general progress of the world. Now is the time for Japan to come to her asgistance.

The Hochi says :-- A Major in the Russian Army, accompanied by a number of non-commissioned officers, has been engaged in a topographical survey of Ham gyong and Kang-won, Korea. His party lately arrived in Won-san, and they are reported to have committed gross outrages on women and others along the road which they had to pass. Some of them recently repaired to the local Administrative Office in Won-san, forced its officials to provide them with wine, broke furniture and goods, and indeed indulged in indiscribable violence. left the office, but came again at night and finding the gate closed, attempted to break it with their swords. A Korean about fifty years of age happened to pass and was cruelly murdered; the Russian afterwards proceeded to the police station and killed one of the servants. After this they carried their attack to the church, where a French missionary lived, were repulsed by the latter, who fired a pistol at them.

"The necessity for establishing a foreign bank in Japan-an impression made on the consul during his tour there a few years agoforgotten. But since the Japanese law does not allow foreigners to hold landed property or in deal in shares in their own names, it is altogether impossible to expect that they will ever be induced as private individuals to invest their capital in Japan except to the extent of a million European Bankers in general are yen or two. European Bankers in general are of opinion that there in no hope of success in the introduction of capital to Japan. The rates of interest are exceedingly low in Europe, yet the market in its present condition guarantees the possibility of realizing as much profit on money was secured in Japan. Capitalists as a rule are therefore deterred from investing their funds in such a distant and (as they think) unsubstantial country, though different opinions are entertained on the subject by some English and French bankers. A certain class of Germans and Americans appear to regard the Japanese as formidable rivals in industry and Japanese as formidable rivals in industry and commerce, and are accordingly disposed to condemn the farnishing of fands to them as giving provisions to the enemy. While Japanese industry may be expected to secure considerable progress and development by the appropriations of foreign capital, it is to be regretted that Japan has shown a spirit, of intolerance against foreigners in regard to the supervision of her domestic enterprises." Finally the consul expresses his intention of coming to Japan next year for the purpose of organising a Japanese German bank.

The Finance Department has published the national accounts for the past two years as follows :-

brought over ......

contributions ... Special War fund......

Total ......112.617,110

Total .....217.676,201

Grand total ......217.437.377 Expenditures.

hama, under date the 14th instant, announces injury from frost throughout Nagano prefecture. Another telegram from the 19th National Bank in Uyeda reports 90 per cent. of the district to have sustained damage. Similar reports have also been received from sericulturists in Matsushiro, while news from silk factories in Ogata represent the mulberry leaves there to have been entirely destroyed. A reduction of at least five per cent, on the output of silk must be expected this year. [These reports appear regularly every year and are mostly manufactured for "market use."]

The tea growers in Omi district have sustained in ordinary years lately a loss of 33.6 yen per tan; they have this year to expect a loss of 5 10 yen owing to the appreciation of rice and fuel and the depreciation of tea. Immense tracts of land in which irrigation is possible have from these circumstances been converted into rice fields, while others have been changed into mulberry plantations. The area of tea land has diminished on the whole by 20 per cent., the reduction in the output through want of fertilizers being estimated II 50 per cent. In Formosa the ten growers are remarkably successful this year on account of the settled condition of weather throughout the season. The quality of the leaf is even superior to that of last year. But the market remains in a state of extreme depression, the amount of business done in Twatutia being half that of last year. Arrivals from the beginning of the season up to the present amount only to 6,800 cattles. Quotations now stand at 32 yen, which figure shows a depreciation of 3 or 4 yen as compared with the Spring tea of last year and of 12 or 13 yen as compared with the Autumn leaf.

The Kokumin reports that a private undertanding has been arrived at between the leaders of the Doshi Club and those of the Progressiat erry, with the object of demanding an explanaion from the Government with regard to its diplomacy. The points on which information is wanted may be summarised as follows:—(1) When the retrocession of Liaotung peninsula was acceded to a few years ago III the instance of the three Powers, was not a solemn declaraion exacted from China pledging her to refrain rom leasing to any other Power the territory so restored? If no pledge or promise was taken, why? (2) What were the detailed reports ob-tained by the Government in regard to circumstances attending the claims advanced by Russia for leasing Port Arthur and Talien and securing profits connected with mines and rail-ways? (3) How far was the Government enabled to ascertain the facts to the land changed by England, France, and Germany from China? (4) While the various Powers were competing with each other to obtain land and secure advantages in China, what schemes were adopted by Japan towards maintaining her in-terests as well the general peace of the Orient?

The Pomiuri expresses satisfaction at the Russo-Japanese Protocol recently concluded. As the Protocol constitutes a guarantee against the obstruction of Japanese commerce and industry in Korea, enterprising men will be attracted to the little Empire. The resources of Korea are now in the hands of the Japanese. To cultivate her wealth to the fullest extent, however, a satisfactory financial system is necessary, and no scheme can answer the purpose better than the establishment of a Japan-Korean bank. The first problem which pre-sents itself in regard to the development of various enterprises in Korea is that of currency. The Korean currency consists of three classes—the old native pure coins, of low denomination; the new ailver pieces of the same weight and value as the Japanese yes and subsidiaries; the Japanese silver yen and convertible notes. Of the above mentioned media of exchange, the Japanese yen pieces have acquired the Jargest credit. Despite the yen The Nippon publishes the following reply received from Mr. M. Burfield, the Japanese Honorary Consul at Hamburg. Generally Nihoumstan 40 per cent. of the multiple layer the greatest sufferers. In Fukushims being prohibited from circulation at the time of Nihoumstan 40 per cent. of the multiple layer consultant in the coinage system, their made by the Kyoth Chamber lay Computer in the crop seems to have been destroyed. A will have a trom the market proved a matter of regard to the introduction of foreign capital:— The gram received by the Maki Shoten in Young Land assumpted coins were sub-

stituted for them; the task of substitution being undertaken by the Soul branch of the 1st Na-tional Bank. The independence of the Empire was recognised by the late Imperial Rescript issued at the time of the declaration of war against China, and also by the recent Russo-Japanese Protocol; but the circulation of stamped coins of any other nation in Kores may, to a certain extent, impair her diguity as a Sovereign state. At the same time the want of convertible notes necessitates the carrying on of all transactions in cash, to the serious inconvenience of the people. The promotion of either commerce or industry can, in such a state of affairs, be hardly expected. Korea ought, by issuing a uniform coinage, to show the reality of her independence, and at the same time she should afford facilities to the economic market by the issue of convertible notes, organisation of the proposed Japanese-Korean bank will secure all these advantages; the minting of coins, as well as the issue of notes, may be undertaken as a measure falling properly within the sphere of its business. The foundations of a coinage system may thus be laid. To hold specie in reserve is of course necessary for the issue of convertible notes, but supposing so million yen to be floated in notes, 10 million yen in specie would be sufficient. The Korean Government is not rich enough to provide this amount, but Japan could supply the funds for the time being either in yen pieces or silver bullion. The silver yen in the vaults of the Japanese Treasury now amount to 50 millions. Some of these are to be reminted into anbaidiary coins, and some will be circulated in Formosa, but the remainder are to be offered for sale in Hongkong or Shanghai. The latter amount might be utilized as a loan to Korea to constitute the reserve for the issue of convertible notes.

#### NEWS OF THE WEEK.

It is now believed that the P. & O. steamer China can be floated off Azalea Rock, Perim.

The shares in the Japan Brewery Company sold at public suction by Mr. Jno. W. Hall on Tuesday fetched pen 495 each.

Commodore Dewey, U.S.N., has been promoted to the rank of Admiral and has received hundreds of congratulatory telegrams.

The vote of thanks passed by the U.S. Congress to Admiral Dewey adds ten years to his age limit of retirement, and will make him at the end of the present year the Senior Admiral in the U.S. Navy. -

More instances of coolie violence are given in the Kobe papers, the latest being an attack last Sunday upon a party of foreign ladies and one gentleman. The gentleman was bady hurt about the left arm in the course of the affray.

The plague has claimed another European wictim in Hongkong in the person of Miss Ruchwaldy, aged filteen years, who resided with her mother at No. 4, Blue Buildings. Like the rest of her family, the deceased young lady was an accomplished musician.

We understand that the Yokohama Waterworks Loan has been almost twice covered. The sum of 400,000 yen was required but when the tenders were opened on May 15th, it was found that 338 applications had been sent in, their total subscription amounting to yen 723,300.

Many people in Yokohama will be interested in the following paragraph, which is taken from the N.-C. Daily News of May 13th :- The steamer stranded in Shihtao Bay on the South-East Promontery, is the Amarapoora, which left Yokohama on the 2nd inst. for Taku with a cargo of lumber, Messrs. Dodwell, Carlill & Co., being her agents. She cancer Co., being her agents. She appears to have stranded in a fog and is likely in be a total loss, for a steamer to take away her crew. It is strange and moving spectacle—a Bishop seated, roam, at will and propagate. These pigs are stated that with fine weather part of her cases not exactly on a ass, but behind one in a hard hard will have and fatten on little.

may be saved. The Amarapoora is a vessel of 1,619 ions net and 2,444 gross, of 300 nominal horse-power, built at Greenock by Scott and Co. in 1874.

A recent issue of the Cape Argus would de light the soul of Sir Buyle Roche. In asking questions regarding the opinious of the lawyers or Johannesburg respecting the Katze scandal, Oom Paul "thought be would catch a weasel asleep in the person of Mr. Lindsay; but in vain was the net spread in the sight of this bird,"

The Government of Natal has offered to supply free of cost 12,000 tons of steam cost annually to ships of Her Majesty's Navy calling at the port of Durban. In accepting this gift, Mr. Chamberlain has intimated that the English Government are very much gratified at generous proposal, and highly appreciate the spirit which dictates it.

They seem to be puzzled in England over the pronunciation of Wei-hai wei. The Globe asks plaintively :

WHICH WAY! AND WHY! O. Whyshigh-why, as uthers swear? Will one familiar with Chinese
Decide 'twist whys and ways and wees?
It should not be in English powers
To mispronunce a port that's ours.

A very sad occurrence took place at Christ Church, Yokohama, on Sunday morning. During the service a young-looking man was seen atagger in one of the pews and on temoval outside he was found to be totally unconscious. Dr. Eldridge and Dr. Wheeler were sent for, but life was almost extinct when they arrived, and death ensued within ten minutes of the seizure. The cause of death was found, on post-mortem examination, to be due to excessive heart disease. The deceased was Mr. Robert J. Strinton, chief officer on the reserve of the Nippon Yusen Kaisha.

A steel gun-boat built to the order of the order of the Siamese Government by the Hougkong and Whampos Dock Company, Limited, was successfully launched at Kowloon on Tuesday, May 10th, the " christening " being performed by Mrs. G. II Dodwell. The vessel, which is intended to be fitted with a four-inch Armstrong gun and four small quick filers, is 148 feet in length, beam 23 feet, depth 11 ft. 3 The engines are triple expansion, direct acting, surface condensing. Cylinders 13 inches, 21 inches, and 85 inches; length of stroke 24 inches. There are two hollers of mild steel of the multitubular cylindrical type, nine feet in length and eight feet three diameter, the working pressure being 170 lbs.

In connection with the manning of the British Navy, and the proposed increase of the number of binejackets for the coming year by 5,140, 8 good deal has been said from time to time an to the resources of the Colonies and the possibility of utilising them as recruiting grounds. The hardy fishermen of Newfoundland, if they could be induced to join, would make ideal seamen when trained to the work of a man-ofwar, and both British North America and Australia ought to furnish a numerous Reserve of properly trained men. That they will do so when the Colonies fully recognise their responsibilities and the Imperial character of the cuties of the British Navy is more than probable. In the meantime, an incident which recently oc-curred suggests the advisability of an effort to obtain recruits from Colonial sources. In one day the Consul-General of the United States at Montreal received twenty five applications from men desirous of entering the Navy of the United States. The whole of the twenty five men were British subjects, and nearly the whole of them are stated to have been well qualified for the

costermonger's donkey cart. The Bishop of Mailborough was due to hold a confirmation service at St. Lawrence's Church, Brentford, but when his lordship arrived m Gunnershury Railway Station in time, as he thought, to take a cab to the place of appointment, he found, to his great chagrin, that vehicles for hire were conspicuous by their absence. The distance was too great for walking in the few minutes to space, and the Bishop had almost made up his to be late for the ceremony, suddenly there came on the scene a humble coster with his "moke" and cart, the man having apparently been turning an honest penny by providing the locality with oranges and apples. The aproned ecclesiastic explained to the coater in a moment his dilemma, and asked for a "lift." The kindly owner of the ass at once consented-the Bishop scrambled into the cast—and the donkey, entering into the humour of the situation, used its four hoots with such despatch that his lordship's ride through the principal street of the town was like a triumphal procession. Thanks to the donkey the Bishop arrived at St. Lawrence's in good time.

The King of the Belgians is sending a special mission to China, and he has entrusted it to Count Charles d'Ursel, formerly Belgian Minister at Buchaicat and Governor of Hainault, Count d'Ursel lest Brussels for the Far East on 24th April.

The famous lime-tree, which since 1813 has been one of the currosities of the bettlefield of Leipsic, is no more. It has been uprooted by a hurricane. It stood on elevated ground, and was known as Murat's lime-tree, for the reason that it is said to have served the "King of Naples" as an observatory on the morning of October 14. Legend has it that Napoleon himself watched the course of the battle from this tree. Its trank was 30 metres in height, and nearly two metres in diameter,

In the course of a well-informed article in the Naval and Military Magazine on Hong-kong, which is termed "Our Gibraltar of the Far East," the writer, Lieutenant-Colonel Le Mesurier, says:—The defences of this distant possession are hardly commensurate with the important position it now occupies, nor are they commensurate with the position this colony is destined to ocupy in the not very distant inture. As China and Japan develop, the importance of the colony will become enhanced. At the moment Honkong depends mainly upon the fleet to prevent the landing of a hostile force upon her almost defenceless southern and eastern shores. The garrison is something less than 3,000 men, which would, of course, render some assistance, in repelling an attack : but it is perfectly certain that, if an enemy could succeed in confining our fleet to the harbour, very little opposition could be offered to the landing of a large force, if sup-ported by the guns of a fleet. There are some ported by the guns of a fleet. small batteries erected on the southern side of the island, but these would be of no use against heavy ships' guns. Moreover, I believe that the town and harbour could be shelled by ships lying off the south coast. What is needed render that fortress impregnable is a properly constructed set of works for the protection of that part of the island. Until something of the kind is done, Hongkong will be liable to be carried by a coup de main. Another important question is the supply of food. The supply of the quarter of a million inhabitants of the colony has to be brought from the mainland. Apart from the danger of having so large an alien population at one's door, it would become impossible to feed such large numbers in time of war, as the ordinary methods of supply would assuredly be dislocated by such a convulsion. Col. Le Mesurier advocates British-born Chinese as militis, and those who did not desire to leave to also thus serve. In regard to food supply, he suggests that the Tytam and a d'Aguilar peninanlas should be fenced off as pig runs,

#### JAPAN AND THE PARIS EX-POSITION.

On the 13th instant a notification was issued over the signature of Mr. Kaneko, Minister for Agriculture and Commerce, embodying the regulations for the collection and inspection of fine att productions for the Paris Exposition of 1900. The chief regulations are as follow:—

Of the acticles selected those which are considered most excellent shall be bought by the Government or subsidies shall be granted for the same. The articles shall be placed on exhibition at No. 5 room of the former Exhibition Building in Uyeno Park, Tokyo, between the 1st and 5th of August of the 32nd year of Meiji (1899).

Articles brought later than this can not be entered in the list prepared in French for presentation to the French Commissioners? Office, and none will therefore be allowed to be exhibited.

Any person desiring this goods to be imspected

Any person desiring his goods to be inspected is required to prepare a register of exhibits in conformity with the revised form, and to present it to the special Exhibition Commissioners' Office, through a Municipal or Prefectural Office, before

through a Minicipal or Prefectival Office, before July first of the 3 and year of Meiji.

The form to be used to preparing the list may be obtained on application by postal card to the Commissioners' Office.

No picture or drawing is to be inspected unless it is presented in the form of a tablet, and it must not be of excessive dimensions.

The number of activities necessited by each applications are presented by each applications.

The number of articles presented by each applicant for examination must not exceed five, but this provision does not apply to cases where several

The expenses to be incurred in packing and transporting the articles submitted to examinated shall be borne by the owners.

#### ENGLISH "MADE IN GERMANY."

#### (CONTRIBUTED.)

Max O'Rell, whose nousense often contains some good sense, once wrote :--" The English have a way of using the adjective 'German' as synonymous with 'bad.' 'German' sausages, 'German' bands, and 'German' silver are atticles I would not recommend to my bitterest enemy." This might have been so at one time, but of late years English politicians and newspapers have taken an entirely different ground, have lauded everything German to the skies, and have decried everything English in the most ununerciful fashion. "Germans only need apply" has been the merchant's motio; no musician whose name does not end in "z" or "un" is tolerated on a concert platform; even the great national patron saint of England John Barleycom himself, has been deposed in favour of the Pilsener and Lager of German beerswillers. Few, indeed, except our own people, can complain of the manner in which we have regarded our German "cousins" during the last few years.

Export Trade, however, has discovered that we regard the Kaiser's subjects with hatred: German commerce is, itsays, the victim of "false statements made by the Englishmen, who can see their star sinking." Export Trade is a journal published in Germany, and, we should say, written by Germans, though it is printed in something that purports to be English. English as made in Germany is a funny product, an inferior product, by any means—we are an-xious to throw no slight on any Teutonic output—on the contrary, it contains elements of humour farin excess of ordinary, commonplace English. Witness the prospectus :- " This German Journal purposes to make known the German industry to the world's market abroad, and to prove the capacity of the German industry, contrary to the false statements made by the Englishmen, who can see their star sinking. The German industry stands in every way as high as the times demand, and is capable to compete with the industry of any other civilized country. The subscription price of the journal is payable in advance. For payments we take money from all countries at day course. We correspond in English, French, German,

thropic publishers of Export Trade will be adding to the gaiety of at least four nations.

The leading article is written in a style worthy of Fleet Street. The writer, for once in his life free of the haunting dread of six months for lèse majesté, has let himself go. He trounces the poor English well. "They are in a very uneasy mood; they are annoyed, and not without reason that the German commerce and the German industry have taken an unprecedented step ahead, and they show this ill-humour in the haughty and superior manner which they have shown as far back as the history reaches. Then follows much about the coming Germani-sation of the Universe, from Peking to Peru, and total humiliation of the effete Anglo Saxon. China is to be to Germany what India is to England; and we are told, in all the solemnity of italics, that, "the star of Great Britain seems to be going down rapidly." "We could easily tell," adds the editor "some characteristic examples of the British actions, but we think this is enough for the present, and we hape that our neighbours across the channel will profit by this lesson."

The editor waxes enthusiastic over the growth of German shipping. The English "bave had to come to the conclusions, that the German nation does not only understand to write books and to fight battles, but also is master in technical matters. Germany does not only own the greatest number of the largest ships, but they are also mostly built in Germany. Repeatedly it has been proposed, to arrange a swimming German exhibition, to sail from port to port, throughout the whole world, for the purpose of bringing the capabilities of the German Industry before the eyes of other nations in a penetrating manner. It is hardly possible to show the creative power of the German Trade more expressively, as by a colossal mail steamer, built at a German ship building yard.

"It would be shown by this, that the ship building and construction of machinery as well as the electro-technics in Germany in up to date, and would also show to the visitors in the arrangements of the cabins and saloons the development of the different arts. They could the admire tastily executed metal, timber, porcelain, glass- and decorative works, and harmoniously agreeing arrangements.

"A better recommendation than this for all parts of the German industry could not be imagined, a steamer, well finished, with shapeful lines, and good appearance, combined with the best qualifications for sea service! With such a ship of graceful shape, and besides of enormous size, the same as the newest steamers of the North German Lloyd, one can easily understand why they created such wonder everywhere, at their first appearances in foreign ports. In every port thousands of persons have awaited their arrival, and they have been visited and inspected during the days of their stays in port by an enormous number of speciators, al most to be compared with a migration of nations, and this is a point, opening the eye of even the simplest minded, and showing him the importance of the German industry and the German arts."

The general articles do not come up to the same high level of eloquence. One writer, however, waxes poetical over an object which the dull Anglo-Sazon mind would have considered prosaic, a cable car in an American silver mine:—"The new works are viewed by a large number of visitors, and still visitors are coming to see the plant. It is an undeniable fact, that such a plant is very picturesque and one is strangly impressed by the strong and nevertheless elegant from constructions, the long spans of rope, on which the trucks move along high above our heads, the automatically gripping and releasing of the trucks in a most enigmatical manner, and the rugged mountains around. This is especially noted where the valleys are spanned, some of the spans being up to 372 yaids long and some of the iron supports reaching a height of 92 feet." Spanish, and Portuguese."

If the French, Spanish, and Portuguese are strong, elegant and enigmatical" (like the wriof the same quality as the English, the philanter's English), "but it makes itself paid."

Digitized by

The following concerning the "Polyphone Music Works" (whatever they may be) is in-(whatever they may be) is interesting :-

"They are mostly manufactured to play automatically by clock-work, and one size, the smallest one for children, only is made without clock work, and arranged for hand-turning, as the self-producing of music offers a greater

charm to children."

The heading, "A Very Important Invention on the Domain of the Dying Industry" made us think at first that it was a puff of some German patent medicine, but it has merely reference to some new colouring process.

The advertisements are as interesting as the articles. Here are some specimens :-

"Novelty! The weeping maiden; most original, and highly seasoned joke article m.6.00 Other most interesting joke articles m.2.50."
"The greatest wonder of industrie! The most

sensational article for wholesale Novelty!! Self-running elephant of massive metalconsequence of his four pendulumlegs he runs on every oblique flat. Highly amusing and comical. 9 cm in the length, 6 cm high. Add to this cheuille monkeys with plume of the helmet; dealers put them as riders on the elephant, increasing thus the fun. Per dozen 35 Pfg. gross 4 mark,"

"A Wonder of the World. German Patent No. 80,650. Patented in America, England, France, Austria, &c. Spinning top for running on the Ceiling! A spinning top which does not only run on the floor or in the sir, but really on the ceiling, without causing damage. The most interesting invention of the century. Whoever sees this top spinning on the ceiling, must admit that is hard to believe this before seeing it. Hardly any other invention has effected a greater sensation than this spinning top."

"Piquant! Novel! Amusing! Charming instantaneous Photographs, about 30 different subjects. Kinetographs in magnificant attistic coloured finished with effectful and colour changing illumination."

"For all kind of beasts of pray," (we do not know whether this is a hidden sarcasm on the clerical profession) "birds, rodentia and ine ciencal procession outds, rodenia and fishes we furnish the best generally acknow-ledged and surely catching traps. Besides projecting engines for clay-pigeons and glass-globes, as well a every kind of decoy whistles."

"Umbrellas elegant handles, durable with bells for Ladies and Gentlemen." "Papyrolith, the latest and most distin-

guished invention in Building line is insect proof, fireproof, lessens the sound and has no From 1898 this substance will be also

We could multiply our extracts, but refrain from taking up more space.

#### KOREAN JOTTINGS.

A successful police gambling raid was recently made upon the house of Imperial Private Secre-tary So Wansun, the result being the arrest of five prominent officials, who was caught in Regrante delicto. Remarks the Independent:—
It is the first time in the history of the Korean
Police Dep't that such a high toned gambling
den has been successfully raided.

The carcase of an ox that had died from rinderpest was recently exposed for sale in Soul, whereupon a policeman stepped up and interfered, quoting is his authority the municipal sanitary law. Since this law was enacted Soul has seen several changes in Heads of Police. The owner of the diseased animal, working upon his knowledge, appealed against the policeman's decision, urging that the law was passed by traitors. The Chief Commissioner fell in with the suggestion and reprimanded the constable for attempting to enforce the law!

The Korean tri-weekly journal has a naïve way of describing things at times. A 'smasher's outfit was 34 pently discovered at Soul and the

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

men were arrested. The Independent goes into the affair in this manner:—Ye Pyengku and Choi Haknai of this city have established private mint in Munomi village entside the Northeast gate for the purpose of counterfeiting nickel and copper coins. A cousin of Choi suspected the enterprise and demanded some money from them, but they refused him. He went to the Police Department and informed the authorities of his suspicion. A number of detectives were despatched to the house and watched the men. Last Wednesday the detectives raided the house and discovered a sub-terranean chamber of about eight kas in which all sorts of mining apparatus were placed and where some two thousand pounds of copper and nickel were stored. The two proprietors were immediately arrested and the machiners and the metal have been confiscated.

The police inspectors of Soul are having a hard time of it just now. It appears that the Governor of Soul notified that the Improvement Company would engage all unemployed men to clean the city drains provided they came with proper certificates from the police. Hundreds of men applied for these certificates, which the police granted freely. But upon the bearers presenting themselves at the Company's office, the Improvement Company declined to recognise the certificates and sent the men away. The poor deluded folk are now clamouring for redress at the police offices.

A rumour was current in Soul on the 7th inst. that Mr. Shibusawa Elichi intended presenting ren 1,000 to be distributed in the form of relief doles to the distressed people of the city,

The newly appointed Kamni of Fusan, Mr. Kim Kakhen, held at one time the position of Chief of Diplomatic Bureau in the Foreign Office. He is considered -- says our Soul contemporary—as one of the most promising officials in the government and is thoroughly progressive in his ideas. We believe that he will fill his new post with satisfaction to both the natives and foreigners residing at that port,

#### CHINESE NOTES.

We notice in the Shanghai papers that Madame de Uriarte, wife of the Spanish Consul at Shanghai, is asking assistance to procure old linen for making bandages for the wounded in the Spanish-American war, and also old under-clothing from ladies and gentlemen.

The N.-C. Daily News remarks that a private letter just received from Yatung in Tibet says that the Tibetans declare that they have heard nothing of the capture and maltreatment of Mr. H. Savage Landor, and say he must have fallen into the hands of a wandering tribe.

By an order of the Russian Miniater of War, confirmed by the Emperor, the fortress artillery troops on the Pacific coast are increased by the formation of a new and complete force of this character at Possiet Bay of the same strength as the force at Nikolaievsk, and an additional company, numbered six, of 300 men for the existing detachment at Vladivostock.

Mr. Gervase Cook arrived at Wahu on the ist May to obtain assistance, the Kulingsan mines having been attacked on the previous night by a mob of some 200 men. The rioters took possession of some of the shafts, and on the following morning attacked the works. Mr. Cook defended them for some time, but eventually had to evacuate, and go to Ningkufu for help.

A report was current in Shanghal on the rath inst. that the Nanking Viceroy had issued an inst, that the Nanking Viceroy had issued an order that no cocoons were to be sold to foreigners this season, and that the Italian Go-that either torture must cease, or he must resign his post, and codification be left in statu quo, was to be sent to enforce this protest. What has really occurred is, the N.C. Daily News has really occurred is, the N.C. Daily News best believes, that the magistrate at Wisiab has really of the magistrate at Wisiab has really of the magistrate at Wisiab has seen to show that the magistrate at Wisiab has seen to show that the matter is not one capable of the color of

the various filature firms from employing foreign capital and from insuring, and the order has naturally been protested against,

Kiangnan Arsenal, which has always had two Commissioners of Taotai's rank as Chief and Vice Directors of the works, is now, according to recent instructions of Viceroy, Liu, to have only one; the Chief Director Chiang Taotai having been ordered to hand over the direction to the sole authority of the Vice-Director, Lin Taotat. Chiang Taotai has gone to Manking " to await further appointment."

#### CORRESPONDENCE.

#### THE ABOLITION OF TORTURE IN JAPAN.

TO THE EDITOR OF THE " JAPAN MAIL."

Str.-When two good men fall out on questions of fact it is sometimes in the power of onlookers

of lact it is sometimes in the power of outcokers to clear away miscapprehensions.

The ordinary reader turns away from the perusal of the new edition of "Things Japanese" under the impression, first, that you deep that Count Mutsowas ever imprisoned and treated as a criminal, and, secondly, that you make Mr. Chamberlain assett that the event narrated by him occurred in 1822.

1873. Leel sure that you never intended to convey A careful examinaeither of these impressions. A careful examinagives 1873 as the date of the arrival in Japan of Monsiem Boissonade de Pontarahie, and that ou date is assigned to the incident itself. Moreover, you, with your extensive knowledge of Japanese you, with your extensive knowledge of Japanese affairs, must be well aware that Count Mutsu was imprisoned, in connection (if my memory serves me right) with the Satsuma rebellion of Saigo Takamoni. If, therefore, you will extend your investigation of the record of the deceased statesman for a few years subsequent to 1875, you will be able to confirm the statement that Mutsu suffered invisional and the immediate suffered in the statement that Mutsu su fered imprisonment, and the issue will then he narrowed down to the question whether or not he also suffered tosture.

I am, sir, yours, &c., Tokyo, 12th May.

Tokyo, 12th May.

(The date of the incident as given in "Things Ispanese" is "sho tly after M. Boissonade's arrival in 1873." If that does not mean if yo or 1874, what does it mean? But certainly we did not for a moment intend to regrest that Mr. All-bu was not criminally condemned. In 1878 he was sentenced to years' inp isonment which was altimately traduced to 3. We speak from m-mory only. The question is by no means narrowed, however, but he simple issue whether or no Mr. Mutan wastoriered in 1878—Ep. J.M.)

#### MONSIEUR BOISSONADE AND TORTURE IN JAPAN,

TO THE EDITOR OF THE "JAPAN MAIL."

To the Editor of the "Japan Mail."

Sir,—A few days before leaving Japan, Monsieur Boissonade de Fontarabie told me there was one thing, and one only, in looking back over a long career, which gave him unalloyed satisfaction,—his successful intervention on behalf of the abolition of torture in Japan,—and there inpon he related the detoils substantially as given in the last edition of "Things Japanese," with the exception of the mention of the name of Mr. Mistin, which was obtained from another source and seems, from your collation of dates, to have been erroneous. You have seen fit to sneer at the anecdote, and you ask contemptionally "why M. Boissonade should have carried on the work of codification in a jail, as must have been the case if the chamber adjoining the scene of his study was a torture room." I cannot answer this question; I was not there, and do not know. But that tion; I was not there, and do not know. But that Monsieur Boisonnade should either have tempora-Monsieur Boisonnade should either have temporarily resided, or else have had his study—perhaps for convenience in consulting his Japanese,
colleagues—in some apartment attached to the
Department or Control Justice, seems no very improbable supposition. At any cate, his assertion
to me was that it was while busied over the preliminaries of codification that he heard the groaus
or screems in an adjoining chamber; and then he
went on to relate his horrifled surprise at the incident the avanious of the officials his indignant redent, the evasions of the officials, his indignant re-monstrances, and the consequent diseas of so bar-

European public, whose interest in such humanitarian progress in always intense—doubly so when they have the proud consciousness of the progress they have the proud consciousness in the progression of their own race—
I was naturally led to lay most stress on that part
of the subject. Indeed, the whole point of the story of the subject. Indeed, the whole point of the story was there; as you may see by the context, the test a quantité negligeable. The precise date, and the name of one Japanese sufferer among so many hundreds whom, during our own life-time, the tottore-clasmber has claimed for its own, sink into insignificance, in the minds of most of us, compared with say glorious a victory, so momentous a social and moral change. Nevertheless, I am truly sorry that even no minor points I should have been—nifedd and the accessary alterations shall be made in the next edition. Meanwhile I venture to think that the injury done to Count Mutsu's memory can be but slight, seeing that if he was not (to quote your injury done to Count Maisu's memory can be but slight, seeing that if he was not (to quote your words) "receiving the treatment of a common criminal" in 1873-4, he was most notoriously dragged about the country from gad to gad a few years later, receiving from his sufferings (as his medical attendants will testify) such permanent injury to his health as to being on the disease which resulted in his outinely death. After all, the ignorminy in all such cases rests, not with him who undergoes barbarous punishment, but with those who inflict it.

In conclusion permit me, Sic, to express some astonishment at the animis, the strangely acrid and discounteous tone with which you have seen fit to treat me on this preasion. Lattacked no one, not Count Matsu, least of all yourself. Yet had I made you the object of some violent personal distribe, you could tradly have shown more heat and have scattered disparaging expressions more freely than you have done on the present orgasion.

freely than you have done on the present occasion. Coursesy, however, is not a thing one can demand. The wheet plan doubless is not ven to expect it. I can in any case thank you for the continued advertisement which has been supplied gratis to my books by your repeated attacks.

I am, Sir, Your obedient servant,

BASIL HALL CHAMBERLAIN. Tokyo, May 15th.

TO THE EDITOR OF THE " JAPAN MAIL."

Siz.—If you do not consider such expressions "canard," "falsehood," and "false story" as "canard," "falselroud," and "false story" (not to mention others) disparaging and discourteous, your standard of the language suitable to literary criticism and to social intercourse must be peculiar. Under such circumstances, all discussions sion becomes impossible. I leave it to the public to judge between us.

Your obedient servant,

BASIL HALL CHAMBERLAIN. Tekye, May 17th, 1898.

#### THE SPINNERS' DIFFICULTIES.

TO THE EDITOR OF THE " JAPAN MAIL."

To the Editor of the "Japan Mall."

Sir,—In an article which appears in the Japan Mail of May toll the statement is made that the cotton spinners' difficulties may be attributed to two causes, viz., over production and want of working capital. It seems strange that the editor of the Mail did not suggest another and probably the time cause of these difficulties, namely the gold standard of Japan. It is a well-known peculiarity of the gold standard that it has the power of masking its effects. When producers cannot self their products in competition with other producers, it is the easiest thing in the world to suggest overproducts in competition with other producers, it is the easiest thing in the world to suggest overproduction and want of capital as the cavic of impending embarrassments. And it is probably true that less production and more working capital might have saved the manufacturers. Manchester cotton spinners have been complaining for two decades. Had they cuttailed production twenty years ago and reserved more for working capital fifty years ago, no doubt they too would have weathered the storing of the past twenty years better than they have. But is in not a point of importance that the Japanese cotton spinners have never experienced the danger of overproduction, or of competition with Chinese producers, until a rise in experienced. that the Japanese cotton spinners have never ex-perienced the danger of overproduction, or of com-petition with Chinese producers, until a rise in ex-change occurred between Japan and China? Is-it not cut ions that Japanese spinners never left the need of more working capital until they found the silver standard of China giving the Chinese spin-ners on advantage? I venture to say that the gold standard is the true solution of the difficulties of the cotton spinners in Osaka and elsewhere in Japan.

as it was before 1897. The Government has had to encounter the constant menace of an export of gold-an ever-present incubus to the trade of the gold—an ever-present incubits to the trade of the country; it has had to meet the question of a separate standard for Formosa; it is trying now to work off the silver yen upon Kneea (a very suspicious experiment); it is forcing subsidiary silver upon the community in excessive amounts; it permits one of the chief industries of the country to suffer, but it encounters all these self-imposed difficulties with the greatest willinguess and zeal. because they are done in behalf of that paragon,

the gold standard.

A hundred incidents connected with the intro-A hundred incidents connected with the intro-duction of the gold standard only confirm what Ernest Sayd said so prophetically in 1871, 6 The strong doctrinism existing . . . as regards the gold standard is so bind that when the time of depression sets in, there will be this special feature: the economical authorities of the country will refuse to listen to the cause here foreshadowed; every possible attempt will be made to prove that the decline of commerce is due to all sorts of causes and irreconcilable matters. The workman and and irreconcilable matters. The workman and his strikes will be the first convenient target, then speculation and overtrading will have their turn. Later on when foreign nations, mable to pay in silver, have recourse to protection, when a number of secondary causes develop themselves, then many would-be wise men will have the opportunity of pointing to specific reasons which in their eyes will account for the falling off in trade. Many other allegations will be made, totally irrelevant to the real issue but satisfactory to the moralising tendency of the age."

totally irrelevant to the real issue but satisfactory to the moralising tendency of the age."
The cotton spinners will no doubt gradually work out of their present condition, but not before they have encountered a heavier amount of suffering than they have so far had. And all this might have been avoided; but it is worth while perhaps to be disciplined by untoward circumstances, even if sell imposed. The Osaka cutton epinners ought to regard their financial difficulties as some of the old martyrs did the sconges which they inflicted upon themselves.

they inflicted upon themselves. May 17th.

(The article to which our correspondent refers was not a statement of our own ideas but a résumé of facts adduced by vernacular journals,—ED. J.M.)

#### THE MEIJI GAKUIN.

TO THE EDITOR OF THE " JAPAN MAIL,"

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of the 17th inst, under the "Monthly Summary of the Religious Press" occurs the following as taken from the Shakas Zasshi,—"Have not such institutious as the Auyama Gakuin, the Azahu Ewagakko, the Rikkya Gakko, the Nihon Gakuin, the Meri Gakuin, and the Nara Chugakko all recently stated that they are prepared to give up teaching the Bible as a part of the school curriculum in return for recognition as Ordinary Middle Schools?"

Having no commission to speak for the other

Schools?"
Having no commission to speak for the other schools mentioned, I would simply state that the Meiji Gakuin has certainly not made such a state ment, and that all its authorities whether in Japan or in America are emphatically on record as against such a statement. The Meiji Gakuin teaches the Bible as heretofore, having made no alteration as to time or obligation of students to attend or teachers who impart the instruction. Moreover the fixed authorities have been airent to understand distinctly that the teaching of the Bible is not to be discarded. Should the local authorities ever demand that it be discarded as m condition of its recognition of the school as doing work of the Ordinary Middle School grade, there is no doobt

Ordinary Middle School grade, there is no doubt as to what position the school would take. Its past history and its present professions are premises which admit of only one lugical conclusion. It may be pointed out also that the conditions imposed for recognition as well as the advantages to be enjoyed are of quite a different order from those contained in the "Doshisha Affair." The writer in the Neckle Zareké lands a chiefficial in the Neckle Zareké lands a contained in the Control of the State Sareké lands a chief. writer in the Shashi Zasshi should certainly inform himself as to tacts before drawing such remarkable

conclusions from them.

If "misery loves company," the "Dushisha Affair," must cast about elsewhere for comfort. Thanking you for inserting this correction.

I am, yours very respectfully,
H. M. LANDIS

Meiji Gaknie, 18th May, 1898.

#### WHERE "BEYOND THESE VOICES THERE IS PEACE!

The following letter, which originally appeared in the Times of India, setting forth the advantages of residence in the island of Capit has since been copied into other Iudia papers. Although written with the object of calling the attention of Anglo-Indians to Capri as a place of residence, it may possibly interest others, and perhaps some of our readers, who, when travelling in Italy, may be tempted to see for them-selves whether Capri justifies the writer's very glowing description. It is, at all events, a matter of some importance that folks in the Far East, whose "ships" have not arrived with the desired punctuality, should know where pleasant retreats are to found beyond the sound of the soroban and the sight of ledgers :-

A correspondent writes from Capri: - I have lately received several letters from Anglo Indians lately received several letters from Angin Indians in reference to a letter descriptive of the I-land of Capri, which I wrote to the Field and which was published on July 4th of this year. These letters have indicated an interest in this fascineting island which I had no idea existed and have contained innumerable questions of every conceivable character. It has therefore occurred to me that that there existing a think indianation which lained innumerable questions of every conceivable character. It has therefore occurred to me that a short letter containing the information which is likely to be most useful to Anglo Indians may not be unacceptable to readers of the Times of India. It seems to me that Capri is peculiarly adapted as a residence for a more or less lengthened period to those who desire an ideal climate, economical living, and most exquisite scenery; in addition to which it is very acceptible, and, though out of the world, is in the world. Capri is a small island 64 miles long by 24 broad in the widest part, and rising to an elevation of 2,000 feet. It is situated in the Bay of Naples, due South from Naples about 20 miles. The population is about 5,000. It is very easily reached by those returning from India, as the P. and O., British India, and Orient steamers touch at Naples. From this point there are small steamers twice a day which reach Capri in 34 hours. The first question always asked is, what is the climate like? My answer to this is that it has fewer drawbarks and more pleasant months than any climate in the world. Capri is very beneficial for people in the early stages of wery beneficial for people in the early stages of consumption or sufficiers from bronchial or threat adments, on account of the dryness of the atmosphere, the absence of duss, and its immunity from sinden and capid changes of temperature which are so trying. Malarious diseases are inknown, and I cannot imagine a botter place to get cid of the seeds of jungle fever than Capit. The air is singularly bracing and exhibitating except during the prevalence of the Succo (S.E. Wind). The average mean temperature for the year is 50°. The average mean temperature for the three spring months is 55°; for the three summer months 7.°; for the three animon months 62 and for the three winter months 48°. The prevalent winds in the summer are from the N.N.W., which greatly tends to mitigate the heat. The rainfall is slight, the water supply is entirely from disterns.

To turn next to the subject of economy, which I fear in these days of the depreciated uppers is not an sudden and rapid changes of temperature which are so trying. Malarious diseases are unknown,

fear in these days of the depreciated inpec is not au-unimportant matter, there are few cheaper places to be found than Capri, this of course partly because, as every body more or less studies economy, people do not put on much "style," there in very little entertaining and so form and ceremony, and everyone "does what is right in his own eyes." Pension can be obtained at all the smaller Hotels, of which there are several, at from 6 to 7 live per of which there are several, at from 6 to 7 line per day, including wine. One pound stelling to-day is worth 27 line. Pleasant furnished villas, supplied with plate, linen, and glass, can be rented for 100 to 150 line per month; the wages of servants are 25 to 30 line per month. Finit, olive oil and the wine of the island (which is famous) are clean; milk is easily obtained by cheap; milk is easily obtainable; other provisions are about the same price as in Bughand. There are several shops in Capit which supply all ordinary waits; in Naples, which is a city of 500,000 inhabitants, the shops are excellent and the most exacting wants can be supplied. Capit is a great resort for artists of all nationalities and is a most 

dear and variety of Vesuvius, which by day and night, summer and winter is ever full of colour changes and surprises, the quaint ald twisting lanes and rugged roughbewn stairways of the little town, with the picturesque Capri girl poising on her head a wine jac or loaded panier of luscious figs, of these charming studies for the artist and photographer there is no end. Capri is an excellent centre for interesting exemisions, Pompeii, Vestivius, Soneoto, Amalfi, and Paestuma, can be visited in the day; while Sicily, Ischia, and Stromboli are longer but no less interesting expeditions.

ed in the day; while Sicily, Ischia, and Stromboli are longer but no less interesting expeditions. In conclusion, that I may divest this letter or any semblance of self-interest, I will say that I have "no axe to grind," that I have no pecuniary interest whatever in Capri, only I am fully assured that many a man seeking; a haven of rest would find in Capri the very land of his dreams, and that not to give others the benefit of my fortunate experience would be selfish and churthsh. Should this letter prove of sufficient interest to any reader of the Times of India to lead him to wish for any further details about Capri, I shall be pleased to finither details about Capri, 1 shall be pleased to answer his enquiries, and a letter addressed to me as below will reach me.

" H. E. T. Casa Castiglione, Capci,

#### THE NEVIUS METHOD.

TO THE EDITOR OF THE "JAPAN MAIL."

-Many of the missionaries in Japan have ecently turned with renewed interest to the onestion of self-support among the Japanese churches, and their attention has been especially directed to what is known as the Nevius me had. This method has been in operation for a number of years in Shantung; and it occurred to me that some account of its actual working there would be of value. I therefore regressed one of our mission-aries in China to give me the names of several who could speak with knowledge and also from different points of view. At his suggestion, I wrote to Dis. Mateer and Corbett and in Messas. the that and Langhlin. From Dr. Matter I have not yet received a reply; but, as appears below, an article on the subject from his pen may shortly be expected in the Missionary Recorder. I shall esteem it a favour if you will kindly grant a place in the Fapan Mail for the answers from the other three, together with my own letter of inquiry. Readers of "Methods of Mission Work" will remember its repeated references to Dr. Corbett. temember its repeated references to Dr. Gorbett. It is of interest also to observe that in that sketch, written in 1885, Dr. Nevius says of him, "On the main points of mission policy we are happily nearly of one miod." Speaking of Mr. Langhlin, lee says, "The Rev. J. H. Langhlin is now assisting me in my country work; and will, I tenst, soon take entire charge of it." Dr. Corbeit and Mr. Langhlin have thus an exceptional knowledge of the best and also have the say that a the method and the best and also have the say that a the method and the best and also have a say that the method and the say the say the method and the say the say the method and the say the litstory and working of the method, and their letters are therefore of peculiar value.

I am, sir, etc., WILLIAM IMBRIE.

Dear Doctor — Last summer our Conn-cil of Missions met at Karnizawa. A considerable port of the time was given to the question of self-support, and several resolutions were adopted. Among other things the several missions were re-commended, as far as practicable, to make trigl of the Nevius method.

I have read the little book giving an account of that method. But as the book is made up of actithat method. But as the book is made up of acticles written by Dr. Nevius some ten or twelve years ago, and before the plan had been easily tested, I should be glad to bear something of its actual working in Stanting. Such questions as the following have occurred to me:

1. Does the theory work out substantially as Dr. Nevius hoped that it would?

2. Is the plan still carried out on its might nethod of work?

3. Is the plan still carried out on its original lices, or have important modifications been intro-duced? To particular, has it been necessary to employ a considerable force of educated men; or,

employ a considerable force of educated men; or, has the success of the plan been such as to render educational work relatively unimportant?

4. Are the leaders of the groups of Christians able to maintain their leadership; or do they soon teach themselves out? How are they able to give up their daily work for a month or six weeks at a time, in order to go to Chefoo or elsewhere for special instruction? Do many among them become men of marked spiritual power?

5. As a tible, do the groups of Christians retain

churches? Does the plan lead to real self-support—i.e. to chinches with pastors, places of worship, etcetera; or, are the groups self-supporting rather because the plan dispenses with the various side to Christian life that call for Christian giving? Do the Christians manifest an evangelistic spirit?

evangeistic spirit?
In some cases, no doubt, the answers to these questions can be only incomplete; and it would be quite unreasonable to expect perfection from any plan; but I shall be greatly obliged to you for a brief statement of the actual experience in Chesting. Shanting. Sincerely yours,

WILLIAM IMBRIE.

Chefoo, Feb. 2nd, 1898. Dear Dr. Imbie, In reply to your letter of January 3rd, in regard to the outcome of Dr. Nevins' musting methods.

When Dr. Nevius resigned all connection with the country work in 1887, Presbytery appointed me to the oversight of three of his organized churches in the Ichoufu District. Those churches churches in the Ichoufu District. Those churches were once described as the crown jewels of all Dr. Nevius' work. During the four years that I had change of that work, I visited it twice a year and did all I could to carry it along on Dr. Nevius' lives. The leaders soon reached the limits of their attainments. The members soon came to think that they knew as much as their leaders. Contentious sprang up. Some apostazied; others became members or adherents of the Roman Catholic Church. When I left that part of the field, the Rev. C. C. Kittle and his wife took charge of these churches and did much faithful work there. Last November I visited these churches again; and to my sorrow found them far from flumishing and to my sorrow found them far from flumishing and to my sorrow found them far from flourishing or self-supporting.

The Rev. Low Yor, a faithful and successful worker, had charge of a group of Dr. Nevins' churches for five years. I subsequently asked him, churches for five years. I subsequently asked him, in view of his experience, what he thought of the method, on which Dr. Nevius organized his work. He instantly replied, "It is entirely too economical of time, money, and Isbour; and, in the end, the complete destruction of the work." He said also that when he began the work there he found the members, as a rule, cold and lifeless. He did all he could to get them to study the Bible; and to teach them and build them up in the faith. But at the end of five years all he could say was that the work was not wholly dead. He added also that, in his judgment, had there been no famine or extensive distribution of famine relief, Dr. Nevins would not have had the opportunity to organize work as he did.

To expect men just coming into the light, trained as they have been in all the heathen customs from childhood, to become great Bible students and able to instruct and build up others who shall expand into strong and self-supporting churches, seems to me to expect a stopendous

who shall expand into strong and self-supporting churches, seems to me to expect a stupendous miracle. Even if the leaders would give one or two months yearly to attend Bible classes—a thing which I have never known to continue heyond a year or two—could they possibly do the work expected of pastors?

The self-supporting churches connected with our work in Shanting are chirfly those on which now no maney of the Board is spent; but neither do the people themselves contribute to any extent to pay men to take pastonal oversight of them.

do the people themselves contribute to any extent to pay men to take pastural oversight of them. They struggle along, and some keep alive; but little growth as a cute follows. These are left to themselves, not from choice, but simply because we do not as yet have a sufficient number of trained men to take charge of the work. I know of no one in our mission who is trying to carry on work as D. Newing allocated.

of no one in our mission who is trying to carry on work as Dr. Nevius' paper on "Seminaties for Native Agents" printed in the Life of Dr. Nevius by his wife. This surely means education which Dr. Nevius' system does not provide. In the Records of the Missionary Conference, held at Shanghai in 1890, pages 444 and 566, Dr. Nevius

speaks to the point,

I had the highest regard for Dr. Nevius as an ite and wise man. We were colleagues for I had the highest regard for Dr. Avevan as an able and wise man. We were colleagues for thirty years and fived at peace with one another, although we differed radically on some points. I urged him at the time to delay the printing of his new plans until they had been tested by time and results. I am sure that if the plan were now rewritten there would be many modifications in the Dr. Mateer shares my views largely.

Cincercle water. it. Dr. Maice, ... Sincerely yours,

HUNTER CORBETT.

tung Province, China. It is also very embarrassing that we cannot always answer our friends' inquities as clearly as they desire,

inquities as clearly as they desire,
The teason of this is the utter inability to differentiate between consequences and sequences in
traing to trace out the effect of a given man's
methods of Gospel propagation. Every attempt I
have yet made to uneave the tangle of cause and
effect in Dr. Nevins' field has been a failure.
This is not saying that his work was a failure.
Far from it. The trouble lies in the fact that
after Dr. Nevins handed over his work to younger
colleagues, there arese the necessity of a redistribution of the field. This happened when our Wei
Hien Station was opened in 1883,

bution of the field. This happened when our Wei Hien Station was opened in 1883.

Prior to that date, all mission work by our Church east of Chinanfu was under the management of the Cheloo Station. As you doubtless know, the work had progressed for years under two systems denominated respectively the "Corbett" and "Ne vius" systems. The former was characterized by a free use of foreign money and the latter by a limited use of it. When the redistribution of the field took place, the new lines of control struck at tandom through the existing churches and out stations founded by our honoured pioneers; and we younger men (I include myself, though I did not come on the field till 1887) found ourselves in charge of a mixture of material which in a few years efferienced and united chemically so as not even to give a precipitate upon mically so as not even to give a precipitate upor the addition of new substances, in the shape of chinches and stations organized by ourselves, who assumed charge of the field. It was not until 1890 that any definite scheme for self-support took shape, and then there were such supprising phenomena exhibited as to readiness and unreadiness to support their own ministry, that I have given up trying to draw any inferences which would seem consistent with the original principles upon which the two methods of the work were based. Since the coalition of the two original fields, the work has been carried on upon a sort of composite hat wear the extreme or injustice present the mise between the extremes originally represented by Dis. Nevius and Corbett. I shall not attempt to answer your questions serialing for I an integnal to the task. Dr. C. W. Mateer is now working upon this problem, and hopes to publish the results of his investigation in the coming spring, probably in the Missionary Recorder.

I had the pleasure of personal acquaintance with I had the pleasure of personal acquaintance with Dr. Nevius, and am a great admirer of the man and missionary. To be candid, however, I must confess that the Ductor's practice did not always agree with his theory. For instance, he would often make large subscriptions to church buildings contrary to the explicit advice in his own manual, and I am of the opinion that had he adhered to his own rule as laid down, to wit, I o give but sparingly towards church erection, we should but spacingly towards church erection, we should have been saved some embarrassing trou-bles. Every instance of this kind of aid from lites. Every instance of this kind of aid from Dr. Nevius, to my personal knowledge, has resulted in a subsequent squabble for the use of the property so erected. Just now I have on my hands no fewer than five property troubles of which two and possibly three are directly baceable to these over-large contributions to clutical construction. We are now rapidly coming to a new phase when the churches around Wei Hierare growing more and more independent of foreign funds, and are showing some pride in paying their own evangelists, pastors, and a large part of their school expenses. But we are not yet out of the woods, and so shall refrain from shouting. The unspeakable poverty of Shanting makes the financial problem a most difficult one to solve.

We are now holding a series of revival meetings.

We are now holding a series of revival meetings all over our Wei Hien field. Some of these have been entirely planned and managed by the Chinese without any aid from the mission aries even in the way of preaching. None of them cost the mission area of the mission area of the mission area of the mission area of the mission area. The people come from considerable distances to attend the services, and all provide their own food. Petty the services, and all provide their own lood. Petty persecution continually harasses the Christians in China. It has never yet been fashionable to profess Christianity in this land. I sometimes wonder if Japan did not suffer from a once excessive popularity of Christianity. This is of little or no value to you as a reply to your questions, but please accept it for what it is worth until I am able to apply to your the the point. speak more to the point.

With hest wishes for the further success of your work in Japan, fraternally yours,
FRANK H. CHALFANT.

Wei Hien, Feb. 3rd, 1898.

Drak

be apportunity for mutual questions and replies almost ad infinitum. I will, however, try to answer each of your questions as they come, and put in my qualifications where I can.

- T. The theory can hardly be said to have worked out as Dr. Nevius hoped it would; though it has dons so, in the main, fairly well,
- 2. It has not, in detail, been accepted by our missions in China as the right method , though its general principles are pretty fully approved.
- 3. In no part of Shantung even is the plan cor-

A considerable force of educated men—graduates of Tangchow Collage—is working in Shantung; some of them in the territory which was once under Dr. Nevius' control, and some of them placed there by himself. The success of the plan has not proved educational work to be unimportant, though to many of us a very high education does not, in this stage of our work, seem important. A considerable force of educated men-

- 4. Leaders of stations can maintain their posi-4. Leaders of stations can maintain their positions only, as a rule, by being themselves taught, from time to time, by the missionary. Jealousies sometimes arise which dethrone a reasonably well-qualified leader. Leaders are able to go to Chestoo for a course of instruction by having their coad expenses one way, and their food white there, provided by the mission. Such was Dr. Nevius' custom. Some—not many—have become men of considerable spiritual power.
- 5. The groups of Christians do, as a rule, retain their interest in Christianity, and continue year after year to assemble on Sundays for study and worship. Very few of our stations have absolutely passed out of existence. In many, however, there has been a tendency to fall into a kind of crystallized, growthless condition, adding no new members from outside. No single station has developed into a church; but several churches have been formed out of groups of stations, and are now paying their pastors' salaries. Their churches or meeting houses have always been provided by themselves, with some personal contribution from missionary pockets. Usually the buildings are inexpensive—often part of a dwelling house. The groups exhibit something of an evangelistic spirit; but not very fervent. Now let me add some explanatory comments.

  1. The plan is good, but much depends on the 5. The groups of Christians do, as a rule, retain
- 1. The plan is good, but much depends on the man behind the plan. The plan itself will not lead to great results without the constant stimulus of the missionary's exhortation, instruction, and example.
- 2. Dr. Nevius himself did not conform to the plan in all its details. Experience taught him the necessity of modifications. For example, the following:-
- (a) The necessity of enough helpers to frequently visit the stations who should be paid from mission funds. He tried to have them paid by the stations; but gave it up, partly because after the first year or two the stations failed in contribute adequately, and partly because the helpers so paid failed as his representatives, becoming, instead, the one-sided agents of those who paid them. Thus Dr. Nevius found it much more difficult to escape being imposed upon with law suits and other projects which the Chinese desired him to and other projects which the Chinese desired him to push.
- (b) The necessity of some evangelists among the heathen. He tried having the stations contribute and send out men from their own number, during the idle months of the year. But he found it more or less of a failure; because the Christians it more or less of a failure; because the Christians were almost one to select the poor and weak individuals who needed the money, tather than those who were mentally and spiritually qualified to do the work. These and other modifications show that a certain amount of study, growth, and spiritual experience on the part of the Christians are pre-requisites to the complete working out of the plan. Dr. Nevius' great merit was, that he catted attention to these things and taught us, in several, to aim at a welfarms, and taught us, in catted attention to these things and taught us, in general, to aim at a minimum, rather than a maximum, use of foreign money. Along that general line we Shantung missionaries are working; though we every one have a reasonable number—three or four—of paid belpers. We are, also, doing more towards the education of Christian children than Dr. Nevius did. If I have failed to answer your questions send me another list and I will the again. I will try again.

With kind regards, sincerely yours,

J. H. LAUGHLIN.

#### YOKOHAMA FIRE BRIGADE.

The annual meeting of subscribers to the Yokohama Fire Brigade was held on Tuesday afternoon at the headquarters of the Brigade. There were present Messis. J. Walter (in the chair), E. Flint Kilby, J. P. Maltison, C. K. M. Martin, J. D. Hutchison, and J. Dodds.

The Chairman presented the report as follows: The contributions received from the Insurance Offices for the year amounted to \$2,955.00 and the policy fees paid in to the H. & S. Bank by the various Agents during the twelve months form a total of \$2,177.50. These figures compared with the previous year show a falling off of \$158 50 in the amount of the fees, while the subscriptions from the Insurance Companies show no change.

The ordinary disbursements amount to \$4,790,20.

covering wages and other usual necessary ex-penses, but the outlay for the iron tower on the Brigade Compound and a new hose-reel shed bring the total expenditure up to \$5,645,90 for the whole

year,
The regular bell-tower look-out and the usual patrol during the winter months have been kep np, and in addition to these extra men with hose reel and standpipe are now stationed on Let No. 107 Settlement, which should be found of valuable assistance on an outbreak of fire at the south end of the Settlement

From the full particulars given below the Brigade appear to have answered 18 calls during the twelve months under review. The water supply from the Water-works mains has been fairly good all through the year, but the B igade have in the case of larger fires always found it necessary to fall back upon their fire wells for working the steam fire engines.

Superintendent Morgin's Report is as follows,

Yokoliama Fire Brigade, Yukohama, Jan. ist, 1898.

To the Fire Brigade Committee,

To the Fire Brigade Committee,

Gentlemen,—I have the bonour to present the following report of the work of the Yokohama Fire Brigade during the year 1897.

The number of calls for fires, or supposed fires, has amounted during the year to 18. Of these in the Settlement 3 ended in total destruction, 5 were slight, 1 no damage, and 2 chimneys on fire.

On Bluff—2 chimney alaums.

In Native Town—3 ended in total destruction, and in one case the damage was slight; altogether 40 houses were totally and 18 houses partially destroyed.

The causes, as reported, were as follows, viz :-

SETTLEMENT.	
Unknown	4
Chimney on fice	2
Doubtful	ı
Explosion of Sulphucic Acid	I
Fusion of electric wires	1
Incense burner	1
Hibachi	1
Overheating of fire-grate	1
BLUFF.	
Chimney alacus	2
BATIYE TOWN,	
Unknown	2
Lamp upset	1
Accidental	I
_	_
Thank	. 0

The figures above only refer to calls which in-volved the turning out of the firemen, five engines, hose reels, &c., belonging to the Y.F.B.

I beg to place on record that the Bue Brigade

have worked most amicably with the Police and

Waterworks authorities.

I think it but right to mention the Inspectors of Settlement Police, for their urbanity at all times, and their endeavours to have their lorge work in

naity with ours.
I have the honour to be, your obedient servant,

N. MORGIN, Superintendent, Yokohama Fire Brigade,

A vote of thanks to Mr. J. D. Hutchison for his services as Hon. Secretary and Treasurer concluded the meeting.

#### BICYCLE RACES AT YOKOHAMA.

The Bicyle Meet of the Yokobama Cricket and Athletic Club was held on the Cricket Ground on Addictic Club was held in the Cicket Ground on Saturday alternoon. Unfortunately the weather was not altogether propitions; a cold wind was blowing during the early part of the afternoon, and during the last big race a smart shower descending, making the umbrella-less cush helterskelter for places of shelter. In this connection it may be noted that the proprietors of the Japanese Club by the side of the ground very kindly offered the near of the proprietors and the proprietors of the Can by the side of the ground very kindly offered the use of the pavilion to ladies inconvenienced by the bad weather. In spite of the climatic conditions the gate was fairly large, and a good number of hadies graced the proceedings with their presence. From a sportsman's standpoint the meeting was entirely successful. The times were pretty good on the whole, and the finishes were close, those in the two great races of the day—the mile and the five miles championships—being extremely exciting. The arrangements were under the management of The arrangements were under the management of the following officials:

Referee and Statter:—Mr. Kay Smith; Judge:
—Messis, Mollison, Jackson and Duff; Timers:
—Messis, Mendelson, Stone and Dyer; Scorers:
—Messis, Blake and Lias; Umpires:—Messis,
Elliott and Thwaires; Clerk of the Course:—Mr.
E. J. Libeand; Asst. Clerks of the Course:—Mr.

Manuel Course:—Mr. Messis. Gowey and Adet; Handicapper:-Mr. C. H. Bain,

One MILE Novice.—Prize, The "Columbia" Medal, presented by Mr. E. H. Tanka.

B. H. Icwine ...... 2 L. E. McChesney ...... 0
Time, 3 min, 462 secs.

Morse quickly assumed the lead, closely followed by Eyton, and I wine, with McChesney several lengths behind. In the second lap the positions were mechanged, except that McChesney had dropped further into the rear. In the next round I wine crept ahead, and, increasing his lead by several lengths in the last lap, finished an easy winner. Morse was a bad third.

A profest was raised against I wine on the ground that he was not a nevice, and the objection was upheld the prize being awarded to Eyton.

HALP MILE, HANDICAP - First Prize, The "Cleveland" Prize, prevented by Messis, Andrews & Gorge,

Mendelson led, almost all the first lap, but was passed just at the end by Kingdon. In the second round Roberts dropped out, and Dommond with a fire sport drew ahead, passing Kingdonnear the tape and winning by several lengths,

ONB MILE CHAMPIONSHIP .- Post Entries re-ceived. Prize, "The Reliance Cup," presented by the "Reliance Wheelmen," Present Japan Japan Record, 2 min. 30} sec., held by C. H. Bain.

1. M. Scott ...... 1 H. Balin ...... 2 Examined and compared with the vonchers and found correct. 

Time, 3 min, 331 secs.

The Chairman remarked that the apparent falling off in the amount of policy fees was in reality using to the fact that the agents of the different companies did not pay them at exactly regular intervals: in future they would be asked to make the payments baff-yearly. There had been a heavy outlay for the new tower, but it was an absolutely necessary expense. With the exception of the three large fires the destruction had not been very very very wery wery wery.

MR. Mollison remarked that the expenses would probably have a tendency to increase would probably have a tendency to increase to of wages and water—and more support would be wanted.

The report and accounts were passed.

COMMITTEE.

The rething committee were re-elected, with the receiption of the rock appeared to the rock appeared to the rock appeared to fine race, however, resulted on the found the rock appeared to the rock appeared.

#### ONE MILE BOYS' RACE. HANDICAP .- (For boy) under 16 years old). Prize presented by Mr. A. H. Date.

Okuua ...... 1 

Two Mile, HANDICAP. First Prize, " The Watson Dundee Cup," presented by Messes, James Watson & Co., Distillers, Dundee, Emanuel & Co., Agents.

M. Mendelson, 200 yards.....

Time, 5 min. 363. secs.

At the end of the first lap Morse was leading, with Kingdon second and Drammond third. In the second round the positions were Morse, Mendelson, Kingdon, and Drammond. In third Morse was still leading, but Drammond third Norse was still leading, but Drammond had drawn ahead, and was on terms with Mendelson, as they passed the tape, Kingdon being behind. In the next two taps Drummond made up a great deal of ground, and at the commencement of the fifth he was leading, with Morse second, Kingdon third, and Mendelson last. In the sixth lap Mendelson fell out, and the cross was given by the cross was given by the cross was given by the cross was given by the cross of the cross second. the race was simply between Drummond and Morse. The latter made a splendid bid in the last tew hundred yards, but Drummond responded gamely to the spurt and won by two yards.

### CHINAMEN'S RACE,-2 MILES. HANDICAP. All Fore La Tung Goat Tsang Tut San Cockeye \_\_\_\_\_\_ Chan Teze Kai

This was an amusing race—for the spectators, though the Chinese themselves took it quite seriously, and with reason, for, if gossip can be credited, there was quite a lot of money on it. All the Celestials turned up in racing garb, and they rode with the dignified slowness which characterises every movement of these majestic heathen. The race was somewhat spoiled owing to the fact that two competitors—Cock Eye and Chan Taze Kai—came to grief over a bank, and scores of spectators crossed the track to ascertain the extent of the damage; a semanted up bicycle and hadly of the damage; a smashed up bicycle and badly cut faces and hands. Interest in the race then fizzled out, the leader winning almost at a crawl.

Five Mile Championship. Post Entries re-ceived. First Prize, a Dayton "Special" Racer, presented by Messes, Bagoall & Hilles. Present Japan Record, 13 min. 50 sec., held by

C. H. Bain	,
J. M. P. Collaco	3
E. H. Irwine	o l
K. Tsuruta	n I
I. D. Mason	2
A. L. J. Dewette	21
and the Tax marra	21

Time, 13 mio. 58 secs.

The cace was cidden in a smart shower. The competitors were in a cluster for the first few laps, Onodera leading for the first round, after which Tsurata went alread, with Scott and Collaco second and third. Onodera soon found the pace too warm, and fell behind. By the fifth lap Irwine had worked his way noto third place, but he was afterwards passed by Bain and Dewette, and at the twelvth round the positions were Scott, Bain, Dewette, and Irwine. Collaco also passed Irwine, and in the thirteenth round, Tsurata, who rode pluckily throughout, made a spurt and came to the front, but the Buglishmen soon left him betoned for the beginning of the section and competitors were in a cluster for the first few laps hind again. At the beginning of the 15th round Scott was leading, Bain was close on him, and Dewette and Colaco were behind. So they rode till the bell rang. The finish was very exciting. Bain, put on a splendid sport, got on terms with Scott, and was leading by a little just before the huish. Scott humans, made a grand effort and Scott, and was reading by a fitting just before the hundred a grand effort and the two raced side by side, their machines almost touching, till the finish. After passing the mark, indeed, their machines collided, and Scott was thrown. The judges ruled it a dead heat, though a good many private observers thought the ad vantage, if any, was with Scott.

A protest was made by Scott, who offered to ride the race again, but the condition of the track as considered too dangerous to allow done in safety. Digitized by

#### FIGHTING IN THE PHILIPPINES.

The China Mail contains further details of the operations at Manila. Colonel Lond, who was on a pleasure trip on the Hugh McCulloch at the time of the outbreak of hostilities, and who witnessed the bombardment, describes it thus:

A TREMENDOUS CANNONADE.

A TREMENDOUS CANNONADE.

The ships and batteries at Cavite kept up a tremendous fire at the American ships as they advanced, but Commodute Dewey did not give the order to commence firing until the fleet were within about 4,000 yards of the enemy. The ships then turned in line at the upper end of the Bay, so as to pour full broadsides into the Spanish fleet, and at 5 are more flags, the Committee Carlot. and at 5.35 a.m. the flagship Olympia fired a broad-side from her large guns. The other ships followed side from her large guns. The other ships followed the flagship at four or live ships' lengths, and fired broadside into the Spanish fleet. Commodore Dewey mancenvied his fleet in splendid style, steaming his ships slowly across and across the Spanish line of fire, the guns on each occasion belching forth death and destruction. The American fleet by this mancenviewere able to maintain a continuous rain of shell on the Spaniards. The cannonade of the Spaniards from the shore and the ships was, however, as vigorous. There was no breeze blowing the smoke from the guns and the ships was, however, as vigorous. There was no breeze blowing, the smoke from the guns concealed the ships, and it was difficult to tell how the fight was going.

SPANISH ADMIRAL'S PLUCK.

SPANISH ADMIRAL'S PLUCK.
An incident happened during this series of manchives of the American fleet which shows indomitable plack and heroism on the part of the Spanish Admiral Patricio Montojo Y. Pasaron. The flagship Reina Cristina having got up steam she advanced out of line to attack the U.S. flagship Olympia. On the inducent being observed, all the guns of the American fleet were signalled to concentrate upon the Spanish flagship, and this signal was observed with telling effect before the signal was obeyed with telling effect before the Reing Cristing had reached anywhere near the Reina Cristina had reached anywhere near the Olympia. The Spanish flagship was forced to retire, and as she did so she gave the Olympia a grand opportunity for a raking shot. The Olympia sent a huge eight-inch shell through the stern of the Reina Cristina, raking her the entire length, exploding her boiler. As she drifted helplessly away she was discovered to be on fire. This single shell killed the Captain and sixty other men, and altogether this vessel had 140 men killed and as many wounded. The Spanish Admiral and as many wounded. The Spanish Admiral then transferred his flag to the Castilla, and she was afterwards sunk with a regular storm of shot

BIREAKPAST AFTER HARD WORK.

At 7.45 a.m. the Olympia withdrew from the action, and signafled the remainder of the fleet to ollow. The intense heat had told hard upon the follow. The intense heat had told hard upon the men working the guns. By this time two of the Spanish ships lying together were on fire, and at some distance off another was burning. The men on the American fleet had up to this time had no refreshment, and were greatly lagged in working the gous in the intense heat. The commanders of the different vessels were summoned on board the fleething of a reconference. different vessels were summoned on hosted the flagship for m conference, when it was learned that not one of the crews or officers of the fleet had been killed. Five or six men were slightly wounded by splinters from the deck on the Baltimore. No damage worth recording had been sustained by

damage worth recording had been sustained by any of the fleet. Breakfast was hastly served, and the men, who were in the best of spirits, were relieved of the tension for a time, and recounted their different versions of the fight.

THE "BALTIMORR" IN ACTION.

At eleven o'clock, the U.S. quadron renewed the attack, the Baltimore having the credit of starting the engagement, being ordered in to silence the sand forts at Cavite. She disappeared in a cloud of smoke, and immediately alterwards. in a cloud of smoke, and immediately afterwards in a cloud of smoke, and immediately afterwards the rapid fire of her guns was heard replying to the focts. A storm of shot was heard from the Bailimore's guns, and a few desultory ahots afterwards indicated that her work was about completed. The other ships, following the Battimore, took up their positions at a good range off the batteries, and worked their guns with the codness and necision of larget precise, we have a surface of the state o and precision of larget practice, nearly every shot taking effect. The little gunbont Pelyel, with her light draught, can in closer than any other ship, taking up her position within 1200 yards of the beach, and did her part to the admiration of all who saw her.

A TORPEDO ATTACK FAILS.

Two torpedo launches, which lay in wait off Cavite, attempted to run in with torpedoes against cavie, attempted to run in with torpedoes against the Olympia, and there were some trying moments of Spaniards to provide for the task is not an easy of the crew of that ship. The shells from the big guns were unable to reach such small objects at they rapidly approached. When within 800 wards of the flagship, the second hatteries of the track this belis, this belis, this belis, and with several thousands of the reach such small objects at the second that the Spaniards to provide them within 800 wards of the flagship, the second hatteries of the with supplies or take them out of the country.

Original Corrience with several thousands of provide them with supplies or take them out of the country.

Original Corrience of the task is not an easy one. It is thought that the Spaniards to provide for the task is not an easy one. It is thought that the Spaniards to provide or the task is not an easy one. It is thought that the Spaniards to provide or the task is not an easy one. It is thought that the Spaniards to provide or the task is not an easy one. It is thought that the Spaniards to provide or the task is not an easy one.

board, and driving the second lancel back on the beach with twelve shot-holes through her. This hoat was afterwards found covered with blood. The Petrel and Concord, being of lighter draught than the remainder of the fleet, sailed into the shallow water and sunk or destroyed all the small guiboats which remained of the Spanish fleet. There were eleven Spanish war vessels and two topeds-boats sunk or destroyed at Cavite, and the loss of life is variously stated. As far as can be learned, however, a fair estimate puts the Spanish losses at 400 dead and about 600 wounded.

APPER THE BATTLE. AFTER THE BATTLE

The lighter draught vessels and pinnades of the American fleet, and a large number of tug-boats and launches captured in the harbour steamed ino Cavite harbour shortly after the surrender the wounded men who were left behind in the ships and others picked up out of the water were mon-veyed to hospitals at Cavite and also to Manila city. The Spaniards had taken away most of their dead, and buried some of them, but next day white parties were searching around the naval arsenal at Cavite their attention was drawn by a dreadful stench to a large heap of putrefying bodies, some of which had been horribly mangled by the American shells.

SPANISH ADMIRAL WOUNDED. SPANISH ADMIRAL WOUNDED.
The Spanish Admiral, Patricio Montojo y Pasaron, who was very slightly wounded in action, with his two sons, Montojo y Martinez de Valdivielso and P Montojo y Martinez de Valdivielso, who acted as his aides, fled to the City of Manila.

and P Montop y Martinez de Valdivielso, who acted as his aides, fled to the City of Manila,

THE "OLYMPIA'S" NARROW ESCAPE.

The aim of the Spaniards' smaller guns was more within range than the guns of heavier calible. The flagship Olympia was pierced by numerous 7-lb. projectiles. Had the firing of the big guns been as accurate, the U.S. ships, which are not aimoured vessels, would have fared eather hadly. The ward room of the Olympia was turned into the sick bay, and the chaptain and some others who were on duty there had narrow escapes, They were watching the progress of the fight through a large porthole, when a 7-lb, shell, fired at 3,000 yards' range, exploded against the side of the ship. The chaptain received a few scratches. At a range of 2,000 yards this shell would have exploded in the ward room and done tremendous damage. dous damage. A SAD INCIDENT.

A SAD INCIDENT.

A sad incident occurred on board the revenue cruiser Hugh McCulloch as the U.S. squadron were making their way through the Southern channel between Corregidor Island and the maintain into Manila Bay. The ships were steeming in line up the channel. Every light was out, when the Hugh McCulloch signalled that the chief engineer was seriously ill, and asked for a consultation of dectors. This was of course impossible, and the warships proceeded on their voyage through the channel. A signal was given from the McCulloch shortly afterwards that the chief through the channel. A signal was given from the McCulloch shortly afterwards that the chief engineer of the vessel had died from apoplexy.

THE POSITION OF NEUTRAL VESSELS. The steamer Esmeralda and about half a dozen The steamer Esmeralds and about half a dozen sailing ships were lying about two and a half miles off the viver's mouth. On the day after the destruction of the fleet, Commodore Dewey sent instructions to these vessels not mload or discharge cargo mittl further notice. This was part of Commodore Dewey's plan for the submission of the town. He did not like the idea of bombarding the town, but by cutting off their supplies hoped to force the Spaniards to treat with him for terms, if the Spaniards dogmatically refuse to do so, the fleet will shall the city. The terms of President McKindey's proclamation that blockades to be hinding must be effective renders the condition of neutral ships in Manila harbour somewhat embarasing. The Esmeralda will probably remain till tasing. The Emerada will probably remain till the capitulation of the city has been effected, when it is expected that she will make a very profitable voyage. A commonication from Manila states the Spaniards are very arrogant, and are not likely to surrender until the city is shown to pieces. At present business is completely stopped.

WILL THE SPANIARDS SURRENDER ? WILL THE SPANIARDS SURRENDER?
President McKinley has been pleased to make
Commodore Dewey a Rear-Admiral, and instructions were given that he should raise his flag immediately. He was also given a free hand to take
what course he thinks proper. Admiral Dewey
has no wish to take over Manita on his own remountailing. The sumplies have hear writely sponsibility. The supplies have been entirely supposed by the rebels, and with several thousands of Spaniards to provide for the task is not an easy one. It is thought that the Spaniards will be

by the American Admiral, because of two things by the American Admiral, because of two things—viz, that the Spanish authorities had been sending misleading telegrams, and that they had declined to regard the Tetegraph Co.'s operations as neutral. The cable was cut about fifteen miles from the head of Manila Bay, both ends having been carefully broyed. The tope is expressed that communication will be restored shortly.

The position of affairs in the city of Manila was not very re assuring until the arrival of the French and of war Braix and H.M.S. Immortaliti in Manila Bay. The city is supposed to be surrounded by rebels, whose camp fires were seen distinctly by the American fleet. Should the lasurgents attempt a raid on the town the whole of the inhabitants will be placed in jeopardy. It is aid the Spanish troops will fight to the death. THE INSURGENT DANGER. the inhabitants will be placed in jeopardy. It is said the Spanish troops will fight to the death. Should an invasion take place, men will be sent ashore from H.M.S. Immortalité and the French man of war Braix to guard the British and French Consulates.

#### LATEST TELEGRAPHIC NEWS.

(FROM THE M JAPAN TIMES.") THE WAR.

AMERICAN ARMY CORPS FOR THE PHILIPPINES.

London, May 13.

General Merritt has been given the command of an Army Corps for the Philippines consisting of 2,500 regulars, the remainder being volunteers from the Western States.

SECRECY OF SPANISH MOVEMENTS.

Although it was announced from Washington on official authority that the Spanish Fleet remained at Cadiz, it now appears that the report emanated from a doubtful source. Spain keeps her movements absolutely secret.

SPAIN WILL FIGHT TO THE BITTER END.

Senor Sagasta has declared in the Cortes that the present or any future govern-ment will prosecute the war to the bitter

> SPANISH FLEET AT MARTINIQUE. GREAT BATTLE IMMINENT.

London, May 14.

The Spanish Fleet under Admiral Cervera has arrived at Martinique from Cape Verde Islands. A great naval action appears inevitable.

ADMIRAL SAMPSON BOMBARDS SAN JUAN. Admiral Sampson, with nine men-of-war, has bombarded San Juan, Porto Rico.

AMERICANS REPULSED AT CUBA.

The Americans made a simultaneous attack on Cienfuegos, where they attempted to land troops, and on Cardenas, and were repulsed at both places.

DESPERATE ENGAGEMENT.

AMERICAN GUNBOATS DISABLED. COMMANDER KILLED.

The Cardenas engagement was perate one. The torpedo boat Winslow, supported by three gunboats, entered the port under a heavy Spanish fire which smashed her boilers and disabled her. The gunboat Hudson attempted to tow her off when a Spanish shell exploded her magazine, killing her lieutenant and six men, and wounding all the rest of the crew but three.

THE BRITISH OCCUPATION OF WEI-HAI-WEI.

Mr. Brodrick, Parliamentary Secretary to the War Office, denies that either the Highland Infantry or the Yorkshire Regiment are to be despatched to Wei-hai-wei,

"GALTEE MORE" BOUGHT BY RUSSIA.

The Russian Government has bought the English race-horse Galtee More for £25,000. Digitized by

THE CRISIS IN THE FAR EAST. ENGLAND'S POSITION.

IMPORTANT DECLARATION BY THE COLONIAL SECRETARY.

London, May 16. Mr. Chamberlain, speaking at Birmingham, said that the foreign situation was serious and critical. The time was perhaps not far distant when an appeal would have to be made to the patriotism of the people.

RUSSIA NOT TO BE TACKLED SINGLE-HANDED.

The situation in China was extremely unsatisfactory, but Britain was unable to declare war against Russia without an ally. The interests involved in China were so enormous that no more vital question had ever presented itself to Her Majesty's Government.

BRITAIN STANDS ALONE AND MUST NOT REJECT ALLIANCES.

The British people, the Colonial Secretary continued, stood alone, and it was their duty to aid in drawing closer the upion with the whole of the Empire.

AN ANGLO-SAXON ALLIANCE.

The next duty was to draw closer to their American kinsmen. Any war would be cheaply purchased if it ended in an Anglo-Saxon alliance. Unless the fate of China was to be decided without England, the latter must not reject alliances.

THE PROPOSED ANGLO-SAXON ALLIANCE.

HAILED WITH WARM APPROVAL IN AMERICA.

London, May 17. The American press generally warmly

approves Mr. Chamberlain's speech and welcomes the prospective alliance.

INDIGNATION IN SPAIN.

In Spain the speech has aroused indignation.

FRENCH AND GERMAN PRESS DEPLORE IT. The Berlin and Paris papers deplore the language as being calculated to irritate instead of allaying the present difficulties. UNITED STATES' TROOPS FOR MANILA.

INCREASED TO FIFTEEN THOUSAND. London, May 18.

The United States has decided to send 15,000 instead of 5,000 men to Manila. CABINET CHANGE IN SPAIN.

STRUGGLE A L'OUTRANCE. Senor Sagasta is reforming his Cabinet with men resolved to conduct the war a l'outrance.

MR. CHAMBERLAIN'S SPEECH. STRONG COMMENTS ON THE CONTINENT.

EFFECT ON THE MONEY MARKETS. Mr. Chamberlain's incidental references in his speech at Birmingham as to Russia's disregard of her promises made concerning the Chinese negotiations, are strongly commented upon on the continent, and have caused a fall on the bourses.

QUESTIONS IN THE HOUSE OF LORDS.

LORD SALISBURY DECLINES TO EXPLAIN. May 19.

Speaking in the House of Lords, Lord Kimberley asked for an explanation of Mr. Chamberlain's speech. Lord Salisbury declined to discuss the subject, without having the speech before him.

BRITAIN'S POLICY UNCHANGED. Britain's policy, the Premier continued, remained unchanged.

Empire, developing commerce and preserving friendly relations with all nations.

WHY WEI-HAI-WEI IS TO BE OCCUPIED.
The occupation of Wei-hai-wei was intended to encourage China to resist the dominion of one Power.

DOES NOT BELIEVE IN CHINA'S COLLAPSE. He was unable to believe in the collapse of a nation of 400 millions of brave people.

DEATH OF MR. GLADSTONE. Mr. Gladstone is lying in extremis.

Mr. Gladstone died this afternoon.

(Official Telegram received in Tokyo.) PRINCE HENRY LEAVES FOR TAKU.

Chefoo, May 12. Three German warships, the Gefion, with Prince Henry of Prussia on board, the Deutschland, and the Kaiserin Augusta, arrived here from Kiao-chou yesterday, and after staying for some hours they left for Taku immediately. They will proceed thence to Peking via Tientsin.

> (Received by the 3tji Shampo.) PRINCE HENRY AT PEKING.

Peking, May 13. Prince Henry of Prussia arrived here

to-day. THE "NANIWA'S" DEPARTURE FROM

HONGKONG. Hongkong, May 14. The Naniwa left here to-day.

THE LATE TAI WÖN-KUN AND PRINCESS TAI WÖN-KUN.

Soul, May 14. The funeral ceremony of his late Highness the Tai Wön-kun, and Princess Tai Wön-kun will be held to-morrow.

PURCHASE OF LAND DESIRED BY RUSSIA.

Soul, May 15.

The Russian Minister has applied to the Korean Government for the purchase of land to the extent of to miles in the vicinity of the Russian settlement at Mokpho.

FRENCH DEMAND ON KOREA,

Söul, May 15. The French Minister has addressed a demand to the Korean Government for sanction to engage in coal mining in Phyong-yang.

THE SPANIARDS AT MANILA STILL HOLDING OUT.

Hongkong, May 17. The Spanish Authorities at Manila have refused to surrender. Commodore Dewey will not bombard the town until the arrival of troops from America.

> BRITISH MERCHANTS' RAILWAY CONTRACT.

Peking, May 17. Messrs. Jardine, Matheson & Co. secured last evening a contract to construct with a capital of 21 million pounds sterling the truck railway between Ningpo, Hangkow, and Shanghai.

The English players played very well on the whole, and there is no doubt that taken all round we had the stronger team. Contously enough, on the first five boards England did not win a game; whereas on the second five boards America did not win a game. This clearly proves that the American tail was not wisely selected.—St James' Budget.

#### GAMB No. 389.

The chess editor of the Weekly Mercury says:— This is the game, played at the Metropolitan Club, New York, which, according to the Ameri-can Chess Magasine, compelled Steinitz to admir that henceforth his gambit is unplayable :-

This tremendous move was suggested by Mr. Raubitscheck. Up to this point Stembz is thought to have played the best moves. But who could stand up against a Honegger and a Raubitscheck? Rather would be play our gentle friend Jasungstodsky himself, or our other friend fought at Cobtenz in 1876, the gentle Gumpelzheimer, to whom we gave a Rook. It was in 1876 that Riesenschmantze was in London looking on at the Steiniz-Blackburne match, and affering to wages Steinitz-Blackburne match, and offering to wages that Blackburne would not win a game-which prophecy came out true. Riesenschiantze was then teckoned something of an analyst, but no-body quotes him nowadays, and were it not for his name we might have forgotten him too. We never played him, but we have played with Jasno grodsky and Gumpelzheimer, which is enough glary for one person of medium stature. Poor Jasnogradsky went to the States because England as too small for his name, which he had to keep curled up to preserve it from the salt water that surrounds this skimpy, pinched up little island. In America it can expand and stretch its legs.
We had a tendenness for Jasong odsky, and could have wished that he had emigrated the name and remained with us timeelt. A wonderful country is America to find room in its vast prairies not only for the name of Jasnegrodsky, but also for Honegger and Raubitscheck.

Concerning the componer of No. 371 problem, the Times Weekly tenants that Mr. Blake "may safely be regarded as the foremost British may safety be regarded as the foremost Ditish two-move problemist, if indeed we might not put it even stronger. This young composer began in 1890; some who started composing at the same time have already turned out about 400 problems. But Mr. Blake has resisted the temptation to be prolific, and his work is solid and full of points He informs us incidentally that the three-move problem given in this issue took him three months off and on. Our own solvers are generally greatly puzzled over Mr. Blake's compositions, and we always find his problems prove fatal to about nine out of ten, even though only in two moves. Per haps this gentle hint may serve to warn our correspondents to look and look again in the present case."

The St. James's Budget remarks:—Certain problem solvers, somewhat after the fashion of some people's love for flowers, admire the compositions which engage the attention for the time. They like a good problem, solve it, and after it is the checked its interest fades away rapidly and problem. They give little thought to aught but the difficulty of solution, and the manner of the time of the solution of the solution, and the manner of the solution, and the manner of the solution, and the manner of the solution, and the manner of the solution of the solut

which the mate is effected. There are, however, which the mate is effected. There me, however, other adminers of problems who judge each production from the point of view of problem art. These appreciate a fine creation, and look for the imaginativeness, originality of teatment, symmetry, and purity of construction with a critical eye, and with the same devotron, attention, and interest which loves of art bestow on the objects interest which lovers of art bestow on the objects engaging their attention.

It was on the trip of the last Australian eleven to the old country that a great English chess-player came on at Colombo, and Harry Trott was quite unhappy until he had an opportunity of challeng-ing the champion to a game. The Englishman ing the champion to a game. The Englishman was willing, the Australian lamentably weak—indeed, he could hardly be called a chessplayer at all, seeing that he was ignorant of even a single move. But he sat down with the champion, a crowd gathered to see the game, and for nearly half an hour the Australian captain followed his opponent's lead, faithfully spending long intervals between each move in a profound study of the board, with such suggestive and apparently unconscious comments as "No, that would never do, he'd have me in three. Let me are!" and so on. Finally, there was bursied whisper among the on-lookers, as the captain, after much caremony, made an obviously bad move, and the expert, taking advantage of it, promptly announced "check." "Check to you." holdly retorted the captain, moving something out at random. The chess champion looked hard at the smiling, trust-ful face of the man in front of him, but it beamed in face of the man in front of him, but it beaused innocently, and with never a suggestion of guile. "My dear sit," he said quietly, "you don't understand the game." "Oh, no," said the captain simply. "I never played it before, but I thought it a fine chance to pick it up from a good man." The good man didn't see it in that way. man." The good man didn't see it in that way, and left hurriedly and in a huff, while the passengers laughed, and the crickelers told one an-other that the captain must have been born with that particular talent--no man at his age could have acquired it .- Riverine Grazi r.

#### THE GRETEST WONDERS OF MODERN TIME

#### HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitatep Constitutions will discover that by the age of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills

Sin Samuel Baren, in his work emitted "The Nila Thied taries in Abyssinia," says—"I ordered the dragoman Mahometo inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice grafts, In Jaout "time I had many applicants. In whom I served out a quantity of Holloway's Pills. These are most useful to anealy lorer, as possessing unamistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

#### HOLLOWAY'S OINTMENT

Is a certain emedy forbad legs, bad breasts, and uncertains of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subdusing all inflammations, Mr. J. T. Courks, in his account of Ms extraordinary travels in China, published in 1871, says—"I had with me a quantity of holloway's Cintment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, mik, fowl; butter, and horse feed poured in upon us, until at last a traspoorful of Olotment was worth a fowl and my quantity of pens, and the demand became so great that I was obliged to lock up the small remaining "stock."

Tax Imperial Shinto shrines at Ise have auffered through fire this week.

Queen's Birthday in Yokohama, Tokyo, and Kobe was apoiled by rain.

SEVERAL shocks of earthquake have been felt in Yokohama this two days week.

THE proposed Naturalisation Law has caused some discussion in the House of Peers.

THE Emperor and Empress proceed to Kyoto immediately upon the rising of the Diet.

A NEW design, it is stated, is to be used for postage stamps of five see and smaller value.

THE Japan (Kirin) Brewery, Yokohama, have declared a dividend for the year of 30 per cent.

Mr. Lappin's yacht Mary, as usual, carried off the British Minister's Cup in the Birthday sailing race.

A Fraz that broke out in a paper-dealer's shop in Kyoto spread to the famous Hongwan temple and did enormous damage.

MR. GLADSTONE'S remains are to have a state funeral. They were lying in state at Westminister Abbey this week.

THE Premier announced in the this week that the Government Digitized by

THE evacuation of Wei-hai-wei by Japanese troops having been concluded on the 23rd inst.,
a British force entered there,

THE Japanese warship Tokiwa, which is now under construction at the Armstrong Works, will be launched in a few weeks.

ALL is quiet at Manila, where Admiral Dewey is waiting the arrival of troops from San Francisco before he bombards the city.

THE Rt. Rev. Bishop Awdry preaches at St. Andrews Church, Shiba, to-morrow (Whit Andrew's Church, Shiba, to-mo Sanday), I the 11 o'clock service.

IT is announced the Dr. Schmidt-Leda, German Consul General at Yokohama, has been appointed Minister-Resident at Caracas.

THE P.M. steamer Peru has been quarantined at Kobe for seven days and her departure from Yokohama is therefore postponed until further notice.

Four million bags of tice were imported at Kobe and sold from 1st January to 15th May. Putting the price at yea 5 per bag this represenis war 20,000,000.

THE Temma Cotton Spinning Company, Osaka, will hold an extraordinary general meeting on the 26th inst, to consider the raising of debentures amounting to yen 450,000.

A DRUGGIST named Takahashi Toragoro, living at Hirowo-cho, Azabu, Tokyo, has been fined 20 yes for manufacturing and selling hydrochloric acid of bad quality.

On the 22nd inst., intelligence from Peking reached the authorities that travellers to Port Arthur and Liaotung must obtain passports endorsed by the Russian authorities.

Mr. John Harrington Gubbins, Japanese Secretary of Her Britannic Majesty's Legation in Tokyo, has been appointed a Companion of the Order of St. Michael and St. George.

VISCOUNT HIGASHIZONO, of the Imperial Household, was despatched on the 24th to Ise Province to investigate the damage caused by the recent fire at the great Shinto temple.

WAR news from the Atlantic seaboard is very meagre, the whereabouts of the Spanish squadron being unknown, though rumour says the American squadrons have bemmed it in,

THE railway between Nagao and Kitsu is now completed, and on the 24th inst. a trial trip took place. After Government inspection, the railway will be opened for traffic on 1st June.

On the 19th inst., about 10 p.m., a man was run over by a train near Yokohama Station. He is supposed to have committed suicide. His age seemed to be about 27 years, and he looked like a merchant.

THE Prince of Wales, the Duke of York the Marquis of Salisbury, Earls Rosebery and Kimberley, the Archbishop of Canterbury Mr. Arthur Balfour, and Sir William Harcourt are to be the pall-beaters III Mr. Gladatone's funeral.

On the 23rd inst. a telegram from Shanghai reached the Government that the warship Atago arrived there the previous day. After taking in coal and provisions she will leave for Hankow in connection with the Shashi affair.

extended franchise bill and new taxation huge garden parties. He intends founding a measures. and has donated 500,000 yes as a foundation fund.

> Ow the 20th inst, #1 10.30 p.m., Sir Charles Mitchell, Governor of the Straits Settlements, proceeded to the Palace with Sir E. Satow, British Minister, and had audience of His Majesty. Lady Mitchell was presented to the Empress.

> The Niger question has attained the point of settlement. It is understood that Great Britain retains Bussa and France retains Hikki, and two ports on the Middle Niger, also a large extent of territory, including the whole hinterland of Dahomey.

> In reply to the French claims the Chinese Government has accepted the conditions that a sum of 30,000 yen is to be paid to be distributed among the families of the murdered missionartes, and that a church be established at Peh Hai port, Canton province. The claim for the right of laying down a railway between Peh Hai port and Kwangsi is still under consideration,

THE P. and O. Company, says a porary, has sold the Ravenna, built at Dumbarton in 1880. She is a fine old craft of steel, 38oft. zin. long, 4oft, 5in. beam, and 25ft. 9in. depth of hold, with a net tonnage of 2.046 and a gross toninge of 3.385. Her horse-power is 700, and she makes at ordinary immersion something like 14 to 14½ knots. By the hurried way in which she was to leave the Thames it is believed she has been purchased for either the United States or Spain—the latter for choice.

A CARPENTERS' strike has been in progress at Shaughai, and riots took place on the new Chinese Bund resulting in the serious injury of Major Liu, the officer commanding the little party of "braves," which tried to stem the onrush of nearly 1,000 infuriated and riotous carpenters intent upon awing non-strikers into joining their ranks. An increase of wages will be granted next month and most of the strikers have returned to their work. A proclamation has been issued that the beaviest penalty will be imposed on all guilty of assaulting the police and rioting. Should the men again give trouble they will be fired upon and given no quarter.

THE continued stagnation in the import trade is causing a very large accumulation of woollens and cottons in importers godowns. Native merchants profess themselves willing to take up the goods but complain that money is so scarce and difficult to obtain that business for the present is out of the question, medial measures proposed by the Minister for Figure are expected to relieve the tension shortly and then a revival of rade is confidently expected. Under present circumstances, therefore, the import market remains without change and rates are nominal. There is a very large stock of kerosene now on hand but little or no business is doing. The same tale has to be told in regard to metals. The sugar market continues brisk, with quotations nominally at last week's figures. Business has been fairly brisk in the principal staple of export, the Belgic, Victoria and Yarra taking away 1,137 picula; but prices remain very firm, holders refusing to meet the views of buyers for America. In waste silk only a trifling amount changed hands, shipmen's for the week totalling 276 picula. Present stock is estimated at 7.340 boxes, and prices are therefore numinal. Fea continues brisk, and during the week shipments have been heavy, over 1,262,882 pounds being the total to MIN OKURA, the famous merchant, celebrated date. Stocks are large and prices easy. Copplication of the week by giving three is distributed the same may be said of fish oil.

UNIVERSITY OF ILLINOIS AT

#### SPIRIT OF THE VERNACULAR PRESS.

The Fift Shimpo published an article permeated with its usual liberal spirit, urging the Government to remove all restrictions upon the acquisition of shares in Japanese companies or the ownership of land by foreigners. The immediate text of the article in the transaction recently completed by the directors of the Formosa Railway Company in horrowing a sum of a million and a half pounds sterling from British capitalists at five per cent. In operations of that nature the Jifi discerns the safest and easiest method of importing foreign capital without disturbing the money market or pledging the national credit. At present it is not permitted that foreigners should become shareholders in the Bank of Japan, or the Specie Bank, or in any mining enverprise, and there is a doubt whether they may acquire the shares of any association owning real property outside the settlements. Such limitations and such doubts should be removed at once. The country wants cheap money above all things, and every avenue for its inflow ought to be thrown widely open. Nothing can be more extravagant or pusillanimous than the ideas entertained by some Conservatives about the contingencies connected with foreign ownership of land and shares. If foreigners find their account in investing their money in Japan, the gain is at least as much on Japan's side as on theirs. It is a mere chimera to imagine that there could be danger in letting them enjoy the special privileges granted by the Government to certain industrial and commercial enterprises. The foreigner will have to pay the full value, from a Japanese point of view, of everything he acquires in Japan, and if the Japanese make sales to him whether of land or of shares, it will be because they can reap benefit by doing so.

Chinese affairs are discussed by the Nichi Nicht Shimbun, but we can not find anything specially worthy of note in our contemporary's writing. The theory that China can be drawn away from conservatism by the interference of foreign States is condemued as quite unpractical. China is too huge to be perceptibly influenced in that way. Even the Central Go-vernment is beyond the effective range of alien advice or suggestion, and moreover, if the Central Government were induced to take a new view of its duties and responsibilities, it could not produce any practical seffection of its mond in the provincial districts. After this uncompromising dismissal of the ordinarily accepted theories about China's regeneration, one is disposed to expect some an nonneement of a special programme devised by the Nichi Nichi itself But no such programme is set forth in our contemporary's columns. It hints that it has a programme of its own, but, funtend of formulating it, talls back upon the hackneyed plan of dealing with every event strictly upon its merits and in accordance with the requirements of the time. In short, the article seems to have us purpose except to condemn the notion that international attempts should be made to lead China into the path of progress, and to show that, even if they were made, they could not be successful. . . .

The article nummarized above from the Nichi Nichi Sh mbun finds its justification in the writing of the Mainichi Shimbun, which contends that the only hope of regenerating China consists in subjecting her to foreign pressure. Analyzing the factors that operated to rouse a progressive spirit in Japan, the Mainichi concludes that incomparably the most potent was the display and even the use of armed force. The hombardment of Kagoshims and the expedition against Choshiu did more to open Japau's eyes than anything else. The same levers must be used to prize Chiun out of the conservative rut. She will want a great deal more consing than Japan did

perhaps ten times as much, her population

yen would suffice for the foundry, it is
being ten times as large and her prejudices being ten times as large and her prejudices that the Public Undertakings Loan

more deeply ingrained it that highers are found to now become 141,474,101 yen. UNIVERSITED LINOIS AT want a great deal more rousing than Japan did

her incapable of quick sensation, and it is probably correct to say that an influence which produced certain results in Japan in the course of a decade, must work throughout a century to produce the same results in China. The war of 1894 5 achieved something. The ac-quisition of Kiso chon by Germany, of Liso-lung by Russis, and of Wei-hai-wei by England will also have their effect. By such means alone can the big empire be roused from its lethargy. The impulse will never come from within; it must be applied from without. It is against this doctrine of the Manichi's that the Nichi Nichi Shimbun enters its protest in general terms. There would have been some interest in learning how the Mainichi proposes to exert the pressure on which it relies for China's regeneration, but nothing explicit is said on that point.

The advisability of establishing a legation in Turkey is urged by the Mainichi Shimbun. It is not easy to discover any solid grounds for the recommendation, but the chief idea seems to be that Turkey, owing to the peculiar conditions of its existence, is a species of batometer for obtaining indications of the state of the political atmosphere in Europe, and that Western countries consequently take care in he represented there by their best men. Japan ought, therefore, to have diplomatic machinery in Constantinople. Such is the Mainichi's latest fancy-very unpractical and far-fetched it seems to us.

Mr. Chamberlain's speech at Birmingham forms the subject of an article in the Pomiuri Shimbun. The inference which our contemporary draws from the language of the Colonial Secretary is that the time is fast approaching for an Anglo Japanese alliance, with a view to exercising a really potent influence on the dis-posal of Chinese affairs. Very heartily does the Pomiuri welcome the prospect. It calls upon the Diet to take some step calculated to promote the alliance, and finds much satisfaction in the fact that a consummation so often and so persistently urged in its own columns should now have entered the field of practical politics. The article would be more interesting did its writer show more discrimination. But his failure to perceive the utter impossibility of the language attributed by Reuter to Mr. Chamberlain—namely, that Great Britain could not without affice enter the lists against Russia-deprives his comments of much of their value.

#### THE IRON FOUNDRY.

Apparently the Government's programme for the establishment of an iron foundry has undergone considerable expansion. The sum originally appropriated for the purpose was only 4,095,793 yen, but, according to a supplementary budget submitted to the Diet this session, the total expenditure is to be 10,569,894 yen, distributed as follows :-

	yen
Expenditure up to March 31st, 1898.	2,321,383
Expenditure in 1898-9	1,189 415
Expenditure in 1899 o	2,345.168
Expenditure in 1900	2,122 863
Expenditure in 1901 3	2 <b>5</b> 91,065

10.560.804

As yet we have no particulars of the reasons underlying this extensive change of plan. It may be added that the outlay connected with the establishment of an iron foundry is to be defrayed with the proceeds of the Public Undertakings Loan, and as the latter was estimated at 135 million yen on the hypothesis that 4,045,793

ENGLAND, AMERICA, AND JAPAN.

Mr. Oishi Masami, ex-Minister of Agriculture and Commerce, gave a speech at a grand social gathering held on the 20th instant at the Nakamura Restaurant, Tokyo, by the strong foreign policy party. He said:

Mr. Chamberlain's speech is virtually a declaration of war against Russia. The tone used by such an influential Minister is more than aufficient to show the real motive of Eng-land. That part of his address in which he remarks that he is ready to co-operate with any nation holding the same views is too significant to be forgotten. The Hispano-American war is now III its height and, together with the Minister's speech, is destined to produce no small effect upon politics in the Orient. If Japan, the most influential country in Eastern Asia, would take the trouble of indicating that she could in no way acknowledge the justice of the operations of Germany and Russia towards the East, Europe, too, might be brought to condemu the proceedings of those two Powers. England has secured the reputation of a chivalrons country by affording protection to China, and it is only under the most imperative circumstances that America has entered upon a war with Spain. It may confidently be asserted that England and America will, after the triumphant issue of the Spanish war, be employed in the settlement of complications now prevailing in the Far East. If Japan would make it known to the world that she too has motives for maintaining the peace of the Orient, co-operation with England and America for the settlement of the present difficulty might be recuted. An alliance between Japan and England may be said to have been secured in the abstract; in order m carry it into practice public sentiment—the only reliable support of the government must be roused. If fortunately an alliance between the three Powers-Japan, England, and America-be concluded, the Chinese question, the centre of the present complications, may be solved without a single drop of blood.

#### COST OF THE WAR.

Among the documents submitted by the Government to the Diet this nession is said to be one relating to the expenditures incurred on account of the War. The figures stand thus :--

Excess of income over expenditure 24.754,619 The expenditures extend over a period of 22 months, namely, from June 1st, 1894, to March 31st, 1896. With regard to the surplus revenue of 24% million yen, it was drafted into the Budget for 1896 7 to meet extraordinary war expenditures-Formosan, &c.

#### THE UNIVERSITY OF CHICAGO.

Another indication of the wide-apread interest felt in the development of Japan may be seen in the fact that the University of Chicago has decided to hold entrance examinations in Tokyo. This move is made, not merely for the benefit of Occidental youths or maidens who may be resident in this empire, but also for the sake of Japanese who may wish in complete their education in America. The examinations of the University of Chicago will be in Charge of Mr. Ernest W. Clement, M.A., of the Tokyo Chu Gakuin, and Mr. Eiji Asana, Ph.D., of the Aoyama Gakuin; both of these gentlemen are alumni of that institution. It is rather an interesting coincidence that the only American universities in hold entrance examinations in Japan are Harvard University, the oldest, and the University of Chicago, the youngest, of the great institutions of learning in America.

#### COUNT INOUYE AND THE BUDGET COMMITTEE.

House held its first sitting on the 23rd details given in various vernacular journals.

The bill itself has not yet been actually instant, in the presence of the Minister of State for Finance, the Vice-Minister of the same Department, and other officials. The subject of investigation was the Supplementary Budget submitted by the Government for the current fiscal year. Invited to offer some explanations of his financial policy, Count Inouye made a an exceedingly small impost. We enter-long and explicit statement, lasting nearly ed into this subject fully last year, and two hours. Unfortunately these speeches delivered before Standing and Special Committees are not reported in the Official Gasette, and our knowledge of them is consequently limited to the contents of brief resumes given by vernacular journals. is that the tax actually levied upon each The Count seems to have laid before the The Count seems to have laid before the acre of urban land is 5.15 yen, and that Committee a detailed and lucid account levied on each acre of rural land, 3.28 of the various items in the Supplementary Budget, of the programme of finance mapped out by him for the five years ending March 31st, 19c3, of the considerations underlying the system of increased taxation, and of many other points. On the whole, however, readers of these columns would learn nothing new from his remarks. It is already known that his Excellency intends to devote 20 million yen from the Indemnity to the redemption of War Bonds and to supply working funds for industrial enterprises. It is also known that, with regard to railways and other works the expenses of which were to have been defrayed by means of domestic loans, his plan is to employ the Indemnity as far as it goes, and subsequently to devise other sources of supply-the home market or the foreign market ac-cording to circumstances. He is revolving other projects also, but they have not yet matured sufficiently to be made public. One member of the Budget Committee, Mr. Taketomi, showed a disposition to be captious. He reminded the Count that public securities had undergone unprecedented depreciation since the present Cabinet came into office, and he averred that the Government's financial credit was at a low ebb. To that the Minister replied that the responsibility did not rest with him alone, and that he had not failed to adopt whatever remedial measures were within the Government's power. He added that, if the Diet adopted the system of increased taxation now before the House, the annual redemption of public bonds would be larger by 5 or 6 million yen than it is at present.

Questions were asked, of course, about a foreign loan. One member wanted to know how it happened that the Nichi Nichi Shimbun had announced the Government's intention of going abroad for 150 million yes. The news, regarded by the public as trustworthy in view of the source from which it emanated, had been telegraphed to London by The Times correspondent, and had caused considerexcitement in financial circles. Count Inouve replied that the Nichi Nichi had been mistaken. He himself was not opposed to the introduction of foreign capital, and did not deny that it might have to be relied on by and by. But the Government had no such heroic intentions as those attributed to it. The state of the foreign market and the necessities of the about the wisdom of forbidding the manu-

#### POLITICAL REFLECTIONS.

With regard to the Government's pro-The Budget Committee of the Lower ject for increased taxation we now find published, but its main features appear to be known. Our readers are aware that the Land Tax is levied on a uniform basis of 21 per cent. of the officially assessed value of the land, no difference being made between agricultural land and building sites. One result of that system is that the urban building lands escape with ed into this subject fully last year, and showed that while owners of land outside the urban districts pay a tax of a little more than I yen per capita, the inhabitants of the urban districts pay less than 19 sen each. Otherwise stated, the case yen, a ratio which evidently varies greatly from the relative market value of such lands. Taken all round, urban build-ing lands in Japan are probably worth seven or eight times as much as provincial farm lands, whereas the assessment for taxation purposes does not make the former even twice as valuable as the latter. Some attempt is now about to be made to remedy this injustice, for we find that the rates fixed by the new scheme are

> Agricultural and Forest Lands, 3.7 per cent. of r assessed value.
> Royal Building Lands, 3 per cent. of the as-

> used value.
> Ushon Building Lands, 5 per cent. of the as-

It follows that the tax levied upon urban building lands will henceforth average to 30 yen per acre; and the tax upon farm lands, 4.85 yen. The figures may appear high if considered merely as taxes. But they are not mere taxes: They include the rent paid by the holders of the land to its original owner, the Sovereign. The additional revenue obtained from the Tax when these rates are enforced is estimated to be 17 million yen, and, of course, there is no room for an error of calculation in such a matter.

With regard to the Sake Tax, the rate at present levied is 7 yen per koku on clear sake. According to the programme now contemplated, the private brewing of sake for domestic use-which has hitherto been permitted under certain conditions-and the brewing of what is called "mixed sake" (Konsei-shu) will be interdicted, the rates on the other kinds of alcoholic beverages being raised to the following :-

			koku.
Alcohol (shochiu)	. 1	ı,	yen
Clear sake (seishu)		10	- 0
White sake (shiro nake)		8	*1
Muddy sake (dakushu)		7	2.0

The last two varieties, white sake and muddy sake-i.e. unrefined-are manufactured entirely for the use of the lower middle and lower orders. Hence the smaller rate of tax in their case. Cleari.e. refined—sake is the beverage of the upper classes. It could afford to pay a tax far higher than 10 yen, which, after all, is only a little more than 64d. per gallon. The additional revenue expected to accrue from these changes is 124 million yen.

There can be little doubt, we think,

person not engaged in the liquor trade, and not keeping a public house of entertainment, may brew, for family use, any kind of sake except the refined variety (seishu), in quantities varying from 39.7 gallons to i.e. a tax—not less than one penny and not more than two pence per gallon. Writing on this subject a year ago, we said :- "It is difficult to discover any sound reason for such a system, or to doubt that the private brewing of sake will ultimately be interdicted, with marked benefit to the revenue of the State." Our forecast is now, apparently, on the verge of fulfilment.

Concerning the increment of revenue-123 million yen-expected to accrue under the new system of sake tax, the Government certainly does not seem to have formed an excessive estimate. The quantity of refined sake consumed at present is 31 million koku, in round numbers, and by raising the tax upon that variety from 7 to 10 yen, an addition of 10 million yen is obtained. Further, the probability is that a large part of the white sake and unrefined sake drunk by the lower orders has hitherto been brewed under the domestic consumption rule, and consequently paid only from 2 yen to 4 yen per koku, whereas the new rates are from 7 yen to 8 yen. It will be safe to assume, therefore, that the Government's expectation of an increment of revenue amounting to 124 million yen is rather under than over the mark.

The alterations contemplated in the Income Tax Law seem to be directed against the wealthy classes only. Hitherto the minimum income upon which a tax is levied has been 300 yen. A man with 300 yen a year has to pay 3 yes or I per cent., in the form of income tax. The new Law puts the minimum income at 500 yen, and provides that for the purposes of the tax that income shall be reduced by 200 yen, the remainder only being liable to an impost of a per cent. When we get to large incomes of twenty, thirty, and forty thousand yen, however, we find a material increase of rates. The exact figures shall be published so soon as the bill is submitted to the

Another modification of the Income Tax Law is that whereas individuals alone have hitherto been taxed," legal persons" will henceforth become liable-in other words, companies, corporations, and all associations having a legal status. The taxable income of such associations will be the profits from their business after deducting expenses and appropriations on account of reserve funds as fixed by law. Shareholders, however, in such companies will not be taxed in respect of their shares, since to levy an impost on them as well as on the earnings of the association would be to duplicate the tax. It is expected that these various changes will give an additional income of 13 million ven.

Another project of law relates to silver one-yen coins. The period for their exchange, originally fixed at 5 years from April 1st, 1898—when they ceased to be legal tender-is to be shortened to four months, so that any of such coins not presented for exchange before July 31st, 1898, will not be exchangeable. reasons assigned for this measure need foreign market and the necessities of the about the state of the state

briefly, the Government thinks it expedient to eliminate from Japan's currency that the Minister's consent shall be consystem the element of uncertainty presented by a number of silver coins which ded a full year continuously in Japan and may at any moment be presented for upon exchange against gold at a rate highly duct. unfavourable to the country; and is fur-ther of the opinion, founded on close observation, that no inconvenience will be caused either at home or abroad by shortening the exchange period as above stated.

Another source of increased revenue will be found under the heading of State Industries. The railway tariff of charges will be slightly raised—g rin per mile is the lips of a majority of the members was the figure spoken of—and senders of that the Land Tax must be reduced and telegrams will be obliged to pay for the official salaries out down. There two soname and address of the sendee, hitherto called "reforms" were avowedly based not charged for. The changes are expected to produce an increment of 4 millions. Thus the whole scheme stands thus :-

1449 .		
Increased Revenue from the		
Land Tex	17	millious.
Increased Revenue from the		
Sake Tax	12	46
Increased Revenue from the		
Income Tax	Ιį	11
Increased Revenue from the		
State Industries	4	27
•	_	

Tetal ...... 35 million yen. It will be understood that we have not here epitomized the actual bill submitted, or to be submitted, to the Diet, but have only collected the outlines of it as set forth in various vernacular newspapers.

With regard to bills already sent to the Diet by the Government, the following are the most important :-

1. A hill providing that Government bank notes shall cease to circulate from the 30th of December, 1899. This measure does not signify, of course, that there is to be any change in the present floancial system. It is a step dictated solely by mecoal system. It is a step dictated solely by me-chanical convenience. Of the paper money issued by the Government in 1886 only 7,140,000 yea now remain in circulation, and the notes have become so delaced and dirty that their withdrawal is much to be desired. Any person into whose possession such notes come, with after the enactment of this law, take steps to exchange them for convertible notes of the Bank of Japan.

A third bill provides for the abolition of the Law for Encouraging the Direct Export of Silk; the recission to become effective from the day of the bill's promulgation. This measure has been anticipated. It was known that such a bill would have been submitted to the Diet last session had not the House of Representatives been dissolved. The law in question was enacted in 1897, the date of its operation being fixed for April 1st, 1898, and the period of its remaining in force being put at 5 years. We learn from the statement of reasons annexed to the rescinding bill that, whereas the object of the Law was to improve the quality of Japanese silk and to promote its export, foreign countries considered it so obnoxious that they took steps to impose increased import duties upon Japanese silk, and thus the Law threatened to produce results exactly the converse of those contemplated. Hence the necessity for repealing it as speedily as possible. We suppose that the Government could scarcely have been expected to furnish any reason more fundamental than the above, but such reasons undoubtedly exist.

Yet another bill relates to the adoption

Affairs must be obtained beforehand; (2) ditional upon the foreigner's having resiupon his being a person of correct con-

#### THE NEW TAXATION SCHIMES.

It is very interesting to observe how completely the domestic policy of Japan, as mapped out by the Diet, has failed to be comformable with the march of events. When the House of Representatives assembled for the first time, the cry upon on independent considerations. advocates maintained that officials were overpaid in glaring proportion to the emoluments obtainable by such men in other professions, and that their excessive rewards constituted one of the abuses of the era. At the same time, they insisted that the agricultural classes were groaming under burdens far heavier than those borne by other sections of the nation. In point of fact, however, the two projects were indissolubly connected. It was to obtain funds for reducing the Land Tax that official salaries, were to be cut down. Everybody understood that perfectly well, and though the Government found itself thrust into the invidious position of seeming to reject a scheme of popular relief for the sake of clinging to its own emoluments, it held its ground stoutly. Events have fully justified it. It is now almost universally recognised that the agricultural classes-or, to speak more accurately, the land-owners—pay a disproportionately small amount to the national exchequer, and that the insignificance of the emoluments received by junior-grade officials renders it impossible for the Government to obtain the services of good men; one inevitable consequence being that all public functions-especially those connected with posts and telegraphs—are inefficienty discharged. Thus we see the country disposed now to adopt a policy the exact converse of that advocated by the people's representatives seven years ago; advocollisions between the Government and the Diet were precipitated, and the progress of reform was distinctly checked.

It is not to be supposed that the Government's new scheme of taxation will escape opposition. Many objections will be found, though there will scarcely be any possibility of denying the broad fact that additional revenue must be raised by some method. Our readers will be surprised to learn, however, that the Fiji Shimpo has ranged itself on the side of the objectors. As to the imperative necessity of increasing the taxes, the Fin raises no upon simple and straightforward question, but it condemns the idea of like the land tax and the sake tax. recourse to the Land Tax or the Income Tax so long as the capabilities of the Sake

made it 14 or 15 yen, thus obtaining an additional revenue of about 30 million yen from this one source alone. The augumentation of the Land Tax and of the Income Tax will be very unpopular, according to our contemporary, whereas the sake-brewers and the sake-consuming classes are quite prepared to have their burdens materially increased. What makes this contention curious is that the Fiff does not think of denying the justice of increasing the Land Tax, neither does it dispute the ability of the land-owners to pay more than they do at present, Indeed it could neither deny the former nor dispute the latter in view of its own previous utterances. But it objects to the income tax on general grounds-and we are strongly disposed to endorse its arguments-and it considers that expediency should have indicated the sake tax as a source of revenue preferable to the Land Так.

We are strongly disposed to endorse the Jiji Shimpo's contention that the Government acts unwisely in proposing to increase the Income Tax at this juncture. Of all imposts a tax upon incomes is, perhaps, the most objectionable. Not only does it involve official scrutiny into matters which every individual has a natural right to conceal; but it also exercises a distinctly demoralizing effect by putting a pre-mium upon dishonesty. Such a tax must appear particularly irksome in Japan, where it has been the people's habit from time immemorial to observe the utmost privacy with regard to their pecuniary affairs, and where plutocracy has happily been unknown. The merchant or manufacturer pays income tax on the profits derived from his business after all expenses have been defrayed. It is thus within his power to reduce his liability almost to any point permitted by his conscience or his want of conscience. The more upright and straightforward he is, the heavier his payment. In short, income tax is a device for penalizing the exercise of qualities which it ought to be the prime object of all legislators to educate and encourage. The official, on the other hand, the man who serves his country in the army or the navy, and the man who has retired upon a well earned pension, caled so persistently, too, that frequent are required to pay the impost to the last sen: for them there is no loophole of escape. This is one of the taxes which the Government now proposes to augment. Of course, if a large increment of income were expected to accrue, the project would be more defensible. But the anticipated figure is only 13 million yen, a mere bagatelle. The 7iji thinks that the only wise policy for statesmen to pursue is to abandon all petty sources of revenue, especially those that can not be collected without vexations inquisitions and those that tend to put a premium upon dishonesty, and to fall back entirely upon simple and straightforward assets

We have written a great deal about the Tax are not fully exploited. The present Land Tax, and have long contended that impost upon refined sake is 7 yen per it might legitimately be augmented so as koku, and the bill now before the Diet to afford a considerable increment of provides that the figure shall be len yen, revenue. The measure presently to be or sixpence a gallon, approximately, submitted by the Government to the Diet This change, together with other modifica-provides, as already explained, that the tions, will bring an increase of revenue to tax on farm lands shall be raised from 21 of foreigners into Japanese families by the extent of some 12 million yen. Now marriage. The bill provides (1) that the the #iji thinks that instead of raising the consent of the Minister of State for Home rate to 10 yen, the Government might have original from

UNIVERSITY OF ILLINOIS AT **URBANA-CHAMPAIGN** 

ed without any difficulty. Thus, the assessed value of agricultural land throughout the empire averages, at present, 40 yen per tan-or 160 yen per acre-and the tax paid is, consequently, 1 yen per tan. This will now become 1.48 yen. In other words, the land-owner will have to pay 48 per cent, more than he has hitherto ing to the necessities of the time; and (2) paid. Thus stated, the increase sounds that, in order to place the finances on a considerable. But we have to note that sound basis, the Land Tax must be inthe price at which the koku of rice was creased. At their first meeting (21st assessed when the rate of the Land Tax was fixed twenty-five years ago was 4.18 yen. Hence, in order to pay the tax on one tan, the farmer had to sell 2389 koku of rice. But the average price of the cereal from 1888 to 1895 was 6.93 yen, so that by disposing of 1442 koku, the tax could be defrayed. Finally, the market price of rice now is some 13 yen per koku, and, consequently, the tax can be paid by selling 107692 koku. Rice may depreciate by and by, but it is never likely to fall to anything like its old price, and unless it sells for less than 6.19 yen per woku, the new rate of tax, namely, 3.7 per cent., will not press more heavily upon the agriculturist than did the old tax of 2.5 per cent. when rice sold for 4.18 yen.

The Tokyo Asahi attributes the present inequality of foreign commerce to the over-issue of convertible notes by the Government on the security of the Indemnity received. The reckless introduction of foreign capital is not to be tolerated, but increased taxation is absolutely indispensable. Increased taxation however, may be attended with some trouble. There is a great difficulty in fixing the standard of taxation for income, and any attempt to procure a large amount of revenue from this source will lead to a collision between the government and the people. As regards the sake tax, this species of impost is least open to complaint, as each payer contributes but a small quota on account of the taste in which he indulges. But there must be a limit to the increase, and to levy ten yen on a commodity the marketable value of which scarcely exceeds that figure is madness. It will stimulate illicit distilling among the people and the extensive import of foreign spirits. The increased taxation of land does not admit of any opposition except on the part of owners. But, though the augmentation of the land tax is absolutely indispensa le, it cann d he successfully carried into p actice in the present state of affairs.

The Kokumin in more logical in its views. insists that the financial embarrassment under which Japan is now labouring can not be overcome except by a scheme of increased taxation. Count Inouve's plan to augment the revenue by 35 million ven from land, sake, and income taxes, cannot but be admired. The proposed scheme for taxation is far from being acceptable to the great mass of land-owners who are directly affected, but they may find their consolation in the advantages finally to be attained, namely, the progress of industry and commerce. The Kokumin concludes its article by stating that any opposition in Parliament may justly be regarded as unpatriotic and destined to expose the country to incumerable perica.

#### UNITED CHAMBERS OF COMMERCE.

Representatives from seven Chambers of Commerce - Tokyo, Osaka, Kyoto, Nagoya, Toyohashi, Shizuoka, and Yokohama-met, a few days ago, in Yokohama to discuss the economical situation. Their proceedings were watched with considerable interest, but to the disappointment of the public they decided to carry on their debates with closed doors. It proved impossible, however, to preserve secrecy. Vernacular newspapers report the production and the procedure of the Government at this matter is not adapted to the capturement of a conjuncture involving such grave changes and pends; therefore they condemn that procedure.

Therefore the people of this empire desire that deliberate and clear address to the Throne or a deliberate and clear address to the Throne or a ceedings quite fully enough for all pur-Digitized by Google

poses. The main subject of debate was a memorandum from the Osaka Chamber, consisting of two articles; namely, (1) that the Indemnity should be employed to relieve the present dearth of floating capital, and that recourse should subsequently be had to foreign money accordinstant) the Chambers appointed a committee of 7 to report upon this memorandum, and the Committee presented its report on the 23rd. Whether the report was altogether favourable we can not discover, but there appears to be no doubt that, in the resulting debate, the first proposition, as to the Indemnity and foreign capital, was strongly endorsed, whereas the second proposition, as to the Land Tax, was tabled. It was easy to find pretexts for shirking the Land Tax The Chambers, having voted question. in 1897 for the total repeal of the Business Tax, would be acting invidiously if they favoured an increase of the farmer' burden in 1898. A bill on the subject being already before the Diet, no occasion existed for the Chambers to take action. To raise the rate of the tax without re-assessing the value of the land would be to increase the present inequalities of incidence, and so forth and so on. Thus this branch of the subject was left untouched. The merchants are determined to have more money for the purposes of their own business, but are not to provide any more funds for the administration.

#### FOREIGN POLICY.

The politicians whose dissatisfaction on the subject of foreign affairs has been so vehemently expressed of late, seem determined to pursue their course to the bitter end. They have now formed a new association, calling itself the Doshi Daikonshin-kai, or grand union of friends and fellow-thinkers. The first meeting of this new body was held on the 20th inst., Baron Kusumoto being in the chair. Speeches were delivered by Mr. Suzuki Shigeto, Mr. Oishi Masami, Mr. Abe Iwane, and other men of note. We refrain from reproducing their utterances. The same argument runs through the whole, namely, that Japan has been hopelessly hoodwinked and flouted in the matter of the Liaotung Peninsula, and that Germany in Shantung, and Russia in Manchuria have, deliberately and without any show of necessity, taken the very steps which they forbade Japan to take in the assertion of her lawful rights as a conqueror. The same defect, also, characterizes all cate any remedy; declare that an evil state of affairs exists, but fail to tell how it may be corrected. We therefore confine ourselves to reproducing the resolution adopted by the meeting

The people of this empire consider that the pro-The people of this empire consider that the pro-cedure of Russia and Germany towards Clima disturbs the tranquility of the Orient and is cal-culated to expose this empire to danger and loss; therefore they condemn that procedure. Further, the people of this empire consider that the procedure of the Government in this matter is not adopted to the requirements of a confunctore.

resolution, suitable in the occasion, be presented.

#### THE FINANCIAL CHANGES.

So far as can be ascertained from information hitherto published, the increments of revenue anticipated to accrue under the Government's new system of taxation, and the purposes to which these moneys are to be applied, may be succinctly stated as follows :-

ADDITIONAL INCOME.	yen.
Increase from Land Tax	17,550,000
Increase from Sake Tax	12,410,000
Increase from Income Tax	1,640,000
Increase from Telegraphs	340,000
Increase from Railways	3.240,000
Total	
ADDITIONAL EXPENDITURE.	yen.
Grant in aid of Formora Administration	
Grant in aid of Navigation	4.870,000
Redemption of Bonds	7,000,000
Prison Expenditures (transferred from	
communes)	3,550,000
Natural Calamities Relief Fund	500,000
Interest on Restored Pension Bonds,	460,000
Additional Administrative Expenses	
incurred in consequence of the sp- preciation of commodities, &c Works in connexion with the operation	6,860,000
of the Revised Treaties	2,500,000
	-
Total	35,980,000

If from the latter sum we subtract the regularly accruing increment of the ordinary revenue, namely, 2 million yen approximately, the result is that an additional income of 35 millions has to be provided. Hence the increments of taxation indicated above.

#### ENGLAND AND JAPAN.

The Japan Times contains the following paragraph :—

A London telegram received in Tokyo on the 21st, states that Lord Salisbury, British Premier, in his speech in the House of Lords, disclosed the particulars of the Anglos-Japanese alliance in regard to the Chinese question, and the policy to be adopted in future, and that the Transa in an adjuvent angeling a parents appropried the Premier's Diodoeditorial greatly approved the Premier's Diplo-

The paragraph, as it stands, is calculated to mislead, we think. According to our information, Lord Salisbury did not speak of an "Anglo-Japanese alliance." He could hardly have spoken of what does not exist. What happened, we believe, was this. Interrogated by Lord Kimberley as to whether Mr. Chamberlain's utterances in Birmingham might be regarded as expressing the views entertained by the Cabinet, the Marquis of Salisbury declined to express a definite opinion until he had the full speech before him. He went on to say, however, that he entirely approved of the policy of the previous Cabinet in declining to join the Powers which combined to deprive of the fruits of her victory a country whose in-terests in the East were identical with these utterances: they are unpractical. those of Great Britain. It was a very The speakers complain, but do not indi-emphatic utterance, the most emphatic hitherto made by the Prime Minister; but it did not amount to any declaration of an alliance.

> Mr. T. R. Hubback succeeded in shooting a big maker, the other day, at Damansara, says the Malay Mail. It stood nine feet high at the shoulder; one of its tusks measured over five feet in length, while the other was about four feet six inches. The weight of the tusks was about forty-nine pounds. A enrious feature about the elephant was that he had not a vestige of a tail. Mr. Hubback killed him with a front shot and found, upon examination of the carcase, three old bullet wounds, and when he took the tusks he came across a suider bullet embedded in the beant's head.

#### MR. OKURA'S GARDEN PARTY

A MUNIPICENT GIFT TO THE NATION. A garden party on an exceptionally extensive scale was given by Mr. and Mrs. Okura at their town residence, Reinanzaka, Tokyo, on the 23rd, 24th and 25th instant, to celebrate their silver wedding. The invitations are said to have numbered some two thousand, but owing to the plan of dividing the guests into three parties on consecutive days, all the difficulties incidental to over-crowding were avoided. Of course, such division has its own disadvantages. It necessarily amounts to differentiation, and however tactfully the line be drawn, some persons are always persuaded that they have been placed on the wrong side. Letters in vernacular journals bear witness to that fact in the present case, and show also that their writers were properly relegated to the position of which they complain. Among the guests on the first day were Marquis Ito, Marquis Saigo, Count Inouye, Count Okuma, Baron Iwasaki, Baron Ito, Viscount Enomoto, the Italian Minister, the British Minister, the Brazilian Minister, Marquis Oyama, Marquis Fokudaiji, Marquis Oyama, Marquis Tokudaiji, Hachisuka, Viscount Watanabe, and many other Japanese of note, as well as the leading foreign residents of Tokyo. The guests were received, just within the vestibule, by Mr. and Mrs. Okura, Mr. and Mrs. Takashima, and Mr. and Mrs. Okura (Junior). Thence they passed upstairs to a suite of rooms where the presents received in connexion with the ceremony were set forth. It was a very imposing and beautiful display. All the articles had some affinity with the occasion. Quite a mountain composed of boxes of dried bonito was, perhaps, the least æsthetic object in the collection, but the katsuboshi has its own place in the category of Japanese congratulatory offerings. There were, of course, innumerable bundles of red and white silk, daintity swathed in ornamental wrappers; and scores of huge carp per-plexed persons unacquainted with the pretty Japanese custom of disguising a gift of silk crepe by folding it into the form of the fish of perseverance. Pines, storks and bamboos were naturally much en evidence, and in truth it was perplexing to speculate how so many interesting mementos could be worthily preserved unless a special museum were erected to contain them. The assemblage of silver objects attracted, perhaps, the most attention, so far as the foreign guests were concerned. It included numerous specimens of the finest Japanese work, excellent alike in design, in modelling and in chisel-Very noticeable were busts of Mr. and Mrs. Ókura in solid silver, nearly life size. The artist had caught the likenesses with great success, and the details of the drapery showed much care and skill. From the main building to the garden, which stands on a considerably lower level, a covered corridor had been constructed, giving acess at its further end to spacious galleries facing a theatre with an extensive stage. All these buildings had been specially erected for the occasion, and were prettily decorated, the lines and curves of the roofs and gables picked out with greenery and the interiors draped in cuisine were served with all sorts of deli-

delivered the following address:--

deem it a very great bonour out only to myself and my family but also to the merchant class in general that you all-friends of loveign nationalities as well as my own countrymen—have so gracious ly responded to my invitation to meet and celetrate the silver wedding of my wife and myself, and also my own entry upon my sixty-first year.
May I be permitted to say that I have formed a May I be permitted to say that I have formed a little plan to serve as a memento of this dual occasion, and that I have entirested the task of carrying it out to my friends Messis. Suffurawa Erichi, Ishigmo Tadaoori and Watanabe Roki, who will explain it to you. It has been my good fortune to preserve my health and steength up to the present, and should I bappily be blessed with the present, and should I happily be ble freedom from illness during the remaining years of my life, it is my extuest purpose to show my gratifule to beaven, however unworthily, by de gramme to neaven, inserver on working, by te-working myself to promoting the interests of my country. They your approval of my very humble efforts and your assistance in directing them. Pecmit me also to appologise for the poor hospita-lity that I am able to offer you, and to wish you then most health and happiness while repeating my sincere thanks for your condescension.

Baron Ishiguro, formerly Medical Inspector General of the Army, then stepped forward, and in a brief but gracefully worded address informed the company that Mr. Okura, in order to commemorate the occasion, had decided to devote a sum of five hundred thousand yen for the purpose of building and endowing a commercial school. This aunouncement was received with lond applause, and Viscount Enomoto, formerly Minister of State for Foreign Affairs, an active promoter of the cause of education in Japan, ascended to the verandah of the theatre, and spoke in terms of high appreciation of the munificent act just announced. There were two classes of charitable people in the world, he said,-those that succoured misery when it came under their immediate observation, and those that laid plans for and still fewer among them were those that contributed to the cause of education, which was of all things most essential to the welfare of m nation. Mr. Okura had set a noble example, and it was much to be desired that men like him would become frequent figures in society. There was an ancient saying that fortune loved to visit the home of the virtuous. Experience had proved its truth in Mr. Okura's case.

After these addresses the curtain rose and two dances were performed by the celebrated actors Kakitsu and Kikugoro, assisted by a troupe of experts. It is needless to say that these dances exhibited extraordinary skill. The crispness, grace and rythmic accuracy of all the motions could not but appeal even to the least initiated observers. Then followed it was rendered specially attractive by the dancing of a troupe of geisha, fifteen in number, who were picturesque coiffures glittering with silver ornaments and wings of the same metal. Refreshments were served from the commencement of the party, but at half-past five the rooms of the foreign building were thrown open, tion in Occidental style. In other parts and there those that fancied the Japanese

peach-colour, and its face decorated with storks in black silver and red soaring above a silver sea. The programme, though imposingly large, was perfectly simple, its only adornment being two embossed storks carrying sprays of pine. Happily the weather proved propitions on the first and third days, though the second was very inclement. The fete was certainly one of the most beautiful and successful ever organized in Tokyo.

#### GARDEN PARTY IN TOKYO.

On the 16th instant a large garden party was given in Tokyo at the villa of Mr. Fukuzawa in the Kiu-Mamiyana suburb of Tokyo. The object of the enter-tainment was to introduce to the friends of the renowed host Mr. Kamada Eikichi, who has just been appointed Principal of the Keiogijuku, and Mr. Perry, who arrived recently in Japan to take the chair of English Literature in that college. The weather was fine; the azaleas were in full bloom; the garden looked very pretty; excellent music was discoursed by a military band; refreshments were provided on a sumptuous scale—in short, everything combined to make the affair a thorough success. The party was honoured by the presence of quite a number of distinguished personages-Marquis Ito, Marquis Saigo, Count Inouye, Count Okuma, Viscount Katsura, Mr. Kaneko, Dr. Toyama, Baron Iwasaki, Viscount Tanaka, Viscount Ito, Baron Yasuba and others. The foreigners present did not number more than twelve, and the great majority were Americans. It is certainly a most graceful act on the part of Mr. the future benefit of their race. To the Fukuzawa to pay such honour to a foreign latter really belonged the title of philanemployé as was paid to Mr. Perry on this thropists. They were comparatively few, occasion. The fact that treatment of the employé as was paid to Mr. Perry on this occasion. The fact that treatment of the kind is unfortunately somewhat excep-tional invests it with additional value, especially when it owes its initiative to a leader of thought like Mr. Fukuzawa.

#### FIRES IN GREAT RELIGIOUS EDIFICES.

It is remarkable that a fire should have occurred at the chief Shinto shrine of Japan on the 23rd instant, and at the great Buddhist temple of Higashi Hongwan in Kyoto on the 26th. The Ise sanctuary does not appear to have suffered much. A shed, the business office of the shrine, a meeting hall, and a storehouse were destroyed, but the chief shrine escaped with only some injury to the roof. Still the shrine will have to be removed pending repairs. As to the Higashi Hona "Silver Wedding Anniversary Play," gwan-ji, we do not know at this moment in which Eisaburo and Kakitsu took part. of writing how much destruction has been it was rendered specially attractive by the dancing of a troupe of gersha, fifteen on the afternoon of the 26th said that the conflagration was then raging. If the temple has been burned, it is almost a national calamity. The splendid building was completed in 1893, if we remember rightly, at a total cost of about nine million yen. Its proportions were grand, and and the guests found a sumptuous colla- the materials used in constructing it were of the finest kind Many believe that of the grounds booths had been erected, these burnings of religious edifices are contrived by persons who expect to make a profit in connexion with the re-building cleverly assorted colours. After the guests cacies prepared in loco by the most cele-had taken their seats in the galleries, Mr. brated culinary artists of Tokyo. It need and Mrs. Okura appeared upon the hardly be said that a band was in attend-from devout folks. Whether the suspiand the handling of the munificent converandah of the theatre, and Mr. Okura ance, and that the conventional fan was cion be well founded or not, there is no Pour Excellencies, ladies and gentlemen,—I a black-ribbed ogi, its reverse a deep gwan has been conspicuously unfortunate.

#### THE TORIURE QUENTION.

The letter addressed by Mr. B. H. Chamberlain to this journal containing injurious and unfounded charges of "animus," of a "strangely acrid and discourteous tone," of "heat" and so forth, is reproduced by the Kobe Chronicle, but our reply, of course, finds no place in the columns of that journal. One side of a question appears to satisfy the Kobe newspaper, an interesting illustration of fair play. However, that is a matter of small concern. We recur to the subject because of the following criticism :-

It is noteworthy, however, that the editor of the

This is an amusingly clumsy attempt to draw a red herring across the trail. The whole point is that M. Boissonade was represented as having witnessed the torturing of Mr. Mutsu in 1873 or 1874, and as having been moved by the sight to lodge a protest which had the effect of causing the abolition of torture. If Mr. Mutsu was not subjected to torture in 1873 or 1874, then a material part of the story is erroneous, and the degree of credit attaching to the remainder is greatly impaired. It does not matter in the most infinitesimal degree whether Mr. Mutsu was or was not imprisoned years later. Everybody knows that, in 1878, he got into trouble in connexion with a foolish plot to overthrow the cabinet, and suffered three years' imprisonment. But the fact is totally irreletorture. The Government's condemnation of the principle of torture was publicly announced by a Notification dated Aug. 25th, 1874. Mr. Mutsu's imprisonment four years later in connexion with a political intrigue had no more to do with the matter than any other judicial occurrence of a subsequent era has to do with it. The petty issue raised by the Kobe Chronicle is that, inasumch as Mr. Mutsu was unquestionably sentenced to imprisonment in 1878, there is no occasion to repudiate the incorrect assertion that he was subjected to torture by a criminal tribunal in 1873 or 1874, and that, in view of the former fact, his friends and relatives need not be pained by the latter canard. That is a quaint contention. It does not matter then, does it, whether Mr. Mutsu is re-presented as having been a frequent offender against the law of the land and a frequent figure in the criminal's dock, or whether his true record is quoted, namely that once only did he allow himself to be betrayed into political excesses? Chamberlain makes the naïve point that it would be no disgrace to a man to have been subjected to torture in connexion with the procedure of a criminal court, since the obloquy rests with the torturers, not with the tortured! There was a time when highwaymen were hanged in England. It was a disgrace to English

Digitized by Google

of the principle of torture was publicly announced in August 1874, and the imprisonment of Mr. Mutsu, or any one else, in 1878 can not have had the slightest connexion with the motive prompting an announcement made in 1874. Passing on to the true question under discussion, we desire to add a word to what we have already written. An attempt has been made to show that the abolition of torture in Japan was entirely due to the resolute intervention of M. Boissonade. Never mind the nature of the attempt: it is with the fact, not the fashion, that we wish to deal. Now it is quite unnecessary to premise, we trust, that if the credit of such At is noteworthy, however, that the editor of the Max still avoids any telerence in the column and a memorable contribution to the cause of more devoted to the article concerning (sic) the imprisonment of Mr. Mutsu in connection with the Satsuma rebellion, though great stress was laid at first upon the injustice done to the late Count Mutsu and his family by the suggestion that he was treated as a common criminal in that Japan's foreign employe's receive only agreed. a fraction of the credit really due to them. But there can be no more ineffective and injudicious method of correcting such an injustice than to claim for the foreigner credit which can not be proved to belong to him. Is conclusive proof adducible in support of this particular claim? Is it not perfectly plain that the mere fact of the Japanese Government's employing a French jurisconsult to compile a code based on the principles of European law indicated the acceptance of these principles and, consequently, the ultimate abolition of torture? It seems to us that the answer to this question must be affirmative. Torture was doomed in Japan from the moment that the remodelling of the laws on European lines became an official purpose. There remains the possibility, however, that M. Boissonade's protest greatly accelerated the adoption of this much-to-be-desired reform. Tα that the issue narrows itself, and that alone is a sufficient crown of glory for any man to wear with pride and thankful-

#### JAPANESE ASSAULTS UPON FOREIGNERS.

Our attention has been called to a letter signed "Foreigner" which appeared in the Japan Times of the 20th inst. The writer, accompanied by his wife, was about to return to Yokohama by the last train leaving Shimbashi on the 17th inst. As he walked along the railway platform in Tokyo, he was struck on the back hy one of a party of some six low-class Japanese, and threatened with a stick when he remonstrated. Subsequently his wife, as she entered the railway carriage, was patted on the shoulder by the same Japanese. The assault does not appear to have been at all serious, and it is possible that the man was more or less in-ebriated. We do not desire to attach undue importance to such affairs. They may happen in any country, and to notice them over-much in public prints is calculated to do more harm than good. But there is one feature of this particular in-cident that calls for a word of comment. The Japan Times, in a foot-note appended to "Foreigner's" letter, says:—

in England. It was a disgrate to describe the civilization that they were hanged, but it was also some disgrace to have been a highwayman, was it not?

However, as we have already said, all this talk about Mr. Mutsu's imprisonment in 1878 is wholly irrelevant to the real issue. The Government's condemnation out the most stringent measures against them give the control of the control of the control of the control of the control of the relation was in the place.

The Government's condemnation out the most stringent measures against them ginal from

whenever they deserve. At the same time we think that his hint as to the possibility of Europeans taking the law into their bands is out of place and beside the question.—Ed, J.T.

It appears to us that our contemporary has not rightly apprehended "Foreigner's" meaning. In Western countries it is the habit to employ vigorous means for resenting assault, above all when a lady is to be defended. The vast majority of Englishmen would not have hesitated for an instant about knocking down the Japan-ese who laid his hand on "Foreigner's" wife. But the gentleman's code is to avoid all displays of physical violence in the presence of a lady, and "Foreigner" showed his appreciation of that code as well as his self-possession when he suffered the insult to pass unchastised. In saying, however, that something should be done to avert the ultimate danger of Europeans' taking the law into their own hand if the laws of the country do not sufficiently protect them, he gives expression to a fear which many foreigners entertain and which does not, in our opinion, call for an expression of condemnation from the Japan Times, or any other organ of Japanese public opinion. "Foreigner's" language is entirely misinterpreted when a threat is read into it. His meaning is that if these cases of rudeness on the part of Japanese do not lead to serious disturbances, it is because the foreigner exercises a degree of forbearance which he certainly would not display were the same provocation offered in a European country. It would certainly be most unfortunate for Japanese reputation if the foreign resident, whenever assaulted by a coolie or a student, retaliated in kind. We do not intend to suggest that the physical victory would rest with the foreigner. Very likely he would suffer badly. What we mean is that affairs which now attract comparatively little attention would then become magnified into matters of general interest, and it need scarcely be pointed out that the loss would be entirely on Japan's side. That is what the correspondent of the Japan Times intended to say, unless we greatly mistake the spirit of his letter.

#### CHINKSE SERVANIS.

If we may credit the Peking and Tientsin Times a strange state of affairs must exist among foreigners visiting the summer resort at Pei-tai-ho. They appear to bid over each other's heads for domestic servants, so that Ahoy or Awhat may be serving in Mrs. A's household to-day and waiting upon her at the table of her neighbour and friend Mrs. B. to-morrow. That can scarcely be what our contemporary means, but its writing suggests that and nothing else when it says:

If the wages of cooks, house boys, house coolies, ricksha coolies, and amahs were classified rather more strictly, there would be less tendency perhaps among servants to migrate from one house to another in search of an extra dollar. It house to another in search of an extra dollar. It would not reduce individual qualification to any dead level, but it would at least obysite A being left at a moment's notice without a boy because Bowst door offers a dollar more; or B being forced to pay an extra dollar to keep his boy because X, who is a comparative millionaire, pays his boy from sheer love of the thing a higher wage.

The relations between master and servant must be of a very superficial character in Tientsin if such be the real record of

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

#### 2HE DIET & THE GOVERNMENT'S of international dealings such as those very fallacious, however, to make any FOREIGN POLICY.

T appears that the programme now mapped out for themselves by the Extremists in the House of Representatives is to address a series of Questions to the Government on the subject of its foreign policy. This particular kind of parliamentary procedure in Japan presents much convenience from the point of view of the Cabinet's opponents. The political coterie-it must number at least thirtypresenting a Question chooses the most eloquent or the most intemperate among its leaders, and entrusts to him the duty of explaining the Question to the House. That means, of course, that the member upon whom this duty devolves can ascend the rostrum, and deliver an impassioned attack upon the Cabinet. He is supposed to keep within the lines mapped out in the Question, but, for the rest, there is nothing to restrain him. He may talk to his heart's content, and since the etiquette of parliament forbids any members to reply on the other side, or any representative of the Government to immediately rebut the accusations thus publicly preferred, it results that the Cabinet's assailants have the "floor," as the saying goes. Not until the Government's formal answer is received can anything be heard on the other side, and as the answer is invariably documentary, it must always seem weak and ineffectual compared with the robust vigour of a verbal assault. The reading of the Government's answer by a Secretary of the House affords another opportunity for an oratorical display by one of the propounders of the Question, and thus, one way or another, the malcontents get two chances of airing their accusations. They would apparently have preferred the more direct and potential method of a vote of want-of-confidence on the present occasion, but their numerical weakness deprives such a course of any chance of being either successful or striking, so they are obliged to fall back on the device of Questions. The gist of the four queries which they intend to present is this :-

1. When Japao, in deference to the representations of the three Powers, Russia, Germany and France, retrocated the Lianting Peninsula and the other territorial acquisitions in Manchinia, was any engagement obtained from the three Powers that they would neither seeze not acquire by lease any part of the distinct concerned?

2. In connexion with the fact that Russia loss not only leased Port A. Lin and Talten from China. But has ables of boundary or proposed in the concerned of the concerned of the control of the

Ction, but has also obtained various other con-cessions with regard to military matters, railways and mines, what steps have been taken by the Jananess Givenment?

3. In connexion with the fact that Germany, France and England have obtained numerous

concessions hum China and are weeking to obtain other, what has the Japanese Government done?

4. With reference to the relations that have some netween Western Powers and China, what procedure has the Japanese Government adopted In maintain the status que in the Orient, to pre-serve Japan's prestige and to premote ber interests?

tions embody plenty of material for dis- and that in connexion with the best Gersatisfaction. History contains few instances man prisons at 12,000 marks. It may be

prietor; but the difference in this case is word with one another, and must never of such an insignificant character that the allow their attention to wander from their belongs to the past, however: it is irremediable. None the less we can well ap-kicked. Only a thin strip of matting preciate and sympathise with the feelings separates them from the boards, so that that such a record must excite in the long-continued squatting probably bebreast of any Japanese patriot. It would comes very painful. Similarly in their have been remarkably astute had the Japanese Cabinet of the time obtained for bed, a hard pillow and one wadded from Russia, Germany and France some pledge as to the future of Mancharia, but we greatly doubt whether, even had such doubts whether the full allowance can a pledge been given, the leasing of Port Arthur and Talien by Russia, and the arrangement for continuing her Trans-Asian line of railway to the coast of Liaotung would have been considered a violation of the promise.

#### PRISONS IN JAPAN.

R. KAMEYAMA, a graduate of the M Law College in the Imperial University, who appears to have made a special study of prison administration, recently inspected the Sugamo Prison under the guidance of Mr. OGAWA, Vice-President of the Prisons Bureau in the Home Department, whose name has already been mentioned more than once in these columns. He publishes the result of his inspection in the columns of the Nichi Nichi Shimbun, It is not at all a favourable account, though the standard of comparison adopted by Mr. KAMEYAMA seems to us to be fallacious in one respect. He notes that whereas the expense incurred in erecting the Sugamo prison averaged 224 yen per head of the number of criminals that can be accommodated, and the corresponding figure in the case of the Senju (Kosoge) prison was 484 yen, the outlay in connexion with one of the first-class French It is not to be denied that these ques- prisons is put at 6,000 marks per head,

Three European Powers Japan. We learn, however, from Mr. at once interfered, and compelled her to KAMEYAMA'S reseaches that the expendisurrender the fruits of her victories, on ture on account of the Osaka prison buildthe plea that a foreign State's tenure of ing was only 71 yen and that on account the districts in question would not only of the Tottori and Hyogo buildings only menace the integrity of the Chinese em- 30 yen-figures which can not possibly be pire, but also render illusory the independ-reconciled with any theory of sufficient ence of Korea for which the war between accommodation. Indeed, there can be no Japan and China had been waged. Before question that the provincial jails of Japan two years had elapsed, one of those very call loudly for reform. Mr. KAMEYAMA Powers, and that, too, the leader of the insists, further, that the method of treatcoalition, came forward, and obtained pos- [ing the prisoners presents great abuses, session of these territories that had been The places where they work are well thus wrested from Japan. Of course there lighted and ventilated, but they are kept is a technical difference between taking sitting for hour after hour upon their territory by force of arms and renting it knees and heels, are not allowed to look with the nominal consent of its pro- away from their work or to exchange a Japanese sense of having been duped task. If they violate any of these rules must be all the keener. The incident they are scolded by the wardens, and even-so Mr. KAMRYAMA says-cuffed or cells they have merely a strip of matting quilt. Their food, too, is coarse, and, in Mr. KAMEYAMA'S opinion, insufficient. He satisfy the cravings of a strong man's stomach, and certainly when rations are reduced by way of punishment, the prisoner must be in a sorry plight. Naturally the appreciation of commodities during recent years has not been without its influence upon prison fare. In 1896 the cost of a prisoner's ration was 6.7 sen daily; in 1897. it became 7.8 sen, and in 1895 it is 8.7 sen. Altogether the convict's lot is so miserable that he soon breaks down physically. Out of 1,976 men incarcerated at Sugamo, 116 are in hospital and 391, though not actually in hospital, are ailing, more or less. Such figures indicate that something must be decidedly wrong. And if convicts do not break down while undergoing punishment, their constitutions are so impaired that, on emerging from prison, a great number of them become invalids. Another specially evil consequence of this too rigorous system is that recidivism is rife. To illustrate this point, Mr. KAMEYAMA gives the following statistics with reference to the prisoners now confined at Sugamo:-

Fast offences	678
S-cond off-nees	358
Third offences	251
Fon th offences	240
Fifth effences	140
Seath offences	148
Seventh offences	70
Eighth offences	36
Ninth effences	26
Tenth offences and upwards	31
· ·

It will be perceived that nearly two-thirds voice promises to be a contralto of fine of the whole number are recidivists, a quality, sang "The Interfering Parrot" ratio far in excess of that recorded in most delightfully. She was assisted by ratio far in excess of that recorded in countries like France or Germany, and plainly condemnatory of the system purplainly condemnatory of the system pur-song was much enhanced by the acting of sued in Japan. It is not clear how Mr-the two little mites who, seated in the KAMEYAMA reconciles his assertions about middle of the stage, represented the excessive severity of treatment with this tendency of malefactors to find their way to jail again and again, but his theory seems to be that the prisoners' morale is destroyed, and that, instead of being the castinet dance by Miss Margot von educated to turn over a new leaf, they are more than ever prone to crime when they leave prison. The whole report—which of Miss Margot's motions was supplement-we have greatly summarized here—ed by a really pretty costume. The over-conveys the impression of being written ture and the interact piece were played conveys the impression of being written from a very pessimistic point of view, but if the abuses referred to exist in any degree, too much publicity can not be given to the fact.

#### VARIETY ENTERTAINMENT BY CHILDREN IN TOKYO.

A really beautiful entertainment was held at the Shoreikai in Tokyo on the afternoon of the 19th instant, the whole performance, with the exception of the instrumental part, being by children. Now that we see what charming results can be achieved in this line, it becomes quite surprising that nothing of the kind has been attempted before in Tokyo. Probably the explanation is to be sought in the fact that ladies are seldom found so accomplished and so energetic as to undertake the task of organizing an affair of such difficulty. The trouble must have been immense, but the results justified it, and the community of the capital, both foreign and Japanese, have to thank the Misses von Fallot for a most delightful display. The programme was this :-

> PART I. Overture.

By Misses Hilda Page, Dorothy Page, Gestrade Page, Carmen de Carcer, Margeret Hall, Kathleen Hall, Iné Brinkler, Teresa Brinktneier, Ernestine Gardiner, Margot von Falkot, Tessa Lloyd, Doro-thea Shaw, Nellie McKim, Anna Dooman, Mas-ters Willie Kirby and Kenneth Page.

3. Character Song By Miss Hilda Page and Master W. Kirby.

Skirt Dance By Miss Margot von Fallot.

Piano Sole.

Nigger Song By Miss Teresa Brinkmeier and Master Kail von Fallot,

7. The Interfering Pareot
By Misses Gertinde Page, Einestine Gardiner,
Tessa Lloyd, Master Kichy and Chorus.

PART II. A Gypsy Camp. The hall was crowded in every part by an enthusiastic audience, and the charities on account of which the entertainment was account of which the entertainment was got up must have profited considerably. Every item on the programme elicited rounds of applause. Perhaps the most picturesque was the skirt dance by Miss Margot von Fallot, but the grouping and costumes in the Kindergarten Game and the Gypsy Camp were quite charming, teptesented the character of Nothing in Parti-cular, and, like the House of Lords, did it very well. And there were others who went in for well, and there were others who went in for boldly original designs. Such, for example, Kirby achieved a notable success in their character song, and the nigger ditty with appropriate dance, by Mr. Karl von Fallot and Miss Teresa Brinkmeier, was very effective. Miss Gertrude, Page, whose Digitized by Old Stevensor State of the dress, so that there should be included Duff, Clayton, Healing, Garfit, H.

UNIVERSITY OF ILLINOIS AT

LIRBANA-CHAMPAIGN

an admirably drilled chorus with a highly artistic "shriek," and the effect of the crusty couple, now engaging in vigorous warfare, now lapsing into "icy isolation."
In the "Gipsy Camp" the great features
were the singing of Miss Dorothy Page
in the character of a fortune-teller and Fallot. Miss Dorothy's pretty soprano notes were scarcely more delightful than her smiling artlessness, and the grace by Mrs. Page (piano) and the Misses Kate and Adelie Page (violins) with all their accustomed skill. Altogether the performance was a brilliant success, and we trust that it is only the forerunner of many similar entertainments.

#### CHILDREN'S FANCY DRESS BALL.

A very pretty scene was witnessed at the Public Hall, Yokohama, on Wednesday when a Children's Fancy Dress Ball took place in aid of the funds of Christ Church. The affair was a very happy conception, and an unqualified success, both socially and from a financial standpoint. The hall was charmingly decorated with flags, flowers, foliage, and the back of the platform and the flower stall at the entrance of the hall were rendered exceedingly attractive through the taste of Mr. F. Coghill Jackson, who was responsible for the whole of this part of the undertaking; Mrs. Manley, it should be noted, giving the flowers used in decoration. The ladies most actively interesting themselves in the affair were Mrs. W. K. Wilson, Mrs. Averill, Mrs. Irwine, Mrs. James, Mrs. Bevis, Mrs. Allen, Mrs. Bavne, Mrs. Frazar, Mrs. James, Mrs. C. K. M. Martin, Mrs. John Stiven, Mrs. Strome, Mrs. Wheeler, Mlss F. H. Eld. ridge, Mrs. J. Martin, Madame de Micheaux, Miss Lloyd Thomas, Miss Tripler, and Mrs. Kirkland Wilson,

The programme commenced with an excellent tea for the children and at six p.m. the ball opened with a processional polonaise in fancy dress. This was followed by an Irish jig by Miss Vera and Master Gerald Irwine, to the piano accompaniment of Miss Leach, the performers having been instructed by Mrs. Courtney Johnson, Then followed a Spanish dance by Miss Nita Strome, and a castanet dance, also labelled Spanish. Miss Mollison, dressed as the Queen in her childish years, did a very pretty dance. Other children's dances followed, schottishe, barn dances, the Washington Post, singing lancers, &c.; and later in the evening dancing among the older folks became It would be impossible to degeneral. scribe all the elegant and original dresses to be seen; the mere male mind beggles over such a task. There were Red Riding Hoods; fairies with wands and impossible wings, such as all self respecting fairies must have; diesses suggestive of a giddy Gaiety dameuse; a Japanese lady; gipsies with spang-les and coins jingling all over their dresses, which is well-known to be the everyday walking costume of this class of girl; court ladies who, if they did not bring back to mind the autons of the Georges, at any rate recalled Dorothy and Chanticleer Hall. There were many who represented the character of Nothing in Parti-

absolutely no excuse for taking her for some-thing else. The boys, too, had some capital costumes among them. A Chinese magnate and a jinrikisha man were on terms of easy friendship, with a Sikh policeman from Hongkong looking benevolently on. Cowboys and Mounted Rifles (dismounted for this occasion of course), mingled with jockeys in gay silks and cords; there were Perrots that poor silks and cords; there were Pierrots that poor Aubry Beardsley would have made pictures of; Highlanders, courtiers (Ancient and Modern) and scores of others. It was, in short, quite a brilliant scene. Nearly all Yokohama society was present, among the company, besides those already mentioned being, His Honour Judge Wilkinson, M. Ratard (French Consul) and Madame Ratard, Dr. Eldridge and Mrs. Eldridge, Mr. and Mrs. Mollison, Dr. and Mrs. Tripler, Mr. and Mrs. Bevis, Dr. & Mrs. Wheelet, the Rev. & Mrs. F. Champneys Irwine, members of various Consular staffs, &c. Irwine, members of various Consular staffs, &c.

#### THE QUEEN'S BIRTHDAY.

Unfortunately the weather on the afternoon of the Queen's Birthday turned out most inclement-cold and wet-and the brilliancy of the celebration at the British Legation was much marred. A great number of people assembled, however, in honour of the occasion and to have the pleasure of greeting Sir Ernest Salow. Preparations had been made on an extensive scale, but as the Legation building is quite unfitted to accommodate any considerable party of guests, it was found necessary to erect refreshment booths in the garden, and the rain had thus full opportunity to make itself felt. Various amusements had been provided, but the weather reduced them finally to music by the band of the Imperial Guards. Under the circumstances it is not surprising that the Yokohama community did not send a large contingent, but the Tokyo people were not at all deterred by the rain, and all nationalities were fully represented.

The public celebration of the Queen's Bothday in Yokohama was not very extensive, though the day was widely observed in a holiday. Main Street and the Settlement generally made a good display of hunting, and there was a general cracking of fireworks and playing of "God save the Queen." The unfavourable weather, however—theatening in the morning and miserably rainy in the afternoon—negatived all chance of a successful holiday, and the few events that had been arranged fell under the dispiriting influence of the day, and were not

altogether joyous gatherings,
The Yokohama Cricket Club opened its season by a match President's team v. Captain's. The President's team won the toss and com-menced batting about 11 a.m. Several good scores were made, P. B. Clarke's 68 including one six, 5 fours, 3 threes, and nine twos, while Crawford's 49 embraced 5 fours, 2 threes, and 6 twos. Unfortunately soon after the interval to be abandoned at an interesting stage. Score :

#### YACHT RACES.

The yacht races attracted a few speciators. The first contest, that for 39 raters, ended in Mary (handicap) winning the prize presented by the British Minister and two record points, Spray (club time) taking the Club's prize and gaining one record point. In the 26 rater race the winners were: Albatrots (handicap) prize presented by the British Minister and one record point; Molly Baron, prise presented by the Club and two record points.

Rain fell at Kobe on Tuesday morning and spoiled the All-day cricket match. The Chro nicle says that in the course of the afternoon Mrs. J. Carey Hall, the wife of H.B.M.'s Con-sul, assisted by the Misses Hall, entertained a very large company with strawberries and cream and other refreshments, the reception being held in the Gymnasium, which had been gaily adorned with flags. Most of the Consuls were present and a number of the leading Japanese officials of the port. During the afternoon fireworks were let off. A dance followed the reception, Mr. Rizetti's band providing the music; and notwithstanding the gloomy pro-spects of the morning, her Majesty's birthday vas celebrated in Kobe this year with more éclat than naugi.

At Hakodate on the Queen's Birthday a garden party was given by Mr. and Mrs. R. de B. Layard at the British Consulate to which all the British and American residents were invited. A Japanese conjurer enlivened the early portion of the afternoon, to the intense delight and amusement of the children. He was as sisted by his daughter-a veritable Salamander her principle trick being the devouring of a pan-full of are. After tea-Queen's weather prevailing—games were played in the open and a pleasant afternoon was brought to a close with the singing of "God Save the Queen." Later in the evening, most of the principal Japanese Government officials were present at the Consulate at a dinner given in honour of the occa-The Queen's health was most warmly Mion. responded to.

#### IMPERIAL DIET.

BEGINNING THE SESSION'S WORK.

The Imperial Japanese Diet gets to work very deliberately. There is a routine that can not be dispensed with or departed from. One day is devoted to dividing the Houses into sections and choosing section leaders. Another day is given to the election of the President and Vice-President of the Lower House-these officials are Imperial nominees in the Upper House; a third, to the ceremony of official opening; a fourth, to the election of standing committees and chairmen of committees, and not until the fifth day does the business of legislation really begin. On the present occasion a day intervened between the choice of presiding officers and the official opening, so that the real work of the session did not commence until the 21st instant.

#### HOUSE OF PEERS. BLECTION OF PRESIDENT.

In the House of Peers, on the 20th instant, Prince Tokugawa (Katatsu) was elected Chairman of the Committee of the Whole House, by 137 votes, the other candidate, Viscount Tani, who held the position last session, polling only 71 votes. In the House of Representatives, on the same day, two elections had to be held, no candidate having obtained a plurality of the members present at the first ballot. Mr. Kume Taminosuke, a politician who has not yet achieved any reputation, obtained 130 votes in the first section, 114 being cast for Mr. Kudo Kokan, a well-known Progressist, member for the second electoral district of Aomori Prefecture. Scattering votes for two

Tennant, Kilby, D. H. Biake, F. J. Hall, W. N. Kume's 129. The former was, therefore, electthe Liberals nor the National Unionists put forward any candidate for this post.

#### NEW BILLS.

Under ordinary circumstances the House of Peers would have risen after the election of the Chairman of the Whole, and of the various standing committees; but in consideration of the shortness of the session and quantity of business to be discharged, the first readings of saveral bills were at once proceeded with. They were :-

A Bill embodying the remaining portion of the amended Commercial Code :-The Minister of State for Justice introduced this Bill, explaining that the Code had been under revision since 1893, and that it would have been sub-mitted to the Diet last session had not the House of Representatives been dissolved.

A Bill relating to the Registration of Immovable Property :-The Government Delegate, Mr. Takagi, explained that this Bill was connected with the parts of the Civil Code which had been revised and submitted to the Lower House.

A Bill embodying the Law of Naturalization (Kokuseki ho):—There has not hitherto been any law regulating the general question of naturalization in Japan, but in view of the opening of the whole country and the abolition of Consular Jurisdiction, it becomes necessary that legislation should be directed to this sub-ject. The Government Delegate, Mr. Ume Kenjiro, explained these facts, and the Bill, which is a somewhat lengthy measure of 28 articles, was handed to a special committee, ma were the two preceding bills.

On the sist May both Houses met for legislative work.

#### HOUSE OF PEERS.

#### COMMERCIAL CODE.

In the House of Peers two Bills relating to banks were read for the first time and handed to the Special Committee already appointed for the purpose of investigating and reporting on the revised Commercial Code. The first of these Bills was for amending a portion of the Bank Regulations so as to bring them into accord with the provisions of the Commercial Code; the second was for abolishing the Law for the Amalgamation of Banks. This Law was enacted originally for the purpose of improving the credit of banks by enabling them to combine so as to command larger capital, but inasmuch as provisions in that sense are contained in the revised Commercial Code, the Law becomes necessary.

#### NATURALIZATION LAW.

The third Bill on the Order was a measure for amending the regulations (Notification No. to3 of 1873) with reference to marriages between foreigners and Japanese so as to bring them into accord with the new Naturalization Law, which had been submitted to the House the preceding day. The Bill was therefore handed to the Special Committee already appointed to report on the Naturalization Law.

#### INDUSTRIAL BANK.

A Government Bill was then read and handed to a Special Committee, entitled "Law for amending the Industrial Bank Regulations." Its purpose was to enable the directors of the Industrial Bank to deposit the Bank's reserve lunds in any other bank offering a good rate of interest, and not necessarily in the Bank of Japan, as has hitherto been the rule; the approval of the Minister of Finance to be obtained prior to such deposit. The Law further provided that the face value of the Industrial Bank's shares might be reduced from 50 yen to 30 yen, the object of the reduction being to bring the shares within reach of the lower orders, so as to collect and render serviceable for the purposes of productive enterprise money now circulating among the consuming classes.

21, issued on February 20th of the current year, forbidding the carrying of lethal weapons of any kind by persons engaged in canvassing in elections. The Minister of State for Home in elections. The Minister of State for Home Affairs introduced the Bill in a speech of some length. He explained that experience had proved the necessity of such a measure. He had been found impossible to efficiently protect life and limb during the passion and excitement of electioneering campaigns if people were allowed to carry weapons. The police records of the various elections showed very conclusive. ly that hy issuing the above Notification on the eve of the last elections, a considerable diminution in crimes of violence had been effected, For example :-

No. of No. of Violent Killed, Wounded, Acts. Elections of Frbouary 1892 Elections of March 1894 ... 380 .25 271 252 85 Elections of September 1894 Elections of March 1898 ... 34 71 The figures seemed to justify the Government's recourse to such a veto, and the Minister invited the House to endorse it. handed to a Special Committee, The Bill was

#### HOUSE OF REPRESENTATIVES.

The House of Representatives, having assembled at a few minutes past 1 o'clock on 2 Tet in., was obliged, before commencing legislative work, to listen to long speeches by members presenting Questions to the Government, There were two sets of Onestions, both relating to foreign affairs. One set emanated from the Liberal Party, and carried the signatures of 42 members; the other came from the Progressists and had 107 names.

#### QUESTIONS.

Mr. Shigeoka Kungoro acted as spokesman for the 42 Liberal questioners. He delivered a long and wearisome oration, the Questions propounded being five, namely :-

1. Did the Government take any diplomatic action with regard to the leasing of Kiao-chou by Germany or of Talien and Port Arthur by Russia? If so, what was that action? If not, why

ot?
2. Had the Government held any pourparlers, nened any negotiations, or arrived at any underopened any negotiations, or arrived at any under-standing with Great Britain concerning the latter's

standing with Great Britain concerning the latter's leasing of Wei-hai-wei.

3. What policy did the Government intend to pursue towards China with a view of maintaining tranquillity and the balance of Power in the Orient?

What measures were to be adopted with egard to the Shashi affair?

5. In what condition are the negotiations on the subject of the Hawaiian complication?

JAPAN'S POLICY TOWARDS CHINA.

Mr. Shigeoks, explaining these Questions, disavowed all desire to import party politics into the discussion, and declared that the sole purpose contemplated by himself and his colleagues was to unite the nation on intelligent lines so that its support might be extended to the Government. Summarized into the briefest possible compass, his points were that Germany's action in Shantung had differed essentially from the precedents famished by other civilized Powers under similar circumstances in dealing with China, and that the latter, recognising the unwarrantable character of the procedure adopted towards her, had held out for three months before reluciantly agreeing to grant the concessions asked for. England, too, had plainly evinced her dislike of Germany's doings. any attempt been made by Japan to utilize the mood of the two Powers? It was difficult to avoid the conclusion that some secret understanding had existed between Germany and Russia on that occasion. (This point was elaborated at some length, but nothing worthy of reproduction was said). Had Germany given any notice to Japan of her intentions in Shantung, and of the opening of Kiaochou to trade, and had Japan made any reply? Passing on to the action of Russia in Lisotung, the speaker insisted that there had been no mystery about the great Northern Power's intentions; that her eyes had evidently been fixed for some time on Port Arthur, and that no one used have been of Aomori Prefecture. Scattering votes for the conditates rendered the result abortive, and on a second ballot being taken, Mr. Kudo obtained 141 votes against Mr. seeking post-facto approval for Ordinance No.

CARRYING OF LETHAL WEAPONS.

The last measure on the Order was a Bill taken by surprise when she finally laid hands on Liaotung. It was true that she had nominally Original from

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

leased the places in question, but the difference between such a method of acquisition and actual annexation was infinitesimal. Government would have been perfectly justified in pointing out to Russia that she was following in Liaotung the very course which she had denounced, when followed by Japan, as fatal to the maintenance of peace in the East. Had any representation been made in that sense? There was no desire to press unduly for information, but the Government could accarcely leave the country ignorant upon all these points. Concerning Wei-hai-wei, the people wanted to know whether any understanding had been arrived at with Great Britain, or whether the place had been evacusted without any consideration for the Another subject of great importance was the policy to be adopted towards China. Was it to be a policy pointing to the preservation of the Middle Kingdom's integrity or independence, or was it to be a policy, based on the assumption of China's disruption it With regard to Shashi, the speaker explained that, while sympathising with China and deprecating any harsh attitude towards her, it was felt that fitting reparation must be sought; and with regard to Hawaii, he insisted that the country had not lost sight of the affair of last year, though it seemed to have passed out of the field of practical politics.

THE POWERS AND JAPAN.

The second series of Questions, presented by the Progressiats, were these :-

1. When Japan, in deference to the represent-1. When Japan, in deference to the representations of the three Powers, Russia, Germany, and France, retroceded the Lianting Perforsula and her other territorial acquisitions in Manchoria, was any engagement obtained from the three Powers that they would active seize not acquire by leave any part of the districts concerned?

2. In connexion with the fact that Russia has any part of the districts of the Russia has a content of the series of the districts.

not only leased Port Arthur and Talien from China, but has also obtained various other concessions with regard to military matters, railways and mines, what steps have been taken by the Japanese Government?

Japanese Government?

3. In connexion with the fact that Germany, France, and England have obtained numerous concessions from China and are seeking to obtain others, what has the Japanese Government done?

4. With reference to the relations that have

4. With reference to the relations that have arisen between Western Powers and China, what procedure has the Japanese Government adopted to maintain the status quo in the Orient, to preserve Japan's prestige, and to promote her interests?

Mr. Ozaki Yukio introduced these Onestions in a speech moderate in tone and very different from his habitually fervid utterances. He professed to be merely seeking information, and he referred at some length to the statements made from time to time by the British Government as showing that the accrecy observed by the Iapanese Government was excessive. In view of the brief duration of the present session, he expressed a hope that the usual delay would not intervene before a reply was given to the Questions.

Various Government Bills were then read for the first time,

NEW SILK BOUNTY REPBAL BILL

The first was a Bill for rescinding the Law for Encouraging the Direct Export of Silk. Concerning this, the Government Delegate ex plained that experience had shown the measure to be more likely to defeat than to promote the purpose for which it had been enacted, namely, the development of the silk-export trade, since it had provoked foreign states to impose additional duties on the Japanese staple.

This explanation called up Mr. Kudo Kokan. He made no effort to oppose the Bill on its merits, but he contended that, while foreign Powers resisted strenuously any attempt on Japan's part to tax their manufactures or productions, they did not hesitate themselves to impose what duties they pleased on her productions and manufactures, and he wished to know whether any representation in that sense had been made to them.

A Progressist member asked how it happened that the present Minister and Vice-Minister of Agriculture and Commerce who had been for the Colleges of the Imperial University were Digitized by GOOSIC UNIVER

Government Delegates when the Law was enacted, were now in favour of reacinding a measure which they had then advocated.

Mr. Kaneko Kentaro, Minister of Agriculture and Commerce, replied that the House itself was largely responsible for the measure. It had been brought forward time and again, and the Government had finally adopted it, not fore-seeing the injurious retaliation that it would pro-He did not wish to lay the whole blame on the House; the Government must bear its share. But it was just to recall the fact that the "business men" and the High Industrial Council had approved the Law at the time of ts ensciment

After a brief discussion, the House dispensed with the Regular routine of procedure and rescinded the Law at once.

NEW BILLS.

The following Bills were then read and handed to special committees :-

A Bill for amending the Rules of Legal Pro-

A Bill relating to the Operation of the Civil Cles) of the revised Civil Code. A Bill relating to the Operation of the Civil

A Bill relating to Census Registration, A Bill for reducing the exchange period of silver year coins to July 31st, 1898.

A Bill for limiting to the end of 1899 the period of circulation of Exchangeable notes.

Various minor measures.

MONDAY, MAY 23RD.

HOUSE OF PENES.

The House of Peers met at 10.10 a.m., and after some business of a personal character, proceeded to the first reading of various Bills.

NEW BILLS.

A Bill relating to the operation of the Com mercial Code and a Bill for the better regulation of the management of securities in connexion with law-suits were entrusted to a Special Committee.

PROMOTION OF ATHLETICS.
